Q. What consideration did you give at the time of that decision to the actual interest costs which had been incurred by McCall Ferry and Penn Water? A. I don't believe I gave any substantial consideration to it, Mr. Hall, because of the complications resulting from the receivership and all of the other abnormalities of the McCall Ferry Development. It seemed to me it was just a hopeless task to attempt to derive the cost of money. In the derivation of any such figure it would be necessary to just pile one assumption on top of another, and when you got through all you would have would be the product of a whole series of assumptions.

[8004] Q. Mr. Gunn, did you—— A. It seems to me in that connection, Mr. Hall, there is not more than one partial fragment of data which would give you any indication at all as to the interest, and that is the cost of the money borrowed from Knickerbocker Trust Company, which as I understand when correctly computed is approximately seven per cent, 6.9—something, I believe. The reason I described that as being only a fragmentary indication is because that represented only a small segment of the risk of the enterprise because of the guarantees that lay back of that loan as security.

* * *

[8008] Q. However, there was no dividend paid on either the McCall Ferry common or preferred during the period of construction. Right? A. That is correct.

* * *

[8013] Q. The interest on the Knickerbocker Trust Company loan was at the rate of six per cent with a commission of one-half per cent on the maximum amount of the loan. Isn't that so? A. Yes, sir, as I recall it that is correct.

Q. And the maximum amount of the loan secured from Knickerbocker Trust Company was $4,449,600? A. I believe that is correct.

Q. Did McCall Ferry Power Company secure any cash from any other source during the period from April 1905 to October 31, 1907?

* * *

THE WITNESS: The only other funds in cash that I know of which McCall Ferry received was interest that they earned on their deposits. Of course, there might have been a small amount of revenue from McCall Ferry Company.

By MR. HALL:

Q. Just how small would that amount have been? A. Pretty small, I think. It was not a very big [8014] operation. They had only one or two ferries.

Q. About $200 a year? A. I don't have the least idea what it was at that period but it was a small amount.

Q. The only bonds outstanding in the hands of the public prior to February 1, 1908 were the $250,000 bonds issued to Harlow-McGaw for properties? A. Yes, I believe that is correct. Prior to that time the subscribers simply had receipts for their funds which I suppose had all the characteristics of the bonds, but the bonds themselves, as I understand it, had not been issued except those we gave to Harlow-McGaw in exchange for their property.

* * *

Q. Did you make any determination of the average interest rate paid for that period? [8015] A. No, and for the reason I explained early this morning. It was too complicated to compute a rate of interest which could be reasonably described as the true cost of money, and an effort to do so simply would result in piling up a large number of assumptions, one on the other, until you had an answer which had no particular significance. But, as I recall it, the staff by some sort of a mixture of figures arrived at six per cent as a cost of money. It seems to me that the

rate paid to Knickerbocker Trust Company for a fractional part of the project risk proved that is wrong, obviously.

Q. Mr. Gunn, let us check that last statement you made. If we add the amount of $4,449,600 advanced by Knickerbocker Trust Company at six per cent and the $2,817,900 from subscribers at five per cent, we arrive at a total of $7,267,500, right? A. Yes, sir, that arithmetic appears to be correct.

[8016] Q. That being the total cash available for construction purposes. A. Yes, that seems to me to be about the proper amount.

Q. Six per cent on the $4,449,600 loan would result in an annual interest payment of $266,976. Right? A. That appears to be correct. I will accept your mathematics on it.

Q. The commission on a loan of one-half per cent would amount to $22,410 for a year. Right? A. Yes, sir.

Q. And five per cent on the advancements made by subscribers of $2,817,900 would produce an annual interest cost of $140,895. Right? A. I will accept that.

Q. Adding the $266,976, $22,410, and $140,895, we arrive at a total of $430,281. Right? A. I will accept your mathematics.

Q. If you compare the $430,281 annual interest cost with the total funds available of $7,267,500, we arrive at an interest rate of 5.92 per cent. Right? A. I will accept your mathematics on that, Mr. Hall, except I think you didn't mean compare but you meant if you divided the first figure by the second and multiplied by 100 you would get 5.92. Is that what you meant?

Q. Yes. [8017] A. Yes, the arithmetic seems to be correct on that so far as I know. I don't know what significance the figure has now that we have performed the arithmetic. It doesn't have any to me, certainly.

Q. Didn't the Knickerbocker Trust Company offer to extend the loan to any of the individual subscribers for an additional year beyond the three-year period at six per cent

upon payment of a second instalment of 20 per cent of the subscription price?

• • •

THE WITNESS: Yes, I believe that is correct, Mr. Hall. At least they offered to extend them for a year and they did charge a rate of six per cent. Whether they charged the bonus or not I really don't recall. I should think they ought to have extended that loan for less than six per cent.

A payment of another 20 per cent certainly made the risk less of a fraction of the project risk than it previously was.

By MR. HALL:

Q. Are you suggesting that the subscribers did pay a bonus in addition to the interest rate? A. I am suggesting I don't remember whether or not they did.

TRIAL EXAMINER: Counsel has given the witness figures [8018] indicating total advances by Knickerbocker Trust Company and total subscriptions from the subscribers.

On Page 39 of Exhibit 51 those figures don't check.

MR. KING: Referring to page 39 of the text, Mr. Examiner?

TRIAL EXAMINER: Yes.

MR. HALL: Mr. Examiner, the figures on page 39 of Exhibit 51 apply only to the advances made up to November 1, 1907, whereas the figures used in Mr. Gunn's calculations, or my figures furnished to him, were derived from the appendix 3, page 73 of part 2 of Exhibit 51 and represent the total cash ultimately received from the bond subscribers.

• • •

[8041] Q. And in the year 1930 Penn Water also resumed the charging of interest to plant account. Isn't that so?

A. Yes, sir, in 1930 Penn Water formulated a definite procedure for charging interest.

Q. What has been the company's policy with respect to the capitalization of interest since 1930? A. The practice with respect to interest during construction which Penn Water adopted beginning with 1930 was [8042] to charge interest at ½ per cent a month on construction expenditures on all jobs estimated to cost $2,000 and to require more than one month in construction.

They terminate interest under that practice at the end of the month during which the facilities are available for service.

In the case of large projects involving land, interest during construction is charged to both construction expenditures and land acquisition cost.

In the case of acquisitions of land such as the purchasing of flowage rights for the Holtwood development after the project is in operation, the company does not charge any interest during construction on the acquisition cost of such lands.

Q. Is the policy you have just outlined the same as that which has been pursued by the company since 1930? A. Yes, sir.

Q. That is on its books? A. What is that?

Q. The policy pursued on its books in capitalizing interest. A. Yes, sir.

Q. And that policy is in effect today, right? A. Yes, sir.

• • •

[8043] Q. Has Penn Water paid as high a rate as six per cent since 1930 on any of its outstanding bonds? A. Not so far as I know.

• • •

[8044] Q. Why has Penn Water used a six per cent rate in charging interest to construction when it does not pay that high a rate on borrowed money? A. One of the biggest

reasons I know of is that the Federal Power Commission approved six per cent in the Safe Harbor case.

Q. That approval, of course, applied only to Safe Harbor. It had nothing to do with Penn Water's rate of interest. Isn't that so? A. It is a fact that it was approval of Safe Harbor. I wouldn't say it had nothing to do with a proper rate of interest for Penn Water. It seems to me like it had a very great deal to do with it.

Q. How do you arrive at that conclusion? A. Because they approved it for Safe Harbor.

Q. Is that the reason you used six per cent in so far as your computation of interest is concerned? [8045] A. I take it, Mr. Hall, you are referring now to Penn Water's present practice in computing interest during construction, are you?

Q. Yes, since 1930, Mr. Gunn. A. Yes, I would say that was one of the biggest reasons. It seems to me that six per cent was an amount which commonly is used for interest during construction. As a matter of fact, in Safe Harbor we arrived at the interest in all sorts of ways. In the early part of Safe Harbor construction it was on short term borrowings, in which case the interest actually paid was put in, interest during construction. When the project was about half through a $21,000,000 bond issue was sold and part of the proceeds for that were used to repay the short term borrowing and the remainder was available for construction over a considerable time in the future, and as long as the residue of the bond money available for construction in the future lasted, Safe Harbor charged the total amount of interest on the outstanding bond issue, and when that money was gone, that is the residue of the bond issue, Safe Harbor stock was sold to Penn Water and to Consolidated Company, and the proceeds of that stock were treated as the company's own funds, and the Federal Power Commission found, in the Safe Harbor case, that six per cent was an appropriate rate to apply to those funds or to the proceeds of the sale of stock.

[8046] I think our conclusion in Holtwood to use six per cent since 1930 was probably more influenced by the opinion of the Federal Power Commission that six per cent was an appropriate amount to use on the company's own funds than by any other single factor.

* * *

[8086] MR. KING: If your Honor please, while he is looking for that, I just wanted to state for the record that Mr. Eichhorn, the Secretary, and Mr. Bortner, the assistant secretary of the company, will be forced to be out of the hearing room tomorrow and Thursday due to the fact the company is having a board of directors meeting in New York. I previously stated these gentlemen, plus Mr. Chase and Mr. Wetzel, would be here all during Mr. Gunn's cross examination.

* * *

[8308] Q. Did Penn Water incur expenses in connection with the issuance and sale of capital stock during the period from 1923 to 1935, inclusive? A. I don't recall whether they did or not.

Q. Is there any means available to you from which you can refresh your recollection at this time?

* * *

THE WITNESS: Yes, I believe they did, Mr. Hall.

By MR. HALL:

Q. Are those expenses included in your claimed cost? A. Yes, sir.

Q. Why were these expenses incurred? A. Because they were organization expenses under the provisions of the road and equipment accounts of the I. C. C.

Q. What is the total amount of those expenses which you have included in your claimed cost? A. Approximately $82,000.

Q. Do you claim the total of $82,000? A. Yes, sir.

[8309] Q. And there is no elimination at all? A. Well, the total figure was greater than $82,000. The total figure

was $82,963.12. Of that we are claiming $81,906.59, and $1,056.53 was eliminated in connection with the original cost study.

Q. Under what account have you classified your claim of $81,906.59? A. 301, I understand.

Q. Mr. Gunn, in view of the fact that these expenses were incurred during the years 1923 to 1935, how can they be classified as organization expenses of Penn Water? A. To me they are proper when consideration is given to the fact that the Interstate Commerce Commission Account No. 71 is a part of the uniform system of accounts.

Q. Doesn't that organization expense account No. 71 refer to organization expense at the time of the organization of the company? A. I don't think it is limited to that.

Q. What does "Organization" mean to you if it doesn't mean organization in that sense? A. That is one form of it.

Q. What is the other form you refer to? A. Issuance of additional stock, for example.

Q. Doesn't the account state, among other things, "This account shall include all fees paid to Government for [8310] the privilege of incorporation and office and other expenditures incident to organizing the corporation and putting it in readiness to do business"? A. It says that among other things. When you are increasing the capital stock of a company it seems to me you are increasing the scope of the corporation. In any event it was for that reason that I put it in this account.

* * *

[8312] By MR. HALL:

Q. Mr. Gunn, were any of the organization expenses amounting to $81,906.59 which you claimed incurred in connection with the organization of the corporation in 1910—— A. No, not so far as I know. They were incurred in connection with the issuance of stock between the years you mentioned in your previous question.

Q. It is in no way related to the organization of Penn Water in 1910. Isn't that right? A. It is the extension of the organization which was made in 1910.

• • •

By Mr. Hall:

Q. Where does the phraseology contained in account 71 cover extension of organization expenses? A. The whole of the account covers it. That seems to me to be the sense and intent of the account.

Q. That is the way you interpret it? A. Yes. If I hadn't I wouldn't have put the money [8313] where it is.

Q. Did you have any accounting assistance in reaching the interpretation you did? A. I probably discussed it with Mr. Eichhorn. As I recall the principal reason why I so classified it was because company counsel advised me that was proper. It was more of a legal matter than it was an accounting matter. As I recall it it was a rather complicated determination.

• • •

Q. Wasn't an account in about the year 1909 opened up covering reservoir surveys? A. I don't recall whether there was or not. Regarding all of the land costs or reservoir expense incurred after 1910 the company's original cost study was made under my supervision by Mr. Bortner. Mr. Bortner has been the company's land and right of way agent for twenty years and he is thoroughly familiar with those items. I relied on Mr. Bortner's judgment of those items and accepted his recommendations. I do not have before me any of the details of those land transactions.
[8314] Q. Did you reach an independent conclusion as to those items? A. I accepted Mr. Bortner's recommendations.

Q. That is unresponsive, Mr. Gunn.

Did you reach an independent conclusion as to those items? A. I don't know. I accepted Mr. Bortner's recommendations. You can call that whatever you please.

TRIAL EXAMINER: The question is what process did you go through after Mr. Bortner brought in his recommendations. Did you analyze it?

THE WITNESS: I reviewed them generally and accepted them. I don't know what that constitutes.

TRIAL EXAMINER: Did you check them? Did you check the details and processes by which he arrived at the conclusions?

THE WITNESS: I checked the principles he followed, but I didn't undertake to check the details. Those land accounts, Mr. Examiner, represent thousands of transactions which took place over a period of thirty years, and it is a vast amount of detail. It was just wholly and completely impossible for me to check the details or to have before me or in mind the details now. I don't have them.

• • •

[8323] Q. Mr. Gunn, has Penn Water built any of the storage reservoirs contemplated in the 1910 and 1911 investigations? A. No, sir.

Q. Do they contemplate building the storage reservoirs, building any storage reservoirs? A. They have no specific plans for it, I don't think you can properly say they don't contemplate it, but at least they have no specific plans for it.

• • •

[8327] Q. Have you included in Penn Water's original cost determination an amount representing the cost of study made in connection with the roller dam which the company at one time contemplated building? A. Yes, sir, I believe that is correct.

Q. What is the amount of the claim?

• • •

A. About $4800.

Q. What investigation was made in connection with the contemplated building of the roller dam? A. An engineering investigation to determine the feasibility of using

a roller dam to accomplish the same purpose that it was—that ultimately proved best accomplished by the flashboard system presently used by the company.

Q. Isn't it a fact Penn Water had flashboards before the initiation of this investigation? A. Yes, sir, but they were unsatisfactory and were [8328] causing the company a vast amount of trouble with the land owners adjoining the Holtwood project, and several law suits resulted. The Water and Power Resources Board was permitting them to operate their flashboards on temporary permits and requiring annual reports to see they did not infringe the public interest in the shape of the landowners, and it was just a generally unsatisfactory situation which the company was required to correct.

Q. What period did the investigation cover? A. You mean that part of it related to the roller dam?

Q. Yes. A. The years 1914 to 1916, inclusive.

[8329] Q. Did Penn Water expect to correct the unsatisfactory condition by the installation of roller dam? A. They made the investigation for the purpose of determining if they could correct it that way.

Q. Could not the roller dam aggravate the water situation? A. No.

Q. Aggravate it so far as the adjoining landowners were concerned? A. No, certainly not. If it had not been so expensive it would be an ideal solution for it.

Q. How high did Penn Water contemplate building the roller dam? A. I don't recall that detail but I suppose it was up to something like four, four-and-a-half feet.

Q. Wasn't it 15 to 20 feet?

* * *

THE WITNESS: I don't recall it was that high. They may have investigated up to 15 feet but I don't recall investigation going that high. However, they very well in connection with the investigation may have.

By Mr. Hall:

Q. Wouldn't a roller dam from 15 to 20 feet aggravate [8330] the situation with respect to the adjacent landowners? A. If they hadn't gone out and bought more land it might have aggravated the situation, that is if the company hadn't done that.

Q. That would be true even of a roller dam of 10 feet. Isn't that so, Mr. Gunn? A. It might. I don't have enough particulars concerning the boundaries of the company's land to determine that offhand.

Q. To what account was the cost of this investigation charged on the books?

* * *

A. I think it was charged to account known as flashboard account originally, and in the reclassification it was charged to the dam account.

Q. Originally wasn't it charged to Main Dam and Hydraulics, General Hydraulics? A. My records indicate, Mr. Hall, that $1695.09 of the $4819.02 was originally charged to general hydraulics. The remainder was originally charged to Main Dam Account.

[8331] Trial Examiner: That revises your statement about the flashboard account?

The Witness: Yes, sir, I think so. The flashboard account itself is a part of the Dam Account.

By Mr. Hall:

Q. Where did you put it in the reclassification? A. In the Main Dam account.

Trial Examiner: You kept it in the Main Dam account then in your reclassification?

The Witness: That is what happened in effect, yes.

By Mr. Hall:

Q. And the sub-account under the Main Dam account is Flashboards, right? A. Yes, sir.

Q. And it is in that account that you included the claim? A. Yes, sir.

Q. Does Penn Water propose building the roller dam? A. We have no specific plans for it at the moment. Penn Water might at some future time find it desirable to raise the Holtwood Dam, and in which event they might do it by building a roller dam.

Q. What type, Mr. Gunn? A. Roller dam.

Q. What type of roller dam? [8332] A. I don't know. As I said, we don't have any plans for it specifically.

Q. Have you included in Penn Water's original cost claim a contribution of $1,400 made by Penn Water to the building fund of the Holtwood Presbyterian Church in March of 1913? A. I think I have, Mr. Hall.

Do you want to know why?

Q. Yes. A. Yes, I included it there.

Q. That was a contribution, right? A. Yes, sir. I don't know—it is also sort of complicated. It was originally planned by the company to deed the land on which the church was built to the trustees provided upon cessation of its use as a church the property would revert to the company.

However, the church rules prevented the deeding of it to the trustees. They couldn't accept the property and the $1400 was used in the construction of the church, the title to which still belongs to Penn Water and Power Company.

Q. That amount of $1400 never had been included in the Plant account until you made your reclassification, right? A. That is correct.

Q. Where was it charged prior to that time? [8333] A. I think it was probably charged to Surplus back in the days when the original cost of the company's property was not so significant as it is now.

Q. What is the justification for capitalizing this contribution? A. Because it is a worthy expenditure for the House of God.

Q. Would you consider it a contribution made for the employees' benefit or welfare?

MR. KING: Contribution, did you say?

MR. HALL: Yes.

THE WITNESS: I should think that would depend, Mr. Hall, upon the quality of the church services rendered.

* * *

[8335] By MR. HALL:

Q. Mr. Gunn, did the original three-party agreement between Penn Water, Safe Harbor and Consolidated contemplate the construction of the Riverside and Perryville Transmission Lines?

* * *

THE WITNESS: I really don't know, Mr. Hall. I am not sufficiently familiar with the power contract to answer that question.

By MR. HALL:

Q. Can you obtain that information from one of your assistants? A. No, I don't believe there is anybody here who has any familiarity with it. The power contracts in the company are the responsibility of Mr. Spaulding. I really couldn't answer that question.

Q. Do you know when Penn Water began acquisitions for that line? A. Which line? I think you mentioned three or four [8336] of them, didn't you?

Q. Both of them, construction of the Riverside and Perryville Transmission Line.

In answering my question, Mr. Gunn, confine yourself to the Riverside Line. A. I am told the beginning of the acquisition of property on the Riverside Line was late in 1930.

Q. What customers were to be served by that line? A. Consolidated Gas Electric Light and Power Company of Baltimore.

Q. When was it originally expected that the Riverside Line would be built? A. It was originally expected that that line would be built immediately following completion of the Westport Line, perhaps in the latter part of 1931 and 1932.

Q. Why was it decided to defer construction of the line?

* * *

THE WITNESS: I think perhaps there were several contributing factors, one of which was the economic situation which caused a decline in the load in Baltimore, and the other was the unexpectedly good service which was received out of the Westport Line.

* * *

[8338] Q. Had a part of the rights-of-way for the lines been obtained when the decision to defer construction was made? A. Yes, sir.

Q. Why did Penn Water order the construction of seven tower foundations for the Riverside Line in 1932? A. Because at that time Consolidated Company was building tower foundations adjacent to Logan Field for a line of their own, and the construction of those foundations was quite complicated because of water conditions and required rather extensive construction plant. It was known that while Consolidated had their construction plant there for building their foundations that it would be cheaper at that time for them also to build Penn Water's foundations, which were in the water area, and along Logan Field.

* * *

Q. When was the work on the foundations started? A. They were built in 1932. I don't recall just what date.

Q. Completed them in the same year? A. Yes, they were relatively short jobs.

* * *

THE WITNESS: That is, Mr. Hall, they were completed as [8339] far as they were ever built. They were not complete foundations, as I understand it.

Q. Is it your understanding, Mr. Gunn, that five were completed, one partially completed, and one not constructed? A. Yes, I believe that is the fact.

Q. Why was the foundation work stopped?

• • •

THE WITNESS: Because of complications which developed with the authorities concerning the use of Logan Field. Logan Field is an airport within Baltimore, its only airport.

By MR. HALL:

Q. What complications are you referring to now, Mr. Gunn? A. I don't have in mind all the details of it, but the City of Baltimore was using Logan Field as an airport. At the same time it was building another airport. The construction of the airport then in progress kept progressing slower and slower as it went on, thus forcing the City to continue using the Logan Field location.

The towers that the company had to construct in order to give sufficient ground clearance for the 230,000 volt transmission line conductors were such that they would obstruct the gliding angle of certain types of planes coming into and going out of Logan Field, and difficulty developed [8340] with the aviation authorities over that, and it led to the company's halting the construction they then had in progress.

Q. In 1937 when the Riverside line was finally built were all of the tower foundations built in 1932 used for the line? A. No, sir.

Q. How many were not so used? A. The records I have before me indicate that four of them were not used.

Q. How much did the unused foundations cost? A. About $3600.

Q. Have these foundations ever been used by Penn Water for its transmission line? A. No, sir. By "These" you mean the ones I just mentioned—the four?

Q. Yes. A. No, sir, they have never been used.

Q. Have those foundations been abandoned? A. I don't know what you mean by abandoned. They have not been used. They never were used. I don't understand quite what you mean by "abandoned."

Q. Does Penn Water have any plans for using those foundations? A. No, not so far as I know at the present time.

Q. Was the cost of these abandoned foundations ever [8341] removed from the plant account? A. Certainly not. They were part of the cost of the Riverside line and a justified part of it, I may add.

Q. They are not being used as part of the Riverside line. Isn't that so? A. It doesn't make any difference. It is still a justified part of the cost. Would you like to know why?

Q. Yes, why? A. For the same reason the Federal Power Commission withdrew its suit in the case of the quarry land and agreed to the settlement of that case which the company had appealed to the Third Circuit Court.

Q. Would you identify that case? A. That was the Safe Harbor Water Power Corporation's appeal from its original cost case in connection with some land which was bought for use as a quarry and was not actually used as a quarry.

Q. Can you refer us to any document which shows the reason why that appeal was withdrawn? A. I don't recall that there is any document, unless it would be in the Court record. However, I distinctly remember how it came about. It came about as a result of Mr. Milford Springer telling Commissioner Manley that it was impossible to defend the item, and Mr. Manley instructed counsel to get together with Safe Harbor's counsel and [8342] compromise the item and withdraw the suit. It was done. I participated in the conferences in which that was accomplished.

Q. Is the item to which you referred discussed in Opinion No. 18, or was it settled off the record? A. No. As

I recall it I believe the items certainly, when they were disallowed as cost, were discussed in the Commission's Opinions.

The settlement, however, was accomplished by some sort of a legal instrument which was drawn up between Mr. Hambright representing Safe Harbor Water Power Corporation and a member of the Commission's legal staff.

Q. At least in your opinion, Mr. Gunn, the reasoning used with reference to the quarry site allowance justifies your inclusion of the four abandoned foundations—right? A. Yes, sir.

• • •

[8343] By MR. HALL:

Q. Isn't it a fact, Mr. Gunn that the unused towers represented only a temporary location and special permission was secured from the Dundalk Company, in July 1932, to locate these towers temporarily on their lands until a more direct route could be taken?

MR. KING: When you say "towers" you mean tower foundations?

MR. HALL: Yes.

THE WITNESS: Yes, it is my understanding that is a a fact.

By MR. HALL:

Q. Do you know why Penn Water was temporarily unable to use the direct lines? A. Yes, because they obstructed the runway of the Logan Field airport.

• • •

Q. Didn't Penn Water expect conditions to change to allow it to build a more direct line and because of that fact secured only temporary permission? A. Yes, that was the explanation I gave you earlier when I said the City of Baltimore had under construction another airport and expected to abandon the use of Logan Field.

[8344] Q. Did Penn Water retain the crossing permit over Bull Neck Creek required for the more direct line?

• • •

THE WITNESS: It is my understanding, Mr. Hall, that we retained the permits but they had a date limitation in them and it was necessary later to extend them.

By MR. HALL:

Q. Did conditions change to enable Penn Water to use a more direct route? A. Yes, sir.

Q. Isn't it a fact that of the foundations planned for the Riverside line, Penn Water in 1932 built only those which it knew might become unnecessary?

• • •

THE WITNESS: No, I don't think that is a fact.

By MR. HALL:

Q. What other ones did they build?

• • •

A. Towers 271, 272 and 278, the foundations for which [8345] were built at that time, and subsequently actually were used in the line.

Q. But at the time they built those three additional ones they knew they might not be used. Isn't that so? A. No, they expected to use them temporarily. There is nothing unusual in the procedure. That may frequently happen.

• • •

[8377] Q. Why in your opinion should the project bear the cost of the financial reorganization as a cost of construction? A. Because it was unavoidable expense in the creation of the enterprise, each and every dime of it.

Q. Would you have treated it differently if it had been an avoidable expense?

• • •

THE WITNESS: I don't know what I would have done with it. I can't conceive of anything like that happening

if it were avoidable. People just don't put corporations through bankruptcy and lose their opportunity to be compensated for their work for fun.

By Mr. Hall:

Q. Why in your opinion should the project bear the cost [8378] of the foreclosure and sale? A. For the same reason I gave you in answer to the previous question.

[8379] Q. Mr. Gunn, in what sense did you use the word "unavoidable" a few moments ago? A. In this sense: That McCall Ferry was organized by thoroughly capable people in every department of its business. It was advised by the most eminent engineers in the country. It had capable people in every branch of it. The failure and the bankruptcy was, in my opinion, the result of the financial panic in 1907, and it was thus caused by something beyond the control of good management.

Q. Would McCall Ferry Power Company have had to worry about the financial panic if they had initially made proper financial arrangements? A. They did initially make proper financial arrangements.

Q. Did they make arrangements which were sufficient to carry out the construction? A. No, sir, because after the financial arrangements were made the plan for development of the project was changed so as to increase the output of the plant.

Q. Assume they knew that they needed more money to carry out their plans and made the arrangement then, would the financial panic have caused McCall Ferry any concern? A. If you assume also that they could have done it at that time, a fact which I doubt.

* * *

[8381] By Mr. Hall:

Q. Mr. Gunn, have you included in your original cost claim the overhead during the period of suspension from November 1, 1907, to September 1, 1909, as well as other

expenses incurred because of the work suspension? A. Yes, I computed all the costs incurred during that period. I don't agree that is the cessation period, of course.

Q. Why didn't you exclude the overheads applicable to that period? A. For the same reason I didn't exclude the reorganization expense.

Q. Did you make any investigation of these overheads to determine which, if any, were the direct result of construction activities? A. I don't recall that I did.

May I have the last question, please?

(Question read.)

THE WITNESS: I think I will have to modify the last answer. Of course, I knew the character of the expenses during that period, and I am aware that there were expenses of Hutchinson, Cooper, and Sanderson and Porter included in there. Of course, they would be related to construction. However, I didn't make a separation and treat one category of expenses in one way and another category another way. [8382] I treated all the expenses the same.

By MR. HALL:

Q. That is as construction costs? A. Yes, sir.

Q. You have capitalized all overheads prior to November 1, 1907, right? A. Yes, sir.

Q. And you have capitalized all overheads from September 1, 1909, to January 1, 1911, right?

* * *

THE WITNESS: You mean January 1, 1911, or October?

By MR. HALL:

Q. Will you give that explanation? A. Yes, and also we capitalized the overhead from January 1, 1911 to the date of beginning of commercial operation, which is October 1, 1911.

Q. In addition to what you have just stated you have capitalized overhead during the cessation period from November 1, 1907, to September 1, 1909, right? A. Yes,

that is correct, such overheads as were incurred during that period.

* * *

THE WITNESS: Capitalized overheads during that period, [8383] of course, Mr. Hall. I disagree with the characterization of the period.

By MR. HALL:

Q. Assume, Mr. Gunn, that Penn Water were to begin today to construct an additional hydro unit and stopped work when it was 80 per cent complete. Do you think that it would be proper to capitalize overhead until such time as the unit was finally completed? A. That would depend on the circumstances, what caused them to cease construction, how long construction ceased, and it would depend on all sorts of things you have not included in your question. I couldn't answer that question.

Q. What percentage of overheads does Penn Water use in making retirement on its books? A. For the period prior to 1924 the company uses 25 per cent, and since 1924, when the job order system came into effect, the company uses whatever amount the job order on which the property was installed shows.

* * *

[8384] By MR. HALL:

Q. When Penn Water retires property constructed prior to 1924, does Penn Water still use an overhead percentage of 25 per cent? A. I believe they do.

* * *

Q. Had the project been completed without suspension of work the overheads would have been paid during such shorter period. Isn't that so?

* * *

THE WITNESS: Yes, if by "overheads" you are referring to the whole list of periods that we have just previously discussed. I think that is rather obvious.

By Mr. Hall:

Q. Why did you capitalize the general office salaries and general office expenses paid during the period of cessation? A. For the same reason I gave you in connection with [8385] the bondholders' expense. It was a necessary and unavoidable expense of creating the enterprise.

Q. You don't mean creating, do you, Mr. Gunn? A. Well, it seems to me that is the proper description. Building the project, if that is better. I have used the word in a general sense.

Q. The general office of McCall Ferry and its employees were located in New York City, right? A. I believe that is correct, but not all of its employees by any manner of means. Most of McCall Ferry employees were, of course, located in Holtwood.

Q. That was the construction crew, right? A. Construction and some supervisory, I think.

Q. Is it your view that the retention of Mr. Barnum, the Treasurer, of Messrs. Foote, Hinton or Sillick, Accountants, who remained on the payroll after the project work was closed down, lessened the time necessary to complete the project when it was finally reopened at the end of August, 1909?

* * *

[8386] The Witness: Yes, I should assume it did if the bookkeepers were busy.

By Mr. Hall:

Q. How did their retention shorten the later construction period? A. To the extent that they did any work that much work was not necessary to be done later. Of course, you know Mr. Barnum was not the bookkeeper. He was a lawyer.

Q. He was the Treasurer; right? A. Yes, sir.

Q. What work did these individuals do which shortened the later construction period? A. I don't know.

Q. Will you describe any expenditure charged to general office salaries or expenses during the period from November 1, 1907 to July 17, 1909, which was made and represented direct construction costs?

* * *

THE WITNESS: Mr. Hall, in that question you are still referring to the three bookkeepers and the lawyer, are you?

By MR. HALL:

Q. Any expenditure charged to general office salaries or expenses? A. I would say that Mr. Hutchinson's efforts contributed [8387] to the construction of the project and I would say, also, that these three bookkeepers to the extent they were busy were either catching up on their past work related to construction or doing work which would otherwise have had to be done at some other time.

Q. To what extent were they busy? A. Well, I wasn't there, Mr. Hall. But with the company in the financial situation McCall Ferry was in I certainty don't assume they were wasting money on salaries for people not to do anything.

Q. To what extent was their work in arrears? A. I don't know.

Q. As a matter of fact, Mr. Gunn, you don't know that it was in arrears—right? A. No, I am just assuming that there was some reason for McCall Ferry keeping them on the payroll and, being bookkeepers there would have to be some sort of work of that sort for them to do.

Q. What did Mr. Kirkland, Mr. Pender, Mr. Deutzman, or the clerical help do in actual construction during the period of cessation?

* * *

THE WITNESS: I think Mr. Kirkland, and perhaps Mr. Pender, were working on the plans and designs and perfecting [8388] those which we discussed the other day, and certainly for a considerable part of that time, during the

tailrace work, the bookkeepers were probably keeping the books because there was a considerable volume of work which went on, if you recall. You have included that within your period. So I suppose everybody was engaged on that. If you recall, during that period of time, Mr. Hall, the payroll of McCall Ferry Power Company ran up to in excess of $30,000 a month.

By Mr. Hall:

Q. The three men I named, Mr. Gunn, were not directly engaged in construction work—right, during the period? A. I believe Mr. Kirkland certainly was. They were not actually out excavating the rock. Mr. Kirkland was an engineer and certainly active in the design of the plant. Mr. Pender was secretary and treasurer and also an electrical engineer.

Q. Those three individuals were not in direct supervision of the construction work—right? A. They certainly had responsibility in connection with the completion of the designs. There is no question about that.

Q. Inasmuch as those three individuals were located in New York how could they have been in direct supervision of the construction activities? A. I didn't say they were in direct supervision of the [8389] construction activities. I said they had duties in connection with them and they had duties in connection with the design. It is my understanding designing was actually done in New York.

Q. What was the nature of the duties of these three individuals? A. I imagine the ordinary duties of an engineer supervising design. I was located in Baltimore during the design and construction of Safe Harbor. I was working on it. It is not necessary you be sitting on top of the project to have something to do in connection with it.

Q. The fact is, Mr. Gunn, you don't know the specific nature of the duties these three individuals were performing during the period of cessation. Isn't that so? A. All I know about it is what is in the Exhibit 27 and Exhibit 26,

and the fifteen filing cases, all of which have been available to the Commission Staff for the last two and a half years.

Q. Did the retention of the three individuals on the payroll decrease the time necessary to complete the project when it was finally reopened at the end of August, 1909? A. I am very sure it did.

Q. How much time did it save? A. I don't know how much time quantitatively, but it obviously saved time. [8390] Q. What makes it so obvious that they did? A. Because they were completing the designs of the powerhouse and they had duties in connection with the tailrace excavation.

Q. I thought you stated a few moments ago that you did not know the exact nature of the duties performed by those three individuals? A. That is another matter. When you stick the word "Exact" in there I obviously must say I don't know. But I didn't say, and that doesn't mean, I had no knowledge at all.

Q. What designs were these three individuals completing?

* * *

THE WITNESS: Mr. Hall, I have before me a tabulation showing the details of work that was done between those dates which was in the nature of engineering design which is made up of several columns, one of which is headed with the word "By" and immediately below appears H. L. C., which refers to Hugh L. Cooper. That fact indicates that all of these drawings on the first 4 pages were started by Cooper's organization, and that column may be eliminated in copying this.

There is another column headed "Penn Water and Power Company" in which is contained Penn Water and Power Company's drawing numbers set opposite the drawing numbers of McCall. [8391] Ferry Power Company. I think the Penn Water and Power Company drawing numbers for this purpose is without significance and also may be eliminated.

MR. HALL: I suggest, Mr. Examiner, that with the elimination of the two columns referred to by the witness the schedule referred to, consisting of six pages, be copied into the record as if read.

* * *

(The pages referred to are as follows):

[8392] McCALL FERRY POWER COMPANY DRAWINGS

November 1, 1907 to December 31, 1909

Number Mc F. Co.	*Date*	*Title*	*Revision*
552	2-14-07	Details of ice chute.	7- 9-08
579	3-13-07	Details of recess for upper draft tube casting.	8-17-08
582	3-18-07	Details of recess for turbine thrust bearing.	7-13-08
586	3-18-07	Details of thrust bearing chamber showing castings in place drainage, etc.	8-14-08
630	4-25-07	Manhole between each of main units.	8- 3-08
632	5- 3-07	Cross sec. of substr. at M. U. showing spaces to be filled in when wheels are installed.	8-20-08
645	5-18-07	Detail P. H. substr. through exciter units.	
655	5-22-07	Plan and profile of tailrace.	7-18-08
656	5-23-07	Cross sec. of tailrace.	3-20-08 7- 7-08
660	5-28-07	Plan of center line of canal below weir.	7-18-08
661	5-27-07	Cross sec. at main power unit showing superstructure.	7-21-08
675	6- 1-07	P. N. Cross sec. of substr. at M. U. #1 to 7, Inc.	7-25-08

Number Mc F. Co.	*Date*	*Title*	*Revision*
676	5-28-07	Position of transf. with reference to tail water discharge and construction bridge.	7- 6-08
[8393]			
756	8-12-07	P. H. Super-Conc. out. and details of openings wall below gen. room and gate house.	7-15-08
765	8-20-07	P. H. super. detail of end walls river end.	7- 7-08
771	8-26-07	Details of main side walls, gate house.	7-20-08
773	8-26-07	Shore end of P. H. showing fishway location.	7-20-08
774	8-26-07	Details of east end of P. H. from center line of Unit #10.	7-20-08
779	9- 3-07	Details of south wall of gen. room from El. 130.00 to 191.50 between transf. house and shore end.	9-21-08
782	9-10-07	Details of stop log gallery and substr. of transf. house.	4-21-08 9-22-08
785	9-10-07	P. H. super. details of end walls (shore end).	6-18-08 7-18-08
786	8-11-07	P. H. super. detail of wall below El. 191.50 south side of gen. room transf. house to river end.	7-26-08
788	9-18-07	Details of coping river end of P. H.	7-20-08
794	9-19-07	Steel for window frames 1st and 2nd floors, transf. house.	7-21-08
796	9-23-07	Steel for frames shore and river ends.	7-21-08

Number Mc F. Co.	*Date*	*Title*	*Revision*
797	9-25-07	Details of coping shore end of P. H.	9-21-08
811	10- 4-07	Details upper end of fishway.	7-20-08
854 [8394]	10- 1-07	Details of windows.	7- 1-08
872	11-19-07	Sketch showing hook for 100 ton traveling crane.	7- 1-08
878	12-12-07	Longitudinal profiles under dam, showing rock bottom as prepared to receive concrete.	
904	1-28-08	Track crossing over permanent R. R. cut.	
905	1-24-08	Preliminary location of entrance R. R. into P. H.	
906	1-24-08	Profile and sections of proposed permanent line from P. H. to P. R. R.	
909	2- 7-08	River end wall of transf. house.	4- 1-08 6-18-08
915	2-19-08	Transf. house south wall river end.	Obsolete
918	2-21-08	Transf. house south wall (shore end). Super. by 259 A 2546	
919	2-24-08	Details of coping for river end of transf. house.	4- 1-08 6-18-08
944	4-10-08	Sketch plan concrete east of No. 10 unit.	
1011	5-23-08	Details of conc. piers on top of cribs—ice protection.	
1018	6-16-08	Cross sec. of M. U. showing opening in concrete for supporting ring brake arms and cylinders, conduit pipe for handling operating shaft.	8-15-08

Number Mc F. Co.	*Date*	*Title.*	*Revision*
1019	6-19-08	Ice protection, gen'l. details of boom.	Super. by 4287
1020	6-23-08	Sketch showing arrg't. of trolleys and tracks for tailbay stop log hoist.	
[8395]			
1030	7- 9-08	Details of ice chute tunnel and foot bridge at shore end of P. H.	Super. by 239 A 2470
1032	7-13-08	Details of stop logs for ice chutes at shore end of P. H.	Obsolete
1033	7-20-08	Sectional plan of P. H. at El. 138.50.	
1049	7-23-08	P. H. plan and El.	
1050	7-25-08	Steel for window frames 1st floor transf. house.	
1052	7-29-08	Drainage System of P. H.	
1057	8-22-08	Air line as constructed.	
1058	8-31-08	Sketch showing expansion joints and revised arches for deflecting dam.	
1059	9- 4-08	Sketch showing Reinf. of Deflecting Dam.	
1061	9- 3-08	Present contour of rock fill dam.	
1062	9- 3-08	Progress curves of work on Cully's cut. for June, July and August, 1908.	
1063	9-21-08	Progress Curves of work on Cully's cut. 1908 total organization.	
1066	10- 6-08	Gauging of Susquehanna River at McCalls Ferry.	

[8396] SANDERSON AND PORTER DRAWINGS

November 1, 1907 to December 31, 1909

Number Sanderson & Porter	*Date*	*Title*	*Revisions*
46 B 33	7-15-08	Plan of floor El. 151.0 and Rheo. Gallery shore end showing conduits.	3-14-08 6-15-08 10-24-08
46 B 37	1-25-08	Plan of Floor El. 151.0 and Rheo. Gallery River end showing conduits.	3-14-08 6-11-08 9-14-08 10-24-08
46 B 46	3-20-08	Transf. pocket oil drains, plan and details locker rm., H-1-H-2 & L Transf.	
46 A 24	4- 8-08	Cross section of transf. house, generating station	Obsolete
46 B 42	2-24-08	Detail of barriers for 11,000 V cables between 1st and 2nd floors.	Obsolete
—	1- 2-08	Arrg't. feeder panel for cranes	Tracing Missing
—		Diagram of connection of Sta. S & P circuits.	Super.
—	10-15-08	Switchboard for station light and power.	

[8397] EMPIRE ENGINEERING CORPORATION

November 1, 1907 to December 31, 1909

Number Empire Const. Company	*Date*	*Title*	*Revisions*
4	11- 4-09	Centers for wheel chambers.	
5	11- 6-09	Plan of east end of P. H.	
6	11-20-09	Concrete piers on top of center cribs, ice protection.	
7	11-25-09	Abutment main dam and P. H.	
8	12-20-09	Man hole for main unit.

1	10-11-09	Plan & details of stoplog gallery.	
2	—	Side Elev. pressure and Pro. cableway Charlestown, Md.	

[8398] By MR. HALL:

Q. Mr. Gunn, isn't it a fact that all the drawings described in your answer represent drawings prepared by H. L. Cooper's organization in New York? A. Those on the first 4 pages were started by Hugh L. Cooper's organization, those on the 5th page were started by Sander-

son & Porter and those on the last page by Empire Engineering Corporation.

Q. And the revisions to Cooper's drawings were done by Cooper's organization as well? A. Yes, under the supervision of the individuals we have been talking about in McCall Ferry Power Company.

Q. Were Messrs. Kirkland, Pender and Deutzman in Cooper's New York office? A. No, sir. They were officials of McCall Ferry Power Company. In referring to their supervising and coordination of the completion of these drawings I am referring, of course, to Kirkland and Pender. This other name you mentioned, Deutzman, I don't recognize. I don't know whether or not he was even an engineer.

Q. What connection did Kirkland and Pender have? A. Cooper's New York office was doing the engineering work on McCall Ferry project and Kirkland was vice-president and general manager. Pender was secretary and treasurer.

Q. Did either of those gentlemen supervise Cooper's work? A. Depends on what you mean by supervision. In the sense I have used it they did.

[8399] Q. In what sense did you use the word "supervision"? A. That they exercised general approval over the results of engineering designs made by Cooper, just like the officer of any other corporation would exercise general approval over the work of a contractor he employed.

Q. What documentary evidence, Mr. Gunn, can you point to in order to substantiate the statement that Kirkland and Pender supervised Cooper's New York office? A. I haven't said they supervised Cooper's New York office, Mr. Hall.

Q. The design work of that office. A. I didn't say they supervised the design work of it. I have told you what they did. The documentary evidence is the fact that Kirk-

land was vice-president and general manager of McCall Ferry Power Company.

Q. And everything else that you have stated you infer from that? A. There might be some more evidence in the fifteen filing cases.

Q. You don't know of any that you can point to at this time, do you? A. I don't have any in mind at the moment. It would take a search of those records. I think it is obvious somebody had to do the job and we might be able to find some more evidence if it is that important.

[8400] Q. You thought these two individuals, Kirkland and Pender, did it? A. I thought they did it.

Q. Yes. A. Yes, sir. It is just a necessary function which must be performed. It never occurred to me to question whether or not they did.

* * *

By Mr. Hall:

Q. Wasn't Mr. Parsons the head of Cooper's New York organization? A. I don't know. There is no question—if this is what is troubling you—there is no conceivable question but what Mr. Cooper had a supervisor in his New York office. There is also no question in my mind but what the officers of McCall Ferry Power Company had a function to perform in connection with Cooper's design. These were the officers and the function is obvious. By "these" I mean Pender and Kirkland.

[8401] Q. Why is there no question in your mind that Kirkland and Pender had a function to perform in connection with the drawings prepared by Cooper's organization? A. Because I have been practicing engineering for 25 years and I know that such functions are necessary.

Q. And you have assumed that that was the case with Kirkland and Pender back in the period of cessation—right? A. I think it is more than an assumption. I am pretty sure the sun rose back in 1910, but I don't think that is an assumption. I can't prove it with any documentary evidence in the fifteen filing cases.

Q. Isn't it a fact that Kirkland left McCall Ferry Power Company in February of 1908 because there was nothing more for him to do? A. I believe it is a fact he left then. I don't know what the reason was.

Q. Mr. Gunn, did the retention of the engineering experts on the payroll decrease the time necessary to complete the project when it was finally re-opened at the end of August of 1909?

* * *

[8403] THE WITNESS: It is my opinion that it did.

By MR. HALL:

Q. How did their retention decrease the time necessary to complete the project? A. By reason of the work they performed which we have just been discussing.

Q. How much time was saved? A. I don't know.

Q. Isn't it a fact that Mr. Value, Mr. Cooper's representative, left the job and Mr. Goodwin was placed in charge of the tailrace excavation in 1908? A. I believe that is correct.

Q. And isn't it a fact Mr. Goodwin's salary was paid by McCall Ferry Power Company, whereas Mr. Value, if he had stayed, would have been paid by Cooper out of his personal fee as manager of the hydraulic construction?

* * *

THE WITNESS: I think we will have to break that down or have an explanation of it. It is true that Mr. Value, as long as he was needed at the project, was to be paid out of Mr. Cooper's fee. It is also true that Mr. Goodwin was always Mr. Value's assistant and always had been paid by McCall Ferry Power Company. When he did the tailrace work he continued to be paid by McCall Ferry Power Company.

[8404] By MR. HALL:

Q. But he performed the functions Mr. Value would have performed had he remained? A. No.

Q. What additional function did he perform? A. What additional function?

Q. What different function? A. Mr. Value was a man of such capability he was not needed for the tailrace work. Mr. Goodwin was perfectly capable of supervising it.

* * *

[8429] By Mr. Hall:

Q. Mr. Gunn, isn't it a fact that the hydraulic department of McCall Ferry had its own bookkeeper, timekeeper, storekeeper, clerks, engineers, draftsmen and foremen at McCall Ferry?

* * *

The Witness: It is a fact they had engineers, draftsmen and foremen, but it is my understanding that the books of accounts of McCall Ferry Power Company were kept by Sanderson and Porter under their contract, and they were compensated on a cost-plus basis for keeping the books. I believe you will find that in Sanderson and Porter's contract. It very well may be true that the hydraulic department, which was Cooper's organization, may also have had some bookkeepers and timekeepers. That detail I don't recall.

By Mr. Hall:

Q. As well as storekeepers and clerks? A. Yes, I should think they would have had to have some storekeepers and clerks to cover their part of the work.

Q. Isn't it a fact that the hydraulic department had its own New York office with a bookkeeper, purchasing agent, [8430] engineers, draftsmen, clerical and stenographic help? A. I don't quite understand your question, Mr. Hall. The hydraulic department was Hugh L. Cooper, as I understand it.

Q. Yes. A. Hugh L. Cooper did have a New York office. I don't understand that he had a separate New York office for the McCall Ferry Power Company project. It is

undoubtedly true that in his New York office he had some clerks and bookkeepers.

Q. Isn't it a fact that Mr. Goodwin's salary and expenses and the salary and expenses of his assistants are charged to the hydraulic department accounts? A. Yes, sir, that was in accordance with Cooper's contract for the construction of the project.

Q. Isn't it a fact that the preparatory work on the tailrace did not commence until May of 1908 and was finished on October 15, 1908?

* * * *

THE WITNESS: That is substantially correct, although I would say the preparatory work began sometime during the month of April and was finished about October 15.

Mr. Hall, in answering that previous question I understood you to be referring to the resumption of work on the tailrace. Of course, the tailrace work had been started by Kerbaugh [8431] earlier.

By MR. HALL:

Q. That is right. A. And the date you gave me in your question indicated you were referring to the resumption of work on the tailrace in 1908.

Q. That is correct.

So that the men were not engaged on construction work during the period of cessation prior to April, 1908 or after October 15, 1908. A. That depends upon what you refer to by construction work, Mr. Hall. I interpret the general term "construction work" when referred to a project to include all work on it, including the engineering design and all other functions in connection with it.

Now, if you are limiting your term of construction work merely to the work of laborers doing such things as excavation and pouring concrete, installation of machinery and work of that sort, if you so limit it then I believe that is substantially correct.

* * *

[8432] By Mr. Hall:

Q. Did the treasurer have a separate office in New York at 62 Cedar Street? A. I really don't know, Mr. Hall. I don't recall.

Q. Where was the treasurer's office? A. I don't recall.

Q. It was located in New York, wasn't it? A. I believe it was.

Q. Hutchinson and Dimock and their assistants had an office in New York at 60 Wall Street. Isn't that so? A. Hutchinson had an office in New York somewhere. I don't know whether it was at that address, and I don't understand that Hutchinson's office had anything to do with Dimock's office. Hutchinson was a consulting engineer in New York and had a consulting engineer's office there. I was never aware that it had any connection with Dimock or anybody else.

Q. Cooper and his assistants had an office in New York which was charged to the McCall Company. Isn't that so? A. No, I don't think that follows: It is true that Cooper did have, he and his assistants did have, an office in New York, but it is my understanding that their sole business at that time was not work they were doing on McCall Ferry project, and therefore I don't assume that all of Cooper's New York expense was charged to McCall Ferry project.

Q. Didn't the McCall Ferry Power Company pay the office [8433] rent for Cooper's New York Office? A. I don't know. They may have paid a part of it. I don't think it follows they necessarily paid it all. I think it would have been perfectly proper for them to pay a part of it, a proper part of it. They had to have some place to house the personnel in New York which Cooper was employing on the McCall Ferry project.

Q. Did I correctly understand you to say, Mr. Gunn, that Cooper had a New York office which was engaged on all Cooper's work? A. That was my understanding of it.

Cooper was a consulting engineer and maintained a permanent office in New York.

Q. Cooper also had a local hydraulic office at McCall Ferry which was charged to the project—right? A. He had some personnel there. I don't know whether you would call it an office or not. He had the men who were reporting to Mr. Value and to Mr. Goodwin. I would suspect he had several engineers there. A project of that magnitude would require the services of several engineers, a surveying corps, and numerous other technical personnel.

Q. Sanderson and Porter had an office in New York which made charges to the project. Isn't that so? A. I assume they did. I think their contract provides that they would have to cover their scope of the work as covered by their contract.

[8434] Q. As a matter of fact, until September 1, 1906, Sanderson and Porter acted as accounting managers and kept books of the McCall Ferry Power Company. Isn't that so? A. That is my understanding.

Q. What other offices did McCall Ferry project support? A. I don't quite understand that question, Mr. Hall.

Q. The same types of offices we have been discussing. A. I suppose they had any other offices they needed in connection with the project, but I don't recall offhand. As a matter of fact, I don't think it can properly be said they supported the ones we have been talking about, unless you are using "support" in the sense I have limited it in my answers.

Q. Did Cooper complete all the work he undertook in his contract with McCall Ferry Power Company? A. No.

Q. As a matter of fact, Empire Engineering Corporation completed the hydraulic construction started by Cooper and received a fee of $60,000 for so doing. Isn't that so? A. They completed what Cooper had not finished.

Q. Yet Cooper also received his full fee of $130,000 without deduction for the work he did not complete—right?

A. I believe that is correct, because he was able to demonstrate that he was in a position to fulfill the contract. McCall Ferry was not in a position to do it, and as I recall it Cooper threatened to sue them for it. In any event they [8435] felt it necessary to pay the man.

TRIAL EXAMINER: When did he threaten to sue? Do you remember?

THE WITNESS: It was after the project was in financial difficulties.

May I check that?

He threatened to file a suit in October, 1908. His claim was based upon this fact, Mr. Examiner: His contract called for certain payments if he would complete his work by a certain date, that is the part of the work covered by his contract. At the time McCall Ferry Power Company got into financial difficulties, Cooper's work was so far advanced it was perfectly obvious that he, on his part was capable of completing it. It was on that basis that they were forced to settle and make the payment to him.

By MR. HALL:

Q. Do you know how much of Cooper's fee is applicable to the work he did not complete? A. None, obviously.

Q. Isn't it a fact that Cooper's fee covered only his and Value's supervisory services with all salaries and expenses in connection with preparation of plans or construction work being paid by McCall Ferry?

* * *

[8436] THE WITNESS: Yes, I believe that is correct, Mr. Hall, if you interpret the word "salary" as being Cooper's total remuneration.

By MR. HALL:

Q. The cost of preparing plans is included in the hydraulic department expense, is it not? A. Yes, all of the costs of preparing plans except Cooper's and Value's supervision of it.

Q. Preparation of plans did not necessitate closing down the project? A. No.

Q. Did Sanderson and Porter complete the work they had contracted to do for their fee of fifty thousand dollars?

* * *

THE WITNESS: They completed the drawings, which was a part of their contract, but they did not complete the installation of machinery, which also was a part of the contract.

By MR. HALL:

Q. Isn't it a fact that the installation of the electrical work had not even begun when work was suspended on November 1, [8437] 1907? A. That is substantially correct.

Q. And a large part of the material and equipment had not even been ordered. Isn't that so? A. No, I don't think that is quite so. As a matter of fact, as I recall it, the majority items of equipment and material, which are the great bulk either dollarwise or any other way you want to compute it, had been ordered.

Q. None of the substation materials or transmission line materials had been ordered. Isn't that so? A. That is correct, but as a matter of purchasing and ordering that is a relatively minor operation. The equipment I had reference to was turbines, generators, transformers, I believe the switchboard as a unit had been ordered, and certainly as regards the power station that was by far the greater part of the materials and equipment.

Q. Isn't it a fact that the transmission line had not yet been surveyed or specifications drawn therefor? A. No, I don't think that is correct because McCall Ferry Power Company had advanced to their lands agents somewhere about $100,000. They were actually buying the right of way with it. It is perfectly obvious they couldn't have been buying right of way without knowing where they would locate the line.

Q. Well, Mr. Gunn, does the surveying and specifications [8438] precede the acquisition of right of way? A. Certainly. It must. Otherwise you wouldn't know where to buy the right of way, you wouldn't know where you wanted to locate the towers, you wouldn't know what clearances you were going to have in the line; in fact you would be just silly to start buying right of way without knowing the characteristics of the line and without knowing the route over which it would run. You might as well just start out buying miscellaneous farm lands.

Q. Isn't it a fact, Mr. Gunn, that the work which Sanderson and Porter were obligated to do was actually completed by Mr. Wails? A. Some of it was.

Q. What portion? A. The installation of machinery. That is the principal item, Mr. Hall.

Of course, of the work Sanderson and Porter were contracted to perform, by far the greater part of the responsibility under that contract was the design of the powerhouse and the specification of the equipment, and particularly the major equipment.

Q. Do you know what portion of the fee actually paid Sanderson and Porter represented work actually performed by them? A. All of it. That seems perfectly obvious to me, Mr. [8439] Hall, for the reason that with the financial condition McCall Ferry Power Company were in they certainly wouldn't have paid it unless they felt they had to pay it. I don't know that Sanderson and Porter undertook to sue them for it, but I have no doubt they would have if it had not been forthcoming.

Q. Do you have any means of determining the exact proportion of Sanderson and Porter's supervisory functions, which were completed? A. I have described them to you. I don't know how you would measure them except by description.

Q. Is insurance paid during the period of cessation a proper charge to construction? A. Certainly.

Q. Does that apply to fire insurance? A. Each and every dollar they spent for whatever they may have paid it so long as it was a justified and prudent expenditure.

Q. How do you justify that insurance as a proper construction charge? A. Because it was a proper and prudent thing to do, that is the taking of insurance. For example, if they had not taken insurance and they had a fire, done serious damage to the construction work already done, it would have cost much more to complete the powerhouse and they might have gone busted again.

* * *

[8440] By Mr. Hall:

Q. Did you consider, Mr. Gunn, the construction period was in any way affected by the payment of insurance charges? A. Not by the actual payment of the charge, Mr. Hall, but if there had been no insurance and there had been a serious [8441] fire, I think it very well may have been serious—it very seriously would have affected, indeed the project may never have been completed. In other words, it has the same effect that insurance against a risk which does not incur always has on every operation of every sort.

* * *

By Mr. Hall:

Q. Did you make any investigation of the insurance charges to determine how much applied to the period from November 1, 1907 to September 1, 1909? A. No, sir, that was of no significance to me.

Q. Did the general engineering expenses incurred during the period of cessation decrease the time necessary to complete the project after its reopening in August of 1909? A. Unquestionably they did.

Q. In what manner? A. By forwarding the engineering work in such manner that when they did reopen the project they were in a position to go ahead unhampered by the necessity of attempting to pursue construction and

design simultaneously. I think it not only shortened the construction period, but when a project is built that way—and by that way I mean attempting to pursue construction just one jump behind the plans—it is also much more expensive than it is if the plans are perfected [8442] and the construction can be planned far in advance.

* * *

Q. Mr. Gunn, isn't construction and design usually pursued virtually simultaneously? A. All too often it is, but it is highly undesirable.

Q. It was being done that way prior to November 1, 1907—right? A. No, I don't understand that to be a fact.

Q. You mean that the designs were ahead of construction? A. I understand that the designs were far enough ahead of construction until they were not hampering the construction work.

Q. What is that based on, Mr. Gunn? A. Based on several things. First, the fact that the work prior to the date we are now discussing, that is the so-called cessation period, had been largely on the dam in which a few simple plans provided a very great magnitude of work. For example, in designing the dam they needed only a plan and cross section, and with those two drawings and maybe a few detailed drawings they had a year and a half of work ahead of them.

But when you go into the powerhouse to design that and to construct that it becomes an altogether different matter [8443] and a very much more important matter that your drawings precede your actual installation by enough time to do several things: To organize and plan the work, to schedule the delivery of the equipment so that it would come in in the order in which it can be installed, and it will not involve a lot of rehandling, and it has many advantages which if they are not present result in excessive cost of the work.

Q. How much time was saved by the design work you have just referred to? A. I couldn't state precisely how much it saved. That would be pure speculation. I think it would be possible to go back over the details minutely and make some sort of an intelligent guess at it, but I don't think you could describe it as any more after it was done, other than to say it would result in a substantial saving. I don't know how to describe it other than that.

Q. Did you reach any conclusion as to the amount of time saved before you included the expenditures in question in your claim? A. No, sir, I just recognized it would be a substantial saving of time and also cost.

Q. What do you mean by a saving of substantial time? A. Just that.

Q. What is substantial time? A. It is substantial time. By that I mean it is not [8444] a trivial saving. Let's put it that way.

Q. Well, is it a month? A. I should think it would be more than a month.

Q. How much more? A. I don't know.

Q. Isn't it a fact that these expenses represent mainly miscellaneous expenses of the engineering experts? A. Which expenses are we talking about now, Mr. Hall?

Q. The expenses included in the account "General Engineering Expenses"? A. During what period?

Q. During the period of cessation.

• • •

[8445] A. Yes, the Account "General Engineering Expense" included that amount of money. However, you have characterized it as cessation period. Of course I disagree with that characterization. Commission staff's exhibit so shows that amount of money.

Q. Otherwise your answer is "Yes"? A. Otherwise my answer is "Yes."

[8446] Q. Why did you capitalize the expenses segregated on the books in the "Cessation Account" totaling

$36,445.21? A. I don't recognize the figure, Mr. Hall. Where is that to be found?

Q. Will you refer to Page 37, Part 2 of Exhibit 51? A. Yes, sir, I have that before me now.

Q. Do you see under the disallowed column the amount of $36,445.21 opposite the words "Cessation Expense"?

* * *

THE WITNESS: Yes, I see the figure, Mr. Hall. That is Caption D "Cessation Expense." Those expenses were capitalized because they were unavoidable costs to carry the McCall Company development to completion, and represent costs actually incurred.

May I have the answer, please?

(Answer read.)

THE WITNESS: I don't have the precise details of that account before me, but as I recall it it consists of unloading materials, particularly some ten or twelve carloads of roof tile, stripping forms from concrete which had been [8447] poured previous to cessation, maintenance and repair of the construction plant, and various other items of that nature.

By MR. HALL:

Q. Mr. Gunn, may we describe those expenditures generally as representing clean-up, putting away, and otherwise securing and protecting the plant to preserve it from damage during suspension plus other expenditures caused by cessation? A. You could describe only a small portion of it that way, Mr. Hall. For example, it is true that during that period they greased and did some repairs to the construction plant. Those repairs and that lubricating would have had to be done whether it was laid up or not. It is a fact it was a desirable thing to do it incidental to the laying up of the plant for the cessation period. So it is impossible, in the case even of that item, to classify it exclusively, and that would be the one most likely to be classifiable as you have characterized it. The sole result of having done it was not the cessation period.

Q. Did McCall Ferry have a separate account in which was included the expenditures for, repair and construction work and so forth? A. Referring now to the cessation account?

Q. Yes. A. Yes, they had a separate account. It was that account which contains the cost of unloading, for example, [8448] the roof tile which came into the powerhouse and stripping the concrete forms. Obviously that work had to be performed whether they had a cessation period or not.

• • •

[8449] By Mr. Hall:

Q. Mr. Gunn, did Albert S. Crane prepare a report dated September 10, 1908 on the McCall Ferry Power Company for Electric Bond and Share Company? A. I believe a report was prepared, it seems to me, by Albert S. Crane and working with Mr. S. D. Mortimer, I believe.

Q. Didn't he list in that report the cessation account as "Loss due to stoppage of work"? A. I don't remember what he had in that report, certainly not in that detail.

I haven't looked at the report, Mr. Hall, for seven or eight years.

• • •

Q. Have you excluded the expense of reopening the McCall plant in 1909 in your original cost claim? A. No, sir.

[8450] Q. Why not? A. Because it was a necessary and unavoidable expense in the creation of the enterprise under the circumstances which McCall Ferry and Penn Water encountered.

Q. This expense would not have occurred if construction had occurred without cessation to the completion of the project, isn't that so? A. That is correct.

• • •

Q. Do you have any records of the cost of reopening the McCall development in 1909? A. I don't recall there

were any separate records. Whatever they are, they have been available to the Commission Staff for the last two and a half years. I think there are records of the cost, Mr. Hall. The company has somewhat in excess of fifty thousand vouchers to represent the transactions of the company from its inception, and such costs as [8451] there are no doubt are among those fifty thousand vouchers. My difficulty is that I have not memorized them all.

MR. HALL: May we have marked for identification as Exhibit 205 the tabulation furnished by the company a few days ago and which is entitled "Nature of Interest, Approximate Area, and indicated Purchase Price of Property acquired by Hutchinson, including York Furnace Power Company Properties, Later Conveyed to McCall Ferry Power Company under Contract Identified as Part 19 of Exhibit 27"?

• • •

(The document referred to was marked Exhibit No. 205 for Identification.)

• • • •

By MR. HALL:

Q. Mr. Gunn, who prepared the schedule which has been marked for identification as Exhibit 205? A. Mr. Bortner prepared it at my request.

MR. KING: I might add in response to a request from the Staff.

MR. HALL: Yes.

By MR. HALL:

[8452] Q. Am I to understand that this document contains a complete list of all the prices paid for the land by York Furnace Power Company or Cary T. Hutchinson insofar as that information is available?

• • •

THE WITNESS: Yes, sir.

And I would like to call your attention to the last column, the heading of the last column, appearing on the second page. In your question you said "prices paid". Some of the prices, I think it would be proper to say, instead of prices paid that it contains all the evidence which indicates the price paid. The reason I must make that qualification is that the indications contained in that column come from various sources of information, some from correspondence in the file. Some of them deed consideration and some contracts of sale and some by word of mouth from individuals. It is impossible to say with certainty they are the total consideration.

MR. KING: I think the witness inadvertently referred to the heading on page 2 of that exhibit. It is the same heading on both pages, as I understand it.

TRIAL EXAMINER: Is that right?

THE WITNESS: Yes, that is correct. I thought I had referred to page 1. In any event the heading is the same on both pages, and the explanation I have given applies to both [8453] pages.

By MR. HALL:

Q. Am I to understand that Exhibit 205 for Identification embraces a complete list of the properties conveyed to McCall Ferry Power Company under the contract identified as Part 19 of Exhibit 27? A. Yes, so far as I know.

Q. How was the total price of $201,000 paid by Hutchinson for the York Furnace properties determined, which is noted at the bottom of Sheet 1 of Exhibit numbered 205 for Identification? A. It was determined from the fact that the final consideration paid by Hutchinson to Beyer was $155,500, and the additional fact that the agreement or the option obtained by Hutchinson and dated February 21, 1902 recited and acknowledged certain previous payments

by Hutchinson, which previous payments were added to the $155,500.

The previous payments were $3,500 acknowledged as being paid on October 1, 1901, $2,000 acknowledged as having been paid on January 9th of 1902, and $30,000 acknowledged as having been paid on October 21, 1902.

That agreement provided the option was to run until January 1, 1903 and could be extended to January 1, 1904 by the payment of an additional ten thousand dollars, and since the agreement was extended it is our belief that that ten thousand [8454] dollars was paid.

The total of those give an amount of $201,000, which I think is properly described as being at least the amount that was paid. I don't think it necessarily follows that was all that was paid.

Q. Did you find any evidence of any additional payments over and above the $201,000? A. No, we didn't find any evidence of any other payment, but I don't think we can assume that because we didn't find the evidence that that represented the complete payment. I think the most we can say is that the payment was not less than that amount.

Q. Mr. Gunn, since you mentioned Hutchinson's agreement dated February 21, 1902 I show it to you at this time.

* * *

(Thereupon, the document referred to was marked Exhibit No. 206 for Identification.)

* * *

By Mr. Hall:

Q. Do you recognize that as being the agreement of February 21, 1902 to which you referred, Mr. Gunn? [8455] A. Yes, sir.

Q. At this time, Mr. Gunn, I show you an agreement dated April 4, 1904. Is that the option agreement under which the properties were finally transferred, under which

the York Furnace properties were finally transferred to Hutchinson? A. Yes, sir.

MR. HALL: Mr. Examiner, may we have the agreement dated April 4, 1904, between Cary T. Hutchinson and George B. Willson and Wm. F. Beyer, marked for identification as Exhibit No. 207?

TRIAL EXAMINER: Yes, the document may be so marked.

(Thereupon, the document referred to was marked Exhibit No. 207 for Identification.)

• • •

[8457] Q. Mr. Gunn, I show you at this time an estimate of the cost of construction of McCall Ferry Power Company dated December 18, 1905, and prepared by Cary T. Hutchinson. Are you familiar with that document? A. Not at the moment. I believe I have seen it before. It was some years ago.

Q. This document was prepared after the transaction whereby Hutchinson transferred the lands to McCall Ferry through Susquehanna Power Company—right? A. Its date would indicate that.

• • •

[8458] (Thereupon, the document referred to was marked Exhibit No. 208 for Identification.)

• • •

[8460] By MR. HALL:

Q. Mr. Gunn, I show you a letter dated October 3, 1906, written by Cary T. Hutchinson, Chief Engineer, to J. W. Kirkland, Vice President and General Manager of McCall Ferry Power Company, and which letter was copied from file number 3951-12. Are you familiar with that letter? A. I can't tell you offhand without reading it, Mr. Hall. Do you wish me to read it?

I could say this much: It evidently having come from the company's files I was at one time familiar with it, I

believe. I can't state that is a fact without reading the letter, obviously.

• • •

(The document referred to was marked as Exhibit Number 209 for Identification.)

• • •

[8461] By Mr. Hall:

Q. Mr. Gunn, I show you at this time a letter signed by J. W. Kirkland, General Manager, and Cary T. Hutchinson, Chief Engineer, addressed to H. F. Dimock, President of McCall Ferry Power Company, which letter is dated May 8, 1907, and which was copied from company file number 3951-13. [8462] Did you consider that letter in connection with your original cost study?

• • •

The Witness: Yes, sir, I believe so. I believe that letter affords some of the support for statements made in Exhibit 26 which are not in Exhibit 27 but in the 15 filing cases.

By Mr. Hall:

Q. Mr. Gunn, in Exhibits 208 and 209 the Harlow-McGaw purchase is shown in an amount of $425,000, whereas in Exhibit 210 that purchase is shown in an amount of $435,000. What does the 10,000 difference represent, if you know? A. I don't know. As a matter of fact, neither of these exhibits seems to me to have very much significance because they are simply letters pulled out of context and the purpose for which they were written is not disclosed. We can only speculate as to what Hutchinson was asked for when he gave these letters.

Q. Doesn't the $10,000 difference that I referred to represent the $10,000 paid to Pullen? [8463] A. It may be. You can speculate that way, at least.

• • •

(The document referred to was marked for identification as Exhibit Number 210.)

* * *

[8464] Q. Mr. Gunn, have you included in the original cost claim an amount of $130.99 representing the difference between the petty cash funds reported on the books of McCall Ferry at July 17, 1909, and the amount turned over to J. E. Aldred, Receiver, as of that date?

* * *

[8465] THE WITNESS: I recall we included an amount of $130 and some odd cents. I don't remember whether it was 99 cents or not.

By MR. HALL:

Q. Do you have a record of the expenditures made which comprise the total of $130.99? A. It is undoubtedly in the company's books which have been available to the Commission staff for the last two-and-a-half years, but I don't have it before me.

Q. Do you know over what period the money was spent? A. No, sir, I don't recall.

Q. Are you sure of that, Mr. Gunn, that the details of this amount are in the books? A. Well, I don't know. I assume they kept books. I assume there are some books somewhere or the Commission staff wouldn't have discovered it. At least there are figures in the books from which you derive the difference. That is, of course, what we are talking about. Presumably the $130 disappeared somewhere.

* * *

[8468] Q. Have you included in Penn Water's claimed original cost two amounts, one of $21,341.94, and the other of $6,535.01 representing loss of inventories?

MR. KING: Mr. Hall, one of the figures to which you referred in your question was $6,535.01. Is that right?

MR. HALL: Yes.

• • •

MR. KING: I would like to state that that is an item which, on advice of counsel, the company now agrees to eliminate.

MR. HALL: That statement, I take it, does not apply to the amount of $21,341.94?

MR. HALL: Mr. Gunn, please consider my question as now relating only to the $21,341.94.

THE WITNESS: Yes, sir. I am doing that.

• • •

THE WITNESS: It is my understanding, Mr. Hall, that we have not claimed that amount, but we have claimed approximately [8469] $13,000 of it. The difference between the two figures, as I understand it, is because of some accounting adjustment. The $13,000 we have claimed is made up of miscellaneous loss of materials and supplies, amounting to $4,062, and a write-down in the value of cement due to spoilage of $8,970. The total of those two is approximately $13,000.

By MR. HALL:

Q. Would you explain in just a little more detail, Mr. Gunn, what the two amounts of $4,062 and $8,970 represent?

• • •

[8470] THE WITNESS: • • • If I may attempt to clarify it this way, Mr. Hall: I do not recognize the figure of $21,341.94. However, the company did, in its original claim, have an amount of 19 thousand and some odd dollars, I believe. As company counsel just stated, the company was conceding $6,535.01, of that $19,635.01, which reduces the company's claim to about $13,000.

Now, the figures which make up the $13,000 are a miscellaneous loss of supplies unaccounted for in an inventory, details of which I don't have before me, amounting to

$4,062, together with an amount of $8,970 which represents the write-down in the value of cement due to spoilage.

By MR. HALL:

Q. Mr. Gunn, is this the fact: That the $21,341.94 represents the difference between the inventory of $35,019.16 on the McCall Ferry books at July 17, 1909, and the lesser amount of inventory subsequently entered on the books of the receiver and Penn Water after the receiver made the adjustments?

* * *

THE WITNESS: I can't answer, Mr. Hall, for the reason [8471] I don't know. It is my understanding that after Penn Water finally made all of their accounting adjustments incidental to this transaction that they wound up with an amount of about $13,000 with respect to this item, that amount being made up of the two items I described.

TRIAL EXAMINER: Where is counsel getting these figures?

MR. HALL: I got my figures from the working papers of the Commission's accountant, Mr. Examiner.

TRIAL EXAMINER: They can't be related to any——

MR. GOLDBERG: Can not be related to any document in evidence, if that is what you mean.

TRIAL EXAMINER: Or any document marked for identification.

MR. HALL: That is right.

MR. GOLDBERG: I might add this, for the sake of clarification, Mr. Examiner: Mr. Newlands' analysis is an analysis of the company's books. The figures we are discussing not being on the company's books would not be reflected in his analysis which is carried through in Exhibit '51. It is an amount which the company added on, and we would have to go into their

working papers to get the details. They didn't spread it out any place.

By Mr. HALL:

Q. Mr. Gunn, do you know the details of the amount of $4,062, which represents miscellaneous loss of supplies? [8472] A. I do not have that before me.

Q. Do you have any details concerning the amount of $8,970 to which you referred? A. There were no details back of that. It was just simply a loss of cement due to spoilage. I have no more details than are set forth, I believe, in Exhibit 51. At least I don't have any more before me at the moment.

Q. Do you have the details of the inventory comprising the amount of $35,019.16? A. Not before me, no.

Q. Are they available to you through any of your assistants? A. No, sir. All the details back of that item were in the company's records at Baltimore and I don't know offhand just what the nature of the detail is.

Q. Mr. Gunn, isn't it a fact there is no inventory of the McCall Ferry materials and supplies at July 17, 1909? A. As I said, I don't know. What information there is concerning that item is in the company's records and has been available to the Commission staff for the last two-and-a-half years, so presumably they know. I don't recall.

Q. I am advised, Mr. Gunn, there is none. Do you agree? A. I will have to, not knowing myself whether or not there are any.

[8473] Q. Mr. Gunn, is it your understanding that the loss in inventories which you have capitalized is entirely due to deterioration during the period of cessation? A. No. I think most of the cement spoilage may have been due to that, but the loss of inventory, I don't know when that occurred. Presumably that was an accumulative figure, that is the miscellaneous loss of inventory represented by the $4,062.

I could say this, Mr. Hall: For a project of that size, the total of the figure, whether it be 4,000, 6,000, 19,000,

21,000 or 36,000, is an astonishingly small loss for a project of that magnitude. I have been through several construction projects and I never have come through with as small a loss as that in my experience.

Q. Are you familiar with the inventory prepared by C. B. Vorce on December 31, 1908? A. No, I am not personally familiar with it. I don't recall ever having looked at it in detail.

Q. Do you know how many barrels of cement McCall Ferry had on hand on July 8, 1909? A. It seems to me it was around eight or nine thousand.

Q. Mr. Gunn, I show you a letter dated July 8, 1909, written by J. W. Young to J. E. Aldred, which was copied from J. E. Aldred, Receiver file number 9, and I refer you specifically to the third paragraph from the bottom of page 2.

[8474] Does that help to refresh your recollection as to the amount of cement on hand as of July 8, 1909?

* * *

THE WITNESS: Yes, it would appear from that paragraph on that date there were 30,000 barrels of cement on hand. I believe the figure of eight or nine thousand I mentioned was probably the part of that 30,000 barrels which had undergone deterioration, perhaps.

By MR. HALL:

Q. How many barrels of cement did the receiver set up on his records? A. I don't recall.

Q. My information is 7,851½ barrels of Giant and Atlas Cement.

Does that help you refresh your recollection? A. Yes, sir, I believe that is correct, Mr. Hall.

TRIAL EXAMINER: Upon what is your belief based?

THE WITNESS: Based upon Mr. Hall's question and upon a working paper shown to me by one of my assistants. The two figures agree, the one Mr. Hall used and the one shown me from the company's records.

TRIAL EXAMINER: When you say that letter of July 8, 1909, refreshed your recollection, is that the source of your previous information as to how many barrels were on hand?

[8475] THE WITNESS: One source of certain information, Mr. Examiner, but this situation about the cement as it came over from McCall Ferry to the receiver and on to Pennsylvania Water and Power Company is extremely confused. We have never been able to get together enough information to tell precisely what did happen to all the cement.

The question Mr. Hall asked me was did this letter refresh my recollection as to how much cement was on hand on July 8, 1909. The letter is a letter written by Mr. J. W. Young, who was Vice President of McCall Ferry Power Company to Mr. Aldred, and which states that there are at present approximately 30,000 barrels of cement made up of——

TRIAL EXAMINER: Actually your recollection was not refreshed at all. You are accepting the letter's statement; is that right?

THE WITNESS: I think that is correct, sir. As a matter of fact, that is all I can do with any of these things related to original cost, simply accept what can be deduced from the documents. I have no first-hand information on any of it, of which this document is one which enters into the cement confusion.

TRIAL EXAMINER: Well, the cement confusion is based upon the absence of accurate records and the existence of conflicting data as to the actual number of barrels on hand; isn't that so?

THE WITNESS: Yes, sir, I think that is a correct statement.

[8476] TRIAL EXAMINER: The number of barrels on hand as being 30,000, you do not know whether or not there were 30,000?

THE WITNESS: No, I don't know any more than what Mr. Young states.

TRIAL EXAMINER: You do know there are figures which conflict with the 30,000.

THE WITNESS: Yes, sir, I know that.

TRIAL EXAMINER: And those figures are to be found in other correspondence or records of McCall Ferry Power Company which Pennsylvania Water and Power Company now has.

THE WITNESS: Yes, sir. It is from those other records that the seven thousand-odd dollars entered on the Receiver's books were taken.

TRIAL EXAMINER: Do you remember whether you ever used the figure 30,000 for any purpose at all?

THE WITNESS: No, sir. I never used either one of the figures for any significant purpose. Whatever the cement cost was was reflected in the McCall Ferry cement cost and that was the end of it. I did not concern myself with how many barrels more or less there were.

By MR. HALL:

Q. Are we to understand you did not use the available data, Mr. Gunn, as to the amount of cement on hand in reaching the amount of $13,032 which you now claim? A. No, I believe I used the records of the Receiver in [8477] reaching that amount. It is true that in those records barrels of cement are mentioned, but as I recall it it is not 30,000 barrels mentioned but 7,000 barrels.

Q. What happened to the difference between the 7,851 and a half barrels of cement set up by the Receiver in his records and the 30,000 barrels of cement reported by Mr. Young in his letter? A. I have no idea.

Q. Didn't you try to account for that difference in reaching your conclusions as to the amount to be included in your claimed cost? A. No, there was no occasion for me to do that, Mr. Hall. I was not attempting to bring a

case against somebody having stolen the cement. I was just attempting to find the original cost, and therefore it was of no particular moment. If there were 30,000 barrels on hand, then those 30,000 barrels were reflected in McCall Ferry costs. If there weren't 30,000 barrels on hand then it didn't make any difference.

Q. Mr. Gunn, I show you a letter written by Mr. J. A. Walls, Chief Engineer, to Mr. C. E. F. Clark, Treasurer of Pennsylvania Water and Power Company, which is dated September 9, 1910?

Did you consider the information on the second page of that letter in arriving at your claimed cost? A. You mean that information relating to the barrels of [8478] cement?

Q. Yes. A. No, as I said, there was no necessity for my going into the barrels of cement other than as they were recorded on the books. Mr. Walls wrote this letter at a time when he knew what had been rec rded on the books, and I assumed he had all the facts. If you want me to read the letter and go into that I will be glad to.

* * *

[8479] By Mr. Hall:

Q. Isn't there a notation on the letter that the 7,000 should be 27,000? A. No, sir. There is a notation on the letter which states as follows:

"Apparently this should read 27,000." The initials appearing under that are R. W. C. and that note is dated October 3, 1944. That is a note of Mr. Chase.

Q. Do I understand you did not agree with Mr. Chase in that respect? A. I don't agree or disagree with him. I am simply saying that note you find on the piece of paper is not a note put there by Mr. Walls in 1910 but a note put there by Mr. Chase in 1944, and it is speculation of Mr. Chase's, as is evident from the beginning of the sentence with the word "apparently."

Q. Mr. Gunn, I show you at this time an eight-line letter which Mr. Walls wrote to C. E. F. Clarke, Treasurer

of Pennsylvania Water and Power Company, on September 8, 1910. Does that assist you in determining the amount of cement on hand as of that date?

* * *

[8482] By MR. HALL:

Q. Was any of that Union Cement, Mr. Gunn? A. I don't recall whether or not it was. I should say there were 75 or 100 thousand barrels bought during that time.

Q. Don't you know none of that was Union cement? A. No, I don't know what sort of cement it was.

MR. HALL: Mr. Examiner, may we have marked for identification as Exhibit 211, the letter dated September 8, 1910, written by Mr. J. A. Walls, Chief Engineer, to Mr. C. E. F. Clarke, Treasurer, Pennsylvania Water and Power Company?

TRIAL EXAMINER: Yes, the document may be so marked.

(Thereupon, the document referred to was marked Exhibit No. 211 for Identification.)

* * *

[8483] MR. HALL: Mr. Examiner, may we also have marked for identification as Exhibit No. 212 the letter dated September 9, 1910, written by Mr. J. A. Walls, Chief Engineer, to Mr. C. E. F. Clarke, Treasurer, Pennsylvania Water and Power Company?

TRIAL EXAMINER: Yes, the document may be so marked.

(Thereupon, the document referred to was marked Exhibit No. 212 for Identification.)

* * *

[8484] By MR. HALL:

Q. Was there any construction work going on at McCall Ferry during the period December 31, 1908, to July 8, 1909, which required the use of cement, Mr. Gunn? A. No.

Q. Was there any construction work going on during the period between July 8, 1909 and September, 1909, which required the use of cement? A. At the beginning or the end of September?

Q. The beginning. A. I can't state with certainty, Mr. Hall, but I suspect there was because Empire Engineering resumed construction about the middle of August 1909, and among their first work it required the placing of concrete and therefore the use of cement. Just how much they would have used during that period I couldn't say.

Q. Do you think they would have used as much as 23,000 barrels? A. No, I shouldn't think they would use that much.

Q. Just how much do you think they would have used? A. I don't know, but I wouldn't expect them to use that large an amount.

Q. Mr. Gunn, can you account for the 30,000 recorded by Mr. Young on July 8, 1909, and the 7,851-½ barrels set up by the receiver on September 29, 1909? [8485] A. I don't know whether I could or not. I never undertook to do that, Mr. Hall, because, as I said, it had no significance whatever in the determination of original cost.

* * *

[8518] MR. KING: May I interrupt you, Mr. Hall?

MR. HALL: Yes.

MR. KING: You asked me at the conclusion of yesterday's hearing at page 8516 as to the status of the request you had theretofore made at page 7579 of the transcript.

MR. HALL: Yes.

MR. KING: That request was for us to produce the documents attached to Mr. Fisk's affidavit and bearing his initials.

I herewith hand you those documents.

* * *

[8537] By Mr. Hall:

Q. Mr. Gunn, is the purpose of flashboards on the Holtwood dam to increase the head? A. Yes, sir, under certain circumstances, and decrease it under other circumstances.

Q. What benefit does Penn Water derive from the use of flashboards on the Holtwood dam? A. A greater head on the Holtwood dam.

Q. Will you explain what a greater head means in way of benefit to Penn Water? [8538] A. It makes it possible under certain circumstances for Penn Water to generate more power.

Q. And more power means more income to Penn Water—right? A. Depends on the contract under which Penn Water sells its output. Presently it means less.

Q. Will you describe the present flashboard arrangement on the Holtwood dam? A. The flashboard presently used on the Holtwood dam is supported by various combinations of single pipes and pipes within pipes for the purpose of creating under certain circumstances a maximum increase in head on a Holtwood plant of 4 foot 9 inches. The flashboards are made up in sections 3 feet high and one foot 9 inches high, and when there is a total height of 4 foot 9 inch flashboards on the dam, the combination of pins used to support them are such that they will collapse at a stream flow of about 70,000 cubic feet per second over the dam.

When it is possible to foresee a high flow coming it is the company's practice to remove the upper one foot 9 inches, thus leaving three-foot flashboards on the dam, and they collapse at a much greater flow over the dam. The reason for that maneuver is to save both the lower 3 foot of flashboards, the pins supporting them, and to gain the advantage for the maximum length of time of the 3 foot [8539] additional head created by those flashboards on the plant.

Q. So that the flashboards remain on the dam until destroyed—right? A. Except for the upper 1 foot 9 inches which are removed when it is possible to predict with sufficient accuracy increases of flood of a certain magnitude. That is one of the reasons why it is so necessary for the company to have the best available information on what the floods will be.

Q. How long has Penn Water utilized flashboards on the dam? A. You mean the present flashboards?

Q. No. A. Flashboards of any sort?

Q. Yes. Weren't they originally installed in 1911? A. Yes, sir, they began experimenting. As a matter of fact, they started in July of 1911 drilling holes for the flashboard sockets and that was on July 26. On July 31, one of the landowners on the reservoir got an injunction against the company against using flashboards and it was not until August 26 that that injunction was dissolved.

Then they put up some flashboards with solid pins under them and I believe in about 1914 or some time about then they got in trouble with another court proceeding and had to take the flashboard down again. There have been court [8540] proceedings and flashboards ever since.

Q. What was the cost of the initial flashboard installation in 1911? A. I don't recall.

Q. Do you know whether or not that initial expenditure was charged to the plant account on the books? A. I believe it was. It should have been, at least.

Q. Have any subseqnent expenditures in connection with flashboards been charged to the plant account on the books?

* * *

THE WITNESS: Yes, sir, a very substantial amount of experimentation has been charged since that date, including the investigation of the roller dam we discussed the other day and some rather extensive pioneering development work in developing the form of support for flashboards which would give a result equally satisfactory to the

landowners around the reservoir and the Pennsylvania Water and Power Resources Board.

Q. Pennsylvania Water and Power Resources Board? A. What I mean to say, Mr. Hall, was the Water and Power Resources Board of the State of Pennsylvania.

Q. Will you describe the support which was finally developed? A. The support which was finally developed varies with [8541] the combination of boards that are on the dam, but when 4 foot 9 inch boards are on, alternate supports, as I recall, are single seamless tubes, the specifications for which I don't recall offhand, that is the specification as to the size of wall thickness. Between each one of those single tubes is a support consisting of two tubes, one inside the other and welded together. I don't remember the precise specification for those tubes.

However, that is the combination which gives the most certain failure of the flashboards and thus lays the company liable to the least trouble with the landowners as a result of backwater in case of high flow.

The reason for using the tubes was the outcome of extensive investigations on the part of the company, and the establishment of the fact that a seamless tube, or a tube of any sort, when it fails will fail most completely of any other structural section, and thus will most completely relieve the crest of the dam from any obstruction to the continuing increase in the flow of the river.

Q. Is that the chief change made in the flashboards? A. You mean during this period of years?

Q. Yes. A. Well, in flashboards as such, I believe, but during that period of years the company tried flashboards supported by pins, they investigated the use of a roller dam [8542] on top of the present dam, they used what they call butterfly gates which were some flashboards hinged by the ends and supported on permanent pins, and then after that they used flashboards of the present collapsible type supported by solid steel pins which were machined at the point on the pin which rested at the top of the

sockets with the hope that that would bring about a predeterminable failure, and then in about 1921 the company finally developed the combination of seamless tube and pipe then available which would make practicable the present type of flashboards.

Q. So the principal change has been in the support used for the flashboards? A. No, I wouldn't say so, Mr. Hall.

First we attempted to use a collapsible type of flashboard. Then the company investigated the use of a roller dam. That was a very great change. From the roller dam they progressed to the idea of butterfly gates, which bears no similarity at all to present flashboards. Then from the butterfly gates they finally developed the present flashboard. So the change has been very radical and very wide.

Q. As far as the flashboards actually tried out, the principal change always has been in the support, in the type of support? A. What do you mean by "flashboards" in that question, Mr. Hall?

[8543] Q. The same thing which was initially installed. A. Does your definition of "flashboards" include the butterfly gates, for example?

Q. Did they install the butterfly gates? A. Certainly.

Q. Then it would include the butterfly gates.

THE WITNESS: Now may I have the question?

(Question read.)

THE WITNESS: The answer to that question is No.

By MR. HALL:

Q. Are the pins presently in use destroyed every time the flashboards go out? A. Only half-destroyed ordinarily. What happens is that the pins are about 6 or 6½ feet long, and there are about 12, 14 or 16 inches of them in the sockets. When the flashboards fail that 12, 14, or 16 inches bend to at least a 90 degree angle or more. Then

when the flashboards are reinstalled the other end of the pin is stuck in the socket and it bends again on the other end. So with each failure of the flashboards I guess you would say the pin is a half of the failure.

Q. In other words, the pins are used twice. A. Yes, sir.

Q. What other important improvements, other than the support, exists in the present flashboard over the flashboard [8544] installation made in 1911 and 1912? A. I don't recall precisely what the details of the 1911 and 1912 flashboards were, Mr. Hall. Therefore I couldn't answer that question.

Q. Have turbine units numbers 6 to 10 been designed to make use of the additional head obtained by the use of the flashboards? A. Yes, I think that is right. I think all the turbines have been designed to make use of it. In any event they are making use of it, designed or not designed.

Q. Were the first five units designed for the use of increased head through the use of flashboards? A. Certainly. We are using them, aren't we, for increased head? Therefore it proves they were designed for it, no matter what may have been in the mind of the designer. That is only of academic interest.

Q. Did you capitalize the renewal of flashboards during the year 1945? A. Not so far as I know. If we did it was an error.

Q. You charged them to operating expenses. A. Surely. It is my understanding we have charged them to operating expenses ever since 1921.

Q. How much did Penn Water spend for flashboard renewal made in 1945? A. I don't know offhand, Mr. Hall. The company's [8545] operating statement would show it but I don't have it before me.

Q. Mr. Gunn, would you please describe briefly the fish-ways which are constructed at Holtwood? A. Which fish-ways?

Q. Both shores, on the York shore and the one on the Lancaster shore. A. I take it you mean which were constructed.

Q. Yes. A. Well, the outstanding feature of the design is that none of them ever worked. But the one on the east shore was a winding concrete structure from the east shore bulkhead down to the tailrace which had wooden baffles in it, and to which water could be admitted so as to make in effect a series of steps, and it was supposed, by the fishermen and the Pennsylvania Fish Commission, that the shad would jump from one step to another, or, so to speak, they would jump up the stairs, but they didn't do it. Then the fishermen supposed we ought to have another fish ladder. We went to the remaining shore, the west shore, and cut a channel down through the rock over on the hillside and built a concrete wall between that and allowed water to flow from the upstream side of the dam down through this rough rock channel we cut, and again the fishermen and the Fish Commission thought the shad would walk up that, but they didn't. So that is about all there is to the fishway.

[8546] Incidentally, all the fishways were installed as a result of the injunction brought against McCall Ferry Power Company, the decision on which specified two things: 1, that the company should install fishways satisfactory to the Pennsylvania Fish Commission and fishways that the fish would use. The company installed fishways satisfactory to the Fish Commission but they never succeeded in making the fish use them.

Q. In other words, the fishways are not in use at the present time. A. The fishways never were in use by the fish at least. They only satisfied the Court order. That they did in complete fashion, I understand.

Q. And so far as you know they never will be used in the future—right? A. You mean for the fish?

Q. As fishways. A. No, Conowingo built a dam down below and cut the shad off. In lieu of building any

more of those fishways that the fish wouldn't use, Conowingo, and I know Safe Harbor, worked out an arrangement with the Pennsylvania Fish Commission whereby they would pay an annual amount each year in perpetuity for stocking the pond so that the fishermen would have fish.

MR. KING: May I point out to your Honor that the order of the Court the witness has just referred to is Part 35 of Exhibit 27?

[8547] By MR. HALL:

Q. Do you know the total cost of those fishways? A. I don't know.

Q. Was it $64,000? A. That sounds like about the right figure.

Q. In what account have you classified the $64,004.61?

• • •

THE WITNESS: As I recall, Mr. Hall, it was classified in Account 302, but that was a rather difficult conclusion to reach because it seemed to me you could put it in 303 just as well.

By MR. HALL:

Q. How about 322, Reservoir, Dams and Waterways? A. No, I don't think you ought to put it there at all.

Q. Why not? A. The reason is that it was compliance with the Court order and was a condition precedent to permit us to build the dam. It is a franchise or intangible. It is nothing physical, certainly.

Q. Wasn't the entire dam in compliance with Court order? A. No. All the Court order specified was that as a condition precedent to building the dam we had to provide one of these things for the fish to walk over.

[8548] Q. So that the construction of the whole dam had to comply with the order of the Court—right? A. No, sir, the Court had nothing to do with the construction of the dam except to make the fishway a condition precedent to it.

Q. Will you refer to page 62 of the system of accounts, Mr. Gunn, particularly to Account 322? A. Yes, sir.

Q. Certain numbered items are there listed? A. Yes, sir.

Q. Do you know why those items are so listed? A. As indicative of the scope of the account, I suppose.

Q. Would you look at item number 3? A. Yes, sir.

Q. Do the fishways come under the word "Fish Ladders"? A. Not these fish ladders.

Q. Why not? A. Because these fishways are intangible and were installed as a condition precedent to building the dam under a franchise right, or of that character. They are certainly not physical property as that contemplates.

If the fishways had been used for the fish and the company was still maintaining them and they were performing as [8549] good a function as the fishways at Bonneville are said to perform, then you can put them in Account 322. But these are not that sort of fishways. The fish wouldn't use them and therefore they are intangible costs, costs made necessary to acquire the company's right to build the dam.

Q. Are you saying that they became intangible because of non-use by the fish? A. No, because of the Court order.

Q. Did the Court order the fish not to use those fishways? A. The Court ordered the fish to use it but the fish wouldn't do it.

* * *

By Mr. Hall:

Q. Do you have Exhibit 25 before you, Mr. Gunn? A. Yes, sir.

[8550] Q. Isn't the entire amount of the fishways shown in Account 302 in the amount of $64,004.61? A. Yes, sir, I understand that is correct. In other words, the only cost of the whole Holtwood project in the nature of franchises and consents was the fishway.

Q. Would you please identify Mr. Bushong for the record? A. Mr. Bushong was for many years Pennsylvania Water and Power Company's land agent or, I believe, Mr. Bortner's predecessor.

Q. What was Mr. Bushong by profession? A. I really don't know, Mr. Hall. I knew very little about Mr. Bushong. As a matter of fact, I don't recall that I ever met the gentleman.

Q. What had been Mr. Bushong's experience before joining Penn Water? A. I don't know.

Q. What were the exact duties of Mr. Bushong and his activities in connection with Penn Water? A. I don't know. All I know is that his duties were in connection with the acquisition of land.

Q. Where was Mr. Bushong located while in the employ of Penn Water? A. In Lancaster, or in the vicinity of Lancaster, I understand.

Q. What was the nature of the promotion work Mr. Bushong [8551] did for Holtwood Power Company? A. Mr. Bushong was given the responsibility of setting up a plan of procedure in respect to the corporate organization and status of the company to have the chartered powers of producing steam generated energy, it being understood that the company would be subsidiary to Pennsylvania Water and Power Company. This, I believe, was in the early part of 1924. Mr. Bushong, with the assistance of Mr. Malone and others, prepared such a plan and gave consideration to the type of contract which would be entered into between the new company and Penn Water. He followed through the organization of the company and obtained such approvals as were necessary from the Pennsylvania Public Service Commission.

Mr. Zimmerman assisted Mr. Bushong in Mr. Malone's place while Mr. Malone was absent from Lancaster.

Q. What is your last answer based upon, Mr. Gunn? A. Based upon information given to me by Mr. Bortner.

By Mr. Hall:

Q. What do you mean, Mr. Gunn, when you say Mr. Bushong obtained the approval from the Pennsylvania Commission? A. All the approvals that were necessary in connection with the setting up of Holtwood Power Company.

Q. Precisely what did he do? [8552] A. I can't enumerate all of the details of what he did. I don't have that information.

Q. Can't you give us some of the details?

* * *

The Witness: Well, for one thing they had to obtain from the State of Pennsylvania a charter for the company. Another thing, they had to obtain from the Public Service Commission of Pennsylvania what I believe they call a certificate of public convenience or something, in any event, the right for a public utility to do business in the State of Pennsylvania.

Q. Aren't those duties usually performed by attorneys? A. Well, Mr. Malone was an attorney and Mr. Zimmerman was an attorney, and they both worked with Mr. Bushong.

Q. What did Mr. Bushong do in connection with the obtaining of a certificate of convenience and necessity and the charter? A. Did just what I said he did, and that is about all I know about it.

Q. What do you mean when you say Mr. Bushong obtained a charter and the certificate of convenience and necessity? A. I mean that he, together with the lawyers, obtained it. That is all I know.

Q. By what process did Mr. Bushong obtain it? A. I don't know. The same way I would, I guess, if I [8553] undertook to do it—go up and ask them for it.

Q. What would you do in that connection? A. I would go up and tell the Public Service Commission what I wanted to do and ask them for a certificate.

Q. Did Bushong do that? A. I don't know. I suppose he did. They must have gotten that idea across to him somehow.

Q. Why didn't the lawyers, Mr. Malone and Mr. Zimmerman, do that? A. Don't ask me. I don't know.

Q. Had Mr. Bushong ever held any political office in Pennsylvania? A. I don't know.

Q. As a matter of fact, you don't know exactly what Mr. Bushong did do, isn't that so? A. That is what I told you when you started on this line of cross-examination.

Q. Did Mr. Bushong prepare the charter? A. I don't know.

Q. Did he prepare the application for a certificate of convenience and necessity? A. As a matter of fact, I don't know. I never saw either one of those documents. I assume he did, or assisted in it, certainly.

Q. When did Mr. Bushong first come into the employ of [8554] Penn Water? A. About 1912. At that time I believe he was more or less serving in a minor capacity performing certain functions in connection with the acquisition of lands.

If you recall, he first worked for a while, I believe, with Penn Water, and then when it was decided that the Lancaster Company would build a 25-cycle line from Holtwood to Lancaster I believe he worked for the Lancaster Company in connection with the acquisition of the right of way for that land. Then at some later date, I don't remember just when, he came back into the employ of Penn Water.

Q. Did Penn Water have an office in Lancaster? A. When?

Q. During the time Mr. Bushong was employed? A. Part of the time they did, I understand.

Q. Where was it located? Do you know? A. It was in the Woolworth Building for a considerable period of time.

Q. Was that office listed under the name of Penn Water? A. What do you mean by "listed," Mr. Hall?

Q. Was it listed in the telephone directory; was it listed on the door? A. I understand it was listed both ways, in the telephone directory as Pennsylvania Water and Power Company, and I [8555] think on the door Mr. Bushong's name appeared.

Q. How many employees did Penn Water have in Lancaster besides Bushong? A. I don't know.

Q. Did they have any? A. I think they did.

Q. Who were they? A. I think there was a stenographer or a clerk or so, or something like that. I really don't know very much about that, Mr. Hall.

Q. Did Mr. Bushong or Penn Water keep any record of Mr. Bushong's activities for the Holtwood Power Company, including the time spent and the services performed?

* * *

THE WITNESS: Well, so far as I know neither one of them ever kept a log of precisely how Mr. Bushong disposed of his time, but the records of Penn Water, of course, show the results of Mr. Bushong's work. It is my understanding that considerable information has been given to the Commission Staff in that connection by Mr. Bortner as compiled from the company's land records and from the company's files and from various other sources of information.

By MR. HALL:

Q. Over what period of time did Mr. Bushong perform his services for the Holtwood Power Company?

* * *

[8556] THE WITNESS: His services began in the latter part of 1923, I believe, and continued up through the organization of the company. I don't remember just what date that was.

By MR. HALL:

Q. What period of time did the charges cover? A. A period the duration of which I do not know, Mr. Hall. But as the company is now claiming the charges they were

all prior to August 16, 1925. If you will refer to Exhibit 204 and to Item 22 you will find that the company is now conceding, on advice of counsel, an amount of $5,267.41 which represents payments and costs in connection with Bushong's services on the steam station which were incurred after August 16, 1925.

Q. Do you know what the amount of $5,267.41 represents? A. It is my understanding that it represents Bushong's salary and his office expenses.

Q. When? A. After August 16, 1925.

Q. What activities was he performing as a result of which this $5,267.41 was incurred? A. I really don't know. It doesn't seem to me it is of very much significance. We are not including it in the cost.

* * *

[8569] Q. When did Malone first become associated with Penn Water? A. About 1912, I understand.

Q. Do you have any record of services performed by Mr. Malone for Penn Water prior to 1924? A. Well, we have the company's files in which there is correspondence which indicates the character of some of the services, but I don't have any catalog of them, if that is what you are asking.

Q. Did Malone render an itemized statement to Penn Water of the work performed? A. I really don't know whether or not he did. If he did it has been available to the Commission Staff, attached to the [8570] voucher—available to the Commission Staff and attached to the voucher probably.

Q. Who made the distribution of Malone's retainer fee to the various operating expense and plant accounts during the years he was associated with the company as counsel? A. I don't know.

Q. Prior to 1924. A. I don't know, but I imagine it must have varied from time to time. By that I mean the person who made the distribution must have been

different from time to time during those years. But I really don't know.

Q. Does Penn Water have any records showing the basis of the distribution of Mr. Malone's salary prior to 1924? A. I really don't know whether they do or not. What the company has has been available to the Commission Staff for two and a half years.

Q. Will you accept my statement that you don't have that information? A. Yes, sir, if that is a fact I will accept it.

Q. Do you know whether or not it is a fact, Mr. Gunn? A. No, sir, I don't know whether or not it is a fact.

Q. Does Penn Water have any records showing the properties purchased by Mr. Malone, if any, and his fees associated therewith?

• • •

[8571] By Mr. Hall:

Q. What services did Simpson, Thacher and Bartlett perform for the one thousand dollar fee charges to Flowage Basin Account in 1915 on voucher No. 6892?

• • •

[8572] The Witness: I don't know, Mr. Hall. That is one of the more than 50,000 vouchers I haven't memorized, or at least don't remember now.

• • •

Q. Mr. Gunn, I show you voucher which was copied from a letter attached to Penn Water voucher No. 6892, December, 1915. The voucher is dated December 20, 1915. Does that serve to refresh your recollection?

• • •

[8573] The Witness: No, I can't say that it helps me, Mr. Hall.

By Mr. Hall:

Q. Do you recall why the one thousand dollars was charged to the flowage basin account? A. No. Naturally

I don't recall because I was not present when it was done. The reason it was left there was because in my determination—left there in my determination of original cost was because of the fact I believed the people who put it there knew more about it than I did, and I considered it to be attached to the legal services rendered in connection with that Woelpper injunction suit, and that was rather a complicated litigation which the company ultimately had to settle in order to obtain the right to use their flashboards.

Q. Didn't a Mr. Hensel, a local attorney, represent Penn Water in that case? A. I believe he was connected with it in a legal capacity at one time. So was Simpson, Thacher and Bartlett at one time, according to that bill you refreshed my recollection with.

Q. What part did Simpson, Thacher and Bartlett play in connection with the suit? A. I don't know any more than you see on that document, which is voucher number——

* * *

[8583] Q. Mr. Gunn, was Mr. Bushong a full-time employee of Penn Water? A. When?

Q. During the period that his charges are accrued in that period we were discussing this morning. A. We discussed all sorts of periods this morning.

Q. During the period that his expenses were claimed as part of Holtwood Power Company cost? A. I believe he was.

Q. How about 1911 to 1924? Was Mr. Bushong a full-time employee of Penn Water? A. I really don't know. There was a part of that time when he was not an employee at all, of course, that [8584] being the time he was working for the Lancaster Company on the purchase of the right of way for that 25-cycle transmission line. I really don't know what his status and basis of employment was during that period. I have the impression it varied from time to time.

* * *

[8590] Q. What services did Simpson, Thacher and Bartlett render in connection with the charge of $3,975.53 to flowage basin in 1923?

• • •

[8591] THE WITNESS: I don't recall the transaction, Mr. Hall.

• • •

[8595] Q. Mr. Gunn, what was the nature of the river observations made by Penn Water during the period from 1911 to 1924 and charged to the flowage basin account? A. They were made in connection with the establishment of rating curves and water surface profiles for backwater data. These studies became basic original data useful in the acquisition of properties and also in the operation of the plant. The data required could be obtained only by checking up on the Susquehanna River and its tributaries in the Holtwood area under varying flow conditions. This probably led to the use of the title "River Observation" which, in my opinion, does not properly describe the work performed.

Q. What title did you use, Mr. Gunn? A. Did I use?

Q. Yes. A. I didn't have any occasion to use any title at all. I simply described what the work was.

Q. How would you describe the work? A. Just the way I finished describing it.

[8596] Q. What title would you substitute for river observations? A. If I would substitute one I would substitute the description I gave you. I don't see any reason for characterizing it so long as you know what it is.

Q. Does Penn Water have a record of the nature of each river observation, the date the observation was made, and the purpose of the observation? A. I really don't know. I haven't had any occasion to determine whether they have that record or not. They have the results of all the observations, but as to the date on which they were made and those details I don't know whether or not they have them.

Q. Do you have the costs associated with those river observations? A. Yes, sir.

Q. With each observation? A. No, certainly not. I have the total cost of them.

Q. How did the observations aid in the operation of the Holtwood plant? A. It gave the company knowledge of what would be the consequences of not doing enough experimenting to be able to predict with certainty the point at which the flashboards would fail, and thus avoid becoming entangled with the landowners and get more lawsuits on their hands. It goes back to the [8597] simple justification for doing the experimental work they did in connection with the flashboards we covered this morning.

Q. What was the nature of the work done by the persons whose time and expenses were charged to flowage basin sub-account 6, 6-E, and 6-L during the period from 1911 to 1924? A. Mr. Hall, are you referring to the Item 3 on Exhibit 204, or are you referring to something else?

Q. That is the item, Mr. Gunn. A. That item covers an allocation of engineering salaries and expense and the portion charged to the flowage basin account represents engineering work related to property acquisitions. I believe that in general it covers property survey, topographic surveys, setting of monuments on property corners, making of record drawings, studies for the relocation of roads and bridges, establishment of permanent bench marks, and other engineering field work.

Q. You stated that you believed it represented those various things. Do you know it to be a fact that the charge does represent those things? A. Yes, I believe it can be established with certainty.

Q. Do you know it to be a fact? A. Have I personally investigated it?

Q. Yes. A. No, sir. Mr. Bortner did that. I couldn't do everything personally, Mr. Hall.

[8598] Q. Do you have the cost associated with the various items you mentioned? A. No. As a matter of fact, it

would be impossible to keep the cost that way, even for an accountant to do it.

• • •

By Mr. Hall:

Q. Does Penn Water have time slips and other payroll data showing the amount of time spent by each of the persons whose salary is charged to the flowage basin sub-account 6 and 6-L, the nature of the work performed and the expenses [8599] associated therewith? A. No.

Q. Has the company been able to segregate any specific charges to sub-accounts 6, 6-E and 6-L, or the associated accounts 6-N, 6-O and 6-P, as representing the cost of surveying specific properties? A. No.

Q. Has the company made an investigation to determine when each property was first surveyed and the date and extent of the subsequent surveys?

• • •

The Witness: I don't believe I understand your question, Mr. Hall. Could you break it down into two pieces? I don't understand the first-surveyed and second-surveyed business you have in the question.

By Mr. Hall:

Q. Has the property been surveyed more than once? A. I really don't know. Mr. Bortner is responsible for that work and he would have to supply that detail.

Q. Mr. Gunn, when you mentioned a while ago topographical surveys what did that cover? A. Covered just that, topographical survey.

Trial Examiner: That is to determine the water levels at various stages, in other words, to determine what the outline [8600] of the basin would be at various stages.

The Witness: Yes.

• • •

By Mr. Hall:

Q. Mr. Gunn, did Penn Water bring suit against the Susquehanna Power Company in 1925 in connection with the plans of the Susquehanna Power Company to build a dam at Conowingo on the Susquehanna River? A. Well, there was a suit. I don't recall who brought it.

Q. What was the nature of the controversy between the two companies? A. The Conowingo Company was attempting to infringe Penn Water's water power rights.

Q. In what respect? A. By flooding them into the Penn Water's tailrace.

Q. How was that controversy settled? A. It was settled as a result of Penn Water's having established the validity of their water power rights, and as [8601] a result of that the litigation was set aside or held in abeyance or something and Penn Water entered—and Penn Water and Susquehanna Power Company entered into an agreement whereby Susquehanna Power Company would flood back into the Holtwood Company's tailrace to the elevation 108, I believe, 108.5.

Q. Did Penn Water give up any of its land or flowage rights or claim to land or flowage rights to Susquehanna Power Company or its associates in that settlement?

* * *

The Witness: No, I don't think you could properly say they gave up any. I think you might say they leased them to the Conowingo Company. I believe that would be a more proper description of the transaction.

By Mr. Hall:

Q. As far as claims for land is concerned, a status quo was maintained for the term of the contract—right?

* * *

[8602] The Witness: What do you mean by "status quo"? I don't understand the question in the first place.

By Mr. Hall:

Q. No one transferred any lands or no one gave up any rights? A. Penn Water did just what I said. They leased their water power rights to Conowingo Company. At least that is my understanding of the transaction.

Q. Did Penn Water incur any expense in connection with the controversy with Susquehanna Power Company? A. Yes, they incurred some expense in defending the [8603] validity of their ownership to the water power rights.

Q. What was the total amount of that expense? A. $39,301.46.

Q. Where was that amount charged on the books? A. Flowage basin account, I am told.

Q. In what account have you reclassified this expenditure in your original cost claim? A. It was reclassified in the original cost study to Account 303, miscellaneous intangibles.

Q. Why did you include the expenditure in Account 303? A. It was rather a hazy item and it seemed to me that it might as well be put there as any other place. I have no brief for it. It doesn't seem to me to make any difference whether you put it there or in some other account. My only concern is that you leave it in the capital investment.

* * *

[8607] By Mr. Hall:

Q. What was the character and scope of the work performed by Penn Water during the years 1929 to 1932 under your Job Order C-791, extension of triangulation system, Mr. Gunn?

* * *

The Witness: That work, that is the extension of the triangulation system, and that job to which you referred, Mr. Hall, was one of two jobs, the other being job order C-970, and being entitled "Property Ties to Triangulation System."

Mr. Bortner was sponsor engineer on these jobs and is familiar with the costs incurred. I have discussed these matters with him and have some knowledge of installing a permanent triangulation system and connecting thereto all of the isolated property surveys. It is common practice to establish a base network where property surveys of several [8608] properties are to be made over a large area. Such a system exists in the Safe Harbor development and is included as a part of the original cost of that project. The triangulation system established at Holtwood is a permanent system and the control points consist of brass plugs set in rock or pipes set in concrete. By connecting independent property surveys to the system the geographic relationship of independent property surveys is determined. This simplifies the plotting of maps, the replacement of missing property monuments, future defense of property ownership, and the making of additional property surveys. The existence of a permanent base network is also of value when surveys of river coal deposit are made from time to time. I have been informed by Mr. Bortner that in his opinion the existence of the triangulation system saved approximately 1100 man-days of field and office work in establishing the bearings and distances of the project boundary line required to be filed in connection with Exhibit K-1A and K-1C of the application for license filed by Penn Water.

By Mr. Hall:

Q. What was the extent of the territory covered by the work performed under job order C-791? A. Covered the flowage basin.

Q. How does this work tie in with the work done by the U. S. Geodetic Survey? [8609] A. The U. S. Geodetic Survey tied in to the company's triangulation point and used that, and beginning from that point, made their own extension beyond what the company had done.

Q. I think you referred to the territory being covered as the Holtwood flowage basin. Is that the same thing as

the Holtwood project? A. Flowage basin is part of the project.

Q. Did it cover only that part? A. Well, when I refer to the flowage basin, Mr. Hall, I am referring to all of the lands necessary and used and useful in the Holtwood project.

Q. What was the total cost of work under job order C-791? A. $3,338.25.

Q. How is that amount classified in your claimed cost? A. I don't recall how it is classified, Mr. Hall.

Q. Does that answer apply to the amount of $3,151.71 which was incurred under job order C-970? A. Yes, sir.

* * *

[8610] By MR. HALL:

Q. What were the duties and activities of the Lancaster office during the period from 1911 to 1923? A. Mr. Bushong and the Lancaster office from which he operated, and where the expenses were incurred, was real estate agent for the company for many years and it is my recollection that between 1912 and 1924 he acquired a total of 64 properties, some of the negotiations lasting over periods as long as nine years. I do not have any detailed information as to the identity or location of the properties acquired. In my opinion, based upon the facts submitted to me by Mr. Bortner, which facts I do not recall in detail, the salary of Mr. Bushong and the expense of the Lancaster office for the period from 1910 to 1924, were properly claimed as original cost of electric plant.

Q. Is it claimed in connection with purchases made of property? A. Yes, I believe that is correct.

Q. Did Mr. Bushong submit regular time reports covering his activities during the period from 1911 to 1924? [8611] A. I don't know whether or not he did. I haven't seen them if he did.

Q. Did Mr. Bushong submit periodical reports? A. I never have seen any such reports. I really don't know.

Q. Mr. Gunn, when you were just discussing Mr. Bushong's salary did you intend to include the entire Lancaster office? A. You mean expenses?

Q. Yes. A. Yes, sir. Those appear, Mr. Hall, as items 7 and 8, I believe, on Exhibit 204.

I beg your pardon. They are items 6 and 7 on Exhibit 204.

Q. Mr. Gunn, with respect to the amount claimed in item 17 of Exhibit No. 204, is that also claimed in connection with the purchase of land?

* * *

THE WITNESS: Yes, sir.

By MR. HALL:

Q. Mr. Gunn, isn't it a fact that you have included in Penn Water's original cost claims as plant items, amounts previously charged by Penn Water to operating expenses? A. Yes, sir.

[8612] Q. Did you ascertain whether the amounts you so restated had been charged to operating expenses in accordance with management's discretion pursuant to accounting practices it was then following? A. I determined they were not, that rather they were accounting errors and the amounts so claimed are, of course, representative of physical property.

Q. Did you determine that there were accounting errors or did someone else determine that for you? A. I think the conclusion was reached by me in conference with the company's accountants and lawyers.

Q. Is that determination based upon your present judgment as to the appropriate classification of such amounts?

* * *

THE WITNESS: By that determination you are referring back, are you, Mr. Hall, to the determination that these were accounting errors?

By Mr. Hall:

Q. To the restatement. A. Of course it was based upon my judgment in 1939 and 1940.

Q. And the discussion we have just had, Mr. Gunn, applies equally as well to the restatement of items from the [8613] depreciation reserve?

Mr. King: What do you mean "discussion you have just had", Mr. Hall? You mean the reasons the witness has given for claiming the amounts?

Mr. Hall: That is right.

The Witness: Yes, I would say it applied to those, also. It all goes back, of course, to the basic necessity of determining the original cost of the company's property.

By Mr. Hall:

Q. What in your opinion did you consider was an accounting error? A. Well, as I recall about 130 examples of it included in the company's claim for original cost.

Q. What is your definition for accounting error? A. I don't have any particular definition in mind. It is something accounted for incorrectly.

Q. Who decided that those items were accounted for incorrectly? A. I did, with the assistance of the company's accountants and lawyers.

Q. What standard did you apply in making that determination? A. Several standards. I applied the classification of accounts of Pennsylvania Commission in effect at the time the accounting was done, the fact that the company had or had not [8614] followed a consistent policy, and I found they had not, and I also considered the fact that some of the accounting errors were errors in the treatment of property replaced in kind, some of the other items involved betterments, some other items involved outright additions to property, and that they were all in violation of the system of accounts in effect at the time the accounting was done. That seemed to me to make them erroneous.

It seems to me that the instruction 2-B of the Federal Power Commission's classification of accounts requires they be corrected. In any event, whether it requires it or not, it most assuredly permits it.

Q. Mr. Gunn, I show you at this time the original affidavit signed by Pliny Fisk, Sr. which affidavit is part 9 of Exhibit 27. Do you recognize that document? A. Yes, sir.

Q. Attached to that affidavit are two documents. Is that right? A. Yes, sir.

Q. Each of them bears Mr. Fisk's initials? A. Yes, sir.

Q. Is the first document the prospectus and underwriting agreement of March 1, 1905, which was incorporated as part 5 of Exhibit 27? A. Yes, sir.

[8615] Q. Is the other document the bond and stock purchase agreement of March 25, 1905 which is incorporated as part 10 of Exhibit 27? A. Yes, sir.

* * *

By Mr. Hall:

Q. Mr. Gunn, in connection with obtaining Hutchinson's affidavit which is part 1 of Exhibit 27, how many times did you personally contact Hutchinson? A. That question gives me a little trouble, Mr. Hall, for this reason: I contacted Hutchinson, I would say, seven or eight times, perhaps, in the course of the period of time between my first contact with him when I asked his assistance in connection with the original cost study and the period when I last was in indirect contact with him through his lawyer at the time the affidavit was obtained.

I don't know whether you could say that all of those contacts were, to use your words, for the purpose of obtaining the affidavit. They were for the purpose of obtaining Hutchinson's assistance in connection with the original cost.

Q. Where was Mr. Hutchinson located at the times you conferred with him? A. Various places. I conferred with him first, I believe, [8616] in Miami, Florida.

Q. When?

• • •

THE WITNESS: I believe that was in January or February of 1938 that I conferred with him. That is as close as I can recall it.

By MR. HALL:

Q. Is that the only time you conferred with Mr. Hutchinson in Miami? [8617] A. That was the only time I conferred with him, but I went to Miami on the occasion of obtaining his affidavit a year later. I didn't confer with Mr. Hutchinson at that time but rather with his personal lawyer.

Q. Do you recall just exactly when you conferred with his lawyer? A. Well, I would say it was a couple of days prior to the 14th day of January, A. D. 1939.

Q. You have stated you saw Mr. Hutchinson in Miami. When did you next see him? A. I believe the next occasion was perhaps a month or six weeks later.

• • •

[8619] By MR. HALL:

Q. What conferences did you have with Hutchinson other than the one you referred to being held in Miami? A. As I recall in about six weeks or some such period. Mr. Hutchinson came to our Baltimore office at that time, I believe, and spent one or two days going over documents and discussing his recollections of McCall Ferry with us. I believe he came to the Baltimore office twice, but I don't remember the date of the second trip to Baltimore.

Then on one and perhaps two occasions I saw Mr. Hutchinson in New York at the University Club where he lived when he was in New York and discussed various aspects of the McCall Ferry history with him.

Q. Who was present at your conferences in Baltimore? A. In general Mr. Eichhorn and Mr. Chase, and for a part of some of the conferences Mr. Walls was present and I believe on one occasion Mr. Higgins was present.

Q. Who was present when you conferred with Hutchinson in New York? [8620] A. I don't believe there was anybody present at those conferences but myself.

Q. Who was present at your conferences with Mr. Hutchinson in Miami? A. Mr. Higgins.

Q. Was there any reason for waiting until January of 1939 to obtain Hutchinson's statement? A. Yes, a very good reason.

Q. What was that? A. I had no expectation but what Mr. Hutchinson would be alive and able to appear at the hearing when it came to the question of our original cost, and, as a matter of fact, I discovered his physical condition as a result of having written a letter to make another engagement with him to come to our Baltimore office for further assistance. The response to my letter to Mr. Hutchinson was a reply from his lawyer saying that he was in very bad health and that if we wanted any further help from him we had better get it immediately.

As I recall, I left Baltimore within one or two days and went by plane to Miami to see Hutchinson's lawyer after I learned of his condition.

Q. Was the first time you saw Rhinehart at the time you went to get the affidavit in January of 1939? A. Yes, sir.

Q. Rhinehart had no personal information as to the [8621] early history of the project nor the detailed data you possess as a result of your prolonged study. Isn't that so?

* * *

THE WITNESS: That is true. He didn't have any prior to the time I gave it to him.

By Mr. Hall:

Q. Did you go with Mr. Rhinehart when he conferred with Hutchinson with respect to the affidavit? A. No, sir.

Q. Did Rhinehart deem it inadvisable for you to accompany him? A. I don't remember why I didn't go.

Q. Was Hutchinson's physician present when he signed the affidavit which is Part 1 of Exhibit 27? A. Who do you mean by "he"? You mean when Hutchinson signed the affidavit?

Q. Yes. A. I really don't know. There is included in Part 1 of Exhibit 27 the physician's statement as to Hutchinson's condition.

Q. Hutchinson died on January 16, 1939, didn't he? A. About that date, I believe. He died a very few days after the affidavit was obtained from him.

Q. Mr. Gunn, will you refer to page 9 of Exhibit 27? What is the illegible and obscured scribbling which appears [8622] above the words "his" X mark? A. I understand it to represent Hutchinson's attempt to sign the document.

[8623] Q. Is that what you were told or is that merely an assumption on your part? A. That is an assumption on my part. I don't know I ever actually inquired.

Q. Did Mr. Hutchinson have assistance in making the "X" mark? A. I don't know. I would have to ask Mr. Rhinehart that question.

Q. Who was present at your conference with Pliny Fisk, Sr.? A. I don't believe anyone was. I think I saw him by myself.

Q. That conference took place in June of 1938, right? A. At about that date as I recall it.

Q. Was Mr. Fisk in the hospital at that time? A. No, sir.

Q. Where was he? A. At his home in New York.

Q. Fisk died March 30, 1939, right? A. That sounds to me about right, Mr. Hall. I don't recall.

Q. Was Mr. Fisk ill at the time you conferred with him? A. No, not that I knew of.

Q. How long a conference did you have with Mr. Fisk? A. I would say it was three or four hours.

[8624] Q. Were you just starting out seeking information when you conferred with Fisk? A. No, I had already done a considerable amount of groundwork in accumulating information. The situation with which I was confronted was this: I had a large number of documents and couldn't manage to put them together so that they made a story that sounded reasonable. So I went to Mr. Fisk primarily to get his memory or judgment as to how those documents fitted together to state the true facts concerning McCall Ferry's history.

Q. Did you participate in the search made by Pliny Fisk, Jr. and W. D. Cole for the records of Harvey Fisk and Sons? A. What do you mean by participate, Mr. Hall?

Q. Did you aid in their search for the records of Harvey Fisk and Sons?

MR. KING: You mean did he go with them?

MR. HALL: Yes.

THE WITNESS: No, I didn't accompany them.

By MR. HALL:

Q. Do you know where the search was made? A. Various places as I understand it.

Q. Where, for instance? A. I don't recall offhand other than one specific place I know of, the Pliny Fisk Financial Library at Princeton. [8625] It is my understanding that Mr. Cole or Pliny Fisk, Jr. communicated with a number of previous employees of the Fisk firm, but the names of them I don't recall at the moment.

Q. Do you know over what period of time that search extended? A. As I recall it it was six weeks or two months.

Q. Why didn't you go back and talk with Mr. Fisk subsequent to June, 1938 after you, as a result of your further consideration and study, had become more familiar with the history of the project? A. Because Mr. Fisk asked that I handle the matter through his personal lawyer and through his son.

Q. How old was Mr. Fisk when he died? A. I don't recall, Mr. Hall, but he was well advanced in years. He was over 75, maybe more.

Q. Do you know whether Mr. Fisk actually dictated the answers contained in his statement which comprises pages 70, 71, 72 and 73 of Exhibit 27? A. No, I do not. You will have to ask Mr. Cole that question. It could be ascertained, I think.

Q. Had you seen the statement of Mr. Fisk after it was prepared but before it was signed by Mr. Fisk? A. No, sir.

Q. Mr. Gunn, will you refer to the last paragraph on page 75 of Exhibit 27? [8626] A. Yes, sir.

* * *

By Mr. Hall:

Q. You there state "It is also desirable that he initial the exhibits." First, what exhibits did you have reference to? A. The exhibits which are referred to in the first paragraph on page 74 in the first sentence.

Q. Are those the exhibits included in the participation?

* * *

The Witness: I don't believe they are as I recall it, Mr. Hall. If you will notice, the question and answer statement of Mr. Fisk is dated December 29, 1938, and as I recall the documents which I identified this afternoon, and which were initialed by Mr. Fisk and attached to Fisk's original statement, were submitted to him in connection with that question and answer statement.

[8627] Then the question and answer statement did not contain all of the information we wanted and we prepared,

apparently, another document between that date and January 9th, together with a substantial volume of exhibits and sent those to Mr. Cole on January 9, 1939. Of course, at various times various of the parts of Exhibit 27 had been supplied to Mr. Cole and had been discussed by him with Mr. Fisk, but I can not now recall just what the list of documents was which were so supplied.

* * *

By MR. HALL:

Q. Why was it desirable for Mr. Fisk to initial the exhibits referred to in the last paragraph on page 75 of Exhibit 27? A. I think probably I got the idea from the fact Mr. Cole had him initial the first two exhibits submitted to him, although I have not been able to find initialed copies of those exhibits and I have a vague recollection that Mr. Cole forgot to ask him to initial them and he didn't do it.

Q. Mr. Gunn, will you refer to Transcript page 6921, line 4? A. Yes, sir.

Q. Isn't it a fact that in June of 1905 McCall had only $6,400,000 cash available from bond subscriptions [8628] rather than the $7,267,500 referred to at that point?

* * *

THE WITNESS: That depends, Mr. Hall, on how you interpret it. The figure referred to at that point of $7,267,500 is the total amount realized from the sale of bonds. That amount reduced by the cash payment to Hutchinson and the cash payment to Harlow-McGaw, which payments were made by Susquehanna Contracting Company, equals the $6,400,000 which Susquehanna Contracting Company was to turn over to McCall Ferry Power Company, or was holding available for McCall Ferry Power Company. So what in effect happened was that Susquehanna Contracting Company paid for the property of Harlow and McGaw out of the $7,267,500 and had $6,400,000 left for McCall Company to use in constructing its plant.

By Mr. Hall:

Q. In referring to the Harlow-McGaw and Hutchinson lands at that point in the transcript you included in those amounts the payments of cash by Susquehanna to Hutchinson and Harlow-McGaw?

• • •

The Witness: At what point?

[8629] Mr. Hall: Page 6921, line 4.

• • •

By Mr. Hall:

Q. Mr. Gunn, will you refer to page 6921 of the transcript, lines 6 and 7. Isn't it a fact that the amount of $13,772 and $1,221,000 and $450,000 includes the cash paid by Susquehanna Contracting Company to Hutchinson and Harlow-McGaw and Pullen? A. Yes, sir, that is correct.

Q. The remaining cash due from Susquehanna Contracting Company to McCall was the amount of $6,400,000? A. Yes, sir, that is correct.

[8630] Q. Then the $8,951,772 referred to in line 6, transcript 6921 should be $8,084,722. Right? A. Yes, sir, that is correct.

Q. That is correct, substituting the $6,400,000 for the $7,267,000. A. Yes, sir, that would make it correct.

• • •

[8638] Mr. King: Mr. Examiner, Mr. Goldberg's statement eliminates from discussion the question of the affidavits contained in Exhibit 27. As I understand it, he does not object to their admissibility, but his comments on them relate to their weight, which, of course, is for your Honor to decide at the conclusion of the case. So I think there need be no further discussion as to the affidavits.

[8639] Mr. Goldberg: I object to their admissibility but not on the ground they are ex parte statements and the persons who made the affidavits are not presented for cross-examination.

• • •

[8680] GEORGE W. SPAULDING.

* * *

RE-CROSS-EXAMINATION.

By MR. GOLDBERG:

* * *

[8700] Q. What is wattless energy? A. What is it?

Q. That is right. A. I am trying to think of an answer which doesn't go too far into the textbook, Mr. Goldberg.

Q. Keep my head above water. A. Wattless energy may be produced by a synchronous condenser or by the operation of any other generator by adding or absorbing a magnetizing current in the circuit, and the introduction of magnetizing current changes the characteristic of the supply or of the service, as the case may be.

* * *

[8712] Q. These two—220 K. V. Safe Harbor-Baltimore-Washington transmission lines at times carry backfeed energy for purposes of interchange. Am I right so far? A. They do.

Q. And the interchange is between Penn Water and [8713] Pennsylvania customers, or the northern customers as they are referred to in the record? A. That is correct.

* * *

In some cases, of course, Safe Harbor is a party to those contracts.

Q. I don't want to get into that right now. A. I don't want to introduce it, either, but I wanted to be sure the record was clear.

* * *

Q. * * * Now, then, the interchange results from savings or benefits not only to Consolidated but to the Pennsylvania customers, right? A. That is correct.

Q. The two—220 K. V. Safe Harbor-Baltimore-Washington transmission lines are involved in bringing

about those benefits—right? A. Among other facilities which are required in addition to the lines between Holtwood and Safe Harbor and Baltimore.

Q. Right now I am talking about the two—220 K. V. Safe Harbor-Baltimore-Washington transmission lines, and what I have said is right as to those lines—right? A. That is correct.

Q. But the allocation you made of the costs of those [8714] two—220 K. V. Safe Harbor-Baltimore-Washington transmission lines is entirely to Consolidated—right? A. Properly so.

Q. It is entirely with Consolidated? A. That is correct.

* * *

[8719] Q. Are you saying that with your present contracts which you have with your customers to the north you could just [8720] as well get along without this backfeed from Consolidated for firm power purposes?

THE WITNESS: May I have the question again?

(Question read.)

THE WITNESS: Yes. Limited only by the fact that today and perhaps for the next few months the cost of generation is a little lower on the Baltimore-Washington system than it is in Pennsylvania, but if the cost of such energy was lower to the north, lower on the northern systems, the very same method of operation and the philosophy of our contracts would be such that we would purchase such supplemental energy from the north rather than from Baltimore, and we would then also be supplying Baltimore with interchange energy from the north rather than receiving backfeed from Baltimore Company.

* * *

[8743] STANLEY W. ROLAND.

* * *

[8746] CROSS-EXAMINATION (Continued).

By MR. MYSE:

Q. Mr. Roland, at various places in your direct testimony, you mentioned the Safe Harbor Water Power Corporation, and in order to get the record straight on it, I ask if Safe Harbor is a licensee under the Federal Power Act.

MR. GOLDBERG: Mr. Examiner, I object to that as a legal question.

TRIAL EXAMINER: I will permit it as a preliminary question.

THE WITNESS: That is my understanding that Safe Harbor is a licensee.

[8747] By MR. MYSE:

Q. Do you know what project number it has? A. No, I don't recall what the number of the project is.

MR. GOLDBERG: I am willing to stipulate that it is No. 1025.

MR. MYSE: All right.

* * *

[8748] Q. Well, is the power from Safe Harbor used to serve the Pennsylvania Railroad? A. In part, yes.

Q. Is it used to serve other public utilities who use it to serve the public?

MR. GOLDBERG: What do you mean by public utilities in that question?

MR. MYSE: Well, Pennsylvania Power and Light Company, for example.

THE WITNESS: Energy generated by Safe Harbor would be delivered to Pennsylvania Power and Light and sold by them to their customers, I presume.

[8749] Q. Now, will you turn to page 981 of the record, if you have the copy before you? Now, beginning at line 8 your counsel asked you the following question:

> "Do Holtwood and Susquehanna own and operate facilities for such transmission and sale at wholesale which are not used only for the transmission of electric energy which is not transmitted from any state and consumed at a point outside thereof."

You remember that question, do you not? A. Yes.

Q. And a little bit later on you say "Yes, that follows from one of my previous answers."

Do you remember that testimony? That is down at lines 20 and 21. A. Yes.

Q. Now, can you point out for me to which of your previous answers you are referring in that answer? A. Well, I expect it would take in quite a bit of my previous testimony in which I pointed out that these facilities were used for transmitting energy from one state to another.

Q. Now, just a minute. You say, "Yes, that follows from one of my previous answers." I would like to know which of your previous answers you are referring to there.

TRIAL EXAMINER: Look at 979.

[8750] THE WITNESS: Pardon?

TRIAL EXAMINER: Look at 979.

THE WITNESS: I don't find it right at the moment.

By MR. MYSE:

Q. Well, there are only two or three pages previous to that where you testified on that subject, isn't that so? A. Yes. It is one of those lawyer's kind of questions, I mean, which has so many double negatives in the darned thing that I—I don't find it right now.

• • •

[8754] MR. MYSE: Will you check, Mr. Roland, and come back with an answer at some future time?

THE WITNESS: Yes, sir.

By MR. MYSE:

Q. By the way, your testimony was prepared testimony, was it not?

MR. GOLDBERG: What do you mean by prepared testimony?

MR. MYSE: Prepared in written question and answer form before you came into the hearing.

THE WITNESS: That is correct.

By MR. MYSE:

Q. And you spent some time in preparing that testimony? A. Yes.

Q. As well as this answer line 20 to 21, page 981? A. Well, it wasn't just an offhand answer, I gave [8755] it consideration, yes.

Q. Now, in the light of your answer at page 981, whatever it means, do you agree that the facilities of Penn Water, not used for generation, are not necessarily used for transmission and sale of energy at wholesale transmitted from a state and consumed at any point outside thereof? A. You are talking about facilities not used for generation, that is the first part of it?

Q. That is right. A. Are not used, did you say?

Q. Are not necessarily used. A. Are not necessarily used for the transmission or sale?

Q. Transmission and sale. A. At points outside of a state, I mean, is that added to it?

Q. If you want the question reread, the reporter will reread it to you I am sure.

TRIAL EXAMINER: Read the question again.

(Question reread.)

THE WITNESS: Does it mean exclusive use in your question. You mean used exclusively for transmission and sale, at points outside of the state?

MR. MYSE: I will accept that.

[8756] By MR. MYSE:

Q. Can you answer the question with that amendment? A. Well, I will agree that Penn Water owns and operates facilities which are not used exclusively for transmission and sale at points outside the state.

Q. Well, the fact that they are not used for generation, however, does not mean that they are used for transmission and sale of energy which crosses state lines, isn't that right? A. I am just trying to get in mind what facilities we are talking about when you say facilities not used for generation. Are we talking about the transmission facilities?

Q. We are talking about the facilities of Penn Water, the facilities that you were talking about starting at page 979, and through 981. A. Yes, but in your question now you are saying facilities not used for the generation of energy, that means we are talking about facilities used for the transmission. I want to know what you mean by it.

Q. I mean exactly what you meant when you were talking about facilities of Penn Water and Power. You are familiar with the facilities, are you not? A. Yes. But I still don't understand what you talked about—when you talk about facilities for generation of [8757] electric energy that are not used for transmission of electric energy just what you are talking about.

TRIAL EXAMINER: Just a moment. You do not have to speculate as to what counsel means. If you have any doubt you may preface your answer by stating what the question means to you.

THE WITNESS: When he speaks of facilities not used for the generation of electric energy in the Penn Water system I am then referring to facilities used for the transmission of electric energy.

• • •

Q. Do I understand that you can't answer the question the way I put it? A. I don't understand it thoroughly enough.

Q. You just don't understand the question, is that it, Mr. Roland? A. It isn't completely clear in my mind, I mean, as to just what you have in mind.

Q. Now let us exclude from our mind for the moment all the facilities of Penn Water used for generation. It doesn't follow from that, does it, Mr. Roland, that all the remaining facilities are transmitting facilities, does it? A. That is true.

Q. Nor does it follow that all the remaining facilities [8758] are used for the transmission and sale of energy at wholesale transmitted from a state and consumed at any point outside thereof, does it? A. There would be some local distribution facilities that would not be involved in that kind of a transaction.

Q. Now, in the light of your answer at page 981, isn't it true that the facilities of Penn Water not used for local distribution, are not necessarily used for transmission and sale of energy at wholesale transmitted from a state and consumed at any point outside thereof?

* * *

[8759] THE WITNESS: Well, as I understand it now, we have eliminated the facilities for generation of electric energy and we have eliminated the facilities used for local distribution and you are asking me now if the balance of facilities are used for transmission and sale of electric energy at point outside the state; is that correct?

MR. MYSE: Well, that isn't quite correct, but I think it is substantially the way my question was except that I used a little bit different language.

THE WITNESS: Yes.

MR. GOLDBERG: Has the witness correctly understood your question so that if he answers your question it will be an answer?

MR. MYSE: I am willing to have him answer it with that understanding and if he answers it I will have a further question.

THE WITNESS: I would have to exclude a line that is leased to the Baltimore Company, for one thing, that is that 110 kv line that runs from Highlandtown Substation up to Gunpowder Substation, that is owned by Penn Water but I mean is not operated. It is leased to the Baltimore Company, that one.

By MR. MYSE:

Q. Why do you say that you would have to exclude that line? [8760] A. Well, that one certainly is not used for transmitting energy from one state to another, as I recall.

Q. Actually that line doesn't run to Highlandtown Substation, it runs to Philadelphia Road Substation? A. It is right across the street from that. There is no electrical connection, that is true. I said Highlandtown Substation is on one side of the street and Philadelphia Road is on the other.

• • •

[8775] Q. Let's look at the generating facilities for a moment of Penn Water. How many main hydro units does Penn Water have? A. Ten.

Q. Then it is true, isn't it, that eight of those ten main hydro units at Holtwood were used to generate 25-cycle, three-phase service? A. That is right, sir.

MR. GOLDBERG: What does counsel in his last question mean by service, electric energy?

[8776] MR. MYSE: Electric service, including electric energy, isn't that what you understood that I mean, Mr. Roland?

THE WITNESS: Well, ordinarily you use generation of electric energy.

By Mr. Myse:

Q. But it does generate other attributes of electric energy, does it not? A. It generates electric energy at some particular voltage and certain frequency. If you want to call those attributes, all right.

Q. So that only two out of the ten main hydro units are used to generate 60-cycle three-phase electric service or energy if you would have it that way, isn't that right? A. Two of the units generate electric energy at 60-cycle.

Q. What are the steam units generating at? A. 60 cycles.

Q. In addition to that, there are two 5,000 kw frequency changers at Holtwood, are there not? A. I believe that is a nominal rating; there are two of them, I believe they are 6,250 kva rated frequency changers.

Q. Now, what are those frequency changers used for? A. To change the energy generated from 25 to 60 cycles or energy generated from 60 cycles to 25 cycles.

[8777] Q. Now, with respect to facilities used in local distribution, I think you mentioned or did you mention the Highlandtown Substation facilities? A. That is what I had in mind, that there might be something down there on the low-tension side at Highlandtown that might be considered local distribution.

Q. Well you, as an engineer, would consider them local distribution? A. Well, in my opinion, local distribution was a legal term, I would say that they are distribution facilities.

Q. You would say they are? A. There are certain parts of them that I think would certainly be classified as distribution facilities.

Q. And that is your opinion as an engineer wholly aside from any legal connotations? A. That is right.

Q. Now, what about the facilities used to serve the Holtwood Village, didn't you consider them distribution facilities? A. Yes, those would be distribution facilities.

Q. And they would be local distribution facilities in your opinion as an engineer, would they not? A. I don't know. As that word local is used in the Power Act, I should think that is a legal term used solely [8778] for retail sale and distribution.

Q. Now let me refer you to the question at the top of page 981: "Q. Do Holtwood and Susquehanna own and operate facilities for such transmission and sale at wholesale, which are not used in local distribution?" What did you mean when you answered that question "Yes" with an additional phrase? A. They are distribution facilities.

Q. What do you mean by the word "local"? What was your understanding? A. Well, there, of course, I stated with a possible exception, I wasn't being definite about those facilities as being used in local distribution. That is an expression of opinion there, I mean, I don't have any clear-cut opinion as to what is local distribution. Certain types of facilities, when you describe them, like the facilities for the Holtwood Village, I wouldn't hesitate to call those local distribution.

Q. You say you would hesitate? A. I would not hesitate to call those used in local distribution.

Q. You would not hesitate. You say you would hesitate, however, at least you have had some doubt about the Highlandtown Substation facilities. Is that right? A. Yes, I don't know just whether they would be in a [8779] legal sense, I mean whether this would be considered local distribution or not.

Q. Now just so we understand each other, Mr. Roland, I am not asking you for any legal conclusion or anything in the legal sense. A. Yes.

Q. Can you answer my question as an engineer? A. I don't know whether they would be or not.

Q. You are sure that they are distribution facilities? A. I would agree that they are distribution facilities.

Q. Were you aware of the Holtwood Village facilities when you gave your testimony back in April or May, whenever it was? A. Yes, I was aware of it.

Q. How would you class the facilities used to render service to the Pioneer Electric Light Company area adjacent to Holtwood?

MR. GOLDBERG: What service does counsel have reference to?

MR. MYSE: Well, I described that as the service to the Pioneer service area adjacent to Holtwood.

MR. GOLDBERG: What is the service?

MR. MYSE: I am asking him how he would classify it.

TRIAL EXAMINER: Can you classify it?

THE WITNESS: I believe that those were definitely [8779-A] distribution facilities. Whether or not they would be used in local distribution, I don't know. I didn't examine the facilities owned by the Pennsylvania Power and Light Company that were used, I mean in their area for distributing that energy. All I had in mind was that Penn Water owns the step-down transformers for serving that area.

MR. MYSE: And certainly there is no transmission of any length or of any kind, is there?

THE WITNESS: I don't believe so.

By MR. MYSE:

Q. So that if it is anything it is a distribution facility so far as Penn Water owns facilities? A. Well, Penn Water does not own the distribution lines. They furnish the transformers, I mean for stepping the voltage down to distribution voltage.

Q. But to the extent it does own the facilities they are distribution facilities, is that right? A. Yes, I think I

would call those transformers, small transformers, distribution transformers.

• • • •

[8780] Q. Mr. Roland, I think earlier this morning you mentioned the Gunpowder transmission facilities owned by Penn Water, and by that I mean Penn Water or Susquehanna Transmission Company? A. That is right.

Q. In this case that line is owned by Susquehanna. Is that right? A. That is correct.

Q. Now, you stated, as I remember it, that that line is not used to transmit energy across state lines. Is that right? A. I made no effort to determine whether it did or not, but that is my offhand opinion, I mean that it does not.

Q. Well, will you briefly describe that line, where it originates, where it runs to, and what use is made of it? A. Well, one of the terminal points is the Baltimore Company's Park Road substation.

Q. Philadelphia Road, I believe. A. Philadelphia Road substation. The other terminal point, I believe, is the Gunpowder substation, which is a substation on the 110 K. V. loop around the City of Baltimore.

Q. Now, that line has no direct connection with the so-called Highlandtown line running from Holtwood to [8781] the Baltimore Company, does it? A. Certainly not a direct connection, no. The 25-cycle system is tied in with the 60-cycle system, by means of frequency changers, and through that way it would be connected but there is no direct connection.

Q. There is no electrical connection between the 25-cycle and the 60, is there? A. At a frequency changer you break the electrical connection and have a mechanical connection.

Q. So there is no electrical connection between the two systems—right? A. In that sense that is correct.

Q. And as I understand your evidence, then, that Gunpowder transmission line is used as a part of the Baltimore

Company's distribution system in Maryland. Is that right? A. I don't know where to draw the line between distribution and transmission. If that 110 K. V. loop is considered distribution then it would be a part of the distribution system. If it is considered as a transmission system, then it is part of the transmission system.

Q. Well, at least you would agree it is used exclusively as a part of the Baltimore Company's system in Maryland whether we characterize it as distribution or transmission system? [8782] A. That is correct.

Q. To that extent then, it would be a facility used only for the transmission of electric energy not transmitted from a state and consumed at any point outside thereof? A. That is correct.

Q. I think at various places in your testimony, and you repeated this morning, you said that that line was leased to Baltimore. Am I right in so understanding your testimony?

MR. GOLDBERG: Will you point to the places where he said it was leased?

MR. MYSE: One is at page 909 of the transcript, line 5, and I think he repeated it this morning.

By MR. MYSE:

Q. Let me ask you first at transcript 909, line 5, you were referring to the Gunpowder line when you talked about the line leased to Baltimore? A. That is correct.

Q. Now, what did you mean by "leased to Baltimore Company"? A. Well, the line was built at the request of the Baltimore Company and for the use of the Baltimore Company. It was used exclusively for the Baltimore Company service.

MR. MYSE: May we have the answer, please?

(Answer read.)

By MR. MYSE:

[8783] Q. Well, does Baltimore operate and maintain the line? A. I don't believe so. I think that Susquehanna

maintains the line and maintains all the other lines because it is on the same right of way as the other transmission lines owned by Susquehanna.

Q. Does Baltimore make any compensation for this lease that you referred to? A. I don't know.

Q. Have you ever seen any document which looked like a lease of these facilities from Penn Water or Susquehanna to Baltimore Company? A. No.

Q. Isn't it a fact that the compensation that Penn Water receives for these facilities is included in the contract referred to in this proceeding as "H and I"? A. I don't know.

Q. Didn't you study that contract? A. I studied it but I don't recall now just how ten miles of line was handled.

Q. Well, are you familiar with H and I? A. Well, I couldn't precisely remember any details of it. I am generally familiar with it.

• • •

[8785] By Mr. Myse:

Q. Is the Exhibit C of Item H what you had reference to when you are talking about a lease, leased facility from Penn Water to Susquehanna to Baltimore? A. Well, Exhibit C would indicate that it was not a lease, that Baltimore Company was paying a part of the average annual cost of the operation and maintenance of the line.

• • •

[8787] By Mr. Myse:

Q. Now, can you summarize for me what facilities Penn Water or Susequehanna owns, either one, which are used for the transmission of electric energy not transmitted from a state and consumed at any point outside thereof?

The Witness: Will you read the last part of that?

(Question read.)

THE WITNESS: We are discussing now transmission facilities?

By MR. MYSE:

Q. That is right. A. Gunpowder line would be one. That is the only one I can think of now other than these facilities, which we have talked about as being distribution facilities.

Q. Well, isn't it a fact that the transmission line, let's take from Holtwood to York, is also a transmission line used for transmission of electric energy not transmitted from a state and consumed at any point outside thereof? A. No, that isn't; no.

Q. You mean there is no energy that goes on that line that is generated in Pennsylvania and consumed in Pennsylvania? A. Well, wait a minute. It is not used exclusively for either one.

MR. MYSE: Will you read back my previous question?

(Previous question read.)

[8788] By MR. MYSE:

Q. Do you want to change your answer? A. It does both. At times it transmits energy which is generated in Maryland. At other times it transmits energy which is generated in Pennsylvania.

Q. At times it transmits energy generated in Pennsylvania and consumed in Pennsylvania, and that is the only State in which that energy is generated.

MR. GOLDBERG: When?

MR. MYSE: At times.

THE WITNESS: There are times when the energy transmitted by the line to York is transmitting energy generated only in Pennsylvania.

By MR. MYSE:

Q. Now, that would also be true with the line that runs from Holtwood to Coatesville? A. That is right.

Q. Would it also be true with respect to the line that runs from Holtwood to Safe Harbor? A. That is correct.

Q. And that would also be true with respect to part of Conestoga sub-station? A. That is correct.

Q. And there may be times when the transmission line from Safe Harbor to Perryville, portions of it at least, are used for the transmission of energy generated solely in [8789] Pennsylvania. Is that right? A. That is correct.

Q. Now, that would also be true with respect to some of the facilities of Safe Harbor which conduct energy and other services from Safe Harbor to Conestoga, for example? A. This question was some questions back. Now, let's see—we are saying that there are times when the energy transmitted by Safe Harbor's facilities is energy which is generated in Pennsylvania only.

Q. And consumed in Pennsylvania. A. And consumed in Pennsylvania only. I am not so sure about that because the Safe Harbor generation would be going to Perryville most of the time, and that, of course, would then be consumed in Maryland.

Q. Well, isn't some of the Safe Harbor generation single phase, 25 cycle, used in Pennsylvania? A. Yes.

Q. It is used for railroad purposes in Pennsylvania. A. That is right.

Q. And it is conducted through the Conestoga substation. A. That is correct.

Q. It has to go that way. A. That is right.

Q. And there are times when the only energy on that [8790] line is energy generated in Pennsylvania. Isn't that right? A. That is correct.

Q. And it is consumed in Pennsylvania, too? A. Well, that is where I am not certain about it, because some of it necessarily goes to Perryville and the rest of it would then take you to Maryland and some of it is consumed in Pennsylvania.

• • •

[8799] Q. Isn't it a fact, Mr. Roland, that under that contract, Exhibit No. 72, energy delivered to M. E. Company for peak use is never delivered at times of backfeed energy generated in Maryland? A. I don't know.

Q. You made no study to determine that, did you? A. No. I studied the flows as shown on Exhibit 42 and whatever they showed, that was it. I didn't study that in relation to the contracts.

Q. Well, if you studied the flows today, wouldn't it be the fact that energy delivered to M. E. Company, that is Metropolitan Edison Company, for peak use is never delivered at times of backfeed energy generated in Maryland? A. I don't know. I would have to go back and refresh my memory on the terms of the contract. Maybe that would be so, but there may be times when there is not peak use. There would still be energy sold.

Q. Well, if what I say is correct, however, that changes the situation materially from what existed in 1944 under the old contract identified as Exhibit 71, doesn't it? A. The contract would be quite a bit different, yes.

Q. And the flow of energy under the contract identified as Exhibit 72 would be quite different, wouldn't it? A. I don't know.

Q. You made no study to determine it? [8800] A. I did not. I studied the flows in 1944.

Q. Now, certainly you will agree, wouldn't you, Mr. Roland, that some energy delivered to the Pennsylvania customers is delivered at times when there is only generation at the Safe Harbor-Penn Water Plants?

MR. GOLDBERG: Let's have that question, please?

— (Question read.)

MR. GOLDBERG: What Pennsylvania customers do you have reference to?

MR. MYSE: Pennsylvania Power and Light, Metropolitan Edison Company, Philadelphia Electric Com-

pany at Coatesville, Pennsylvania Railroad Company in Pennsylvania.

MR. GOLDBERG: Now, I would like to have the question reread again.

(Question read.)

THE WITNESS: I don't understand that. Only generation at Safe Harbor and Penn Water? I don't follow you. There is generation all over the system, not necessarily only there.

By MR. MYSE:

Q. Well, let's change the question slightly and say that you must agree, Mr. Roland, that there are times when the energy delivered to the Pennsylvania customers we have named was generated in Pennsylvania? A. Yes.

Q. And that there are times when there is no mixture of [8801] energy generated from without the State of Pennsylvania. A. That is right.

TRIAL EXAMINER: You are referring there to generation in Pennsylvania by Safe Harbor and Holtwood?

By MR. MYSE:

Q. That could be, could it not, Mr. Roland? There could also be generation by some of the Pennsylvania customers at the same time deliveries are taking place? A. That is what I had in mind that you were talking about deliveries to Penn Water from its northern customers and also generation at Safe Harbor and at Holtwood.

Q. It is perfectly possible to have deliveries to Philadelphia Electric, for example, at Coatesville, Pennsylvania, at the same time that Penn Water or Safe Harbor or both are receiving energy from Pennsylvania Power and Light Company. Isn't that right? A. That is right.

Q. Do you have any idea as to the amount of such hours during which all of the energy delivered to the Pennsylvania customers we have named is generated in the State of Pennsylvania?

MR. GOLDBERG: What period of time; what year?

MR. MYSE: Well, let's take 1944, the year you were talking about.

THE WITNESS: Well, one could get some idea of it from [8802] the 20-days I selected, but I didn't attempt to go through and determine the number of hours that that would occur.

By MR. MYSE:

Q. Would you say that those hours are substantial in relation to the total number of hours in the year?

MR. GOLDBERG: What does counsel mean by "substantial"?

MR. MYSE: I think the witness knows. He hasn't protested.

MR. GOLDBERG: I ask what counsel means by "substantial"?

TRIAL EXAMINER: The witness may answer the question.

THE WITNESS: Let me get it. Are the number of hours substantial when the supply to the Pennsylvania customers is generated in the State of Pennsylvania?

By MR. MYSE:

Q. And no other place. A. And there is no comingling so to speak with energy generated in Maryland. Is that what you have in mind?

Q. That is right. A. I would say that the number of such hours would be substantial.

Q. Now, what do you mean by substantial—and I might refer you to line 17 of page 979 of your transcript as constituting your direct testimony? A. What line.

MR. GOLDBERG: Are you referring to that question that [8803] spoke about the amounts of electric energy rather than time?

MR. MYER: Yes, but he used the word "substantial" and I want to know whether he uses it now in the same sense he used it then and if so what does he mean by it.

THE WITNESS: Well, one cannot be too definitive about a word like substantial. I can't reduce it into terms of percentage. I don't know whether I can use a word that would convey what I have in mind any more adequately than the word substantial. It could be over quite a wide range and still be substantial.

By MR. MYER:

Q. Well, let's take the other side of it, then. Wouldn't it be a fact that only a small proportion of the kwh's of energy delivered to the Pennsylvania customers we have named are delivered at times when electric energy is transmitted from Maryland and received by Safe Harbor or Penn Water?

THE WITNESS: I will have to have that one again.

(Question read.)

MR. GOLDBERG: What does counsel mean by "small proportion", Mr. Examiner?

MR. MYER: I think if the witness can answer the question I would like to have the answer.

TRIAL EXAMINER: All right.

THE WITNESS: We are talking now over the period of a year [8804] or something like that?

By MR. MYER:

Q. Yes, the year that you took, 1944. A. There would certainly be fewer hours during the year when energy was coming up from Maryland to Safe Harbor and Penn Water for transmission to these Pennsylvania customers than there would be hours when all of it was generated in Pennsylvania.

Q. Now can you answer the question? A. Well, in order to give you something very definitive of course you would have to study the thing hour by hour for the entire year, but that would be my opinion that relatively the hours when you had energy coming from Maryland would be very much smaller than the number of hours during which it was generated in Pennsylvania.

Q. Well, maybe we can shorten this. You haven't made any such study? A. I haven't made any hour by hour study for the entire year, no.

Q. You just took selected days you testified to on direct. A. That is correct.

* * *

[8808] Q. Well, you have made an investigation of the flows of energy on the Penn Water and Safe Harbor system haven't you? A. Yes, but I didn't go into net hourly flows.

Q. What are your figures based on other than net hourly? A. Gross flows.

Q. Gross? A. Yes.

Q. Kwh? A. Yes, in most instances.

There were a few cases where I netted, where I got the net flows in some of the circuits for certain hours.

* * *

[8829] Q. Actually, Article II of Exhibit 10 provides that "the amount of power and energy, hereinafter referred to as 'contractual supply', which Railroad Company shall call for and which Electric Companies shall supply when called for by Railroad Company is defined", and then it goes on to define it, doesn't it? A. That is right.

Q. And what are "Electric Companies" as used in this contract, do you know? A. I suppose they are named in the beginning.

Q. Well, actually the Consolidated Gas Electric Light and Power Company of Baltimore, Pennsylvania Water and Power Company, and Safe Harbor Water Power Corpora-

tion are [8830] hereinafter jointly referred to as "Electric Companies." A. That is right.

Q. So that when it speaks of the supply to the railroad it speaks of the supply by all three, does it not?

• • •

THE WITNESS: What Mr. Myse has stated is so stated in the contract.

By MR. MYSE:

Q. That is your interpretation of it, too, isn't it? A. Safe Harbor physically supplies energy to the [8831] railroad.

Q. And it is obligated to under the contract?

• • •

TRIAL EXAMINER: You didn't use this contract in making your determination?

THE WITNESS: I did not.

TRIAL EXAMINER: You did not refer to the contracts in your preparation of your testimony on direct?

THE WITNESS: I did not refer to the contracts, as I recall, on direct; certainly not to the railroad contract. I believe I did mention contracts, that certain sales were made under certain contracts, the Penn Power and Light Company and Metropolitan Edison, and so forth, and I also mentioned that Pennsylvania Water and Power was selling——

• • •

[8833] THE WITNESS: The question being, is Safe Harbor obligated to supply power to the Pennsylvania Railroad under Exhibit Ten, is that correct? I don't know.

• • •

[8834] MR. MYSE: You did refer to sales to the railroad company by Baltimore, did you not?

• • •

THE WITNESS: I did make such a reference. The sales in the state of Maryland are the obligation of the Baltimore Company and the sales in the state of Pennsylvania are the obligation of Penn Water Company.

By MR. MYSE:

Q. Now how do you determine what those obligations were? A. I was so advised by Mr. Spaulding. My discussions with him that the Pennsylvania Railroad requirements of—In the state of Pennsylvania are considered as being supplied by the Penn Water Company, and the requirements of the railroad company in Maryland are supplied by the Maryland Company. Now, physically that doesn't always take place.

• • •

[8836] Q. As I understand it, then, your conclusion as evidenced by the testimony on page 914 with respect to the sales to the railroad company is not entirely your conclusion then, is that right? A. Of course it is my conclusion. It was a matter of discussing it with Mr. Spaulding, Mr. Davis, and other sources.

Q. I am trying to find out how you arrive at that conclusion. How did you arrive at the conclusion that the obligation of Baltimore was to sell to the railroad company only in Maryland? A. I didn't say that.

Q. Then I understand that it is not its obligation; is that right? What other obligation does it have to the railroad? A. It supplies power to the railroad but it doesn't necessarily all have to be consumed in Maryland.

[8837] Q. Well, can you answer my question? What other obligations does Baltimore have other than supplying energy to the railroad in Maryland? A. There are all kinds of obligations.

Q. What are they? A. Sells power in Baltimore to all its customers.

• • •

THE WITNESS: They supply power in the city of Baltimore. They have got obligations of all kinds.

MR. MYSE: Let's confine ourselves to the Pennsylvania Railroad. What other obligations are there other than the obligation you mentioned of supplying the railroad service in Maryland?

MR. GOLDBERG: Mr. Examiner——

THE WITNESS: I didn't say that. I said that they supplied power to the railroad. Now this does not necessarily mean that it is all used in Maryland. They supply part of power requirements in Pennsylvania.

[8838] MR. MYSE: Excuse me——

THE WITNESS: Likewise Pennsylvania Water and Power Company, it supplies power to the railroad, it doesn't necessarily mean that it is all used in Pennsylvania.

By MR. MYSE:

Q. Then am I to understand that you mean the obligations of Penn Water and Baltimore respectively are not arbitrarily divided by the Pennsylvania-Maryland line? A. As far as requirements are concerned that is true. They just together supply the total requirements.

Q. Now, actually the energy supplied to the railroad is 25-cycle single-phase, is it not? A. That is correct.

Q. And that is a different kind of energy from 25-cycle, three-phase, is it? A. The frequency and the phase are different from the other.

Q. And it is different from 60-cycle, three-phase, is it not? A. 25-cycle is different from 60-cycle, yes. Single phase is different from three-phase.

Q. Now where is almost all or most of that 25-cycle single phase energy generated? A. Safe Harbor.

Q. Where else? [8839] A. At Benning, Washington.

Q. The amount generated at Benning is generated by PEPCO, is it not? A. That is right.

Q. What is the full name of PEPCO? A. Potomac Electric Power Company.

Q. And it is really generated in a converter at Benning, is it not?

MR. GOLDBERG: What do you mean by "really generated"?

MR. MYSE: Actually generated.

MR. GOLDBERG: What do you mean by actually generated?

MR. MYSE: If the witness knows I would like to have his answer.

THE WITNESS: The 25-cycle is generated by a frequency changer located at Benning Station.

By MR. MYSE:

Q. And the amount of such generation at Benning is relatively small, isn't it? A. As compared to the total, I believe that is correct.

Q. Now, isn't it also true that a substantial portion of the backfeed from Baltimore received at Safe Harbor is also converted at Safe Harbor from 60-cycle to 25-cycle and used for supply of the railroad? A. At times, some of the backfeed is converted to 25-cycle for use of the railroad.

[8840] Q. And if you refer to your Exhibit 44 again, perhaps we can trace that a little bit better. Now, that Exhibit 44 shows, as I understand it, and you correct me if I am wrong, 67,000 kilowatt-hours backfeed from Baltimore over the 220 kv circuits, is that right? A. I think it would be better if you said kilowatts. This is for one hour.

Q. All right. A. 67,000 kilowatts; other than that, it is all right.

Q. That is kilowatts for one hour. A. Well, it is kilowatts; it is kilowatt-hours for one hour.

Q. It is integrated kilowatt-hours for one hour. A. Well, the kilowatts are integrated over an hour, which gives you——

Q. (Interposing.) And you could integrate it for fifteen minutes or five minutes? A. Yes.

Q. It is frequently integrated over fifteen minutes? A. That is correct.

Q. What is it called when it is integrated over fifteen minutes? A. Well, that would be called a kilowatt demand integrated over a fifteen-minute period.

[8841] Q. Well, in any event, getting back to Exhibit 44, as I understand your correction to my question, there are 67,000 kilowatts transmitted from Baltimore over the 220 kv circuit, sixty cycles, during the hour shown on that exhibit. A. Yes.

Q. And that is received at Safe Harbor, is that correct? A. Yes.

Q. And there is no generation at Safe Harbor so there must be some 23,000 of those 67,000 kilowatts converted, is that right? A. That is correct.

Q. And after it is converted, where does it go? A. It all goes to the Conestoga substation.

Q. And from there it is used in the railroad service, is it not? A. That is correct.

Q. Now, in order that we may understand your Exhibit 44, the converter is shown by the sign of the two balls there, is it not? A. That is right.

Q. Shown connecting the two busbars at Safe Harbor, isn't that right? A. That is right.

• • •

[8842] Q. Now, some of that backfeed converted at Safe Harbor may be used in Maryland again? A. Yes.

Q. And that may be the case especially when there is a good deal of backfeed and no generation at Safe Harbor, isn't that right? A. That is right.

Q. Will you refer to page 914 of the transcript again, please. Now, at lines 13 to 14 you testified that Holtwood

delivers energy to the railroad at Conowingo and Perryville, [8843] Maryland, "for the account of Baltimore Company."

Now, what did you mean by that phrase that I quoted? A. Well, the delivery to the railroad company at that point, that is at Perryville, for service south of Perryville, is considered a sale by the Baltimore Company to the railroad.

Q. Where did you—what evidence did you use in arriving at that conclusion? A. Oh, well, my recollection is that I discussed that with Mr. Von Eiff.

Q. When did you discuss it with Mr. Von Eiff? A. Oh, it would have been the last half of 1945.

Q. Did he write you a letter about it? A. No.

Q. Was that the only basis you had for using that phrase? A. I don't know whether anyone ever used that phrase; that is my own phrase. I think that is the one commonly used under similar circumstances, where you deliver energy at the point, and at that point the sale is actually made by somebody else, you make the delivery for the account of the person that does the selling.

Q. Now, you say that the sale is made by somebody else at Perryville, and Conowingo other than Holtwood. Who is that sale supposed to be made by? [8844] A. Baltimore.

Q. What led you to that conclusion, what evidence? A. Deliveries in Maryland; I mean deliveries to the railroad company, for use in the State of Maryland are treated as sales by Baltimore Company to the railroad.

Q. Let me understand what you mean by sale in that connection. Will you explain it for me? A. The energy in this case is delivered by Penn Water; the payments for that energy consumed in Maryland is made to Baltimore Company.

Q. You mean the payment by the railroad? A. Yes.

Q. Made to Baltimore? A. Yes.

Q. That is also true for the energy delivered to Pennsylvania, the payment is made by the railroad to Baltimore,

isn't it? A. Yes, knowing that Baltimore, I mean, is supposed to pay the other, the Penn Water Company share to Penn Water.

MR. MYSE: May I have the last part of the answer.

(The answer was read back.)

By MR. MYSE:

Q. How do you know that? A. I think I learned that from conversations with [8845] these same people that I have been talking to you about, Mr. Von Eiff, Mr. Spaulding; that is my recollection of that.

Q. Is that the only basis then that you have for making that statement? A. That the Baltimore Company collects the entire bill for railroad service, and then it, in turn, compensates the Penn Water Company for deliveries to the railroad in Pennsylvania?

Q. No, I was referring to your statement that it is supposed to pay part of the compensation received from the Pennsylvania Railroad Company to Penn Water. A. I don't know whether any actual check, I mean, is transferred from one to the other; but for billing purposes, I mean, the part that is sold in Maryland is considered a sale by Baltimore, and sales in Pennsylvania are considered a sale by Penn Water; the money paid by the railroad is split up accordingly.

Q. I don't believe that you have answered my question, although you can start over again.

As I understand you, you said that the sale by Baltimore in Maryland was a sale because energy was delivered and Baltimore received the payment therefor, is that right? A. Yes, but it is used by the railroad in Maryland, [8846] which is considered a sale by the Baltimore Company.

* * *

Q. Now, as I understand it, however, you say that there is a sale by Penn Water in Pennsylvania even though it doesn't receive payment from the Pennsylvania Railroad

Company. A. Not directly; it doesn't receive payment directly.

Q. So that when it receives what you call an indirect payment, that makes a sale, is that right? A. Well, the railroad company, I suppose, could make out two checks, give one to Baltimore Company, and one to the Penn Water directly. As I understand it, it compensates the Baltimore Company only, which in turn, compensates the Penn Water Company.

• • •

[8847] TRIAL EXAMINER: Answer the question, Mr. Witness.

THE WITNESS: To be a sale there has got to be the compensation.

By MR. MYSE:

Q. But there is no compensation from the railroad to Penn Water, is there? A. Oh, well, that is a matter of convenience; there is compensation; I mean it is for some purposes, I mean, by the railroad company; the Baltimore Company is handled in that particular way; there is compensation.

Q. Well, you consider that a sale from Penn Water to the Pennsylvania Railroad even though there is no direct payment from the railroad to Penn Water? A. I consider it a sale because Penn Water makes deliveries and it receives compensation therefor.

Q. So, under your theory it makes no difference from whom they receive the compensation, is that right?

• • •

[8848] THE WITNESS: Compensation would be made by the purchaser. Now, you might make it directly or he might make it indirectly.

By MR. MYSE:

Q. What do you mean by compensation made indirectly by a purchaser? A. Well, as I stated, as a matter of

convenience instead of making out two checks they make out one, and in the way of billing arrangements as they are between Penn [8849] Water Company and Baltimore Company that seems to be a practical way of doing it.

Q. Mr. Roland, it is more than a mere matter of convenience; it is a provision in exhibit ten, the contract. A. Well, it is still a mere matter of convenience.

TRIAL EXAMINER: State your question again.

By MR. MYSE:

Q. There is a provision in the contract requiring that all payments be made to Consolidated Gas Electric L & P Company of Baltimore. Doesn't that provision say that? A. I don't recall that there is a provision like that in there or not. But even if it was in there it would be for the same reason, that it is a matter of convenience.

• • •

[8850] MR. MYSE: As a matter of fact, the contract in Article XI requires that the payments be made to Consolidated Gas Electric L & P Company of Baltimore, doesn't it?

• • •

[8851] A. Is it required? Yes.

• • •

[8855] Q. So there you spoke of the deliveries by Holtwood to the railroad as deliveries to the ultimate consumer. Is that right? A. The railroad company is an ultimate consumer and that is what I had in mind.

• • •

[8858] Q. Mr. Roland, will you refer to page 911 of your direct testimony? The reference is line 13 through 19. There you spoke of sale of interchange power to Philadelphia Electric Company. Is that right? A. That is right.

Q. And again at page 929, you testified with respect to the deliveries, the interchange deliveries by Holtwood to Philadelphia Electric Company. Is that correct? A. Yes.

Q. And those deliveries are made actually to the Pennsylvania Railroad Company, are they not? A. To the facilities of the railroad company, yes.

MR. MYSE: May I have the answer, please?

(Answer read.)

By MR. MYSE:

Q. Well, the energy is used by the railroad company in running its trains up and down the line north and south of Perryville, is it not? A. That is my understanding. I don't know whether any of the energy supplied at that point gets up beyond the railroad and back into the Philadelphia Electric system or not.

* * *

[8868] By MR. MYSE:

Q. Now, at certain places in your direct testimony you testified with respect to electric energy receipts by Penn Water, and I refer to one place, to be specific, at lines 15 through 20 at page 906, if you care to look at that.

MR. GOLDBERG: May I have those pages again, please?

MR. MYSE: Lines 15 through 20, page 906.

Now, in addition to the companies that you listed there at page 906, does Safe Harbor receive energy from Potomac Electric Power Company?

MR. GOLDBERG: What was that question?

MR. MYSE: I meant P. W., rather.

MR. GOLDBERG: Instead of Safe Harbor the question should be Penn Water?

MR. MYSE: Yes.

THE WITNESS: Does Penn Water receive energy from PEPCO?

MR. MYSE: Yes.

THE WITNESS: There may be times when PEPCO is feeding into the railroad facility at Benning that it is more than enough to satisfy the railroad requirement between there and Perryville. Some of it may back up to Conestoga.

By MR. MYSE:

Q. Isn't it also true that at times there is energy [8869] received by Penn Water on the 220 kv circuits from PEPCO? A. Well, yes, if you talk of it being received directly from the facility of PEPCO, yes. What I had in mind there was that it was received from Consolidated because the purchase was made by Consolidated.

Q. Then you weren't talking about physical receipts in that testimony at page 906. Is that my understanding? Is that understanding correct? A. The question was from what companies do they receive it?

Q. That is right. Isn't it a fact that physically Penn Water receives energy from PEPCO at times? A. There is a transfer of energy from the facilities of PEPCO directly to Susquehanna.

Q. So your answer should be amended accordingly, shouldn't it? A. If we change the understanding of that, yes. If we are talking about the physical transfers from the facilities of one company to another, the answer should be amended to include PEPCO.

Q. Well, what did you mean when you used the words "receive electric energy"? A. I had in mind receiving from what company, and they do receive it from the Baltimore Company. The sale is made by PEPCO to Baltimore, and therefore I consider that [8870] as being received from Baltimore.

Q. Then do I understand your answer on page 906 to be limited to cases of receipt of electric energy when there is also a sale of that energy? Is that right? A. I think that my answer would so limit it, yes.

Q. It didn't show in your answer, and you want to amend it now to show that. Is that right? A. I think

that answer could be amended to include PEPCO. I think that would be perfectly proper.

Q. Then as I understand you you are making your answer mean that you are dealing with physical receipts of electric energy. Is that right? A. I am doing it now. From your questioning I think that it would be all right to add PEPCO there the way the question is stated on page 906.

Q. Now, as I understand your testimony over the last few minutes, then, the receipt of energy is not the same thing as the purchase of energy. Is that right? A. The receipt of energy doesn't necessarily have to be a purchase of energy, that is true.

Q. Now, the interchange energy which Penn Water received from, let us say, Pennsylvania Power and Light Company and Metropolitan Edison Company is available for use for any loads that Penn Water may have at the time, isn't it? [8871] A. Yes.

Q. And it can also be used to take care of any Baltimore load it may have at the time? A. Yes.

Q. And even if the energy so received never gets down to Baltimore, it makes available to Baltimore by the receipt of that energy a certain amount of additional energy to Baltimore. Is that right? A. If Holtwood has some definite requirement to meet in Pennsylvania and a part of it is supplied from a Pennsylvania customer, obviously there would be more left over for Baltimore.

* * *

[8873] By Mr. Myse:

Q. You don't know what a charge for service is? Is that your answer? A. A charge for service—I presume what you have in mind is so many mills per kilowatt hour or so many dollars per kilowatt of demand.

Q. Well, those things that you mentioned would be a rate for service, wouldn't they? The charges per unit? A. Well, it results in a charge. Q. That is you take the total units and multiply it by [8874] the rate and you come

out with a charge for service. Isn't that right? A. Isn't that what you had in mind?

Q. I am asking you is that what you mean? A. It results in the charge. If you apply the rate you get a charge.

Q. So if you apply a charge per unit, whether it be kwh or mkw, or kw, and multiply it by the number of units you get a charge for the service, a total charge. Is that right? A. Yes, that would result in a total bill or charge, whatever you want to call it.

Q. What is your understanding of electric demand?

• • •

THE WITNESS: Well, demands are measured by the demand meter or a watt hour meter integrated over an hourly period.

The demand is the measure of the rate at which the energy is being delivered or sold, usually expressed in kilowatts or kilowatt hours per hour.

[8875] By MR. MYSE:

Q. Well, do you think it is fair to state that an electric demand is the load at the receiving terminals over a specified interval of time and that demand is expressed in kilowatts, kva, amperes, or other suitable units?

• • •

THE WITNESS: Yes, you could measure the demand in kilowatts or kilovolt amperes.

By MR. MYSE:

Q. My question was, was that a fair definition of demand?

MR. GOLDBERG: Would you like to have it read again?

THE WITNESS: No, I think I understand it. The word "load" itself, of course, is demand in a sense.

MR. MYSE: Can't you answer my question, Mr. Roland?

THE WITNESS: I think that definition would be satisfactory.

By MR. MYSE:

Q. As a matter of fact, it appears in the Federal Power Commission's glossary of terms, does it not? A. I don't know. You were reading it.

[8876] Q. Isn't that correct on page 7? A. That is what I said I thought it was, a satisfactory definition.

Q. I don't think your answer was quite responsive. It does appear on page 7, does it not? A. I will take your word for that.

Q. Well, I don't want you to take my word for it.

TRIAL EXAMINER: Well, that would be a matter of official notice.

MR. MYSE: I am not so sure in this case, Mr. Examiner.

TRIAL EXAMINER: Well, you mention it to me, and I will take official note of it.

MR. MYSE: I am not so sure that other people might take official notice.

TRIAL EXAMINER: That is the ruling. You don't have to ask the witness what appears in the glossary of the Federal Power Commission.

MR. MYSE: Then do I understand that you will take notice of that specific reference at page 7 that I just read?

TRIAL EXAMINER: Yes.

MR. GOLDBERG: I think we had better have a definite description of the glossary so there will be no question of where it came from.

By MR. MYSE:

Q. Will you describe what I was reading from?

[8877] MR. GOLDBERG: You describe it. The witness doesn't have to describe it. I will accept your description of it.

MR. MYSE: I would like to have some testimony in the record.

TRIAL EXAMINER: Proceed.

MR. MYSE: As a matter of fact, the definition I read came from what is known as the Federal Power Commission glossary of important power and rate terms, abbreviations and units of measurement and was issued in the year 1936.

By MR. MYSE:

Q. Is that right, Mr. Roland? A. That is right.

Q. Now, I think you agreed with me, but I am not sure, that demand could be measured over different intervals of time. That is you could have demand integrated over one hour. Is that right? A. That is right.

Q. Over fifteen minutes? A. That is right.

Q. Generally speaking a fifteen-minute integrated demand might be higher than a one-hour integrated demand? A. It usually would be, yes.

Q. And if you had a five-minute integrated demand it might be higher? A. It would be higher than the fifteen minute demand.

[8878] Q. Why would a fifteen-minute demand, for example, normally be higher than a one-hour demand? A. Well, over a period of an hour you can get a lot of averaging out which you get by integration. During the first half of the hour it might be high and then during the last half of the hour it might be low, and you would average them out. If you take a five-minute period you don't have much time for averaging out. You catch a peak and that peak may be sustained for five minutes, so you don't have the averaging.

Q. If I can understand that answer as a poor layman, what that means is that in the fifte... minute demand you

are more apt to get the peaks weighted into your answer than you are in a one-hour demand. Is that it? A. The peaks are not so apt to be balanced out by something lower during the same interval of time.

MR. GOLDBERG: I think counsel is modest. That sounds like a technical understanding.

By MR. MYER:

Q. Is it fair to say that an electric capacity service is the service furnished by carrying an electric load equivalent to the demand plus whatever reserve is necessary?

THE WITNESS: Can I have that one?

(Question read.)

THE WITNESS: Does that state "Carrying the equivalent [8879] load"?

Q. Carrying the electric load equivalent to the demand. A. In capacity service you are not probably carrying any of that load. You have the capacity available to carry it, but you are not actually carrying it.

Q. That constitutes service, doesn't it, having capacity available? A. Under certain forms of contracts the supplier agrees to have the capacity available. Under those conditions that would be a part of the service which he would render to the buyer.

Q. Well, wouldn't the company which is taking care of a demand load at the service point be rendering capacity service as well? A. I don't understand that, I don't believe.

Q. Well, in any event capacity service and demand both are measured by kilowatts, kilovolt amperes, and sometimes hp, aren't they? A. Capacity is measured in terms of kilowatts or kilovolt amperes, and so is demand; yes.

Q. Now, a charge for electric capacity service is referred to either as a demand charge or as a capacity charge, and it is a charge based upon the capacity fur-

nished or the demand in terms of kw or kva without regard to the amount of [8880] energy consumed. Isn't that right? A. That is very often the case, yes.

Q. As a matter of fact, the glossary that I referred to a while back contains such a definition, does it not? A. I don't know.

Q. As a demand charge?

MR. GOLDBERG: Do you want the witness to read the definition into the record?

MR. MYSE: I can read it and ask him if that is correct.

By MR. MYSE:

Q. The glossary at page 7 defines a demand charge as "A component part of a rate schedule which provides for a charge based upon the customer's demand or equivalent, without regard to the consumption of energy." Is that right? A. That is correct.

Q. How do you define electric energy, Mr. Roland, as you used it in your direct testimony? A. Well, electric energy can be defined in qualitative terms. You can say it is something which has the ability to do work. That is a very common definition for energy in the qualitative sense. You can define it in the quantitative sense, the energy of a system is the amount of mechanical work that the system is capable of doing.

You can also define energy in the problem that we are dealing with here as a commodity, something which is bought, [8881] sold and interchanged. I think probably in my studies here that that is the concept that I had more than I did the definition in a quantitative sense or the one I described as being the more qualitative.

Q. Well, speaking of it as a commodity as you have just testified to it, is it something you can put your hands on? A. Some people claim they can. I have never been able to.

Q. Well, I want your opinion, not what some people claim. What do you think? It isn't a commodity in the ordinary sense like buying the table or a hat——

MR. SPARKS: Or Mr. Goldberg's tie.

MR. MYSE: Would you like the question read now?

TRIAL EXAMINER: Read the question.

(Question read.)

THE WITNESS: Certainly energy cannot be related to anything that we ordinarily think of.

By MR. MYSE:

Q. So it is not like the ordinary commodity, then? A. Physically it is not.

Q. Now, electric energy is measured commercially for billing purposes in kilowatt-hours, isn't it? A. Yes.

Q. As distinct from demand or capacity service which is measured commercially for billing purposes in kw or kilowatts. [8882] A. That is right.

Q. And sometimes measured in kilovolt amperes. A. That is correct.

Q. And sometimes measured in hp. A. Yes.

Q. I take it you would also agree that a charge for electric energy is a charge based upon the amount of kwh furnished. Is that correct? A. Yes.

Q. And again the Federal Power Commission in its glossary of 1936 defines an energy charge as a component part of a rate schedule that provides for a charge based upon the amount of energy consumed. A. That is correct.

Q. That is at page 9. A. That is right.

* * *

[8883] By MR. MYSE:

Q. I take it from our previous discussion you would also agree that a rate for electric energy is the price or charge per kwh furnished. Is that right? A. Rate for electric energy?

Q. A rate for electric energy, yes, an electric energy rate as distinguished from the charge. A. A charge per unit of energy?

Q. That is right, per kwh furnished, if that is the unit. Is that right? A. I think that usually is the case, yes.

Q. As a matter of fact, if you went to the Philadelphia Electric Coatesville contract you would find some examples of separate charges for demand, separate charges for capacity service furnished, separate charges for energy, and separate charges for transmission services, wouldn't you? A. I believe that is correct.

Q. Now, are there any such separate specified charges for the services rendered to Baltimore by Penn Water?

* * *

[8884] THE WITNESS: I don't believe there are. I don't recall now about separate transmission charges, but I know there are no energy charges or demand charges spelled out.

By MR. MYER:

Q. Can't you be a little more specific on that? You have examined the contract, have you not? A. Yes, I examined them some time ago for a specific purpose, not including what you were just talking about.

Q. As a matter of fact, it is clear from that contract that there are no such separate specified charges, separate for each of the different kinds of services I have been talking about.

* * *

[8885] THE WITNESS: I stated that my recollection was that there were no separate charges for energy or demand. Now, there was some question in my mind about the cost of these facilities, the 220 K. V. lines, but I am not sure about that.

* * *

Q. Now, Mr. Roland, I am sorry, but I am not satisfied with your recollection at this time because you made the

direct statement about sales in your direct testimony. I would like to have you be more positive if you can.

• • • •

[8886] TRIAL EXAMINER: Can you be more positive at this time?

THE WITNESS: I can be more positive about the energy and the demand charge. I am not so certain about the facilities.

By MR. MYSE:

Q. What do you mean by that? A. That there are no special separate provisions for energy charges and demand charges in that contract.

Q. As a matter of fact the charges are based upon expenses without regard to the amount of energy furnished? A. That is correct.

• • • •

[8890] MR. MYSE: Whatever charges are made under the presently effective contract after the year 1931 they appear in Article III of that contract, do they not, and that has been gone into extensively in the cross-examination of Mr. Spaulding?

MR. GOLDBERG: Which contract?

MR. MYSE: Items H and I, Article III, 1931 supplement.

THE WITNESS: Is that a question?

MR. MYSE: Yes, that is where whatever charges there are under the contract are specified. Isn't that correct.

THE WITNESS: I would have to look and see. I don't remember the Article numbers.

MR. MYSE: Will you do so?

MR. GOLDBERG: Article III on page 29 of Item H?

MR. MYSE: Yes.

MR. GOLDBERG: Now may we have the question, please?

(Question read.)

THE WITNESS: That Article covers the payment that should be made for electrical capacity and energy which Baltimore Company receives from Penn Water Company.

• • •

[8900] Q. Now, what is the difference between metering on a net hourly basis and metering on a net yearly basis? A. It seemed to me that on a net yearly basis what that would mean would be the difference between the gross transfer in one direction subtracted from the gross transfer in the opposite direction.

[8901] Q. Over a year period? A. Over a year period. Now, the net hourly basis would be the summation of the net transfers during any particular hour over a period of a year, which of course might differ from the net yearly basis. That is, during an hour you may have the flow in one direction for part of the hour and in the reverse direction for the remainder of the hour. The difference between the two would be the net hourly. If you add all those up for each hour of the year you would have the net hourly for the year. That is my understanding.

Q. And the net hourly for the year might be quite different from the net yearly? A. I expect it would, yes.

Q. And if you had a net daily basis, you might get a different figure? A. That is right.

Q. Do you know what is the normal way of accounting for energy for billing purposes, whether it is net hourly, net daily or net yearly?

MR. GOLDBERG: I object, Mr. Examiner, unless the question is confined to the company under study. The question talks about the normal basis. Normal basis for whom?

MR. MYSE: I will accept that amendment, the normal basis for transactions of all these companies we

have been [8902] talking about, that is the Pennsylvania customers, Penn Water, Safe Harbor, Baltimore.

MR. GOLDBERG: Now may we have the question?

(Question read.)

MR. GOLDBERG: Then that is confined to Penn Water?

MR. MYSE: No, it is not confined to Penn Water.

TRIAL EXAMINER: Answer the question.

MR. GOLDBERG: Mr. Examiner, I understood the amendment was——

TRIAL EXAMINER: The amendment wasn't that. The amendment was Penn Water and all involved with Penn Water in these transfers.

MR. GOLDBERG: In connection with Penn Water transactions?

TRIAL EXAMINER: That is right.

THE WITNESS: I believe it was on a net hourly basis.

By MR. MYSE:

Q. Actually, however, backfeed energy when it is billed for and accounted for is billed on a net daily basis, is it not, that is backfeed from Baltimore? A. I don't know.

Q. Well, didn't you examine "H" and "I" on that point? A. No, I did not, not for that point.

Q. Well, at page 912 you testified in your direct that you examined the billings under those contracts, didn't [8903] you? A. I examined the billings.

TRIAL EXAMINER: Before we go any further, explain for me the difference between net hourly, net daily and net yearly, why they differ?

THE WITNESS: Why they were different?

TRIAL EXAMINER: Yes.

THE WITNESS: Well, take Safe Harbor as an example. During part of the year energy during certain hours is transmitted from Maryland to Safe Harbor. Now, that meter, if you read it at the beginning of the year and at the end of the year, for example, you would get the gross amount transferred from Maryland to Safe Harbor. Now, there would be another meter in the circuit which would measure energy transmitted in the reverse direction. If you read that meter at the beginning of the year and the end of the year you would get the gross amount transferred in the opposite direction. If you subtract the two you would get the net yearly transfer.

MR. MYSE: That would be a net yearly figure for an amount of energy?

THE WITNESS: That is right. But if you read these meters at the end of each hour, you may have during one hour a certain amount transmitted towards Safe Harbor and during the balance of the hour it may be transmitted in the [8904] opposite direction. You would net that figure, and then you do that for each hour of the year, which might be quite different from the net yearly figure.

TRIAL EXAMINER: You mean you do it for each of the 24 hours times 365?

THE WITNESS: That is right.

By MR. MYSE:

Q. And if you added up all those net hourly figures for one year, you wouldn't get the same figure as the net yearly?

A. I don't believe you would, no.

TRIAL EXAMINER: Why not?

THE WITNESS: I would have to try to work out an example to try to illustrate it to you. I will try to do that for you after a while.

By Mr. Myse:

Q. Anyway, when you are talking about sales of energy it is important to know what the basis of the metering is, isn't it?

Mr. Goldberg: Important in what connection, Mr. Counsel?

The Witness: I don't believe it is necessarily important to determine whether or not it is a sale.

By Mr. Myse:

Q. Well, the amount of the sale would depend on how the metering figures are determined. [8905] A. The amount of the sale would depend on meter readings, but whether or not it is a sale you don't need to know all the details of how the billing or metering is done.

Q. But to determine the quantity of a sale you have to know, and it is important to know, the basis of the meter readings, isn't it? A. You would have to know how the meters are read and what they read, yes.

Q. And if one's receipts are not a net yearly basis, you may not get the same thing as if they are on a net hourly basis or a net daily basis, would you? A. That is right.

Q. Now, coming back to "H" and "I", isn't it true that in Article 6 of Item "H" the contract provides——

Mr. Goldberg: What page are you on?

Mr. Myse: Page 9.

By Mr. Myse:

Q. —the contract provides that billing for backfeed energy from Baltimore shall be on a net daily basis? A. It so states.

* * *

[8907] Q. Now, will you refer to Exhibits 38 and 40? We had better have both of them before us. Now, referring to those two exhibits, Mr. Roland, can you tell me what the effect would be or your figures on Exhibit 38 and the picture

on Exhibit 40 if you had included all of the transfers across the Pennsylvania-Maryland line? A. If I had included the transfers across the Maryland line over the 132 kv single phase circuits, it would have increased the amount transferred from Pennsylvania to Maryland, and that would have shown up both in the [8908] tabulation and in the bar chart.

Q. Well, then, as I understand that that would be that if you had shown all of the transfers instead of just part of them, there would be less relative flow shown from Maryland to Pennsylvania. Is that right? A. The flows from Maryland to Pennsylvania remain the same. The flows from Pennsylvania to Maryland would have increased.

Q. Which means that relatively speaking the flows from Maryland to Pennsylvania would be less. A. The flows from Maryland to Pennsylvania expressed as a ratio of the flows from Pennsylvania to Maryland would have decreased.

* * *

[8919] A. The question is under what conditions is energy transferred from Maryland to Pennsylvania?

Q. Yes, under what circumstances? A. Well, in operating a steam and hydro electric system where you have a run of river plant such as at Holtwood and Safe Harbor, in order to coordinate the operations of the steam and hydro, the hydro has to be supplemented by steam which usually occurs during off-peak hours. That accounts [8920] for some of the flow from Maryland to Pennsylvania where the hydros shut down during off-peak hours and the steam takes over and carries the load, which means that steam-generated energy from Maryland would be transmitted to Pennsylvania to supply Penn Water's northern customers. A part of the energy transmitted from Maryland to Pennsylvania would be for purposes of interchange with Pennsylvania customers. Under other conditions, emergency conditions to the north, energy may be transmitted from Maryland to Pennsylvania.

Q. Well, first of all the flow from Maryland to Pennsylvania isn't a continuous thing from hour to hour, is it? A. No. That is when you say "continuous" you mean day in and day out, hour by hour?

Q. That is right. A. That is true, it isn't that.

Q. It only occurs at certain definite periods during the day and during the year. Is that correct? A. I wouldn't say they were very definite. But they occur as required to get coordinated operation of a combined steam and hydro system.

Q. I think you would agree that generally speaking it is during low-flow months of the year that greater amounts of energy in the past, at least, have been transferred from Maryland to Pennsylvania. Is that right? A. That is correct.

[8921] Q. And during the high-flow periods relatively less amounts and sometimes none. Is that correct? A. That is right.

You didn't finish your statement, though, I don't believe, Mr. Myse.

MR. MYSE: Let's have the question and answer, then.

(Question and answer read.)

By MR. MYSE:

Q. I believe I did finish my statement. A. Relatively less amounts of what?

Q. Of energy. A. Doing what?

Q. Flowing from Maryland to Pennsylvania. A. O. K., now the statement is complete.

Q. Now, along that same line, Mr. Roland, you understood me when I referred to the low-flow and high-flow in those questions I was referring to river flow? A. Yes.

Q. Now, that variation may also take place during the day, during different hours of the day. Isn't that correct? A. Which variation?

Q. The variation of flow of energy from Maryland to Pennsylvania? A. They vary throughout the day?

Q. Yes. [8922] A. Certainly.

Q. And usually the greatest flow I think you said was on off-peak hours. Is that correct, the flow of energy, I am speaking of? A. Yes, that is right.

Q. And that is a flow of energy from Maryland to Pennsylvania, we are talking about? A. Yes.

Q. Do you know whether there is ever any backfeed from Baltimore at times of peak on the Holtwood or Safe Harbor system? A. At time of peak—you are referring to the system annual peak?

Q. No, daily peak. A. I only studied hourly flows for 20 days, so I couldn't tell you as to what may have occurred at other times during other days. That is not the plan of operation, however. It is for the hydros, of course, to produce a maximum during a time of peak, and ordinarily that would result in flows from Pennsylvania to Maryland.

Q. So there would be no flows from Maryland to Pennsylvania at the time of the daily peak. A. I can't say whether it has actually occurred, but the mode of operation, I mean, would indicate that it would be unlikely that the flow would be from Maryland to Pennsylvania [8923] during time of peak.

* * *

[8925] Q. Now, I don't know whether you mentioned it or not, but some of the circumstances surrounding the flow of energy from Maryland to Pennsylvania should include, should it not, the furnishing of service to the Pennsylvania Railroad? A. That is part of the load, yes.

Q. And the amount of the Pennsylvania Railroad taken care of by deliveries from Safe Harbor by Conestoga substation via Perryville, depends upon the load on the railroad in both Maryland and Pennsylvania, does it not? A. Yes.

* * *

[8927] Q. Now, I refer you to page 946 of the transcript, lines 5 through 8, where you stated that December 11, 1944, was designated because it was the day when the system peak load of the year occurred on the Safe Harbor-Holtwood-Baltimore power pool. Did you there have reference to the Area 6 system peak day? A. I believe that is correct. I would have to go back and check the Form 12 report.

Q. I think I have one here if you will use my photostat. Do you know where to look in it? A. Yes. I would want to see the report for the interconnected system.

Q. You mean the Consolidated Company power system statement, F. P. C. Form No. 12. Is that what you are looking at? A. The Form 12 report filed by the Baltimore Company for the combined Holtwood-Safe Harbor-Baltimore, Bethlehem Steel and Washington systems.

Q. Will you tell me, Mr. Roland, after referring to the Consolidated F. P. C. Form No. 12 for 1944, what the Area 6 system peak day and hour was? [8928] A. It was the hour ending 6 P. M. on December 11, 1944.

Q. Now, as I understand it, the Area 6 system means what? Let's have it for the record again so we are sure we know what we are talking about. A. The Area 6 systems include the Holtwood, Safe Harbor, Baltimore, Bethlehem Steel and Washington systems.

Q. Now, if you looked at the Holtwood-Safe Harbor system alone you might get a different day of peak or hour of peak, would you not? A. For the Holtwood-Safe Harbor system?

Q. Yes, alone. A. Yes.

Q. Can you tell me what that was for 1944 by referring to the Penn Water F. P. C. Form 12 for the year 1944? All I was asking for was the day and the hour. A. The date is April 19, 1944, and the hour is the hour ending 8 A. M.

MR. GOLDBERG: That is the same information that is on transcript 946, isn't it?

MR. MYSE: Yes, except for the hour.

By MR. MYSE:

Q. Isn't that correct, Mr. Roland? A. That is right.

Q. Now, referring to Exhibit 42 page 20 and the line showing the figures for the hour ending 6 P. M., which as I [8929] understand it now, is the Area 6 system peak hour for 1944, will you tell me the total amount of KWH delivered to Baltimore Company from Holtwood and Safe Harbor during that hour by reference to that line, if you can? A. During that hour 88,000 kilowatts was delivered to Maryland over the 220 K. V. circuit.

Q. And that is shown by what column? A. That is shown in column 7. During the same hour, 54,000 kilowatts was delivered to the Baltimore Company at Highlandtown, Maryland.

Q. That is shown by what column? A. That is shown in column 41.

Q. Now, let me interject a moment. The 88,000 kw is 60-cycle energy, is it not? A. That is correct.

Q. And the 54,000 kw is 25-cycle? A. That is right.

Q. Now, that makes a total, if my arithmetic is correct, of 142,000 kw furnished during the Area 6 system peak hour over those two lines or three lines, I believe. Is that right? A. The 142,000 is correct.

Q. Now, isn't it a fact that the kw available to Baltimore at the hour of Area 6 system peak in 1944 was greater than 142,000 kw?

[8930] TRIAL EXAMINER: Read the question.

(Question read.)

THE WITNESS: More could have been delivered to Baltimore of the 25-cycle power during that hour. I don't know what the 60-cycle generating capacity was available at that time at Safe Harbor during that hour. They were gen-

erating 146,000. I don't remember now just what the capacity available was.

By Mr. Myse:

Q. Well, isn't it a fact that the amount of interchange which may have been furnished to the Pennsylvania customers to the north during that hour was available to Baltimore if it needed it? A. Yes, the interchange could have ceased to the northern customers and gone to Baltimore if they needed it.

Q. Then to the extent there was interchange furnished during that hour, it was available to Baltimore in addition to the 142,000 kw we have found on our Exhibit 42?

Mr. Goldberg: What does counsel mean by "was available to Baltimore"? Do you mean Baltimore had a right to demand that it be sent to them?

Mr. Myse: The witness answered the question.

Mr. Goldberg: You have got that in your present question and I wonder what you meant by that phrase.

By Mr. Myse:

[8931] Q. What do you understand "interchange being available to Baltimore" to mean?

Mr. Goldberg: I would like to know what counsel meant?

Trial Examiner: Just a minute.

The Witness: Interchange is on a when, as and if basis, and if the supplier doesn't want to send it, he doesn't have to send it.

• • •

Q. What do you understand, Mr. Witness, by the term "Interchange being available to Baltimore"?

• • •

[8932] The Witness: If there is any real need during that hour, if there was a need for additional power in Baltimore, why that could be obtained by curtailing interchanges to Pennsylvania customers.

By Mr. Myse:

Q. You mean by that curtailing the interchange which either Safe Harbor or Penn Water or both were furnishing during that hour to Pennsylvania customers?

* * *

The Witness: If the Holtwood generating stations and the Safe Harbor generating stations were generating energy which was being transmitted to the northern customers on an interchange basis, such interchange could be stopped, and if the generation at Holtwood and Safe Harbor continued the [8933] same way, it would be delivered to Baltimore.

By Mr. Myse:

Q. Now, can you tell me how many kw of interchange were furnished to the Pennsylvania customers during that hour, and when I say "that hour", I am referring back now to the hour ending at 6 p.m. on December 11, 1944, Monday, which as I understand it is the Area 6 system peak hour for 1944? A. I believe I can tell you what the interchange was at Harrisburg, but I don't believe I have the hourly records for interchange with Philadelphia Electric Company through the railroad by hours.

Q. Let's have it for Harrisburg first, then.

Mr. Myse: I might say if we have a recess now he can look it up and answer after the recess.

Trial Examiner: I don't like to put the recess on the witness quite that way.

The Witness: During that hour, that is during the hour ending 6 p.m. on December 11, 1944, 5 megawatt hours were delivered to Pennsylvania Power and Light Company at Harrisburg, and during the same hour, 3 megawatt hours were delivered by Pennsylvania Power and Light Company to Penn Water.

By Mr. Myse:

Q. Let's translate that into layman's language. When you say 5 megawatts you mean 5,000 kilowatt hours. Is that right? [8934] A. That is right.

Trial Examiner: Where do you find that?

The Witness: That is not in any of the exhibits. This is from my work papers.

• • •

By Mr. Myse:

Q. Mr. Roland, do you have Table V-A of Exhibit 64 before you? A. Yes.

Q. Now, I see on line 20, a total of 24,000 kw listed by Mr. Davis as non-firm, whatever that means. I assume it means the non-firm demands of Pennsylvania customers on system peak Form 12 of—pool. Does that mean 24,000 kw interchange furnished to the Pennsylvania customers during the 6 p.m. December 11, 1944 hour?

Mr. Goldberg: I object to that, Mr. Examiner. The exhibit was presented by the witness Davis. The witness Davis [8935] will be available to explain the figure.

Trial Examiner: Was this exhibit prepared under your supervision?

The Witness: Very general supervision.

Trial Examiner: Can you answer the question?

The Witness: I don't know whether all of that was on interchange basis or not. It is stated that it is non-firm. That would be either interchange or emergency.

By Mr. Myse:

Q. Well, all of it would be available to Baltimore during that hour, if Penn Water or Safe Harbor or both chose not to deliver to the Pennsylvania customers?

• • •

[3936] THE WITNESS: The 24,000 kilowatts were being generated at that time and delivered on a non-firm basis, and presumably therefore, it could be diverted to Baltimore.

By MR. MYSE:

Q. That is what you understand? Strike that. That is what you understood when I say available to Baltimore? A. Yes.

MR. GOLDBERG: There are no legal implications involved in your question. Is that right?

MR. MYSE: I didn't intend any.

By MR. MYSE:

Q. Now, do you know whether or not the figure shown on Table V-A of Exhibit 64 on lines 15 to 20 inclusive, are figures for the time of this area 6 system peak demand for the hour ending 6 p.m. December 11, 1944? A. Might I have that Form 12 report for the combined systems?

(Report handed to witness).

THE WITNESS: The answer to your question is yes.

• • •

[9040] THE WITNESS: Mr. Examiner, there was a question asked me on page 8922 yesterday that I think should be cleared up somewhat. Line 21.

By MR. MYSE:

Q. 8922, answer beginning line 23? A. That is correct. I would like to ask Mr. Myse if he meant there one particular hour during the day where he stated daily peak?

Q. It is always one hour, isn't there during the day? It can't be two hours, unless it is by coincidence. A. If that is what you had in mind, I will want to modify my answer somewhat then in that I do find in Exhibit 42 hours during the daily peak when there was transfer from Maryland to Pennsylvania.

Q. Will you refer me to those hours, then? A. August 21, Monday, that is page 10.

Q. Which hour are you referring to? A. There were transfers from Maryland to Pennsylvania [9041] during every hour of the day. And one of those hours presumably was the peak hour that you had reference to in your question on line 2.

Q. All right. Now what other hours? A. What other days?

Q. Yes. A. I think that is true for the entire week of August 21, August 22, August 23, August 24, August 25. August 26 is a Saturday which I believe was ruled out as not being one of the peak days by your question.

• • •

[9043] TRIAL EXAMINER: I am not so certain that counsel shouldn't be confined in this respect. That we are now on a different line of inquiry. Your question as put to the witness requires that he go back and review in his mind the testimony of the last two days possibly if there is any matter of question of peak.

Now, in regard to the line of questioning that you are now engaging in since you initiated it I should think that you state the question.

MR. MYSE: Mr. Examiner I didn't initiate anything this morning.

MR. GOLDBERG: You initiated this line of questioning.

TRIAL EXAMINER: Let me inquire—did the witness start [9044] out by testifying as to peak?

MR. MYSE: You mean this morning?

TRIAL EXAMINER: Yes.

MR. MYSE: That was my understanding.

TRIAL EXAMINER: Well, he didn't.

MR. MYSE: He volunteered some information about the answer at 8922 that he wanted to clarify what he

meant by the answer in which the word daily peak was used.

Now, I am trying to find out what he meant by daily peak.

MR. GOLDBERG: You used it in the question.

TRIAL EXAMINER: I think that since you are putting a question to the witness in which that phrase is involved it is not quite fair to the witness to stop and ask him whether what he generally means by what he used insomuch as he used it in his testimony.

• • •

[9045] MR. MYSE: I didn't introduce it in the questioning.

Well, maybe I can clear this thing up. I move to strike all testimony of the witness up to this point this morning. It was not responsive to any question of mine.

TRIAL EXAMINER: The motion to strike is denied.

• • •

[9050] Q. Well, would you consider the hour of maximum generation equivalent to the hour of peak demand on the Holtwood-Safe Harbor system? A. That is one way of measuring peak demands, but you may not be interested in that.

Q. I am asking you as an engineer. A. It is the peak demand on the generating plants.

Q. But it wouldn't be the peak demand on the system? A. Ordinarily not. I don't know whether the Holtwood-Safe Harbor system so treats it or not. I don't recall at the moment. Ordinarily that would not be the peak demand on the system. You would have to take into account energy received and energy delivered to other utility companies which would not correspond to maximum demand on the generating station.

• • •

[9063] THE WITNESS: That is not so. The contracts played a very small part in my testimony on this subject.

By MR. MYER:

Q. Well, what part did they play? A. I was interested in knowing what kind of deliveries were being made at the various points, whether they were firm deliveries or interchange deliveries and whether the energy so delivered was paid for, just a general understanding of the contract. I didn't need to know all the details. It played no part in this study at all.

* * *

[9066] Q. Now, if I understood your opening statement this morning, Mr. Roland, the one that was not in response to any question, do you recognize what I am referring to? A. I do, yes.

Q. You said there was a backfeed, as I recall it, during the hours of daily peak hour on the Holtwood-Safe Harbor system. Is that it? A. Yes.

Q. Now, in making that statement, did you take into account any circulating energy which may be transmitted from one side of the Baltimore system over the 220 kv line to Safe Harbor, and then transmitted south over the other 220 kv line to the other side of the Baltimore Company system? A. No such energy was circulating on August 21.

Q. I think you referred to August 25, however, didn't you? A. I started with August 21.

Q. I am sorry. Just a moment. You say August 21 there is no such circulating energy. Is that your answer? A. That is correct. There was some during three [9067] hours on August 22.

Q. How do you determine that? A. From Column 4 and Column 7, energy was being delivered from Maryland to Safe Harbor during that hour, and during the same hour energy was being delivered from Safe Harbor to Maryland.

Now, that may have been that it was coming up on one of the 220 kv circuits and going back on the other, or it may have reversed on both circuits during the hour, I don't know. I would have to go back and examine the daily log sheets to determine that.

Q. Well, that is a possibility at times though, is it not? A. Which?

Q. That you have circulating energy going up on one 220 circuit and coming back immediately on the other 220 circuit. A. But I wouldn't call it circulating energy.

Q. What would you call it? A. If Baltimore is attempting to feed to PEPCO, you have two parallel circuits, one 220 kv circuit that goes by way of Westport and Ellicott City and you have the other circuit by way of Riverside and Safe Harbor down, so the two circuits are in parallel and if you are putting energy from Baltimore to PEPCO you may have it going up on one and back on the other. If the process is reversed, [9068] where PEPCO is delivering to Baltimore, you may have it go up on one circuit to Safe Harbor and back to Riverside on the other.

Q. So that you may have a situation where PEPCO, that is Potomac Electric Power Company wants to deliver energy to Baltimore under its contract to Baltimore and in doing so the energy travels up one 220 circuit to Safe Harbor and down the other 220 circuit to Riverside in Maryland, is that right? A. That might result in this: Where energy is being transmitted to Safe Harbor over one of the circuits and simultaneously energy is being transmitted from Safe Harbor in the opposite direction over the other circuit, it doesn't necessarily follow that energy delivered by PEPCO goes to the Safe Harbor bus and then turns around and comes back out down to Baltimore.

Q. You say it doesn't necessarily follow? A. No. It doesn't necessarily follow.

Q. It is a possibility though. A. The energy delivered on one of the circuits would be co-mingled with energy

that would be generated at Safe Harbor or delivered to Safe Harbor at the same time from other sources of supply.

Q. If Safe Harbor were shut down there wouldn't be any co-mingling of energy, would there? [9069] A. If Safe Harbor were shut down and you had energy being delivered on one of the circuits, one of the two 220 kv circuits and out again on the other 220 kv circuit and there was no other energy coming into the 60-cycle bus then it would be Baltimore energy that would be sent from Baltimore to Safe Harbor and back to—

• • • Then it would be PEPCO energy that would be sent to Safe Harbor and back to Baltimore.

• • •

[9078] Q. Now, with respect to the 110 kv loop, there are a great many taps on that loop, are there not? A. Well, I see two of them here between Riverside and Westport on this diagram, exhibit 216.

Q. Aren't there a good many more than shown on exhibit 216? A. I don't know.

Q. Aren't you familiar with that loop at all? A. I didn't study the Consolidated system.

• • •

[9082] Q. What I mean is it possible that they may not have enough generating units to take care of the load of that side of the Baltimore system near Riverside, is that right? A. Such a situation may arise; I am not familiar with the Baltimore system.

• • •

[9085] Q. Now, it could well be that the reverse could happen, there might be a deficiency in the Westport area and Riverside would be generating more than enough to take [9086] care of its area, and Safe Harbor shut down so that there would be a transfer from the Riverside area to the Westport area. A. I suppose that is possible, but I don't know anything about the Consolidated system, how it operates or what the relative loads are or what the relative generating capacities are.

Q. And you made no study to determine any of those things, did you? A. No, that was not involved in my study; I was studying the Safe Harbor-Holtwood system.

• • •

[9087] Q. Now, Mr. Roland, I think we can summarize the questions and answers we have been having for the last fifteen or twenty minutes by saying isn't it true that where we have two or more parallel paths between Westport and Riverside, as we do, and one of them is via the Safe Harbor bus, that any transfer of energy between Westport and Riverside would mean that some of the backfeed energy metered at Safe Harbor is energy generated and consumed by Baltimore? • • •

[9088] A. Of course your question assumes that there is an exchange between Westport and Riverside.

Q. That is right. A. I don't know whether that occurs, but when it does occur it would divide in those parallel paths. What I have in mind is if there was a transfer from Westport to Riverside, that transfer would take place over the various parallel paths, one of which would be Safe Harbor circuits.

Q. Then is the answer to my question "Yes"? A. With those qualifications that I made, that would be true.

Q. Yesterday we were talking, near the time we ended at least, about the maximum demands during various hours in the Area 6 system and maximum demands on the Holtwood-Safe Harbor system, as I remember it, distinct from the Area 6 [9089] system.

Now, my question to you is as follows: Isn't it true that the maximum kwh furnished at the time of the PW-Safe Harbor system peak would not only be different in quantity, but different in time to the maximum kwh furnished from the Area 6 system at time of peak? A. It was different in 1944. They did occur at different times.

Q. It is different in time and quantity, is it not? A. Well, the area 6 peak is over a million kilowatts, that is the

annual system peak, and the Safe Harbor-Holtwood system peak being a part of that obviously would be less than for Area 6.

Q. It is also true that the maximum demand in kwh or kw over an hour, if you will, on the Baltimore system peak would come at a different time from either the Area 6 system peak or the PW-Safe Harbor system peak? A. It might. I don't know whether that was true in 1944 or not.

Q. Did you make any study of that situation? A. I remember looking at them at the time of the peak on Area 6 and the Baltimore system by itself and the Holtwood-Safe Harbor system by itself, but I don't recall now as to when the peak occurred on the Baltimore system.

Q. Likewise the maximum demand in Kwh or kw over an hour on the Penn Water system alone would be—would come at [9090] a different time, be different in amount than such maximum demands at time of peak on either the Area 6 system, the Penn Water-Safe Harbor system, or the Baltimore system. Isn't that true? A. I haven't investigated it, but it is quite likely that the peaks would not coincide.

Q. Now, isn't it also true that the peak demand on Penn Water's 25-cycle system alone might come at an entirely different time than the peak demand on the Area 6 system, the Penn Water-Safe Harbor system, the Baltimore system or the Penn Water system as a whole? A. The peak demand on the 25-cycle system would occur when you had maximum amount of generation, which would probably be during the high-flow months of the year, and that would not necessarily, or it is very unlikely that it would occur at the same time as the area's or the system's peak.

Q. Or any of these other system peaks that we were discussing? A. Well, it may not be so different from the system peak on the Penn Water-Safe Harbor system.

Q. Why do you say that? A. Well, because both of them are related to maximum generation, as I under-

stand the way they report system peaks for the Penn Water- Safe Harbor system.

Q. Isn't it because they are coordinated? [9091] A. The two hydro plants are on the same river and if there was high flow at one place there would be at the other so you would have maximum generation at both plants.

Q. It doesn't necessarily follow, does it, because at the one plant you have a steam plant generating in addition to hydro? Isn't that correct? A. That is true. I just discounted the steam because that usually runs along at full load anyway.

MR. MYSE: May I have that question back where I talked about coordination of the two plants and the answer to it?

(Question and answer read).

By MR. MYSE:

Q. Does that mean that the answer you just gave that was read, means "Yes" to my question? A. Your question being that the simultaneous occurrence of peaks at the Holtwood plant and the Safe Harbor plant is the result of coordinated operation? Is that what you have in mind?

Q. No, that isn't it exactly. I think I can restate it. Isn't it a fact that one of the reasons why the maximum demand on the Penn Water system might coincide with the Penn Water-Safe Harbor system is because the two plants are coordinated? A. Whether they were coordinated or not it would seem to me that both being on the same river you would necessarily [9092] have maximum generation at both plants at the same time.

From your question there I am of course assuming that flows are above the full discharge capacity of the plant, so that you would be spilling water; and in that case you would have maximum generation at both plants. Now, if the flows were less than that, then you would only get maximum generation simultaneously at the two plants by coordinating their operations.

Q. I think you said some place in your testimony, it may be your direct at page 932—at that page you pointed out, did you not, that the eight—25 cycle hydro generating units at Holtwood were used and useful principally for delivering energy to Baltimore Company at Highlandtown. Is that right?

• • •

[9093] THE WITNESS: I stated that most of the energy generated by the eight—25 cycle generating units at the Holtwood hydro plant is delivered to the Baltimore Company at Highlandtown.

By MR. MYSE:

Q. Am I to understand by that answer that you mean that those eight units are used for service to Baltimore Company? A. Those units generate electric energy which is transmitted to Baltimore Company at Highlandtown, among other places.

Q. Can you answer my question directly, Mr. Roland?

MR. GOLDBERG: I object, Mr. Examiner. The question has been answered directly and responsively.

THE WITNESS: I stated the fact. As I understand it, you injected the word "service".

By MR. MYSE:

Q. No, used for service to Baltimore. A. You have the word "service" in there. I am saying these units generate electric energy which is transmitted to Baltimore.

Q. That means they are used for that purpose. Isn't that what you mean? A. Yes.

• • •

[9095] Q. Well, can they be used for any other purpose other than service to Baltimore? A. I stated in my direct what they were used for. They were used to generate electric energy delivered to Baltimore Company at Highlandtown. They were also used to generate electric energy which is transmitted to PP and L Company at Lancaster,

and at times they are used to transfer energy to the 60-cycle bus at Holtwood.

Q. You say the 25-cycle hydro generators are used to transfer energy to the 60-cycle bus. That is what you just said. A. Through the frequency changer.

Q. But the generators themselves can't do that, can they? A. The energy is generated by the 25-cycle units, and converted to 60-cycle by means of the frequency changers.

Q. Well, other than the uses you just spoke about, that is in generating 25-cycle energy delivered to PP and L at Lancaster, and delivering 25-cycle energy to the converters at Holtwood, those 25-cycle generating units have no other use than to generate energy to be delivered to Baltimore? A. Those are the only three outlets for the energy generated by the 25-cycle units at Holtwood.

Q. And it follows, then, does it not, that they couldn't be used for anything else? [9096] A. Unless you include use as a synchronous condenser.

Q. How would they be used in that manner? A. They would be operated as a motor to supply reactive to the system.

Q. Where would the energy come from to operate those units? A. That would have to come through the frequency changer from the 60-cycle system.

Q. Do you know whether that happens frequently at Holtwood or not? A. I don't believe so.

Q. What would be the purpose of operating those eight units as synchronous condensers? A. Offhand I wouldn't see that there would be any purpose in doing it. I said they could be.

Q. As a matter of fact, it is true, isn't it, that only one of the eight could be used that way? A. I believe it is number 8 unit that is used at times or operated as a synchronous condenser. Whether or not the others can be, I am not sure. I believe that there is only one, however, that is used as a synchronous condenser.

Q. That use is a very small number of hours, if any, during any one year. Isn't that right? A. I don't know. [9097] Q. Will you refer to Exhibit 42 again, page 20? Will you refer me to the amount of energy delivered to Baltimore at Highlandtown during the Area 6 system peak hour in 1944? A. We discussed the hour a day or two ago, and as I recall that was the hour ending 6 p.m.

Q. Yes, that conforms to my recollection. A. In column 41, then, of Exhibit 42, page 20, 54,000 kilowatts were transmitted to Highlandtown sub-station during that hour.

Q. Do I understand that to mean that 54,000 kilowatts of demand on the Holtwood 25-cycle system by Baltimore during that hour?

THE WITNESS: May I have that question, please?

(Question read).

THE WITNESS: That question is somewhat confused.

MR. MYSE: It is garbled. Let's strike it out and start over.

By MR. MYSE:

Q. Will you tell me what that 54,000 means in terms of demand? A. It means that the 25-cycle units at the Holtwood hydro plant were supplying 54,000 kilowatts of 25-cycle demand in the Baltimore system.

Q. There would have to be that demand in the Baltimore system or they wouldn't be supplying it via Highland- [9098] town. Isn't that correct? A. Yes.

Q. And there is no question but that that is an actual metered delivery during that hour, is there? A. It is metered at Highlandtown.

Q. There might be a small amount of loss. Is that what you had reference to? A. No, not the way I answered your question. It means that Holtwood, to supply 54,000 at Highlandtown has to generate something more than 54,000.

Q. So that the demand on the Holtwood 25-cycle system, if I understand you, is slightly greater than 54,000 during that hour. A. You are talking now about the Holtwood 25-cycle system?

Q. Yes. Isn't that where the energy comes from? A. Yes. I think I understand what you mean, that the demand on the Holtwood 25-cycle system would be greater than 54,000, yes.

Q. I take it if we refer to page 4 of Exhibit 42, column 41, for the hour ending 8 a.m. we would find that 69,000 kwh were delivered during that hour to Highlandtown from the 25-cycle system at Holtwood. Is that right?

TRIAL EXAMINER: What page is that?

MR. MYSE: Page 4.

[9099] By MR. MYSE:

Q. And again that 69,000 figure means that the demand on the Holtwood 25-cycle system during that hour was something greater than 69,000? A. Well, the total demand on the Holtwood 25-cycle system as I understand it, was 81,000.

Q. Well, I meant the demand by Baltimore on the 25-cycle system at Holtwood. A. The demand of the Baltimore Company at Holtwood's 25-cycle system is the 69,000.

Q. Well, to take care of the losses, however, it would be something greater, would it not? A. But that is on Holtwood's own system, not on the Baltimore system.

Q. I mean on Holtwood's own system. The amount of capacity necessary to furnish that 69,000 to Baltimore would have to be greater than 69,000, would it not? A. As I said before, the generation at Holtwood would have to be in excess of 69,000 in order to deliver 69,000 at Highlandtown.

Q. To take care of the losses. A. That is right.

Q. Now, as I recollect that hour ending 8 a.m. on April 9, 1944, is the hour of peak demand on the Holtwood-

Safe Harbor system. Is that correct? [9100] A. Yes, as those two companies reported in their Form 12 report to the Commission for the year 1944.

• • •

[9129] Q. Isn't it a fact, Mr. Roland, that when you connect a motor to an electrical circuit you thereby consume energy at that point if the motor is running and carrying a load? A. Yes.

Q. Now, when you are running a converter at Holtwood, for example, the electrical machine on the end of the shaft, which is taking in energy is being operated as a motor, is it not? A. Yes.

Q. So that that motor is consuming the energy put into the converter, is it not? A. Well, the energy supplied to the motor end of it is converted into mechanical energy; if that is what you mean by consuming, why, that is correct.

Q. Now, Mr. Roland, it is true, is it not, that if we were to connect a motor, electric motor, to any electrical circuit, and put a mechanical load on that motor, that motor would consume electric energy, would it not? A. That term is often used when you have a conversion of energy from one form to another; it is very often called a consumption of energy.

TRIAL EXAMINER: Just a moment. Now, this is not critical, but it should be said. The Examiner overheard a whispered conference at staff counsel's table just before [9130] the witness gave his answer, in which the very words that the witness used in his answer were said audibly enough for the Examiner to hear, and presumptively the witness could have heard.

Now, I think that all conferences and all statements that are made at staff counsel's table or any other counsel's table, should be said in such a tone that they should not carry beyond the table. It is unfair to

the witness, and it can be unfair to cross-examining counsel.

MR. GOLDBERG: Mr. Examiner, if we had been discussing anything at counsel's table, staff counsel's table, it has been a discussion only amongst ourselves, and if the Examiner has been able or was able to overhear the tone at staff counsel's table, then the Examiner has extremely sharp ears, and I say, Mr. Examiner—

TRIAL EXAMINER (Interposing): I don't think my statement needs to be argued about; I think it is something that I should be permitted to say without counsel's saying anything about it.

I stated at the beginning that it was not critical, but I am stating it so that it will not be repeated.

MR. GOLDBERG: We can hear counsel for the respondents at staff counsel's table, and I imagine the Examiner can hear those statements, too.

TRIAL EXAMINER: Proceed, Mr. Myse.

[9131] MR. MYSE: May I have the last answer?

MR. GOLDBERG: I think the Examiner should state the approximate distances of various tables, and of the counsel table, and the witness and the bench.

TRIAL EXAMINER: I think that remark is to be considered as an impudence to the Trial Examiner.

MR. GOLDBERG: It is not so intended, Mr. Examiner. It is intended to state the facts.

MR. MYSE: May I have the last question read, and if it has been answered, I would like to have the last answer.

TRIAL EXAMINER: Read it.

(Question and answer read.)

By Mr. Myse:

Q. Now, Mr. Roland, it is true, is it not, that if we were to connect a motor, electrical motor, to any electrical circuit, and put a mechanical load on that motor, that motor would consume electric energy, would it not? A. It is ordinarily considered as being consumption, I mean, you are converting energy from one form to another, which is ordinarily thought of as consuming energy at that point, yes.

Q. And if I use that motor to beat my eggs in the morning that would be converting electric energy to mechanical power for the purpose of beating eggs? A. That is right.

[9132] Q. And for that purpose, I consume electric energy, do I not? A. Yes.

Q. And I am billed for that consumption by the local utility company? A. Yes.

[9133] Q. Now, likewise, when we have a converter at Holtwood, and that converter is being operated so that energy is being fed into the sixty-cycle end of the converter, and energy is being transmitted away from the 25-cycle end of the converter, the 60-cycle end is acting as a motor, is it not? A. Yes.

Q. And that motor is consuming electric energy? A. Yes.

Q. Being converted to mechanical power, is it not? A. Yes.

Q. And that power is being transmitted along a shaft usually? A. Yes.

Q. It could be transmitted by any other mechanical means, could it not? A. I don't have any other mechanical means in mind.

Q. Well, a set of gears, a belt. A. Well, even that would require a shaft, I presume, but that is all right.

Q. And the 25-cycle end of that converter on the other end of the shaft is acting as a generator, is it not? A. Yes.

Q. The mechanical power transmitted along the shaft or by whatever other mechanical means there are, turns the [9134] electrical machine on the 25-cycle end and that generates 25-cycle energy? A. Yes.

Q. So that it is fair to say, is it not, that any 60-cycle energy that is fed into that converter at Holtwood is consumed at the converter at Holtwood?

MR. GOLDBERG: I object to that. We have gone over that and the witness has stated what he means by consumed.

TRIAL EXAMINER: Read the question.

(Question read.)

TRIAL EXAMINER: You may answer.

THE WITNESS: In the sense that the 60-cycle energy is converted into 25-cycle energy.

By MR. MYSE:

Q. And also in the sense that the 60-cycle energy is used to turn an electrical machine on the 60-cycle end of the converter as a motor, isn't that right? A. That is part of the process. The various steps that are gone through in making that 60-cycle energy come out on the other end as 25-cycle energy.

Q. Well, it isn't the same energy, is it? A. There is no other source.

Q. There is no electrical connection across the converter? A. There is no other source of electric energy which is supplied [9135] to the converter other than the 60-cycle energy that is supplied to it.

Q. A prime mover could be a steam engine, couldn't it? A. Yes, but then it wouldn't be a frequency converter.

Q. Simply because you have a steam engine instead of an electrical motor, is that the only reason? A. No, you would not be converting energy at one frequency to energy at some other frequency.

Q. Now you are using the word energy there; there isn't any path of electrical energy that runs through the converter, is it? A. Well, we stated that before. There is no electric circuit that is continuous from the 60-cycle side to the 25-cycle side.

Q. Well, I still would like to have an answer to my question awhile back, isn't it fair to state that the 60-cycle energy fed into that converter is consumed in the 60-cycle motor on the sixty-cycle end of the converter.

MR. GOLDBERG: I object. It has been answered at least three times.

TRIAL EXAMINER: Didn't the witness answer the question?

MR. MYSE: I don't think the witness answered it directly.

MR. GOLDBERG: Don't think he answered what directly?

[9136] TRIAL EXAMINER: Read the question.

(Question read.)

TRIAL EXAMINER: You may answer.

THE WITNESS: I can only answer it the way I did before, that you supply 60-cycle energy to the motor which is converted to mechanical energy and then back from mechanical energy to electric energy and then it comes out 25-cycle energy at the other end.

MR. MYSE: Can't you answer that question yes or no?

MR. GOLDBERG: I object. The witness can answer the question that way.

TRIAL EXAMINER: Can you answer.

THE WITNESS: I can answer, yes, but with the qualification of what I mean by consumption of energy which is so-stated in my last answer.

By Mr. Myse:

Q. Well, do you say yes with that qualification? A. With that understanding as to what is meant by the consumption of energy, yes.

Q. So that with that understanding of consumption of energy, any 60-cycle energy which may be generated at Safe Harbor and transmitted to Holtwood to the converters is so-consumed, is it not?

Mr. Goldberg: I object to that question. It has already been answered, Mr. Examiner, it has been answered [9137] at least four times.

Mr. Myse: Not this question.

Trial Examiner: What is the difference?

Mr. Myse: We are taking it back to the energy generated at Safe Harbor, 60-cycles.

Mr. Goldberg: What have you been talking about all along here?

Trial Examiner: You may answer the question.

The Witness: The 60-cycle energy which is transmitted from Safe Harbor to the 60-cycle end of frequency changer at Holtwood is converted to energy of 25-cycles.

By Mr. Myse:

Q. Well, you haven't answered my question. My question was is it consumed in the sense we were just talking about with the qualifications we were just talking about.

Mr. Goldberg: I object to that, Mr. Examiner; the witness has just stated his conception of consumption for the sixth time.

Trial Examiner: You may answer.

The Witness: It is consumed in the sense that the electric energy supplied from Safe Harbor at 60-cycles is converted into mechanical energy and from mechanical energy into electrical energy and then comes out of the 25-cycle end as 25-cycle energy.

[9138] By Mr. Myse:

Q. It is also the fact, is it not, that any 60-cycle energy generated by steam at Holtwood would be consumed in the same sense if it were fed to the converters at Holtwood; isn't that correct? A. Yes, it wouldn't matter what the source of the energy was; it is all 60-cycle energy.

Q. And that would be the only way energy—I am not saying whether it is electrical energy or mechanical energy—could get from the steam generators at Holtwood to the 25-cycle system at Holtwood. Isn't that correct? A. Yes, it has to go through a frequency changer some place.

Q. Now, if you will refer to the frequency changers at Safe Harbor, something else happens other than change in frequency, does it not? A. Yes, this change is also from three-phase to single-phase or vice versa.

Q. Can you explain that for the record in layman's language, from three-phase to single-phase energy? A. Well, a three-phase circuit is essentially three single-phase circuits with a time displacement of the voltages in each of those circuits. Those three single-phase circuits, of course, would not require six conductors. They usually are either three conductors or four conductors. [9139] But they are essentially three single-phase circuits with this time displacement that I have mentioned.

Q. What is there about the railroad load which would require single phase service instead of three-phase service? A. I believe it is because of the railroad use of a trolley—and wants to use single-phase motors.

Q. You can't feed three-phase energy into a single-phase motor and expect it to work. Is that the idea? A. I am sorry. I want to hear that again.

(Question read.)

The Witness: I don't see how that would be physically possible. I mean whether it would work or not. I don't see how you could do it. You could take one phase off the three phase circuit and operate a single-phase motor, but I

wouldn't know how you put three-phases into a single-phase motor.

By Mr. Myse:

Q. I don't know either and that is why I am asking you. Certainly you can't feed 25-cycle energy into a motor that uses 60-cycle energy and expect it to work either, can you? A. Not very well.

Q. Well, will it work at all? A. Your question was that you are supplying 25-cycle [9140] to a 60-cycle machine?

Q. Yes. 60-cycle electric motor. A. Offhand, I don't know whether that would operate or not. It certainly would not run at the rated speed, but whether it would run or not, I don't know.

Q. Well, you as an engineer would not advise anybody to hook up a 60-cycle motor to 25-cycle source. A. I would not.

Q. And you would not advise them to hook up a 25-cycle motor to a 60-cycle source of energy. A. I would not, no.

* * *

[9145] Q. Exhibit 42 is, as I recall it, limited to the year 1944 and certain selected days, is that correct?

Mr. Goldberg: What year?

By Mr. Myse:

Q. 1944, I am sorry; and certain selected days. A. Yes.

Q. Now, if the circumstances have changed since 1944, those circumstances would no longer hold? A. Obviously.

Q. The circumstances as shown in exhibit 42 would no longer be true? A. Well, I can't answer that; I don't know what circumstances you are talking about now.

Q. Well, one circumstance, for example, is the change in character of the flows to Metropolitan Edison Company. A. It may or may not change it; I don't know.

Q. You have made no study to determine that, though? A. I made my study for 1944; I don't know what effect [9146] the new contract has had on that.

• • •

[9152] Q. Now, at the bottom of Page 962, you were talking about co-mingling of energy. Is that right? A. Yes.

Q. And that co-mingling you were talking about takes place at both Safe Harbor and Holtwood when energy is supplied at those points simultaneously from more than one source? A. Yes.

Q. That means, does it not, Mr. Roland, that when there is energy being generated at Safe Harbor and being fed to the Safe Harbor 60-cycle bus or for that matter any other source of 60-cycle energy is coming into the bus through meter 8, and at the same time there is backfeed energy coming into the same bus via meters 5 and 6, that there is also a co-mingling of energy at Safe Harbor? A. That is true, but it couldn't be coming in on all the circuits at the same time. Something has to go out.

Q. It could be coming in on all those circuits that I mentioned at the same time, couldn't it? A. From the generators only. From the 69 kv circuits and Maryland, I don't believe so.

Q. Couldn't it be consumed in the 60-cycle end of the frequency changer at Safe Harbor? A. It isn't very likely. It is physically possible, [9153] but I mean the situation that you describe, I couldn't believe would warrant it to occur.

Q. Then, let's limit the question by saying when energy is being generated at Safe Harbor and fed to the 60-cycle bus via meter number 1 on Exhibit 39 and backfeed is coming into the same bus via meters number 5 and 6 on Exhibit 39, that then under those circumstances co-mingling of that energy takes place. A. Yes.

Q. And anything that leaves the 60-cycle Safe Harbor bus is what you might call co-mingled energy? A. That is right, sir.

• • •

[9155] MR. SPARKS: Mr. Examiner, may I make a statement in regard to the matter which your Honor spoke about at the beginning of the afternoon session?

We understand that your Honor's position is that we should go forward with the cross examination of the witness Joseph tomorrow or Friday?

TRIAL EXAMINER: No, the Examiner's position is that the hearing should proceed tomorrow and Friday, and if the presence of the witness Joseph is necessary in order to enable the hearing to do so, then perhaps compulsory process, if necessary, can be used in order to produce the witness.

MR. SPARKS: Let me say this, if your Honor please: For reasons which I have mentioned before it will be impossible for Respondent to go ahead with the cross examination of anyone else but the witness Joseph, and since our cross examination of the witness Joseph tomorrow or Friday would be at the specific order of your Honor and over our objection, we would go forward if you order us to do so over our objection, and we will do so if the witness Joseph is present tomorrow or Friday.

TRIAL EXAMINER: Very well.

MR. GOLDBERG: I can state to the Examiner the witness Joseph will not be here tomorrow or Friday. As I stated weeks ago, it is impossible for him to be here during the month of December.

[9156] However, there is no reason in the world the hearing cannot go forward on Thursday and Friday with the cross examination of any of the other five witnesses who have testified on a number of subjects. I

confess that I am at a loss to understand this repeated protest about being required to go forward, this repeated statement that they are not prepared to go forward.

After all, they have only had 8½ months to prepare for cross examination. I just don't understand it when counsel for the Staff has almost continuously with the exception of one or two days gone through the cross examination of each and every one of these witnesses.

• • •

[9157] MR. GOLDBERG: I suggest that counsel move to strike Mr. Joseph's testimony, and I will put on a rate of return witness on rebuttal and we will agree to strike Mr. Joseph's testimony if that is the only way they can go forward?

• • •

[9166] By MR. MYSE:

Q. In any event, Mr. Roland, the 25-cycle capacity available to Baltimore from the 25-cycle system of Holtwood has not decreased since prior to June 1, 1931, has it? [9167] A. The amount of generating capacity available has not decreased.

Q. And as a matter of fact, one reason it hasn't decreased but has increased is because the amounts of 25-cycle delivered to Lancaster have decreased since prior to June 1, 1931. Isn't that correct? A. I believe that has decreased in the Lancaster area—25-cycle service.

Q. So if anything has happened since prior to June 1, 1931, there has been an increase in the 25-cycle capacity available to Baltimore from the Holtwood 25-cycle system. Isn't that right? A. Yes.

• • •

[9172] THE WITNESS: I could have picked some other metering point other than the Little Inch, the South Manheim and South Akron. Those were distribution points on

the PP and L system in Lancaster. A considerable part of that energy is supplied by Holtwood and that in my opinion is a resale. It is not consumed on the PP and L system.

By Mr. Myse:

Q. Is that what you had in mind when you spoke of resales at line 18, page 835? A. I had in mind that the energy which Holtwood sold to these various customers was in turn sold by the company purchasing from Holtwood to its customers.

Q. All of it? A. All of what?

Q. All of the energy received from Holtwood. A. Not necessarily. Some would be used in line losses and station services. No, I wouldn't say all of it, because [9173] I don't know.

Q. Well, the extent to which it is used in line losses, station services or consumed in the motor ends of converters if they have any, it is not resold, is that it? A. Well, that which is consumed as a line loss is not resold.

Q. And that which is consumed in station losses is not resold? A. No.

Q. And that which is consumed in the motor ends of a converter is not resold, is it? A. Well, it is resold in the sense that it is first converted into a different frequency, and then it is resold.

Q. First converted to mechanical energy and then back to electrical energy and then you say it is resold. A. That is the customary way of describing the process. The energy is supplied by Holtwood, taking your case as an example, being supplied to a frequency changer and before it is resold it is converted to another frequency. It is still the energy that Holtwood supplies and sells at that point.

Q. Now, will you take the deliveries to York Edison or Metropolitan Edison Company for the year 1944 and will you tell me how you determined that all of the Holtwood energy or Penn Water energy received by those companies was resold? [9174] A. I don't say that all of the energy is resold, because obviously in operating a system

there has got to be loss and station use, and so on, which is not resold to the customer. That is a part of the operations which normally takes place. You can't avoid it.

Q. Well, could you determine what percentage was not resold? A. No. Ordinarily the system losses might run anywhere from five to twenty per cent; but I didn't make any effort to determine what the system losses were.

* * *

[9251] Q. Do you consider an emergency supply similar to that provided under Exhibit 73 which you examined, any different [9252] from a supply of interchange?

* * *

[9252] THE WITNESS: Yes.

By MR. MYSE:

Q. What does the difference consist of in your opinion? A. Well, as the name implies, emergency service is made under emergency conditions; under some special circumstances on the purchasing company's system the rates are usually different. The rate that the purchaser paid for emergency power is usually different than the one under an interchange arrangement, and usually there is an obligation on the part of the supplier for emergency service where there wouldn't be under interchange service.

Q. When you say there is an obligation on the part of the supplier for emergency service, would you tell me whether or not there is an obligation on the part of Penn Water or Safe Harbor to supply emergency service to Philadelphia Electric? A. There is such obligation by Hydro to supply.

Q. What does "Hydro" mean? Will you explain that for the record? A. That refers to Holtwood Company and Safe Harbor Water Power Corporation.

[9253] Q. And what is the obligation? A. "Hydro shall be obligated to supply through the Newlinville Substation the emergency requirements of PX," which means Philadelphia Electric Company, "in addition to the elec-

trical requirements of the territory stated in Section 1 of this Article, to the extent that Hydro may judge it has generating and transmission capacity available for such emergency supply without detriment to service to its other customers."

MR. GOLDBERG: You have been quoting, Mr. Roland?

THE WITNESS: I have been quoting from Section 2, Article II, of Exhibit 73.

By MR. MYSE:

Q. Now, am I to understand that the distinction you draw between the emergency service provided under that contract and interchange service is that there is an obligation here to the extent you read from Section 2 of Article II, of Exhibit 73, and that there is no obligation to furnish interchange service? A. I would have to read the sections also on interchange service, but ordinarily the obligation is not there on interchange service. There would be on emergency service.

• • •

[9256] Q. Well, you couldn't say that the entire payment for the year 1944 made by Pennsylvania Power and Light to Holtwood was for firm power service, could you? A. Not if it wasn't for firm power service.

Q. Well, it wasn't. Isn't that the fact? A. There were interchange sales during 1944.

Q. Isn't it a fact, Mr. Roland, that the entire payment made by Pennsylvania Power and Light Company in 1944 to Holtwood was not a payment for firm power sales? A. That is right.

Q. Or firm power energy? A. That is right.

Q. Included in that payment there were payments for other types of service. Isn't that right?

• • •

THE WITNESS: It would include payments for interchange power. I don't know what else.

* * *

[9264] Q. Mr. Roland, have you had an opportunity to check the billings that we were referring to this morning? A. Yes.

Q. Now, can you tell me with respect to the payments made by Philadelphia Electric Company to Holtwood, under the contract identified in this record as Exhibit 73, 74, and 75, whether or not those payments covered payment only for energy and power or for other things as well? A. There is a special facility charge included in the payment by Philadelphia Electric Company.

[9265] Q. So the payment made covers something more than just power and energy? A. Yes.

Q. Now, with respect to the billings to Pennsylvania Power and Light under the contract identified in this record as Exhibit 76 and 77, what does the payment made by Pennsylvania Power and Light Company to Holtwood cover? A. That also includes a small special facility charge, in addition to charges for firm power and energy.

Q. It also covers the payment for service to the Pioneer Electric Light Company area does it not? A. That is also in Lancaster County, but I mean it is handled separately, but it is included in this bill.

Q. Now, what is the situation with respect to the payments made by Edison Light and Power Company in 1944 to Holtwood? A. That bill also includes a special facility charge, a small one.

* * *

[9270] Q. When you made reference to the sale of electric energy under Exhibit 73 did you give any consideration to the provision of Article VII, on Page 73? A. Did I give any consideration to that in determining whether or not it was a sale that was being made?

Q. Sale by Holtwood, yes, under this contract. A. No, in the sense that I was aware of Article VII, but also in this contract I believe Safe Harbor in effect is written out, in that Holtwood is supposed to act for and on behalf of Safe Harbor, as a result S. H. was not even a party to the contract.

Q. You say Safe Harbor is written out in effect? A. Well, in that Holtwood acts for Safe Harbor. It is in one of these contracts, I don't know which.

Q. Well, isn't it Article VII of Exhibit 73 that you have reference to? A. Yes, that is right.

Q. And doesn't it there speak of Holtwood acting as agent for Safe Harbor? A. Well, it says that Philadelphia Electric Company shall be entitled to deal with Holtwood Company in all respects as if Holtwood Company were the only party contracting with it hereunder. To me in effect it writes Safe Harbor out of the contract.

Q. That is what it means to you, is that right?

[9271] A. That Holtwood acts as though it was the only party other than Philadelphia Electric Company.

Q. And it also says, doesn't it, Mr. Roland, that Safe Harbor authorizes and empowers Holtwood Company to act as its agent. It is very clear language there, isn't it? A. It so states.

* * *

MR. MYSE: A similar provision appears in Exhibit 76, Article X, Page 13, does it not?

THE WITNESS: It appears that that Article, in Exhibit 76 is the same as the one that was in Exhibit 73, Article VII.

By MR. MYSE:

Q. And it was Exhibit 76 and 77 that you had reference to when you spoke about sales to Pennsylvania Power and Light Company at the bottom of Page 912 and top of Page 913, isn't that correct? A. Yes.

Q. And the same exhibit was referred to at Page 911, lines 3 to 7 or 8? I should say exhibits were referred to. The same exhibits were referred to? A. What line number was that?

Q. 3 to 8. [9272] A. Yes.

Q. And you find a very similar provision in Exhibit 71, Article XII, Page 15, do you not? If not similar, the same provision, the same words.

* * *

THE WITNESS: They appear to be the same.

* * *

Q. * * * When you were referring to the [9273] sales by Holtwood of electric energy to these companies, and particularly Metropolitan Edison Company at the bottom of Page 912 and the first nine lines of Page 913, were you speaking of sales in 1944 or in 1946? Or what period?

A. My study was for energy transfers in 1944 and it would necessarily have to relate to the sales made in 1944.

Q. Then I understand it your testimony at those pages relates to sales in 1944, isn't that right?

* * *

THE WITNESS: Well, the test period or the days that I selected were in 1944.

By MR. MYSE:

Q. Mr. Roland, you aren't talking about any test days here in 912 and 913; I am asking you what you were referring to at those pages. A. The statements that I made, that I made on those pages, was based on the studies that I made of the energy flows during the twenty days of 1944.

Q. Now, then, it must have been made, as I understand your direct testimony, you were there referring to sales under the contract identified as Exhibit 71, when you spoke of the sales by Holtwood to Metropolitan Edison Company, is that right? A. Yes.

[9274] Q. Now, actually there were no firm power sales to Metropolitan Edison Company under that contract, isn't

that true? A. Not during that time, the firm power sales were to Edison Light and Power Company.

Q. And there were no sales to Metropolitan Edison Company at all under that contract, isn't that right? A. I am confused now as to which contract we are talking about.

Q. Contract 71—Exhibit 71. A. There were no sales to Metropolitan Edison under that contract.

• • •

[9285] Q. Now, as I understand your testimony up to this point, at least, with respect to sales to the three Pennsylvania customers we have been talking about, that is Penn Power and Light Company, Philadelphia Electric Company and Metropolitan Edison, you say they are sales by Holtwood because Holtwood renders service, or supplies energy to those or delivers energy to these three customers and gets paid by these three customers directly. Is that right?

• • •

THE WITNESS: You have the word paid directly in there. I don't believe I added that as a qualification.

• • •

[9291] Q. Mr. Roland, when you were referring to sales by Holtwood to the three customers we have been talking about, did you mean that there was a sale because there was a delivery of energy to each of those three customers and direct payment by each of these three customers to Holtwood? A. You are excluding the railroad. Is that correct?

Q. Yes, that is right. A. I don't know whether the payments were direct or not. Holtwood received payment therefor but whether or not they were direct, I don't know.

Q. Then the answer is, you don't know, isn't that it? A. Yes.

Q. Now, before we get too far away from the Metropolitan Edison Company, under the new contract, identified

in this record as Exhibit 72, there are no sales made to Edison Light and Power Company at all, are there? A. That is right.

Q. But all the firm power sales that there were under Exhibit 71 were made to Edison Light and Power Company. Isn't that right? [9292] A. Yes.

Q. Now, as a matter of fact, under Exhibit 71, Metropolitan Edison Company was one of the supplying companies. Isn't that right? A. Supplying companies to whom?

Q. To Edison Light and Power Company? A. Yes.

Q. And under exhibit 72, it is one of the receiving companies?

• • •

THE WITNESS: Metropolitan Edison Company is one of the receiving companies.

By MR. MYSE:

Q. Yes, under Exhibit 72. Isn't that right? A. That is right, yes.

Q. Under Exhibit 71, Metropolitan Edison Company and Holtwood and Safe Harbor furnished the requirements of Edison Light and Power Company at York. Isn't that right?

• • •

THE WITNESS: The requirements supplied by Penn Water came from the integrated system. I don't know where it all came from.

• • •

[9293] Q. Now, Mr. Roland, if you look at Exhibit 71, page 5, isn't it a fact that Section 1 thereof provides that the requirements shall be furnished by Metropolitan, meaning Metropolitan Edison Company, and Hydro, meaning Safe Harbor Corporation, Safe Harbor Water Power Corporation, and Penn Water and Power Company? A. Well, the contract may so state. I thought you were asking about who supplied the power and energy.

Q. Well, isn't that the fact? A. The contract so states, yes.

Q. Who makes the sale to Potomac Electric Power Company via the line from Ellicott City? A. Baltimore Company.

Q. Does Baltimore Company deliver the energy to PEPCO? A. No, Susquehanna Transmission Company of Maryland delivers the energy.

Q. Does Susquehanna Transmission Company of Maryland receive any payment direct or indirectly for that energy delivery? A. I don't know.

Q. Does Penn Water receive any payment direct or indirect for that energy delivered to PEPCO? A. Well, they are paid for the use of the transmission [9294] lines.

Q. Well, are they paid for the energy that Penn Water delivers? A. To PEPCO?

Q. Or Susquehanna, if you want to put it that way. A. Energy delivered to PEPCO?

Q. Yes. A. Does Penn Water receive any payment for that energy?

Q. Yes, directly or indirectly? A. I don't believe so.

• • •

[9295] Q. Where does that energy originate? A. I don't know.

Q. You have made no study to determine where the energy originates that is delivered to PEPCO, then? A. You mean by which particular generating unit, or what company, or what?

Q. Yes. A. Which?

Q. Which generating unit? A. I don't know.

MR. GOLDBERG: When?

THE WITNESS: That varies from hour to hour. I don't know where it comes from.

By MR. MYSE:

Q. Well, does it ever come from Safe Harbor, for instance? A. I suspect it would.

Q. Does Safe Harbor receive any compensation for the energy which Penn Water or Susquehanna delivers to PEPCO? A. Safe Harbor is only compensated by Penn Water and Baltimore Company and therefore it couldn't receive any from PEPCO.

• • •

[9296] Q. Yes, energy which is generated at Safe Harbor and delivered by Penn Water or Susquehanna or both to Pepco is what I have reference to. A. And is Safe Harbor compensated by Pepco?

Q. I didn't say that. Is it compensated in any way? A. Not for any particular deliveries at any particular point that I know of. Safe Harbor is compensated by the two companies, Holtwood and Consolidated, and that covers all of what it does.

Q. Would you call that indirect compensation for the delivery of Safe Harbor energy to Pepco? [9297] A. One of the sources of the revenue to Consolidated would be its sales to PEPCO, and in that way, it might be considered as an indirect source of the revenue paid by Consolidated to Safe Harbor just the same as any other source of revenue to Consolidated would be available for payment to Safe Harbor.

Q. Do I understand you to mean by that answer that the answer to my question is yes?

• • •

THE WITNESS: Yes, all sources of revenue to Consolidated and to Penn Water from their very many sources are available to compensate Safe Harbor, and in that sense they are indirect payments to Safe Harbor.

• • •

[9309] MR. MYSE: Before I start with Mr. Roland, I direct a question to Mr. Goldberg. At page 8774, Mr. Goldberg said "I think, Mr. Examiner, there are probably more definite precise methods of proving that. If

you will give me an opportunity to check those dates I can go along on a stipulation of those."

The dates he referred to were the dates of the Safe Harbor license and the period over which it runs. I wonder if you had an opportunity to check those, Mr. Goldberg?

[9310] MR. GOLDBERG: The only information I have looked at indicates that the date of the Safe Harbor license is April 22, 1930, and that the expiration date is April 22, 1980.

MR. MYSE: That conforms with my recollection. Does that mean that you agree that is correct?

MR. GOLDBERG: Yes, unless I happen to get hold of the vault copy which I haven't seen yet which indicates otherwise.

• • •

By MR. MYSE:

• • •

[9311] Q. Do I understand then that you don't have time to report or you are not ready to report on this specific question, and the reason I ask that is because I had planned to go over your homework point-by-point and then integrate it with whatever remaining cross examination I had? A. I think possibly I can answer that one. This is at Page 8754, is that correct?

Q. That is where you agreed to check it, but it refers back to the answer on line 20, page 981. A. Well, my answer to your question is that at Page 981, lines 20 to 21 I had reference to my answer at Page 980, line 17, in which answer I stated that Holtwood and Susquehanna each own and operate facilities for such sales.

• • •

[9317] Q. Will you refer to Page 8785 at the bottom of the page and the top of Page 8786? There you said you would have to go back and check the sources that you used

in connection with your statement that there was a lease of the Gunpowder line facilities. Have you had an opportunity [9318] to check those sources? A. Yes, if you will refer to Exhibit 37 you will note in the description of the Gunpowder line shown directly above the area designated "Baltimore" the words "One steel tower line, 110 kv, three-phase, 60-cycle, 9.63 miles (leased by Consolidated Gas Electric Light and Power Company)."

Exhibit 37 is a photostatic copy of an exhibit submitted to the Federal Power Commission by the Pennsylvania Water and Power Company in its annual Power System Statement, FPC form number 12 for 1944.

• • •

[9331] By Mr. Mxse:

Q. The question is, do you have to determine whether there is a contract before you can tell whether or not Penn Water sold to Pepco? A. There is a contract, but Holtwood was not a party to it.

Q. Well, now, let's see if I can understand your answer.

If you determine after looking at all of Penn Water's contracts that it doesn't have a contract, it is not a party to any contract with respect to Pepco, you then decide that it is not a sale by Penn Water to Pepco. Is that correct? A. Yes, if there is no contract covering such a sale I would on the basis of that—it would indicate there would be no sale.

Q. So, in your view there must be a contract covering the transaction before you can call it a sale. Is that correct? A. Well, I presume a sale could be made without there being a formal written contract, but usually there would be a formal contract covering any sale.

• • •

[9332] Trial Examiner: Answer the question.

The Witness: I don't believe I can answer it in any other way than I did. Usually there would be a formal con-

tract covering the sale, but I believe sales can be made without formal contracts.

TRIAL EXAMINER: But as far as your testimony in this proceeding is concerned, you didn't consider any sale that was not associated with a contract, did you?

THE WITNESS: No, I don't believe I took into consideration any sale that wasn't covered somehow by a contract.

TRIAL EXAMINER: I mean by one of the contracts that is an exhibit in this proceeding.

[9333] THE WITNESS: I believe they are all in evidence in this proceeding.

By MR. MYER:

Q. Well, now, just in order that I may understand this last answer, what contract is there covering the sale that you testified to at the last session, from Penn Water to Baltimore, for the account of Baltimore as you put it, to the railroad at Perryville? A. That would come under item H, Article II.

Q. You mean Article Roman II, or Arabic 2? A. Roman II.

Q. And that is at page what? A. 28 and 29.

Q. Where in that Article, Roman II, does it mention a sale by Penn Water to the railroad for the account of Baltimore at Perryville? A. Baltimore Company is entitled to all of the energy which is available to Holtwood and which is not disposed of in its area in Pennsylvania. Now, that can include sources from the Philadelphia Electric Company, through Thorndale and at Perryville. It can include generation at Safe Harbor and other purchases by Holtwood from its northern customers or its own generation and to the extent it is not used in Pennsylvania for Holtwood's customers, it is available to the Baltimore Company, and if any of that is delivered to Perryville, [9334] that would be sold to Baltimore Company.

Q. Where in Article II is there anything said about the Baltimore Company being entitled to receive everything left over after sales in Pennsylvania? A. Performance of its now existing contracts and its contracts are with those companies that are in Pennsylvania.

Q. Doesn't Penn Water have a contract with Pennsylvania Railroad Company identified as Exhibit No. 10 in this proceeding? A. Yes, but it makes its portion of the sales to the Pennsylvania Railroad in Pennsylvania.

Q. Will you point out in Exhibit 10 where it says anything of that kind? A. I don't believe it is in that exhibit. That is an agreement between the Baltimore Company and the Holtwood Company.

* * *

[9336] Q. In order that we may know what you are reading from it is the Form 12 report to the Federal Power Commission from the Holtwood-Safe Harbor system for the year ended December 31, 1944. Is that right? A. Yes.

Q. Schedule what? A. That has reference to Schedule 13, and there is a typewritten statement following schedule 13 which reads as follows:

> "The portion of the hourly load supplied to Pennsylvania Railroad *in Maryland*, by the respondent for the account of the Consolidated Gas Electric Light and Power Company is not included in this item as hourly load allocations are not measured. The total supply to the Pennsylvania Railroad *in both Maryland and Pennsylvania* is included in line 23 below."

Q. Line 23 shows the figure of 95,000 kilowatts at the time of system peak, and it is in response to an item called Item "E", "System peak load of the year (C minus D). This [9337] entry should agree with the peak load of the year as shown in schedules 14 and 15, using the same demand interval." Is that right? A. Yes.

Q. Now, there is also a note to Schedule 13—line 23, included in the report you referred to, is there not? A. Yes.

Q. Will you read that note? A. "This item includes the joint supply to the Pennsylvania Railroad by the respondent and the Consolidated Gas Electric Light and Power Company and also the Holtwood Safe Harbor System transmission losses and station uses."

Q. Now, is there any reference in Schedule 13 of the report you just referred to, or in the notes thereto to any contract of the kind we have been talking about? A. There is no reference to any contract in here. It shows the amount of power delivered to the Baltimore Company at the time of peak which is labeled power delivered to other systems for resale, and that appears on line 21 of Schedule 13. The amount delivered to the Baltimore Company at the time of peak was 174,000 kilowatts.

Q. Now, Mr. Roland, I don't want to unduly burden you nor do I want to protract this cross examination, but unless you agree with me there is no such contract for the sale of energy from Holtwood to Baltimore at Perryville, I would like [9338] to have you find it for me. A. There is no contract as I stated before which specifically designates Perryville as a delivery point. The sale however in my opinion is made under Article II of Item H.

Q. And that is the only contractual provision that you know of which you say covers the sale by Penn Water to Baltimore that we have been speaking about at Perryville? A. That is the only contractual provision that I know of, yes.

Q. Did you consider those provisions in Article II in arriving at your opinion in your direct testimony with respect to sales? A. Yes.

MR. GOLDBERG: Are you referring, Mr. Myse, to any particular portion of the direct testimony?

MR. MYSE: No, we have been talking generally about the Perryville sales.

THE WITNESS: I didn't have the Article number in mind at that time, but I was sufficiently familiar with the contract to know that was what was taking place, that the Baltimore Company was to receive all that was left over from Holtwood, and some of that was delivered to Perryville.

By MR. MYSE:

Q. At page 8867 you agreed to report on peak transfer [9339] energy, did you not? A. Yes. I have had a little bit of time to go into that. That is a very complicated arrangement between the Philadelphia Electric Company and the railroad.

Q. Are you ready to report on it? A. Well, I can give you an idea, I believe, as to what is involved. I certainly can't explain all the details of the arrangement.

Q. Well, let's hear what you think is involved, then.

TRIAL EXAMINER: Where is this—8867?

MR. MYSE: Yes.

MR. GOLDBERG: It begins at 8865, doesn't it?

• • •

[9346] Q. Did you consider Article X of Exhibit 10, page 32, in connection with your description of peak transfer energy? A. That Article has to be taken into consideration in connection with the determination of peak transfer.

Q. Well, is the effect of that Article to impose a limitation on the contractual supply by "Electric Companies," which are Safe Harbor, Baltimore and Holtwood, during the hours of peak load on the railroad in relation to the flows of the Susquehanna River? A. Yes.

Q. Wouldn't you also have to consider comparable sections of the contract between Philadelphia Electric Company and the railroad? A. The interchange agreement is involved in this.

Q. No, I mean the contract between Philadelphia Electric Company and Pennsylvania Railroad, which is not in

this record, for service to the railroad roughly east of Thorndale and north of Perryville. A. I don't know. I haven't examined that contract, but I presume that to get a comprehensive understanding of peak transfer that should be taken into consideration.

Q. Well, did any of the persons under your direction examine that contract between Philadelphia Electric Company and [9347] the railroad? A. Not to my knowledge.

Q. Getting back to page 8867 again, will you take a look at that. You there said in referring to this peak transfer arrangement, that it was the number of kilowatt hours that were delivered and sold at that point, and by "at that point" I take it you meant Perryville. Is that right? That is at lines 3 and 4. A. I think that I had in mind there both Perryville and Thorndale.

Q. All right. Now, was everything that was delivered and sold at those points, or at Perryville, sold on a gross meter reading basis? A. Sold to whom?

Q. Well, to whomever you meant at that point on page 8867, line 4 of the transcript. A. I had reference to sales by Holtwood to Philadelphia Electric Company at Thorndale and at Perryville.

Q. Anyone else? Any other sales? A. Well, included in those sales would be or might be some of the energy which is sold to the railroad company under the peak transfer agreement arrangement.

Q. Sold to the railroad by whom in the case of peak transfer? A. Holtwood.

[9348] Q. Isn't it Holtwood, Safe Harbor and Baltimore? A. Well, I usually refer to the three of them in this connection as Holtwood.

Q. I think it is important, and don't you, Mr. Roland, in view of the confusion which may arise, to specify whether you mean Holtwood alone or Holtwood, Safe Harbor and Baltimore? In this case I take it you mean Holtwood, Safe

Harbor and Baltimore. • • •

[9349] A. The sales I had reference to were under the interchange arrangement between Holtwood and Philadelphia Electric Company through the facilities of the railroad.

Q. Are you referring to Exhibit 134 in that connection? A. Yes.

Q. That doesn't cover peak transfer energy? A. That doesn't cover peak transfer energy.

Q. Peak transfer energy is something that involves more than just Holtwood, isn't it? A. Peak transfer energy involves the Baltimore Company and Holtwood Company and Safe Harbor Company as well as Philadelphia Electric Company and the railroad.

• • •

[9383] Q. Actually I think you agreed with me in the testimony at one place that there are different rates for the kinds of energy you were talking about, interchange or firm power delivery. A. That is right.

Q. And there also might be different costs involved in generating and furnishing that energy. Isn't that right, as between interchange and firm power? [9384] A. The differences in costs are certainly taken into consideration in determining what the rate shall be for different types of service, whether it is firm service or interchange.

Q. I haven't asked you whether it be taken into consideration. The question is: Are there differences in costs? A. Yes, there will be differences in costs.

• • •

[9404] Q. Now, in addition to all of the services we have been talking about with respect to service by Penn Water to Baltimore, they render capacity service to Baltimore, do they not? A. By "capacity service", I presume you mean generating capacity is on the line spinning available for use to the Baltimore Company when they need it?

• • •

Q. That is right. What is the answer to my question with that understanding? A. I don't know the details of the method of operation, but I would certainly suspect that there was always more capacity on the line than was actually being used to generate power which would be available to Baltimore or anyone else if the demand should arise for it.

Q. That is a service rendered to Baltimore, isn't it? A. Yes, I think that is a service to Baltimore.

Q. How does Holtwood get paid for that service? A. They get paid for all of this under items H and I.

Q. For all the services we have been talking about? A. Yes.

Q. However, there is nothing in H and I which specifies which part of the revenues received are for each particular [9405] service, is there? A. No.

Q. Was there such specification prior to the amendment in 1931? A. You mean a sub-division?

Q. A sub-division of the total payments made as between charges for specific services. A. There were demand charges and energy charges prior to the 1931 contract.

Q. Were there other specific charges? A. Then there were charges for transmission lines.

Q. Spinning reserve? A. I believe so, but I don't recall at the moment. I believe there was.

• • •

[9439] Q. Will you refer to Page 9254, please, lines 8 to 11, inclusive? You there stated that by examining the billings you were able to determine that certain deliveries to Pennsylvania Power and Light Company are firm requirements "because they are obligated to supply the Lancaster requirements." Is that right? A. Yes.

Q. Whom were you referring to when you say "they" in that quoted phrase? [9440] A. The Holtwood Company.

Q. Does that mean then you say Holtwood is obligated to supply the Lancaster requirements? A. Well, there are certain qualifications to that.

Q. What qualifications do you have in mind? A. There again I would have to go back and refer to the contract.

Q. Will you do so, please?

* * *

A. In Exhibit 76, Article IV, Page 5, Section 1, "Until Receiving Company—" which is in this case the Pennsylvania Power and Light Company "—shall connect its electric system in Lancaster County, Pennsylvania, with its main system, or with those of other utilities, Generating Companies shall be obligated to supply and Receiving Company shall be obligated to receive and pay for Receiving Company's Lancaster Load Requirements." And then it goes on to define what the "Lancaster Load Requirements" are.

* * *

[9441] Q. Well, do you know whether receiving company as referred to in Article IV has connected its electric system in Lancaster County since that was written? A. It has.

Q. Is that the provision you had reference to when you talked about the obligation of Holtwood at Page 9254? A. Not entirely. I stated that there were certain qualifications to that which appear later on in other agreements which followed this one here shown in Exhibit 76.

Q. Now, before we get to the qualifications, however, I think you described who the receiving company was in that quotation but I don't think you mentioned who the generating companies were. A. Generating companies, Pennsylvania Water and Power Company and Safe Harbor Water Power Corporation are referred to as the generating companies in this contract.

Q. Is there any distinction drawn between the two in the contract as generating companies?

* * *

TRIAL EXAMINER: Any distinction for what purpose?

MR. MYSE: For purposes of the obligations he has been referring to.

• • •

[9442] TRIAL EXAMINER: I am not going to permit the witness to take time to go through that document for the purpose of answering a statement that can be made from the exhibit.

THE WITNESS: There is one statement I would like to make.

TRIAL EXAMINER: In response to this question?

THE WITNESS: Yes. In Article X there is a distinction in that the Holtwood Company acts as though it were the only party to the contract which is a very big distinction.

By MR. MYSE:

Q. Is that the only distinction you can find? A. That is the only one I have in mind which shows that Safe Harbor's part is a very nominal one.

Q. Well, now, the testimony you gave isn't in the contract in that form, is it? It doesn't say that, does it?

TRIAL EXAMINER: I am not going into a discussion of what is in the contract. I am going to strike that statement. The contract will have to speak for itself. The witness' statement is stricken.

• • •

[9452] Q. In your studies of flow in Exhibits 42, 40 and 38, I believe, did you ever make any distinction between flow of energy for interchange purposes and flow of energy for firm power services?

MR. GOLDBERG: I object on the grounds it is repetitious. The record already shows a discussion of this subject.

TRIAL EXAMINER: Overruled.

THE WITNESS: Exhibit 42 makes no distinction between whether the energy delivered at certain points was interchange, whether it was emergency or whether it was firm. I have indicated under what particular contracts the energy was delivered at those points. At Coatesville it would be primarily all firm power, for example. At Lancaster it would be mostly firm power, that is in the Lancaster area, not necessarily up at Harrisburg—that would be interchange.

By MR. MYSE:

Q. You limited your answer just now to Exhibit 42. Does the same answer apply to the other exhibits you introduced in the record or testified to on direct relating to power flow? A. Which exhibit do you have in mind?

Q. Well, 38, for example, I believe is one of them. A. 38 merely shows the total electric energy transferred. [9453] Q. Does your answer with respect to the distinction between interchange flow and firm power flow apply to Exhibit 38? A. Exhibit 38 doesn't indicate what character it is, whether it is interchange or firm or emergency or backfeed or whatever other label you want to put on it.

Q. And the same is true of Exhibit 40. Is that right? A. Yes.

Q. And as a matter of fact, neither of those exhibits drew any distinction between circulating energy as distinct from the flow or firm power or interchange energy. Is that right? A. Circulating energy between what points are you referring to now?

Q. Circulating energy between the York area and the Pennsylvania Power and Light area. A. Exhibit 40 has nothing to do with the York area. This has transfers across the Maryland-Pennsylvania State line.

TRIAL EXAMINER: In your exhibits you just total all your energy and if there is such a thing as circulating energy on the system, it would affect the meter reading and would be reflected in your figures. Is that true?

THE WITNESS: I took meter readings, gross meter readings, which include the total amount of energy measured at that point. [9454] Now, if it included some circulating energy, it would be included in that meter reading.

TRIAL EXAMINER: And that is true of all your exhibits where you have used meter readings?

THE WITNESS: That is right.

By MR. MYSE:

Q. That would also be true of Exhibit 44 and 45 to the extent that they show energy flows thereon. Is that right? A. The energy flows shown thereon are gross meter readings in those circuits.

* * *

[9463] Q. Well, is all of the energy delivered at Violet Hill substation sold to Metropolitan Edison Company? A. Not if some of it is transmitted through the distribution network up to Pennsylvania Power and Light Company. Then it would be sold to Pennsylvania Power and Light Company, and not Metropolitan Edison Company.

Q. So under those circumstances, the delivery at Violet Hill substation means that some energy is sold not only to Pennsylvania Power and Light Company, but to Metropolitan Edison Company as well. Is that right?

* * *

THE WITNESS: Some energy—now, what do you mean by that? Some of the energy delivered to Metropolitan Edison [9464] Company's facilities at Violet Hill may not entirely be sold to Metropolitan Edison Company?

By MR. MYSE:

Q. That is right. Isn't that correct? A. That is my understanding of it, yes.

Q. And likewise, some of the energy delivered at the various metering points up in the Pennsylvania Power and Light area may actually be sold to Metropolitan Edison Company. Isn't that right? A. There is that possibility.

I don't know how much or if such a sale is made, but there is that possibility, yes.

MR. GOLDBERG: Are we talking on an annual basis in all these questions?

MR. MYSE: No; over any period.

By MR. MYSE:

Q. Isn't it a fact there is circulating energy between the facilities at Violet Hill and Harrisburg? A. It seems to me I have stated two or three times that that is my understanding, that there is such circulating energy.

Q. And if there is such circulating energy then some of the energy delivered at Harrisburg is actually sold to Metropolitan Edison Company. Is that right? A. It actually may be delivered to Metropolitan Edison Company. As to how they handle it as far as billing, I don't know.

[9465] Q. I am talking about energy delivered at Harrisburg to the facility of Pennsylvania Power and Light Company may be energy that is actually sold to Metropolitan Edison Company. Isn't that right? A. I am saying that energy may be delivered to Metropolitan Edison Company. As to how it is handled, beyond that I don't know.

Q. Do you call energy delivered to Harrisburg on the facilities of Pennsylvania Power and Light Company a delivery to Metropolitan Edison Company? A. No.

Q. Well, when there is such a delivery and there is circulating energy, some of that energy is sold to Metropolitan Edison Company. Is it not? A. I don't know.

Q. You don't know? A. I don't know.

Q. You didn't give any consideration to that factor in your determination of power flow. Is that right? A. I didn't give consideration to that circulating energy, no.

* * *

[9468] Q. Now will you refer to page 9089 of the transcript? There we were referring, if you recall, to the different times when the peaks occur on various systems.

My question to you today is, isn't it true that the maximum demands on the Penn Water-Safe Harbor system by the various companies who make demands on that system come at different times and in different quantities during the Penn Water-Safe Harbor system peak than during Area 6 system peak? Isn't that right? A. I will have to have that one read.

(Question read.)

THE WITNESS: I don't understand that.

By MR. MYSE:

Q. What is it about it that you don't understand? A. I don't understand any of it.

Q. Do you understand what Area 6 system peak is? A. At the moment I don't remember whether Area 6 system peak includes the deliveries by Holtwood to its Pennsylvania customers or not. I know what companies are included in Area 6, but whether or not it includes firm deliveries by Holtwood to its Pennsylvania customers, I don't recall. Its Pennsylvania customers are not in Area 6, they are in Area 5.

Q. Well, you can determine it very readily by looking at FPC Form 12, can you not? I hand you a photostat of FPC [9469] Form 12 for 1944, filed by Pennsylvania Water and Power Company. A. That wouldn't be for Area 6.

Q. Well, does the Form 12 that I handed you show the demand on the Penn Water-Safe Harbor system? A. Yes.

Q. But you would have to look at something else for the Area 6 system. Is that right? A. That is right.

Q. And that something else is FPC Form 12 for 1944 filed by Consolidated Gas Electric Light and Power Company of Baltimore? A. Yes, covering Holtwood, Safe Harbor, Baltimore, Bethlehem Steel and Washington systems.

Q. Now, will you tell me by reference to either one or both of these documents that I referred to what Area 6

system peak means? A. The system peak as reported here excludes Holtwood deliveries to the Pennsylvania customers.

MR. MYSE: May I have that answer?

(Answer read.)

By MR. MYSE:

Q. Well, will you tell me what Area 6 system peak is? A. It includes the combined peaks of the Washington system, Bethlehem Steel Company, the Baltimore Company, the Safe Harbor and Holtwood companies, exclusive of its deliveries [9470] to its northern customers.

Q. In other words, the amount of kilowatts shown as Area 6 system peak would be the demands on all of the systems that you named, exclusive of the demands up to Pennsylvania. Is that right? A. Of the demands in Pennsylvania as supplied by Holtwood, yes.

Q. Now, where in Form 12 does it so define Area 6 system peak? A. It doesn't define it that way. I am interpreting it from the figures reported here. On schedule 13 in which the 108,000 kilowatts representing the power delivered to the systems in Pennsylvania are deducted from the total demand on the system generating plants of those companies that I named.

Q. Now, that report you are referring to was filed by Consolidated Gas and Electric Company. Is that right? A. They prepared the report, I believe, yes.

Q. Does the data in that report conform to your idea of the data that should be reported in determining what the Area 6 system peak is? A. It corresponds to the definition as to how these figures are to be reported in the sales to other utilities who have their own generating facilities or buy power from others to be excluded from this system peak, and of course they are in a different area. The northern customers are in Area 5.

[9471] Q. Now, who determined what these areas are? A. The Commission.

Q. So that the Area 6 is determined by definition of the Commission. Is that right? A. Yes.

Q. Now, will you look at the verification in the form F2 filed by Consolidated for the year 1944 and tell me if there was any qualification on any of the figures contained in that report? A. I am sorry, but I don't believe I understand what you mean by that, "any qualification."

Q. Don't you know what a qualification is? A. Yes, but I am sorry, I don't understand what it is you want me to do.

TRIAL EXAMINER: Just a minute. Now, can you stand somewhere other than right at the corner of the bench looking over the witness' shoulder?

MR. MYSE: I will get another copy.

By MR. MYSE:

Q. Now, may I have an answer to the question? A. Are you referring to the attest on page 36?

Q. That is right. A. There is a footnote there to a statement.

Q. Well, it is short. Why don't you read the attest and the footnote? [9472] A. The attest is as follows: "I have examined the foregoing statement and certify that the answers to the inquiries therein are as full and complete as can be supplied from the records of Consolidated Gas Electric Light and Power Company of Baltimore," which is footnoted "And from data supplied from Pennsylvania Water & Power Company, Safe Harbor Water Power Corporation, Bethlehem Steel Company and Potomac Electric Power Company, and accepted without verification," and then continuing, "and that they are true and accurate, to the best of my knowledge and belief," signed by F. E. Ricketts, Vice President of Consolidated Company.

MR. GOLDBERG: How about the other attest? Don't you think we ought to have that in?

MR. MYSE: All right.

THE WITNESS: There is an attest which precedes the one I just read, which reads as follows:

"I have supervised the preparation of the foregoing statement and certify that it is based upon the records of the company, and is correct to the best of my knowledge and belief." Signed E. J. Knight.

By MR. MYSE:

Q. And there is an asterisk after the word "Company," which refers to the same footnote that you read. Is that correct? A. There is a little blotch over there underneath [9473] the word "preparation," yes, on that copy (indicating) it appears more distinctly and it is after the word "company."

Q. And the copy I just showed you was the original filed with the Federal Power Commission. Is that correct? A. Yes.

• • •

Q. Well, Mr. Roland, regardless of whether or not the demands of the Pennsylvania customers in Pennsylvania are included in the maximum demand at the time of Area 6 system peak, as shown by the Form 12 filed with the Federal Power Commission by Consolidated Company, there are demands at the time of that system peak, are there not, by those customers? A. Yes.

Q. Now, the time of the maximum demands by each of those customers on the Penn Water-Safe Harbor system comes at a different time than the demands by those same customers at the time of Area 6 system peak. Isn't that correct? A. You mean, for example, that the maximum demand say of Holtwood's delivery to Coatesville during the year may not occur at the same hour as the maximum demand on Area 6 peak?

Q. That is right. [9474] A. I don't know, but it is quite likely that it would be at a different hour. I don't know.

Q. And likewise the maximum demands of the other Pennsylvania customers would not occur at the time of the maximum demand on Area 6 system peak? A. I don't know whether they actually did, but it certainly wouldn't necessarily follow that they would occur at that same hour.

Q. Or would the maximum demand on the Baltimore-Safe Harbor system be at the same time as the maximum demand on Area 6 system? A. Not necessarily, no.

Q. The fact is it does not. Is that right? A. I presume the maximum demand by Baltimore would occur at time of high flow, which would not correspond with the Area 6 system peak.

Q. And that time of high flow is usually in the spring? A. Yes.

Q. And the Area 6 peak usually occurs in the fall or winter. Isn't that correct? A. I think it usually occurs some time in December.

Q. Now, the time of the maximum demands by the Pennsylvania customers on the Penn Water system alone might or might not be different than the time of such maximum demands at the time of the Penn Water-Safe Harbor system peak. [9475] Isn't that correct? A. I believe that would be correct, because the Penn Water-Safe Harbor system peak probably would occur also during periods of high flow, which would not correspond with the maximum demands of the northern customers.

Q. And it is also true, is it not, that the maximum demand by Pennsylvania Power and Light Company on the 25-cycle system of Holtwood would occur at a different time than either the maximum demand period on the Penn Water-Safe Harbor system, the Penn Water system alone, or the Area 6 system? A. I don't know when it occurred, but it is quite likely it did not occur at the same hours you mentioned.

Q. Would the maximum demand by Baltimore on the 25-cycle system of Penn Water occur at a different time than the period of maximum demand on the Area 6 system?

A. The maximum demand by Baltimore on the 25-cycle system of Holtwood would again be governed by river flow, which would not necessarily correspond to the maximum demand on the system which you named.

Q. And that maximum 25-cycle demand by Baltimore would very likely occur in the spring. Is that right? A. Yes.

Q. What do you understand the Penn Water-Safe Harbor system to be? [9476] A. As they report in the Form 12, it includes the Holtwood Company and the Safe Harbor Company.

Q. And all of the demands on that system are the demands of all their customers. Is that right?

THE WITNESS: Let me have that question again, please.

(Question read.)

THE WITNESS: That isn't the way it is reported in Form 12 report, Mr. Myse.

By MR. MYSE:

Q. Well, what customers are excluded? A. Philadelphia Electric Company, Edison Light and Power—I am reading now from the 1944 report—Pennsylvania Power and Light Company, Metropolitan Edison Company, Consolidated Gas Electric Light and Power Company.

Q. What schedule are you looking at now? A. Schedule 13.

TRIAL EXAMINER: Did you say those were included or excluded?

THE WITNESS: Those were excluded from the system peak.

By MR. MYSE:

Q. The demand on the system generating plants doesn't exclude any of the demands of the Pennsylvania customers, does it? A. Well, it couldn't. The demand on its system generating plants is the demand on the system generating plants [9477] regardless of any other deliveries to anyone else.

Q. What was that maximum demand in 1944? A. 369,000 kilowatts.

Q. And that was on a sixty-minute basis? A. Yes.

Q. And that was April 19, 1944, 8:00 A. M. Is that right? A. Yes.

Q. Now, the exclusions that you referred to are the demands of various Pennsylvania customers which under Item D of Schedule 13 of the Form 12 report for 1944, are characterized as power delivered to other systems for resale. Is that right?

MR. GOLDBERG: Now, just a minute. That is not complete.

MR. MYSE: Well, let's have the witness' answer.

MR. GOLDBERG: I mean your question wasn't complete. I move to strike the answer, Mr. Examiner, and I object to the question as an incomplete question.

TRIAL EXAMINER: Do you have the report before you?

THE WITNESS: Yes, Mr. Myse read part of the statement for Item D.

TRIAL EXAMINER: Do you agree with what he read?

THE WITNESS: Well, he read it correctly as far as he read, yes.

TRIAL EXAMINER: Do you have anything to add to it?

[9478] THE WITNESS: If I want to complete the statement that is shown in Item D, it should include "Except those listed in Schedule 8, Part A."

By MR. MYSE:

Q. Well, what are included in Schedule 8, Part A? A. None.

Q. So then my statement was correct, wasn't it? A. May we start all over again and get it straight now?

Q. There was no exception, so there was no need to refer to the exception. Isn't that right? A. Well, after looking back at Schedule 8, I find there are no exceptions, so that would have no bearing on what is shown in Item D.

Q. While we are back on Schedule 13, Mr. Roland, at page 9337 of the transcript yesterday you quoted from one of the notes to that schedule starting at line 9 and the record reads, "This item includes the joint entry to the Pennsylvania Railroad", and actually the note reads "This item includes the joint supply to the Pennsylvania Railroad". Isn't that correct? A. That is correct.

Q. I believe you agreed with me, Mr. Roland, and if not you may correct me, that there is a difference between demands measured on a 60-minute or one-hour basis and demands measured [9479] on a 15-minute integrated basis. A. There can be a difference, yes.

Q. And there very probably is, if there are any swings? A. If there are swings there would be a difference, yes.

Q. And likewise there would be a difference between demands measured on a 30-minute basis and demands measured on a one-hour basis. Isn't that right? A. The shorter the demand interval, the greater the difference might be if there are swings.

Q. And the indicated demands on a 30-minute basis, if there are swings, would be higher than the indicated demands on a one-hour integrated basis. Isn't that right? A. That is correct. But I believe you should use the word integrated instead of indicated.

Q. With that amendment, my statement is correct? A. Yes.

Q. And likewise if you had a meter registering instantaneous demands, they would be very much higher relatively speaking than the same demands measured over an hour-integrated period? A. They could be if there are load swings.

Q. And there are usually load swings on most of these customers served by the Safe Harbor-Penn Water system,

are there not? A. I don't know, Mr. Myse. I haven't examined any [9480] information that would indicate to me what the magnitude of load swings would be. I presume there are some. There would be in systems of this kind.

Q. From your knowledge of the flow of power to the Pennsylvania Railroad, isn't it true there are considerable swings on the energy supplied to the Pennsylvania Railroad system? A. Well, without even having looked at any of that data, I would certainly expect there would be load swings on the railroad.

Q. Do you know anything about the steel plant operations in Baltimore? A. No, but usually you get swings on a steel plant.

Q. And to the extent that those steel plants are connected to the Baltimore system, they would create swings on the energy supplied to Baltimore. Is that right? A. Supplied to Baltimore from what? Its own generating sources?

Q. From the system of Penn Water and Safe Harbor. A. It would create a swing on the interconnected system which would include generating facilities of the Washington Company, Safe Harbor in its own plant, Bethlehem Steel and all the plants connected to the system.

[9481] Q. Well, under the method of operation of this interconnected system, who absorbs the swings? A. Well, usually where you have a big hydro system or hydro plant in the interconnected system you let the hydro units take swings.

Q. Well, if the hydro plant doesn't take or absorb the swings, who does? A. I don't know.

Q. And since Safe Harbor and Holtwood are hydro plants connected to the Baltimore system through the 220 lines at least, they take care of the swings as I understand your testimony. Is that right? A. Well, that would be my opinion that a good part of the swing at least would be handled by the hydro units at Safe Harbor and Holtwood.

Q. Well, did you in your study for the purposes of direct testimony study the nature of the flow of energy in connection with the swings we have been referring to? A. No, that was not at all essential to my study.

* * * *

[9489] Q. You there were describing Holtwood and Safe Harbor as run of river plants. Is that right? A. Yes.

Q. Now, actually you can regulate the operation of those plants over a period of more than a few hours, can't you? A. Yes.

Q. And that regulation is from storage at the site or above, isn't it? A. Storage in the Holtwood pond and the Safe Harbor pond.

Q. Is it at the site or above? A. It is at the site at Safe Harbor and above the site at Holtwood, I presume.

[9490] Q. Now, do you know what the definition of a run of river plant is in the Form 12 report prescribed by the Federal Power Commission? A. No, but I can look it up if it is in there.

Q. If you have it there you might look at Schedule 2, Paragraph 4, and tell me how the Federal Power Commission describes a run of river plant. A. " 'Run of river' refers to those plants whose operation cannot be regulated over a period of more than a few hours, either from storage at site or above, but whose operation is, in general, controlled by the volume of flow which must be utilized as it occurs or be wasted."

Q. I believe in your qualifications you said you had something to do with making up this report. Isn't that right? A. Yes, but I didn't make up the definitions which appear in this schedule that you referred to. They were made up at some time after I had ceased working on this form.

Q. Now, since you agree that the operations of both the Safe Harbor and Penn Water hydro plants can be regulated over a period of more than a few hours either from storage

at site or above, you can't say that these plants are run of river plants within the definition of the Federal Power Commission, can you?

* * * *

[9491] THE WITNESS: It is true it would not be a run of river plant as defined in that schedule of Form 12.

By MR. MYSE:

Q. So when you described those plants as run of river plants, you used a definition different from that used by the Federal Power Commission? A. Yes. It is a relative term. You describe plants as storage plants or run of river plants. It isn't a storage plant and it isn't strictly a run of river plant according to that definition there, but it is a relative term and in a good deal of literature prepared by the company they describe it as essentially a run of river plant.

Q. Over what period of time would you require storage operation to be conducted before you would cease to call a plant a run of river plant? A. I haven't any particular limitation in mind.

[9492] Q. One week? A. No. I think that a storage plant would be on a monthly or seasonal basis. It is a purely relative term. I don't believe there is any real limit set up as to when a plant is a run of river or when it is a storage plant. The term is used very loosely.

Q. Are you sufficiently familiar with the operations of these plants to determine whether or not they are ever operated on a seasonal or monthly basis? A. Well, the storage isn't available for a seasonal basis of operation, no.

[9493] Q. What do you mean by seasonal? A. Where you can store enough water in a reservoir to carry out your operations without any further inflow for a substantially long period of time.

Q. What do you mean by a substantially long period? A. Well, there are plants that store up for a period of six months to carry them over for a dry period of several

months in which there is very little inflow during that dry spell. Well, I would call that a storage plant. Certainly the Boulder project would be a storage plant.

Q. Now, actually the Federal Power Commission has a definition of storage plants, too, doesn't it? A. I believe there is one in there.

Q. Well, it is very short, one sentence. Will you read that in Paragraph 4 of Schedule 2 of FPC Form 12?

* * *

[9495] THE WITNESS: The instruction page of Schedule 2 of this Form 12 report defines storage as follows:

> "'Storage' refers to those plants whose operations can be varied as desired because of storage at site or above. This regulation may be weekly, monthly or seasonal."

By MR. MYSE:

Q. Now, it is a fact that both the Safe Harbor and Penn Water plants can be regulated on a weekly basis, at least, because of the storage at the site or above? A. Yes, but there you can see how loosely the term is used. Storage can be weekly, monthly or seasonal. It covers the entire range practically from a week up to a year or two years. It is a very broad term.

* * *

[9502] Q. In your view, does Baltimore have an obligation for the supply to the railroad in Pennsylvania? A. Well, the obligation is one which all three companies—I mean—take on as a whole.

Q. Is it Baltimore's obligation? A. There is no division in the obligation as between Baltimore and Holtwood as far as any part of the railroad load is concerned.

* * *

Q. Now, in your Exhibit 42, you took 20 days and showed the hourly data for those days. My question is, are those [9503] 20 days helpful in determining the average

amount of net backfeed over the year 1944? A. You say, would it be helpful?

Q. Yes. A. Sure, any information you had would be helpful.

Q. Would it give you any indication as to the relative amount of backfeed for the year 1944 if you just looked at those 20 days? A. Not if you just looked at that alone.

Q. What else would you have to look at? A. Well, if you want the real answer, you would have to look at all the days of the year, the hourly readings for all of the year.

Q. As a practical matter, the twenty days you took were largely days of low flow. Is that right? A. I believe most of them were for low flow.

Q. And when I say "low flow" I mean low river flow and that is what you understood, isn't it? A. Yes.

Q. And it is during the days of low river flow that you would expect to find greater amounts of backfeed from Baltimore. Isn't that right? A. Ordinarily that would be true, yes.

* * *

[9506] Q. Do you consider 1944 abnormal from the standpoint of energy flows on the system of the Penn Water-Safe Harbor system?

* * *

THE WITNESS: 1944 was a war year.

* * *

Q. As I understand, that means that whatever abnormality there was arose out of war conditions. Is that right? A. There were some conditions that Mr. Von Eiff explained to me that I believe occurred during some weeks in 1944 that due to war conditions there was a shortage of oil for generation in Pennsylvania, and on occasions more energy was sent up to replace the oil generated energy in Pennsylvania and would not have taken place had it not been [9507] for the shortage of oil.

Q. When you say energy was sent up, you mean there was more backfeed than would have taken place if there had

been no shortage of oil during the war period? A. I don't know whether it would have meant more backfeed or less delivery to Baltimore.

• • •

[9510] Q. Now, Mr. Roland, in addition to this oil shortage situation during the year 1944, it is a fact, is it not, that the war loads were what might be called loads with a flattened load shape because of overtime in industrial plants. Isn't that right? A. Where?

Q. All over the eastern sea coast. A. I don't know what happened all over the eastern sea coast.

Q. Well, how about the industrial plants connected to the systems of the customers of Penn Water and Safe Harbor? A. The load shape for the interconnected system was flatter during the war period than it was prior to the war.

Q. And that was the result of overtime in industrial [9511] plants, wasn't it, generally speaking? A. Yes, it would be the result of operating the manufacturing plants on a 24-hour or 18-hour basis.

Q. And those were all wartime conditions which you wouldn't expect now in peacetime. Isn't that correct A. Well, there would be more of it during the war period.

Q. And that would be an abnormality during the year 1944 as a result of the war, wouldn't it? A. No, I wouldn't say it is an abnormality. As I understand for 1946 the load shape is not so far different from what it was then and we are not in a period of a war now.

Q. Did you have any data for the year 1946 when you prepared your direct testimony? A. I did not.

Q. Where did you get this information about the load shape in the year 1946? A. From the discussions with the engineers of the Baltimore Company.

• • •

[9517] Q. Do I understand you to say, then, Mr. Roland, that you considered neither Exhibit 228 for identification

nor Exhibit 229 for identification in coming to the conclusions you did come to with respect to power flow in your direct testimony in this case in connection with Exhibits 42, 38 and 40? A. As I stated to the Examiner, I didn't use them at all.

Q. You didn't consider them, then? A. I didn't consider them.

• • •

[9534] Q. Now, at page 8834, line 11 through line 13, you stated that the sales in the State of Maryland are the obligation of Baltimore whereas the sales in the State of Pennsylvania are the obligation of Penn Water. What do you mean by obligation in that connection? A. It seems to me in my subsequent testimony there I modified that, or at least I gave my understanding of that.

Q. Well, I don't think I ever referred to this particular testimony before. What is your understanding of that now?

MR. GOLDBERG: Why don't you give the witness an opportunity to look at that testimony. Maybe he has explained it.

MR. MYSE: If he had explained it I don't believe I would ask the question. I don't think he has.

THE WITNESS: Well, at the bottom of page 8836 you asked the same question. What other obligations does it have to the railroad and I said "It supplies power to the railroad but it doesn't necessarily all have to be consumed in Maryland."

By MR. MYSE:

Q. That was going to be my next question, Mr. Roland. How does Baltimore supply the energy you referred to there to the railroad? Just how does it do it physically? A. At what point now are we talking about?

Q. Well, let's say any point on the railroad system. A. Baltimore Company's facilities do not tie in directly with the railroad.

[9535] Q. There is no connection of Baltimore's facilities to the railroad's facilities, is there? A. There is no direct connection of the facilities of Baltimore and the railroad.

Q. Now, in your view how does Baltimore supply energy to the Railroad? A. Over the facilities of the Holtwood Company, the Susquehanna Transmission Company of Maryland and through the facilities of Pepco.

Q. And it uses those facilities in order to make that supply. Is that right? A. Well, the energy is supplied over those facilities.

Q. Now, did you intend your answer at the bottom of 8836 to mean that Baltimore does have an obligation to the Pennsylvania Railroad in the State of Pennsylvania? A. The companies who are parties to the contract agreed to supply the total requirements.

Q. Does it have an obligation to supply the railroad in the State of Pennsylvania? A. It isn't so defined. It is merely defined that the total obligation is accepted by the three parties to the contract, the supplying companies.

Q. Well, then, as I understand your answer now, the obligation of Baltimore Company to the railroad is not confined to the supply of energy in the State of Maryland. Is [9536] that right? A. Its obligation is not defined other than that the three companies are obligated to supply the total railroad requirements.

Q. Is my statement correct, Mr. Roland? A. I don't know how I can answer that any other way than what I have.

MR. MYSE: Mr. Examiner, I think the question is clearly susceptible of a yes or no answer.

TRIAL EXAMINER: It seems to me it is susceptible to a more definite answer if the witness knows.

MR. MYSE: May I have that statement, please?

MR. GOLDBERG: The difficulty with the question is that it asks for a legal conclusion.

MR. MYSE: Do I understand the witness is directed to answer the question directly?

TRIAL EXAMINER: Answer the question.

MR. GOLDBERG: I understand the Examiner's direction is that he make a different answer if he is capable of making a different answer.

THE WITNESS: All I can state, Mr. Myse, is that the parties, supplying companies, agree to supply the total requirements of the railroad, and there is no particular area set aside for an obligation of either one of the companies. It is just a total requirement supplied by all the companies.

[9537] TRIAL EXAMINER: What you mean, then, is that it is not defined in such a way as to limit it to the state of Maryland.

THE WITNESS: It is not defined at all other than to supply the total requirements wherever they might be.

By MR. MYSE:

Q. Pennsylvania as well as Maryland. A. The railroad requirement in Pennsylvania as well as in Maryland is the obligation of the supplying companies.

Q. And that might be the obligation of Baltimore as one of the supplying companies. Is that correct? A. I stated it was the obligation of all the companies.

* * *

[9539] Q. Well, who sells the services or the energy, if you will, that is supplied to the railroad at Conestoga? A. That which is delivered at Conestoga and used in Pennsylvania is sold by Holtwood.

Q. Well, is it sold by anyone else at that point, at Conestoga? A. I don't know.

* * *

[9541] Q. Well, I understood your testimony to be that at least some of the energy which is delivered at Conestoga is sold by Holtwood to the railroad. Is that right? A. That part of it which is used in Pennsylvania would be sold by Holtwood. Now, whether that is considered the sale point, I don't know.

Q. Now, that part of it which you say is consumed by the railroad in Maryland you say is sold by the Baltimore Company? A. Yes.

• • •

[9546] Q. Mr. Roland, is it your testimony that the compensation that Penn Water receives for its services rendered to the railroad in Pennsylvania is received by reason of the document identified in this record as Exhibit No. 11?

• • •

[9548] Q. May I have an answer to my question, Mr. Roland? A. The compensation does not result from Exhibit 11. It results from the fact that power and energy is supplied to the railroad. The railroad pays for it.

Q. Does the railroad pay it to Holtwood? A. The check is made out to Baltimore Company, as I stated before, with the understanding that Holtwood shall receive a part of it. That is a matter of convenience, as I stated before.

Q. Now, isn't that understanding that you are referring to arrived at under the provisions of Exhibit No. 11? A. Exhibit No. 11 provides for the split-up of the money received from the railroad company.

• • •

[9563] Q. Can you tell me how much two-thirds of the daily energy available from the development at Safe Harbor was in 1944?

• • •

[9564] THE WITNESS: I don't believe I understand what you mean by the "daily energy available."

• • •

[9565] Q. Do you or do you not understand what the phrase means? A. Not as you are using it, no.

[9566] Q. So that you are unable to tell me the amount of the daily energy available in the development at Safe Harbor during the year 1944. Is that right? A. I do not know.

• • •

[9577] MR. KING: Before we call Mr. Newlands I would like to report on the homework which the Staff requested of Mr. Gunn during his cross-examination on original cost.

In the first place, Mr. Gunn was requested to ascertain, in effect, whether there was an opinion of the Pennsylvania courts in connection with the litigation with the State of Pennsylvania concerning the amount of the Pennsylvania State Tax against McCall Ferry Power Company for the year ending 1905.

This request was made at pages 7514 to 7519 of the record.

We made the check and have ascertained that there is no opinion of the court in the company's files in connection with this case, and, further, our understanding is that the court rendered no reported opinion.

In the next place, Mr. Gunn was requested to determine whether the testimony of Mr. Harlow contained in Exhibits 171, 172 and part 21 of Exhibit 27 was an excerpt from his direct testimony or from his cross-examination.

We have checked the company's files and find that the excerpts contained in Exhibit 171 apparently were taken from [9578] pages 99 and 100 of the reported transcript in the case of Susquehanna Power Company v. the Proprietors of the Susquehanna Canal in the Circuit Court for Cecil County on January 28, 1907.

This portion of Mr. Harlow's testimony was covered while he was being cross-examined.

The excerpts contained in Exhibit 172 were apparently taken from pages 39 and 40 of the transcript of the testimony of Mr. Harlow on direct examination in the case of Susquehanna Power Company v. the Proprietors of the Susquehanna Canal, condemnation proceedings in Cecil County, dated September 4, 1906.

The excerpts of Mr. Harlow's testimony contained on part 21 of Exhibit 27 were taken from his direct testimony on pages 11 and 12 of the transcript of testimony in the case of Susquehanna Power Company v. the Proprietors of the Susquehanna Canal in the Circuit Court of Cecil County, on January 28, 1907.

• • •

[9579] JOHN M. NEWLANDS.

• • •

[DIRECT EXAMINATION (Continued).]

MR. GOLDBERG: Mr. Examiner, I suggest that before Mr. King begins with his cross-examination of Mr. Newlands that Mr. Newlands be permitted to point out certain typographical errors in the exhibit which he has discovered, and which I am sure Mr. King and everyone would like to know about.

MR. KING: You mean in Exhibit 51?

MR. GOLDBERG: Yes; in several other exhibits, also.

May the witness go ahead with those?

TRIAL EXAMINER: He may.

THE WITNESS: In Exhibit 51, page 23 of part 1, line 19, it reads: "Memorandum of understanding dated April 24, 1907."

[9580] It should read, "April 24, 1909."

MR. KING: Thank you. We have that, Mr. Newlands.

THE WITNESS: Exhibit 51, page 38, part 2, that is the schedules, the item of general office salaries, column 8 reads, "$10,255.94 (b)."

It should read $10,255.94 (a). In other words, the note should be changed from (b) to (a).

Exhibit 51, part 2, page 51, the item of printing stock certificates in columns 5 and 7 should read $1248 in each case instead of $1548.

MR. GOLDBERG: Does that change the total in the column?

THE WITNESS: No, because I have another change in the same exhibit.

MR. GOLDBERG: I see.

THE WITNESS: The item of miscellaneous expenses at the bottom of that exhibit should be increased by a like amount for the same years. In other words, column 5 should read $415.98 instead of $115.96, and column 7 should read $950.28 instead of $650.28.

In Exhibit 51, part 2, page 39, the total at the bottom of the page should read $35,832.15 instead of $25,832.15.

Exhibit 51, page 43, part 2, the item of Simpson, Thacher and Bartlett, legal services, under reorganization expenses, column 2 should read $23,287.21 instead of $23,827.21.

MR. KING: Does that change the sub-total?

[9581] THE WITNESS: No, the sub-totals are correct. It was just a typing error.

MR. KING: Very well.

THE WITNESS: Exhibit 51, page 53, part 2, the line for the year 1910 under column 3 should read $1,277.31 instead of $1,227.31, the total remaining unchanged.

Exhibit 51, page 37 of part 2, the second sub-total on that page, in other words, the sub-total which precedes the total, column 4, should have a reference mark (a) after the $166,087.42 figure.

Exhibit 52, sheet 2, the year 1917, column 9, should read——

MR. KING: Would you wait just one moment, Mr. Newlands?

THE WITNESS: Yes. (Short pause.)

Should read $21,051,748.19 instead of $21,051,758.19.

MR. KING: Figure 4 is the only thing changed?

THE WITNESS: That is right, changed at that point.

Exhibit 51, page 2 year 1918, column 9, should read $21,152,818.51 instead of $21,051,748.19.

MR. KING: As I understand it, the figure should read $21,152,818.51. Is that correct?

THE WITNESS: That is right.

Exhibit 54 is next.

There is an immaterial correction there. One-half of a bracket was left off of the item for transfer between reserve [9582] account at December 31, 1931.

MR. GOLDBERG: Column 3?

THE WITNESS: In column 3; that is right.

MR. GOLDBERG: You are supposed to close the bracket.

THE WITNESS: That is right.

MR. KING: Did you say that was a slightly immaterial correction?

THE WITNESS: I figured people would recognize the other part of the bracket belonged there.

TRIAL EXAMINER: Very well.

THE WITNESS: Next is Exhibit 55, the year 1914, column 12, and it should read $411,977.58 instead of $411,977.51.

Exhibit 57——

MR. KING: Does that change the total in that column?

THE WITNESS: No. That is a total. It adds across and does not change the total at the bottom.

Exhibit 57, the year 1923, column 5, should read $941,292.32 instead of $941,202.32.

MR. GOLDBERG: Would you read that last correction, please?

(Read.)

THE WITNESS: Exhibit 57, year 1918, column 7, it should read $13,204,623.12 instead of $13,204,523.12.

That completes the corrections.

CROSS-EXAMINATION (Continued).

By MR. KING:

[9583] Q. Do you have Exhibit 51 in front of you, Mr. Newlands? A. Yes, sir.

Q. You have heretofore testified, Mr. Newlands, on pages 1100 and 1101 of the transcript that you assumed full responsibility for the determination of your original cost study designated Exhibit 51 in this case. Is that correct? A. That is correct.

Q. Will you name the persons who assisted you in making your determinations, conclusions and recommendations made in this Exhibit? A. If you mean by that the people who worked for me—none of them assisted me in arriving at conclusions——

Q. I mean by that that I want you to name everyone who assisted you in connection with the preparation of Exhibit 51. A. Or in connection with the underlying details?

Q. Correct. A. Mr. T. S. Montgomery.

Q. Who is he? A. An accountant.

Q. All right. A. Mr. T. F. Keavlain.

Q. Is he also an accountant? A. Yes.

Mr. Jules Englander. He is also an accountant.
[9584] Mr. Lyons, also an accountant.

Mr. McGrath. He is an accountant.

You want only the persons who worked on Exhibit 51?

Q. Correct. A. Mr. Epperson.

Q. Who is he? A. He is an accountant.

Mr. Gagnon. He is an accountant.

Mr. Mark Welt. He is an accountant.

That is all I recall at the moment.

Q. Then as I understand it, Mr. Newlands, you had no engineering or legal assistance. Is that correct? A. I had engineering assistance. I accepted the date of commercial operation given by our engineers, but I had no engineering assistance in preparing Exhibit 51 other than that.

Q. As I understand it, then, you had no engineering assistance in connection with any of the conclusions or determinations in Exhibit 51. Is that correct? A. I may have discussed some of the facts with our engineers. How they affected my conclusions I am not able to say now.

Q. What engineers did you discuss the facts with? A. Mr. Howell was over at various times.

Q. Who else? [9585] A. I believe he was the only one I had most of the discussion with. I may have had short discussions with other people but Mr. Howell in chief.

Q. Did he make the determination in connection with the date of commercial operation which you testified you accepted? A. He made the determination and I agreed with it.

Q. You accepted it? A. I accepted it.

Q. Did you have the right, Mr. Newlands, to modify or change Mr. Howell's determination? A. No, I didn't have that right.

Q. As I understand it, Mr. Howell was the only engineer with whom you talked in connection with the preparation of Exhibit 51. A. No, that is not my statement. I said most of my conversations, if I had any, may have been

with Mr. Howell. I may have mentioned items to Mr. Stanley Roland, who was over on various occasions, but none of my discussions with him affected Exhibit 51, and I doubt any of my discussions with Mr. Howell affected Exhibit 51. They may have, but I don't think so.

Q. Did you or did you not have discussions with those gentlemen? A. I had discussions with all of the engineers who came over to Baltimore, but as to recalling just what I discussed, [9586] that is impossible at this time.

Q. Who were all the engineers who came over to Baltimore? A. Mr. Stanley Roland was one. Mr. Howell was another. Mr. Davis was another. Mr. Nelson was another. Mr. Bybuth was another.

Q. Is that all? A. There were one or two others but I don't recall their names at the present time.

Q. How about Mr. Jeffery? A. He was over there, yes.

Q. What was the nature of the discussions you had with those gentlemen? A. As I told you before, it is impossible to recall now.

Q. Do you recall the nature of any of the discussions you had? A. Well, I can recall two or three. I remember discussing flashboards with Mr. Howell, and I may have discussed them with Mr. Roland.

Q. Anything else you can remember? A. I discussed repairs at the toe of the dam with Mr. Howell.

I discussed various of the items claimed from operation and maintenance accounts or from the reserve accounts with Mr. Howell. Which ones specifically I don't remember.

[9587] Q. Does Exhibit 51 reflect any of the substance of any of those discussions with the engineers? A. No. Exhibit 51 is based on my conclusions.

Q. And your conclusions alone. Is that correct? A. That is right.

Q. Except the date of commercial operation. A. That is right.

Q. Did the accountants whom you have named all report directly to you? A. That is right.

Q. And you directed the work they were to perform in making the investigation. A. That is right.

Q. What was the scope of the authority of these accountants whom you have named in conducting the investigation? A. Are you asking me what is the scope of the authority of the accountants who assisted me?

Q. What is the scope of the authority of the accountants whom you have heretofore named and indicated assisted you in making their investigations? A. They did only what I asked them to do and reported to me.

Q. Did you give them directions in writing or orally? A. Orally.

Q. Did you have the right to reverse any conclusions or [9588] determinations made by them if you thought it proper to do so? A. That is right.

Q. Did you actually reverse any of their conclusions or determinations? A. No, because as I recall it they did not make any conclusions.

Q. Then what did they do? A. They abstracted the figures from the records, made analyses, made up statements as I directed them, and things of that nature.

Q. Can you make an analysis without coming to a conclusion? A. Certainly. You merely copy the figures down in a certain order.

Q. Can you make an analysis without exercising judgment? A. Yes, you can.

Q. And that is the kind of analysis they made? A. They made the analysis I directed.

Q. And without exercising any judgment. A. I directed them as to what they were to put down and how they were to do it.

Q. Therefore they exercised no judgment. Is that correct? A. Very limited. There might have been some judgment involved.

[9589] Q. I thought you said no judgment was necessary.

A. There would be judgment involved in following my instructions for one thing.

Q. You mean because they were unclear? A. No, because it involves interpreting them.

Q. Can you give us an example which would involve interpreting any of the instructions you gave those gentlemen? A. I might have asked one of my assistants to make an analysis segregating certain types of charges, or segregating charges to the account in a certain way, grouping them in a certain manner, in other words.

The actual segregation of those charges by those groups would involve some determination on the part of the persons doing the work.

Q. In that situation, then, your assistants would exercise to a limited extent, total judgment in some instances, wouldn't they? A. They might if no explanation were given of the items involved. Usually we had a description of the items so I could tell later on in examining the work whether they classified it properly.

[9590] Q. Did you have that description before the investigation began? A. I had no descriptions before the investigation began.

Q. You mean whatever descriptions you gave them resulted from the investigation? A. I was referring to the descriptions which the accountants might copy down on their working papers of the items they had taken off.

Q. Then all of the people who actually—— Strike that, please.

All of the employees, then, of the Federal Power Commission who assisted you other than Mr. Howell were directly under your supervision. Is that correct? A. That is right, all of the accountants were directly under my supervision.

Q. Didn't you just testify that the only engineer who assisted you was Mr. Howell? A. That is right. Your statement is correct. I merely wanted to make certain of it.

By the way, with regard to the last statement, Mr. Howell did not assist me. I merely discussed matters with him.

Q. Well, if you include some data with reference to date of beginning of commercial operation, and Mr. Howell [9591] concluded that, wouldn't you call that assistance? A. With that exception.

Q. Then as I understand it, the only assistance you received from the accountants working under you was of a detailed nature. In other words, they just took figures off the books and reported to you. Is that correct? A. That is right.

Q. Do you now occupy the same position with the Federal Power Commission that you occupied at the time of the investigation in this case? A. Do you mean at the time of the beginning of the investigation?

Q. And straight through. A. No.

Q. All right. What was your position at the beginning of the investigation? A. I was a Principal Examiner of Accounts at the beginning of the investigation.

Q. Has your status changed during the investigation? A. Yes.

Q. To what? A. I am now a Chief Examiner of Accounts.

Q. That is the only change made? A. That is correct.

MR. GOLDBERG: That represents advancement, if I may [9592] interpose.

THE WITNESS: Yes, that represents advancement.

By MR. KING:

Q. Who is your immediate superior in the Federal Power Commission? A. Mr. Edward L. Dunn.

Q. Was he your superior during all the time you conducted the investigation? A. That is correct.

Q. So that the change in your status has not changed your relation with Mr. Dunn. Is that right? A. That is true.

Q. Will you please describe in some detail the scope of your responsibilities in connection with the two positions you have just referred to? A. Either one of the positions would involve heading field parties to make studies of the books of licensees or public utilities for the purpose of determining original cost or securing information for rate cases, or any other purpose which the Commission desired me to undertake.

Q. That is the scope of both positions? A. That is true, except that the Chief Examiner of Accounts usually would undertake the larger utilities, but either rank would constitute heading a field party.

Q. What do you mean "undertake larger utilities"? [9593] You mean the work in connection with larger utilities? A. I mean utilities larger in size in total assets.

Q. Work on them would not come under you? A. No, that was not my statement.

Q. Will you explain? A. I am saying that a Chief Examiner of Accounts would ordinarily be assigned to the larger public utilities.

Q. And you would be assigned to the small ones? A. A Principal Examiner of Accounts would be usually assigned to the smaller public utilities, but there is no strict dividing line. The Commission can do what it likes.

Q. That means you are generally assigned to work on the cases involving smaller utilities? A. No, that is not true.

Q. You work on both? A. I work on both.

Q. You generally have responsibility for work on larger utilities? A. That is right.

Q. That is full responsibility in connection with the work on them as well as on the smaller utilities? A. I might have, yes. As a Principal Examiner of Accounts I could be assigned to a utility of any size.

Q. Have you ever been so assigned to the larger [9594] utilities? A. No, not in complete charge of the work.

Q. What is your understanding of the difference between a small and large utility—dollarwise or what? A. Total assets.

Q. Where is the dividing line so far as assets are concerned? A. I don't know. I never have heard that described.

Q. Who determines that? Somebody other than you? A. I imagine it would be the head of our particular division.

Q. How many persons in the Federal Power Commission are there who occupy superior positions in the accounting department over you, exclusive of members of the Commission?

• • •

[9595] THE WITNESS: Are you referring merely to the accounting division that I happen to be in?

MR. KING: The accounting department of the Federal Power Commission.

THE WITNESS: The accounting department is divided into several divisions.

By MR. KING:

Q. How many divisions? A. There is a division of original cost.

Q. Is that your division? A. No, that is not.

Q. What is the next one? A. There is a division which takes care of rate cases and general accounting matters.

Q. Is that your division? A. Yes.

Q. All right. Will you confine my question to your [9596] division? A. I never have made a determination of the number of persons who had superior rank to me.

Q. You said Mr. Dunn did. Is that correct? A. Yes.

Q. Is there anybody else who has superior authority in your division? A. Yes.

Q. Who is it? A. Mr. Baker is the head of the division.

Q. Who else? A. By your question now do you mean persons who had authority to direct my work?

Q. Correct. A. Or change my conclusions?

Q. Correct. A. Mr. Smith, of course, was head of the Bureau of Accounts and Rates. He could do that.

Q. Is there anybody over you who has power to change your determinations or conclusions other than Mr. Smith, Mr. Baker and Mr. Dunn? A. There would be no others on this case.

Q. Did the gentlemen to whom you have referred reverse any of your determinations or conclusions in connection with this investigation? [9597] A. Not that I recall. We had discussions of problems, but there was no reversal of conclusions.

Q. Were those discussions before you reached your conclusions in Exhibit 51? A. Yes, that is right.

Q. You can not remember whether your conclusions were changed as a result of those discussions or not. Is that correct? A. No, they were just general discussions of the problem.

Q. Then your conclusions were not changed as a result of those discussions, is that correct? A. No, because I had not reached conclusions.

Q. Did you have any discussions after you had reached your determinations and conclusions in Exhibit 51 with the gentlemen you have just mentioned? A. I had no discussions which would be reflected in changing the conclusions I had reached. We may have discussed those things over again.

Q. Did the discussions which you had with Mr. Dunn, Mr. Baker and Mr. Smith prior to the completion of Exhibit 51 have any effect upon the preparation of the Exhibit? A. They may have, but I don't recall now.

Q. Can you give us an example of the type of discussions you had with those gentlemen? [9598] A. Well,

we discussed the determination of interest during construction, for instance.

Q. Anything else? A. We discussed the allowance of items claimed by the company from depreciation reserves or operating and maintenance in a general way.

Q. Anything else? A. We discussed the history of the development, that is, the transfer of properties to McCall Ferry Power Company and the issuance of stock, Aldred's activities, the reorganization of Pennsylvania Water and Power Company, and things of that sort.

Q. When you refer to the history of the company, do you refer to the material contained in Exhibits 26 and 27 in this case? A. No, we didn't discuss the companies exhibits as such. We discussed the facts relating to the history.

* * *

Q. Mr. Newlands, Mr. Baker and Mr. Smith, to whom you referred, are both accountants, is that right? [9599] A. That is right. Mr. Smith is also a lawyer, I believe.

Q. How did these discussions you had with Mr. Dunn, Mr. Smith and Mr. Baker originate? A. Well, Mr. Dunn made various visits over to Baltimore and at times stayed there to see how the work was progressing. At that time I would discuss matters with him.

Mr. Baker and Mr. Smith came over only occasionally, perhaps two or three times, and then it was merely a discussion of how the work was progressing, some of the main problems, and so forth.

Q. So that all of the discussions with these gentlemen occurred in Baltimore. Is that correct? A. That is correct.

Q. From what you have said is it a correct statement that you originated the discussions? A. Do you mean who spoke first?

Q. That is one test of who originated them. A. It was a matter of merely sitting around a table and discussing matters.

Q. Did you request—Excuse me. Go ahead. A. Mr. Smith or Mr. Dunn might have asked me to describe the history of the project or might have asked questions about certain parts of it. But there was no leader of the discussion. It was a general discussion.

[9600] Q. Did you request either one of the three gentlement to come to Baltimore at any time? A. No. I made no definite request for them to come.

Q. How about Mr. Howell? Did he come to Baltimore? A. Yes.

Q. Did you have any discussions with him in Baltimore? A. Yes.

Q. Were any of the discussions which you had in Baltimore with Messrs. Smith, Baker and Dunn reflected finally in Exhibit 51 when it was prepared? A. The discussions as such are not reflected, no.

Q. Is the effect of the discussions reflected in Exhibit 51? A. They may have been. Just what effect they had I would not be able to recall at this time.

Q. Did any of those gentlemen direct you to put any particular determination or conclusion in Exhibit 51? A. No.

Q. Did you ask any of the three gentlemen whether you could put any of your conclusions or recommendations or determinations in Exhibit 51? A. No, it would be generally understood that my conclusions would be reflected in Exhibit 51. That is an understood matter, and they would reflect the results of my discussions with any other person.

[9601] Q. But you assume full responsibility for those decisions, determinations and conclusions. Is that correct? A. That is right.

Q. Did you include any conclusions or determinations or recommendations in Exhibit 51 at their direction? A. No.

Q. Did they object to any of the conclusions or recommendations that you did include in Exhibit 51? A. No. I am afraid if they had objected they probably wouldn't have appeared there.

Q. Does that mean that they had full authority to review and reverse your decisions, conclusions and recommendations? A. That is right.

Q. But as I understand you, they did not reverse any of your conclusions and recommendations? A. That is right.

Q. Then the reason why you can assume full responsibility for Exhibit 51 is because they did not reverse any of your decisions. Is that correct? A. No, I would assume full responsibility in any case.

Q. Even though you did not agree with what they directed you to do? A. In that case it would still be my responsibility.

[9602] Q. To defend it? A. That is right.

Q. Whether you agreed with it or not? A. Of course, we are talking about a hypothetical instance now, but I assume that would be so, yes.

Q. Now, Mr. Newlands, if it were demonstrated to you satisfactorily that you had made an error, either in fact or in connection with your conclusions, recommendations and determinations in Exhibit 51, are you in a position now to admit the error, or do you first have to obtain authority from somebody else to do so? A. I could admit if there were any errors in Exhibit 51 that such was the case.

Q. Are you free to change your mind in connection with any of the determinations and conclusions in Exhibit 51 if you deem it proper to do so without consultation or authority from anybody else? A. If that were based on facts which would change my conclusions I would be free to change my mind.

Q. All of your conclusions and recommendations are based on facts, aren't they? A. That is right.

Q. Let us suppose you were convinced you drew erroneous conclusions from the facts. Are you free to change your mind without obtaining authority from anybody? [9603] A. Yes, I believe so.

Q. I notice, Mr. Newlands, that Exhibit 51 is signed by you and Mr. Edward L. Dunn. Will you please indicate the scope and limitations of Mr. Dunn's responsibility in connection with Exhibit 51? A. Mr. Dunn was the supervising accountant on the job and he had general power to direct me if he wished, he had general power to review the work I was doing and the conclusions I was drawing.

Q. Did he exercise any of those powers? A. I believe you will have to ask him that question.

Q. Don't you know? A. I don't know what goes on in Mr. Dunn's mind, no.

Q. You can judge what goes on by his actions, can't you? A. Not necessarily.

TRIAL EXAMINER: Don't argue about this now.

By MR. KING:

Q. Why did Mr. Dunn sign the report, do you know? A. Because he had general supervision over the work I was doing.

Q. Did he personally review any of the facts or conclusions developed by you? A. Yes, we discussed a great many of the facts and conclusions that are now in Exhibit 51.

[9604] Q. Why didn't the accountants whom you have heretofore named who worked under your direction sign Exhibit 51? A. Because they had almost no responsibility except to obtain the figures for me.

Q. Then as I understand it, the main reason Mr. Dunn signed the exhibit is because he has direct supervision over you. Is that correct? A. That is right.

* * *

[9610] Q. Mr. Newlands, did you personally dictate the contents of Exhibit 51 in its present form? A. That is right.

Q. I assume, of course, you had with you from time to time while dictating those contents either some or all of

the accountants who assisted you. Is that right? A. They were present while I was writing Exhibit 51.

• • •

[9612] By Mr. King:

Q. You also went to the files, didn't you, or your assistants did? A. That is right; we requested them from the company.

Q. Your assistants had to exercise judgment, did they not, as to what documents they thought necessary to get from the files? A. Usually my directions were explicit enough so that [9613] the documents which they were to secure would be known to any accountant.

Q. Is that true as to correspondence? A. Are you talking about the fifteen filing cases now specifically?

Q. Yes. A. I directed the examination of those files myself. No one did anything on them unless I told them exactly what to do.

Q. Then do I understand you to mean that you personally know all of the documents that were taken out of those fifteen filing cases? A. You mean all of the documents which were examined in the fifteen filing cases?

Q. Correct. A. Do you mean by that did I personally examine all of the documents which we requested from the fifteen filing cases?

Q. That is one thing I am inquiring about. A. No, I examined most of them but not all of them.

Q. I thought you said you were present when all the documents were taken from those filing cases. A. That is right. I always determined which files were to be secured. I determined then which ones I was to examine personally, which was most of them. I turned over a very few files to my assistants to look through where I thought there [9614] was nothing of any importance in them.

Q. How did you know which portion of those files was material unless you examined them all? A. Because they were classified, all of that correspondence was classified under various headings and subjects.

Q. And you could tell by looking at the heading of the subject whether the material in those files was material enough in your judgment? A. Yes, in most cases. In some cases I might have to look through a little bit to determine the exact nature of the files.

Q. But in some cases you didn't have to do that. Is that correct? A. Well, I believe in every case, as a measure of protection, I did take a look at what was contained in the file to make certain there was nothing important.

Q. What do you mean "a measure of protection"? A. To determine that the file was unimportant or contained unimportant material.

Q. Did you do that in every instance? A. That is right.

Q. Did you read all of the correspondence on the film upon which the company recorded correspondence? A. No, I did not read the full film.

Q. Did you read any of them? [9615] A. Yes.

Q. How did you know what you did not read was material or not if you didn't read it? A. The company extracted various letters from that film which they considered important, so that I saw a great deal of the material on that film as carbon copies of correspondence.

Q. Then you looked only through what you thought the company thought was important. Is that right? A. Plus the portion of the film I saw myself.

Q. And you assumed that the portion you did not see the company did not think was important. Is that correct? A. I didn't have to make any assumption in the matter. I considered that the documents I had secured were sufficient for my purpose.

Q. And you made that determination without looking at the balance of them. Is that correct? A. That is right.

Q. Do you consider that a sufficient study for your determination? A. I think it is.

• • • •

By Mr. King:

[9616] Q. Could you tell what the correspondence files contained by reading the summaries, the card summaries? A. That gave a general view of what was contained in the files, but as I understood it those index files were not complete, anyhow. But it did give a general bird's eye view of the material.

Q. A brief summary appeared on the card. A. Yes. As a matter of fact, those cards sometimes contained reference to the film, also.

Q. Could you give us some idea as to the number of files that you did not examine? A. No, I couldn't.

Q. Would you say you examined half of them?

• • •

The Witness: Based on the index I would say I had examined half of them. But the company had no list of those files, although I requested repeatedly whether they had such a list in order for me to determine which files were available and which ones I wanted to inspect.

By Mr. King:

[9617] Q. All the files were available to you, weren't they? A. They were available in the filing cabinets, but only as I requested the company for certain files. I had no list of them.

Q. You could have gone to the filing cases and ascertained what was there, could you not, or your assistants could have? A. It might have been possible to do that. They never offered to let me go through the fifteen filing cases.

Q. Did you ask to do it? A. No, I did not.

Q. They didn't say you couldn't, did they? A. No.

Q. Did they give any indication that they would object to your doing so? A. Not that I know of except that whenever we asked for information it was always secured by the company from the files. As a matter of fact, we were usually told it would take a certain time to get the

information. In some cases that meant several days, several weeks, or even several months.

• • •

[9628] Q. Mr. Newlands, was it necessary for you to seek or secure legal advice in connection with the preparation of your Exhibit 51? A. No.

Q. I believe you said Mr. Baker was a lawyer as well as an accountant? A. Mr. Smith.

Q. Mr. Smith—excuse me. A. Yes.

Q. Did you get any legal assistance from Mr. Smith? A. If he gave it to me he didn't call it legal assistance.

Q. You know the difference between legal assistance and accounting assistance, don't you? A. Not necessarily. There might be occasions where you could not draw a distinction, where the person receiving the knowledge or assistance might not know whether it was legal assistance or not.

Q. What would be an example of that? [9629] A. Regarding the period of cessation. I don't know whether any of our discussions regarding the period of cessation were such that Mr. Smith was using his legal knowledge or legal information or not. So far as I know he was using his accounting knowledge.

Q. Don't you know the difference between a legal determination of a so-called cessation period and any other kind of a determination, if there is any?

• • •

THE WITNESS: I think I might be able to tell you but I don't know what was in Mr. Smith's mind when he was talking to me. So far as I know he was talking from accounting considerations.

By MR. KING:

Q. What did Mr. Smith say to you in connection with the so-called cessation period? A. I can't recall his conversations so far back as that. As far as I know he didn't

give me any legal assistance. I am saying I don't know what was in his mind. He is a lawyer.

Q. If you can't remember what he told you how do you know what he told you related to accounting and not law? A. Because I can remember the general tenor of the discussion.

[9630] Q. What was it? A. What actually happened during the period.

Q. You mean you told him what happened or he told you? A. We discussed it.

[9631] Q. You told him what? A. I told him the history of the cessation period.

Q. What did you tell him? A. What work was going along, when it stopped, when it started up again, and so forth.

Q. What did he tell you? A. He agreed with me after discussing the items that that cessation period should be eliminated in the determination of the construction period.

* * *

[9632] Q. You are not an attorney, are you, Mr. Newlands? A. No, I am not.

Q. Then Exhibit 51 does not reflect any legal advice from any attorney. Is that correct? A. That is correct.

Q. Mr. Newlands, is the Ohio Fuel Gas Company investigation which you referred to in your direct testimony the only accounting investigation you have had complete charge of since your employment by the Federal Power Commission with the exception of this present case? A. Well, that would need qualification. In the Southern Carbon Case I had charge of the determination of original cost, although another man was supervising the whole job.

Q. Is that the only other one of which you had [9633] complete charge regarding original cost? A. Yes, I believe so.

* * *

Q. Mr. Newlands, is it your opinion as an accountant that the function of the art of accounting is to report facts? A. It records facts, but it also records the conclusion of the person who orders the recording. Its purpose is to record facts.

• • •

[9634] Q. Does an accountant have a right to change the facts? A. No, he doesn't.

• • •

[9640] Q. Do you think it is the function of an auditing [9641] accountant to modify the transactions he finds recorded?

• • •

THE WITNESS: It is the function of an examining auditor to examine the facts and determine how they should be handled according to correct accounting principles. If that involves modifying something on the books, that is making a statement different from what appears on the books, he should do that.

By MR. KING:

Q. Has he a right to modify the significance of those recorded transactions?

• • •

[9642] THE WITNESS: I don't see how anyone could modify the significance of something recorded. The significance remains the same whatever the examining auditor determines should be the proper accounting disposition of the items.

• • •

[9644] Q. Will you please turn to Schedule 1, page 1 of Exhibit 51? Do you have that schedule before you? A. Yes, I have.

Q. Does that schedule contain a consolidated balance sheet as of December 31, 1945, of Penn Water and Power Company? [9645] A. That is right. It does not include

a couple of small inactive subsidiaries, which would make no difference in the general picture.

Q. Page 1 of that schedule lists the assets and other debits of Penn Water and Power Company. Is that correct? A. That is right.

Q. The first group of assets is entitled "Electric Plant." Is that correct? A. Yes.

Q. Now, Mr. Newlands, does the listing of items of Electric Plant indicate to you that the company owns that property? A. Yes, that would usually be the case.

* * *

[9647] Q. Mr. Newlands, who determines the question of whether Penn Water owns the items listed under electric plant on page 1 of the schedule of Exhibit 51?

* * *

THE WITNESS: So far as I know it is a legal matter to determine whether Penn Water owns it or not.

By MR. KING:

Q. And not an accounting matter? A. So far as strict legal ownership is concerned that is true.

Q. Mr. Newlands, did you make an inventory of the property listed under electric plant on page 1 of the schedules [9648] in Exhibit 51 at the time you were making your investigation? A. No, I did not. I understand the company made an inventory.

Q. You did not? A. That is right.

Q. Did any of your assistants? A. No.

* * *

Q. Excuse me. Strike that question, please.

The next item appearing on page 1 of the schedule we are discussing is entitled "Investment and Fund Account." Is that right? A. That is right.

Q. Who determines the ownership of the items there listed? A. My answer to that would be the same as to the previous classification.

Q. The next listing on the page we are discussing is entitled "Current and Accrued Assets." Is that correct? A. That is right.

Q. Would your answer be the same as to the items listed under that heading? [9649] A. Yes.

Q. Mr. Newlands, the next listed item is entitled "Deferred Debits." Is that right? A. That is right.

Q. Would your answer be the same as to those items? A. Yes, so far as it is applicable. Some of those are merely delayed expenses.

Q. Turn to the next page, Mr. Newlands, page 2 of the schedule of Exhibit 51. That page lists liabilities and other credits of the Penn Water and Power Company as of December 1, 1945. Is that correct? A. That is correct.

Q. The first item on that page in the left-hand side is entitled "Capital Stock." Is that right? A. That is right.

Q. What do you mean by common stock listed under Capital Stock? A. That is the name which appeared on the certificate, I believe, and the name which appeared on the charter.

Q. Who determines the rights of common stockholders?

* * *

[9650] THE WITNESS: You would have to obtain legal advice because the rights would be determined by the law of the land.

By MR. KING:

[9651] Q. That is the same as to the preferred stockholders, is it not? A. That is right.

Q. The next item on page 2 of the schedule is entitled "Long Term Debt." Is that right? A. That is right.

Q. That includes mortgage bonds, isn't that correct? A. That is right.

Q. What is your understanding of the term "Mortgage Bond"? A. That generally means that the bonds have a lien on the assets of the company or certain property of the company.

Q. Rights of bondholders is determined by law, isn't that right? A. That is right, ultimate rights would have to be determined legally.

Q. In connection with the next to the last item, "Reserves," what do you understand to be the meaning of reserve for depreciation of electric plant?

• • •

THE WITNESS: It is an account set up on the books to [9652] measure as nearly as possible the expired service life of the company's property.

By MR. KING:

Q. Who determines what use the company may make of this reserve? A. I don't understand what you mean by that question

Q. What don't you understand about the question? A. The reserve account is a nominal account on the books. There is no specific asset back of it, so I don't know what you mean by your question, who determines what should be done with it. There are no assets involved to do anything with.

Q. Is the company subject to any control in connection with that item by anybody?

• • •

[9654] "Q. Is the company subject to any control in connection with that item by anybody?"

TRIAL EXAMINER: Objection is overruled.

THE WITNESS: Regulatory authorities in the case of public utilities have the authority to prescribe how depreciation reserves should be set up.

By MR. KING:

Q. And the regulatory authorities are limited by the law creating them, isn't that correct?

• • •

THE WITNESS: I don't know what the answer is from a legal standpoint, but from an accounting standpoint I would say that would seem to be a reasonable answer.

By MR. KING:

Q. I want it only from an accounting standpoint, Mr. Newlands.

Now, Mr. Newlands, is it a fair statement that the right, title, interest, or obligations of Penn Water and Power Company in connection with every item we have discussed on pages 1 and 2 of the schedules of Exhibit 51 are determined by law?

• • •

[9656] THE WITNESS: The rights, title and interest of a company in its property, the rights, title and interest of the common stockholders and bondholders, are determined as a matter of law.

By MR. KING:

Q. And that includes obligations, too, does it not, Mr. Newlands? A. That would include the right, title and interest of the company as opposed to the right, title and interest of the creditor, that is right.

• • •

[9657] By MR. KING:

Q. Have you had any experience in connection with financial matters, Mr. Newlands, in addition to accounting? A. I have worked on audits of financial firms, but that is the extent of my financial background.

Q. You do not consider yourself an expert in connection [9658] with financial matters? A. That is right.

Q. Other than in the situation you have just described. A. That is right.

Q. Have you ever testified in any court or administrative tribunal as an expert on financial matters? A. No, I have not.

Q. Have you ever testified in any administrative tribunal or court proceeding as an expert in connection with valuing stock of corporations, either preferred or common? A. No, I have not.

Q. Do you consider yourself individually or as an accountant an expert in connection with valuing corporate stock? A. No, I do not.

Q. Have you ever testified in any court or administrative proceeding in connection with valuing land? A. No.

Q. Do you consider yourself as an individual or as an accountant an expert in connection with land values? A. No.

Q. Have you ever testified in any administrative tribunal or court in connection with engineering matters? A. No.

Q. Do you consider yourself individually or as an [9659] accountant an expert in engineering? A. I do not consider myself an expert in engineering.

Q. I direct your attention to column 4, Mr. Newlands, Schedule 3, Sheet 1 of Exhibit 51. A. Column 4, Schedule 3, what sheet number?

Q. Sheet 1. I believe that is page 7 of the table. Do you have it in front of you? A. Yes.

Q. Will you identify in column 4 of page 7, the amount opposite 301, Franchises and Consents of $64,004.61? A. That is the amount the company classified as the cost of the fishways.

Q. Did you eliminate this item from the company's electric plant in service reclassified? A. No, I transferred it to Account 322, Reservoir, Dams, and Waterways.

Q. Who made the determination to transfer this item? A. I did.

Q. Did you have any assistance in connection with arriving at your conclusion and determination? A. No.

Q. That is to transfer this item? A. No, the conclusion was my own.

Q. Mr. Newlands, I show you photostatic copy of document entitled "Memorandum for Mr. Edgar C. Coffman, Chief [9660] Division of Rates and Certificates." It is dated September 10, 1945. This document is a photostat of working papers of the Staff. I ask you to examine it.

MR. GOLDBERG: Whose working papers?

THE WITNESS: This is all one document?

By MR. KING:

Q. Yes. Have you ever seen this before? It is signed by Mr. Roland and Mr. Howell. A. I have never seen the document.

MR. GOLDBERG: Whose working papers did you say?

MR. KING: Signed by Mr. Roland and Mr. Howell. I assume it came from the working papers of either one or both of those gentlemen.

MR. GOLDBERG: All right.

MR. KING: I think probably Mr. Roland.

• • •

[9661] Q. I show you page 5 of this document and refer you to the first full paragraph on that page which states, "When the hydraulic testing laboratory was built prior to the beginning of Safe Harbor plant, the use of the original ice chutes and the original fishway located on the Lancaster side was abandoned. A new fishway on the York side was built and is in operation though indifferently so. Oddly enough the company's books reflect the cost of these fishways as intangible assets and represent the cost of securing rights from public authority. Technically they are intangible and non-depreciable, but the accountants can be depended upon to apply a correct treatment of this item.

"The ice chutes were never replaced, but the opening beyond Number 10 intake and the log chute at the skimmerwall seemed to prove adequate."

MR. GOLDBERG: What is the question?

By MR. KING:

Q. I ask you to examine that paragraph, and state whether you are the accountant who could be depended upon to apply a correct treatment of this item?

• • •

[9663] THE WITNESS: I don't know. I have never seen this memorandum, never had any knowledge of it, and don't agree with the contents of a large part of the paragraphs you read.

MR. KING: May I have the last answer, please?

(Answer read.)

By MR. KING:

Q. In what respect do you disagree with the contents of that paragraph? A. Where they stated that the cost of the fishways represented an intangible item and was reflected as an intangible item on the books. It is not reflected as an intangible item on the books. It is reflected in the construction plant account. I don't believe that is an intangible item, which is a conclusion drawn by the writer of this letter.

MR. GOLDBERG: That is what always happens to an engineer's view of accounting matters.

May I see that document, Mr. King?

MR. KING: Certainly.

By MR. KING:

Q. Then as I understand it, Mr. Newlands, you disagree with Mr. Howell's and Mr. Roland's determination that the item [9664] is an intangible and non-depreciable one, is that right? A. I disagree with that statement which appears there if that is Mr. Roland's or Mr. Howell's determination. I don't know whether it is or not.

Q. Upon what do you base your conclusion in connection with your disagreement with the statement of those two gentlemen, namely, Mr. Roland and Mr. Howell? A. I base my conclusion on my knowledge of the facts.

Q. What are the facts? A. The facts are that the company built fishways, a tangible item, capitalized them in their construction accounts and in their plant accounts, and they remain to this day on the books in the construction plant accounts.

Q. But they have been reclassified into the intangible account, is that correct? A. In the company's proposed reclassification they have reclassified them as intangibles.

Q. Have you ever seen the fishways there? A. I believe I saw the Lancaster side on a visit to Holtwood.

Q. Did you see the other side? A. No, I never was on the other side of the river.

Q. Do you think you would recognize the fishway on the other side if you saw it? A. I have seen pictures of it. I believe I would.

* * *

[9665] Q. Did you consider in arriving at your determination, Mr. Newlands, Part 35 of Exhibit 27, which is the Court order of the case of Commonwealth of Pennsylvania v. McCall Ferry Power Company?

MR. GOLDBERG: What determination is that?

MR. KING: Determination we are discussing concerning the fishways, that it was tangible property.

THE WITNESS: Yes, I considered that because the company called it to my attention.

By MR. KING:

Q. Did you consider that before or after you arrived at your conclusions and determinations as to this item in Exhibit 51? A. Before.

Q. And arrived at your conclusions with knowledge of that order and the contents of that order?

* * *

[9666] Q. You have already testified, have you not, that you made all of the determinations in connection with Exhibit 51 and received detailed help only from the accountants who worked under your direction? A. That is right.

* * *

[9672] Q. Mr. Newlands, assume that there is an agreement between Safe Harbor Water Power Corporation and the Board of Fish Commissioners in the Commonwealth of Pennsylvania providing that Safe Harbor Water Power

Corporation shall pay the Board of Fish Commissioners of the Commonwealth of Pennsylvania $4,000 a year in lieu of the construction of fishways. Would that fact have any bearing in your opinion in connection with your treatment of the item of fishways in Penn Water?

• • •

[9673] THE WITNESS: That hypothetical assumption will not change my determination.

• • •

[9674] By MR. KING:

Q. Before the completion of Exhibit 51, or since that date, did you have any information, either oral or written, which would indicate to you that Safe Harbor Water Power Corporation does pay the Board of Fish Commissioners of the Commonwealth of Pennsylvania $4,000 annually in lieu of construction of fishways? A. Only what I have been told by the company.

Q. What were you told by the company? A. I was told that Safe Harbor was making a payment to the Pennsylvania Commission.

Q. When were you told that? A. Probably in the latter part of 1945.

Q. Is that before or after you completed Exhibit 51? A. That was before the completion of Exhibit 51.

Q. Mr. Newlands, assume Penn Water had not constructed [9675] the fishways but was making, in lieu thereof, an annual payment to the Board of Fish Commissioners of the Commonwealth of Pennsylvania. Should that payment be treated as an operating expense? A. I think it should be.

Q. Mr. Newlands, I show you a document entitled "Agreement Between the Susequehanna Power Company, Philadelphia Electric Power Company, and the Conservation Department of Maryland, Board of Public Works of the State of Maryland, and Board of Fish Commissioners of the Commonwealth of Pennsylvania for Fish Stocking at Conowingo Pool," dated August 1, 1929.

I ask you to examine that and tell me whether you have ever seen that agreement or a copy of it before. A. No, I have never seen this agreement.

• • •

[9676] Q. Did anyone tell you—any representative of the company—that the so-called Conowingo Company paid $8,000 a year annually to the Board of Fish Commissioners of the Commonwealth of Pennsylvania and the Conservation Department of Maryland in lieu of the construction of fishways at Conowingo Dam? A. No one told me the exact amount of the payment being made. I have a recollection that at the time I was told of the Safe Harbor payment it was mentioned that Conowingo made a similar payment.

Q. Were you told that those payments were treated as operating expenses by those two companies, namely, Safe Harbor and the so-called Conowingo Company? A. No, I don't believe I was.

• • •

[9677] Q. Now, Mr. Newlands, if you knew about the existence of the payments made by Safe Harbor and the Conowingo Company to the representatives of the State of Pennsylvania and Maryland, why didn't you ascertain the facts concerning those payments before you completed your Exhibit 51 and made your determinations as to fishways? A. Because in my opinion the payment of those amounts had no bearing on the determination of whether the fishways should be classified as an intangible or as tangible property.

Q. So then you did take the facts as to the existence of these payments into account in your determination as to fishways in Exhibit 51? A That is right.

• • •

[9680] Q. Will you refer to page 60 of the Schedules in Exhibit 51, Mr. Newlands? A. Yes, sir.

Q. Do you have that page before you? A. Yes, I have.

Q. Do you not state there, Mr. Newlands, that the expenses listed on that page were all incurred by Pennsylvania Water and Power Company in connection with the negotiation of a contract with the Conowingo Company covering annual compensation to be paid Penn Water for loss of energy output and demand value due to the erection of a dam at Conowingo? A. That is right.

Q. Did you have any expert assistance, legal or otherwise, in connection with your making the determination or statement I have just referred to on page 60 of Exhibit 51? A. No, that is my own statement.

Q. In making that statement, Mr. Newlands, did you know as a matter of fact—strike that, please.

In making that statement, Mr. Newlands, did you take into consideration the bill of complaint filed by Pennsylvania Water and Power Company against Susquehanna Power Company in the U. S. Court for the District of Maryland, the answer of the Susquehanna Power Company in that same proceeding, the petition of the parties to the Court in that proceeding requesting ratification of an agreement of settlement, and [9681] the agreement of February 20, 1926 between the parties, also filed in the proceeding in the District Court?

* * *

THE WITNESS: Is the agreement of February 20, 1926, the one which settled the controversy? Is that the final agreement determining the amount of the backwater payments?

By MR. KING:

Q. I think you may characterize it that way. A. I have read that agreement. I have not read the other items you mentioned. Of course I secured information from the company as to what these expenses were and what they were for.

Q. From whom did you secure that information? A. From Mr. Wetzel.

Q. Did you know, Mr. Newlands, prior to completing Exhibit 51, of the existence of the suit that I have just referred to in the District Court for the District of Maryland? A. Yes. The agreement which settled the controversy refers to the suit.

Q. Despite that fact you did not make any investigation in connection with that suit. Is that correct? A. I did not read the suit itself or the briefs filed. I did ask Mr. Wetzel for further information concerning the controversy.

• • •

[9682] Q. Mr. Newlands, did you take legal advice in connection with your decision that it was unnecessary to examine the documents which I have heretofore referred to in the suit in the District Court for the District of Maryland? A. No, I did not.

Q. You determined individually that that was not necessary. Is that correct? A. I determined that from the facts I had studied, the information which had been given me by the company and the agreement I read that I had the facts necessary to make the determination I did.

Q. And you came to that determination without looking at any of the documents in that suit except the agreement you just mentioned. A. That is right.

Q. Mr. Newlands, I show you certified copy of the petition of the Pennsylvania Water and Power Company against [9683] the Susquehanna Power Company in equity filed in the U. S. District Court in the District of Maryland. I ask you whether you have ever seen that document or a copy of it before? A. No, I have not seen this document before.

• • •

Q. Mr. Newlands, I show you certified copy of the answer of the Susquehanna Power Company to the petitioner bill of complaint identified as Exhibit 232, filed in the District Court of the U. S. for the District of Maryland in equity and ask you if you have ever seen that document, or a copy of it? A. No, I have not seen it.

[9684] By Mr. King:

Q. Mr. Newlands, I show you certified copy of a document entitled "In the United States District Court for the District of Maryland, Pennsylvania Water and Power Company vs. Susquehanna Power Company in equity," which is a petition of the Pennsylvania Water and Power Company and the Susquehanna Power Company for Court approval of settlement of the litigation, and ask you if you have ever seen that document or a copy of it any place? A. No, I have not.

* * *

[9685] By Mr. King:

Q. Mr. Newlands, I show you a document entitled, "In the United States District Court for the District of Maryland, Pennsylvania Water and Power Company vs. Susquehanna Power Company, in equity," and entitled also "Exhibit Agreement."

This document has been certified and referred to the District Court. I ask you if you have ever seen that document or a copy of it at any time before? A. Yes, I have seen that.

* * *

By Mr. King:

Q. Mr. Newlands, what did Mr. Wetzel tell you in connection with the suit in the District Court for the District of [9686] Maryland? A. He told me that a suit had been instituted to determine the rights of the respective parties.

Q. To what? A. As regards the riparian rights existing below the tailrace of Penn Water and as to the right of the Conowingo Companies to build a dam at Conowingo which would flow back over Penn Water's tailrace.

He also told me the nature of the charges made to the lower development account on the books, Job C-283-8, and the nature of the engineers' services charged thereto.

* * *

[9688] By Mr. King:

Q. Will you turn to page 38 of Exhibit 51, Mr. Newlands? A. That is the text?

Q. Of the text, yes.

Who determined the so-called suspension period referred to by you on page 38 of Exhibit 51 which you recommend be eliminated from the construction period? A. I did.

[9689] Q. What facts did you take into consideration in connection with making that determination? A. The actual facts of what occurred during that period.

Q. Did anybody else in the Staff furnish you any help in connection with the determination of that question? A. They——

Q. Namely, the period of cessation. A. Other members of the Staff assisting me secured information which I could use in determining the period of cessation.

Q. To whom are you referring when you say "Other members of the Staff"—the accountants whom you directed? A. The accountants working for me.

Q. Did you receive any assistance in making your determination in connection with this matter that we are directing our attention to from Mr. Howell? A. No.

Q. Did you secure any assistance from any of the engineers on the Commission Staff? A. No.

Q. Mr. Newlands, I now refer you to that portion of page 38 of Exhibit 51, which reads as follows:

> "Interest during construction is an allowable addition to plant cost only during the period which contributes to the [9690] completion of the project through unretarded construction activity."

Is that your definition? A. That is my statement.

Q. Did you have any help in formulating that statement or definition? A. No, that is my own statement.

Q. What is your standard in determining whether or not there is unretarded construction activity? Is it the

number of men, the amount of concrete poured, the amount of excavation, the dollars spent, or what? A. All of the activities must be taken into consideration. You cannot exclude any.

Q. Did you take all of the activities into consideration? A. I did so far as I knew them.

Q. Have you ever applied your definition or statement to which I just referred in any other case? A. No, I have not.

* * *

[9691] Q. Is this the first time you ever considered that definition or statement, Mr. Newlands? A. No, it is not the first time I have considered it. It is the first time I have written one out and put it in a report.

Q. What was the occasion of your prior consideration of that statement or definition? A. Reading other decisions of the Commission.

Q. Can you give me the names of any of the decisions where you got this statement or definition? A. No, I cannot.

* * *

By Mr. King:

Q. So that as I understand it, Mr. Newlands, you considered all of the facts that you could find of an engineering nature as well as any other kind in arriving at your definition. A. That is right.

Q. You are not a graduate engineer, are you, Mr. Newlands? A. No, I am not.

[9692] Q. Have you ever had any engineer experience? A. No, I have not.

Q. Why did you conclude that it was unnecessary for you to take engineering advice in that connection? A. Because the matter was so obvious. It was not necessary to have engineering advice.

Q. What do you mean by "so obvious"? A. I mean that nobody could reasonably determine that the construc-

tion period continued after November 1, 1907, in the face of the facts as we know them.

Q. Did you make a study in that connection to determine the amount and scope of work done during your so-called period of suspension or cessation?

* * *

THE WITNESS: Yes, I examined all the information that was available, or which the company turned over to us regarding the activity during that period. As a matter of fact, I requested Mr. Chase to furnish us with a list of the work done during that period.

By MR. KING:

Q. Did he do so? A. He said he didn't have any.

Q. Mr. Newlands, will you give us the duration of your so-called period of cessation? [9693] A. It extends from November 1, 1907, to September 1, 1909.

Q. By unretarded construction activity do you mean that in your opinion no construction went on during that period? A. No, that is not so and that is not what I said.

Q. Then you ascertained that some construction work did go on during that period? A. That is right.

Q. Did that construction work in your opinion contribute to the completion of the project? A. It contributed to the completion of the project, but it did not decrease the length of time necessary to complete the project when it was finally reopened.

Q. Did you make a study to determine how that activity could have fitted in with the other work? A. I know that the activity was fitted in with the other work during 1906 and 1907, and I know that it was planned that it would be fitted in with the other work during November and December, 1907, if the work hadn't stopped.

Q. Do you know, Mr. Newlands, how much concrete was poured between November, 1907 and September, 1909 on the skimmer wall connecting bulkhead and powerhouse

substructure? A. No, I don't have the exact amount of concrete poured. I considered I had enough information with the information I had been able to find.

[9694] Q. Did you have an approximate amount of concrete poured during that period? A. No, I don't believe I had.

Q. Did you consider that was unnecessary for your determination? A. I considered I had enough facts without that.

• • • •

THE WITNESS: I considered that it was unnecessary to determine the exact amount of concrete poured in the face of the other facts which I had discovered.

By MR. KING:

Q. What were those other facts to which you refer? A. A general description of the work going on during that period.

Q. What is that general description? Where did you get it from? A. Part of it came from Mr. Goodwin's construction diary, I believe. A large part of it came from letters that are in the records, or letters I found in the fifteen filing cabinets. Also part of it came from an examination of the [9695] construction accounts themselves, the accounting records.

Q. All right.

What did they show to you? What did those documents indicate to you? A. They indicated the amount of construction work going on during that period was relatively small.

Q. Did Goodwin's diary end in January, 1908? A. It may have, yes, but there were letters which continued after that date.

Q. Letters in the fifteen filing cases? A. That is right.

• • •

THE WITNESS: Goodwin's diary stopped in January, 1908. That probably was the reason Mr. Chase said he

was unable to tell me what construction work was going on during the period of cessation.

By Mr. King:

Q. That is pure speculation on your part? A. Yes, that is pure speculation.

Q. Will you please tell me what the facts were you were able to develop to indicate to you what went on during that period where you could make no determination? [9696] A. Are you asking me now what went on during the period? Is that it?

Q. That is correct, which enabled you to make your determination. A. Well, I determined that as of November 1——

Q. What year? A. 1907—work had ceased on all the machinery contracts. As a matter of fact, there is a letter which indicates I. P. Morris was notified on October 24, 1907, to stop work on the machinery contract.

Q. What else? A. I also had a record of the amount of work done during the first 22 days of November, and a letter which indicated that I believe 620 cubic yards of concrete were poured during that period to complete various uncompleted concrete structures and to make the plant safe for suspension in the case of this extended cessation.

I also determined that some time in April a decision was made to continue with the tailrace work with the small amount of money which was available to the company, there not being enough to reopen the project entirely. I determined that some time in May work actually started, that is on tailrace excavation. I don't believe I mentioned the fact it was decided to do the tailrace excavation or complete it so far as possible.

[9697] The preliminary work on that may have started in April, that is getting the plant ready for operation, but the work actually didn't start until May, and I believe excavation itself did not start until June, but I am not certain of that.

There was a relatively small amount of work done during May and June. During two or three of the later months the payroll amounted to around $25,000 to $30,000.

Q. That is work on the tailrace you are now discussing? A. Yes, I am still discussing the work on the tailrace.

During October the work was completed and I believe Mr. Hutchinson reported to the board of directors that it was complete as of October 15, 1908. That is a summary of the work done during that period that I discussed.

Q. Does that include all the facts which you had in your mind when you made your determination? A. No, it does not. As a matter of fact, just now I recall that in connection with that tailrace work I think they added something to the height of the wing wall.

Q. You knew that, did you? A. That is right. And I believe they may have done something on the connecting bulkhead and on the deflection wall.

[9698] Q. Were you able to determine what that was? A. I was able to determine that it seemed to be more or less incidental work.

Q. How were you able to determine that? A. One of the letters indicated that because of floods the personnel had not been able to get at the excavation and during the intervening period they did this other work in order to keep the personnel busy.

Q. Did you make any investigation to determine the nature of the work done during that period other than what you have already indicated? A. Well, I previously said I examined all the correspondence, whatever construction diaries were available, and the accounting records. There was no other information available that I know of. If there had been Mr. Chase should have furnished it to me in response to my request.

Q. The information was all available to you in the 15 filing cases and the other material which was located at the company's office, isn't that correct?

* * *

[9699] THE WITNESS: When I had exhausted all the methods which I knew of for determining what went on during that cessation period I asked Mr. Chase for information. In response to that request the Company is under an obligation to furnish any information they have. It is not an obligation on the part of the Examiner to continue his investigation after that point.

By MR. KING:

Q. The obligation you refer to is created solely in your opinion, isn't that correct? A. It is created by law.

Q. Where is it created by law? A. Either the system of accounts or the Federal [9700] Power Act states that the company must prove all of their contentions.

MR. KING: May I have that read back, please?

(Answer read.)

By MR. KING:

Q. What do you understand the words "prove all their contentions" to mean, Mr. Newlands? A. They must submit evidence to prove any fact which the Examiner has thrown out or disallowed or stated that he has not sufficient information on to allow as part of the original cost.

Q. In view of that understanding, in view of your understanding of what the Federal Power Commission Act means you arrived at the conclusion that it required Mr. Chase to furnish you with a list of material which you requested. Is that right? A. That is correct.

Q. Do you know whether the preliminary work to which you have just referred in the tailrace was done as a result of the so-called cessation? A. That would be the assumption, yes.

Q. That would be the assumption you made? A. That would be the assumption that anyone would make.

Q. I am not asking you about anyone, Mr. Newlands. [9701] I am asking if that is the assumption you made. A. That is an assumption that I made, yes.

Q. Does that answer mean that you made no investigation? A. No, it doesn't mean that. I have already described I examined everything that I knew of which would disclose the facts regarding that period.

Q. Why did you have to make an assumption as to the question I asked you a moment ago? A. Because the day-by-day work was not described anywhere. There was no construction diary, and in any case, even if the construction diary were kept, it might not say, probably wouldn't say, whether that work was done because of the cessation.

Q. I believe you testified yesterday that you did not examine all of the material in the way of correspondence in the 15 filing cases. A. That is right.

Q. Then how did you assure yourself that you had made an adequate investigation in connection with the facts concerning the cessation period? A. Because I examined all the files which I thought would throw light on the subject.

Q. How did you determine which files would throw light on the subject if you didn't examine them?

[9702] MR. GOLDBERG: Mr. Examiner, I object to that. We went over that yesterday afternoon.

TRIAL EXAMINER: I will permit it if he doesn't go too far.

THE WITNESS: By an examination of the index for one thing, and by——

By MR. KING:

Q. What else? A. And by the fact that there were several series of those files and I called for all the series which I thought would contain any information on it. There was one series for McCall Ferry Power Company, for instance. I called for every file in that series. There was one series of files for Pennsylvania Water and Power Company. I called for every file in that group.

There was another series of files for J. E. Aldred, Receiver. I called for every file in that series.

There was another series of files for Susquehanna Contracting Company. I called for every file in that series.

I also called for another set of files. There was another set of files which was classified by the company's present system of accounts, that is, there would be a file for work on flashboards, work on tailrace excavation, work on generators, transformers and so forth. I called for the [9703] files in that series which had reference to tailrace work.

Q. Did you read all of the contents of the files——

Strike that, please. Were you given the files in response to your request? A. So far as I know if any were held out I don't know, unless they were at the end of the series. In other words, if I had called for all of the files on tailrace excavation and the numbers went up to 12, I have no means of knowing whether there were any further files after that series.

Q. Are you saying that the company withheld files from you? A. No, I am not. I am merely saying I don't know. In that case I practically always called for the next succeeding number or two to make sure that I had them all and received complaints that I was asking for files which were not in the files.

Q. That would indicate to you, would it not, that the company had given you all the material they had? A. Yes, that would indicate that to me.

Q. Did you read all of the contents of the files which were given you? A. I didn't read every letter. I scanned every letter to determine the contents of it.

Q. And you believed that you had sufficient engineering [9704] ability to scan a letter and determine the amount of work done during that period. Is that correct? A. I had sufficient knowledge about construction activities.

Q. You thought you did? A. Yes.

Q. Where did you get that knowledge? A. In my work as an accountant.

Q. Since you have been with the Federal Power Commission? A. And prior.

Q. Give us what that experience was, please. A. A great many of the jobs that I was on prior to coming with the Federal Power Commission were concerned with construction activities for plants being built by companies——

Q. Hydroelectric plants? A. None of them were hydroelectric plants, no. Since coming with the Commission, of course, practically all of my work has been in connection with construction and plant accounts.

• • •

By Mr. King:

Q. Did you ever have any responsibility, Mr. Newlands, [9705] for any decision which involved spending as much as $1 in connection with construction? A. Do you mean have I ever authorized the expenditure of any amounts for construction?

Q. That is not the question.

• • •

The Witness: I don't understand the question. My question was put to determine what was wanted.

By Mr. King:

Q. You do not understand that question? A. That is right.

Q. Did you ever have any occasion to make any engineering determinations which involved the expenditure of as much as $1 for construction activity? A. I never had to make any engineering determinations involving payment of any amount for construction [9706] activities.

Q. Mr. Newlands, did you ever make a decision in connection with construction the result of which was to authorize the expenditure of any money for construction activities? A. No, I did not.

Q. Do you consider yourself competent to make a decision at this time with relation to the expenditure of money for construction, which decision involves engineering determinations? A. May I have that question, please?

(Question read.)

THE WITNESS: It would depend on the extent of the engineering determinations. If they were relatively slight the answer would be yes. If they were complicated the answer would be no.

By MR. KING:

Q. Can you give me what you mean by "relatively slight"? A. Well, if it was a question of whether a fence should be built around a piece of property I think I would be able to determine that that expenditure should or should not be made.

Q. What sort of property and what would the fence be for which you had in mind? [9707] A. It could be any sort of industrial plant, and the purpose of the fence depends on any hypothetical situation which might arise.

Q. Give me an example which you have in mind? A. As a purely hypothetical illustration, an industrial plant without a fence around its property might have been bothered by the neighborhood children overrunning the property and they determined to build a fence.

Q. Do you think that involves——

MR. GOLDBERG: Let him finish.

By MR. KING:

Q. Had you finished? A. I think I would be able to determine a fence should be required there.

Q. In that hypothetical situation is there any engineering knowledge necessary? A. There might be.

Q. What is the nature of it? A. The type of fence to put up?

• • •

Q. Can you think of any more hypothetical situations which might illustrate your position? [9708] A. Not offhand.

Q. During the so-called period of cessation do you know how much concrete was poured on the superstructure and intake arches? A. I don't have the exact quantities, no.

Q. Can you give us approximate quantities?

• • •

By Mr. King:

Q. Had you finished the answer? A. I knew that a slight amount had been poured, but I didn't know the exact amount.

Q. What is the slight amount? A. I mean by that that no important part of the structure was completed.

• • •

[9710] Q. Do you know during the so-called period of cessation whether forms were stripped from all completed concrete work? A. I know forms were stripped from the concrete work. I have not seen anything that said all of them were stripped. But I would assume that was a fact unless they didn't want to use the forms any more.

Q. Did you examine the photographs in the possession of the company in connection with this matter? A. I examined quite a number of photographs which were available in the 15 filing cases and other places.

Q. You had the contents of all the 15 filing cases available to you, didn't you? A. I could have called for them if I had a list of files.

Q. Didn't Mr. Gunn tell you the contents of those filing cases were available to you and you could use them whenever you wanted? A. That is right, and I tried to use them.

Q. Do you know during the so-called period of cessation whether roof tile was unloaded on the project? [9711] A. Yes, I know that.

Q. Do you know how many cars were unloaded during that period? A. I believe it was ten.

Q. Do you think that is a necessary part of the cost of construction? A. Unloading roof tiles?

Q. Yes. A. Yes, and I believe it is in the construction costs.

MR. GOLDBERG: Let me understand that, please. By that last answer you meant you had not disallowed it?

THE WITNESS: That is right.

By MR. KING:

Q. Didn't you disallow the costs expended during the cessation period? A. No, not all of the costs. I disallowed only those which I considered to be overheads.

Q. Did you disallow the so-called cessation account? A. Yes.

Q. Wasn't the cost of unloading this tile charged to that account? A. My recollection is that it was charged to the superstucture account and not to the cessation account.

Q. If you learned now that the cost of unloading those ten cars was charged to the cessation account would [9712] you allow it? A. Yes, if I had other facts to go on.

Q. What other facts would you want? A. I would have to know whether the particular unloading they did during the cessation period required any further work in connection with distributing that tile when construction actually started which would not have occurred if the cessation had not taken place.

Q. Can you ascertain those facts? A. I don't believe it can be ascertained. There is nothing I have seen from which that could be ascertained.

Q. Do you know whether or not during that period repairs were made to cars and locomotives? A. Yes, I believe I have seen that to be a fact.

Q. Do you consider the costs of those repairs necessary and proper costs to construction? A. If the repairs were necessary to put the locomotives in efficient operating con-

dition for future work I would consider them as a proper part of plant costs.

Q. Did you make that determination—strike that.

Did you make a determination to ascertain whether that is true in this case or not? A. So far as I know there was not sufficient information available to determine exactly the nature of the repairs being done.

[9713] Q. Mr. Newlands, did you consider that there was some more work to be done at the project after these repairs had been made? A. I don't understand that question.

Q. I say, did you make an investigation to determine whether or not there was more work necessary to be done at the project after the time when repairs were made to the cars and locomotives? A. I determined that the project was not complete at the time those repairs were made and that further construction would be necessary to complete it. I believe that is what you are asking me.

Q. That is correct. Do you know whether these cars and locomotives were used after the date of these repairs on the project? A. I believe that some of them were. I don't have any knowledge that all of them were. I believe there was more than one locomotive involved.

[9714] Q. Did you make an investigation to determine whether all of them were subsequently used? A. No, and it was impossible to determine that so far as I know from information available to me, and it was impossible to determine whether the locomotives repaired were the ones which were used.

* * *

Q. Then, as I understand it, Mr. Newlands, you knew that repairs had been made to cars and locomotives. Is that correct? A. Yes.

Q. And you knew that at least some of them were used for subsequent work. Isn't that correct?

[9715] Q. Why, under that set of facts, did you assume that the costs of those repairs were improper? A. I have not made any such assumption.

Q. You disallowed the cost, didn't you, or recommended it for disallowance? A. Not that I know of.

Q. Do you know whether those costs were charged to the cessation account? A. There is nothing to indicate the exact nature of the charges to the cessation account. Charges from the payroll were made to the cessation account, but I could not find any distribution of the workmens' time to find the exact nature of those charges. I assumed that because of the name of the account, which would be a proper accounting assumption, that the items charged to that account represented expenses incurred because of the cessation.

Q. Have you recommended for elimination any other costs on the assumptions you have just described? A. That assumption is related solely to cessation account.

Q. All right. Let's limit my question to costs during the cessation account. A. The assumption that I gave in my previous answer related only to my previous disallowances in the cessation account. They referred to no other disallowances.

[9716] Q. Is that the sole basis you had for disallowing the cost in the cessation account? A. No. For instance, the company had tool and construction accounts.

Q. What is that? A. Had construction tool accounts under its regular plant construction accounts. A subaccount under that provided for repairs, and it would be my assumption, and any accountant's assumption, that if repairs were made which contributed to the completion of the plant they would have been charged to that account.

Q. That is the basis upon which you proceeded, is that correct?

* * *

THE WITNESS: That is where they were charged while the construction was proceeding.

By Mr. King:

Q. That is the basis upon which you proceeded. Is that correct? A. That is one basis.

Q. All right. Give me any others. A. Also to make certain that I gave a generous allowance to the company for any construction costs or repair work during the cessation period I allowed the entire expenses [9717] of the local hydraulic department, including all foremen and clerks. There must have been perhaps fifty men involved during the months of November, December, January—November and December, 1907, and January, February and March and April of 1908.

Q. Are you finished? A. That is right.

Q. Is the fact you made a generous allowance in one place a basis for recommending elimination of proper costs in another place? A. That is not what I said.

Q. Will you answer my question?

The Witness: Will you read the question?

(Question read.)

The Witness: No, because I knew of no proper costs that had been eliminated any place. I merely made a generous allowance to cover any possible contingency. I knew it was impossible for me to determine everything that had happened during that period, and I wished to be generous to the company.

By Mr. King:

Q. What is your idea of being generous to the company? A. Making certain that I did not disallow any costs which were pure construction costs during that period. [9718] Q. And it was solely by the use of your accounting experience and background that you made certain that you had not disallowed any amounts you just referred to in the preceding answer? A. No, it was based on my examination of the facts so far as I could discover them.

Q. As an accountant. A. In any capacity.

Q. Did you examine the books of the company in any other capacity than as an accountant? A. No, I exam-

ined them in my capacity as an accountant to obtain an accounting determination.

Q. Did you make any determination to ascertain whether the tailrace excavation was resumed in the middle of April, 1908, continued to October, 1908, and that during this period the rock-filled ramp was constructed? A. Well, I previously described the work done on the tailrace excavation.

Q. You mean the work you understood was done in the tailrace excavation. Is that right? A. I believe I did find a reference to the fact that the rock ramp was constructed during that period. As a matter of fact, I think they used material from the tailrace to construct it. They had to deposit the material some place. The ramp was a good place to deposit it since they needed it.

[9719] Q. Wouldn't that work require the use of those cars and locomotives we used a little while ago? A. It would require the use of some of them. I don't know how many.

Q. Do you know whether it would require the work of all of them or some of them?

* * *

THE WITNESS: No, there was no information available to me which would show how many were required or how many were used.

By MR. KING:

Q. From the engineering knowledge which you have stated you possessed couldn't you have determined that? A. No, I don't believe anyone could determine it. You would have to have far more facts to determine that than those available to me. Even an engineer couldn't determine it from the facts I had.

Q. Do you know how many yards of rock were removed? A. No, but in addition to that you would have to know the period over which they were removed. You would have to know how much went into the ramp.

Q. Don't you know that period? A. No, not exactly.

Q. What do you mean by "not exactly"? [9720] A. You would have to determine how many days the excavation actually took.

Q. Couldn't you determine that? A. Not from the information available to me.

Q. Did you ask anybody in the company for that information? A. I asked Mr. Chase for all information available as to what was going on during that period.

Q. Did you ask him to make that determination for you? A. That determination you just spoke of, how much rock was removed?

Q. That is right. A. No, I asked him a general question for all information concerning that period.

Q. Do you know whether the information Mr. Chase gave you showed how much rock was removed? A. Mr. Chase did not give me any information in answer to my question. The other information I secured was information that I had secured from the files and by requesting certain documents like the construction diary and the letters and so forth.

Q. Did that information furnish you with enough material to make that determination we have been discussing? A. As I recall it it did not.

Q. Why didn't you ask some of the company engineers [9721] to make that determination for you? Did you think it was immaterial? A. Mr. Chase is a company engineer.

Q. You just said you did not ask him to make that specific determination. You just asked him for general information. Now I am asking you why you didn't ask him to make that specific determination for you? A. Because I expected Mr. Chase to produce all the facts which he considered necessary for me to review in order to determine what was going on during the cessation period. It was not my responsibility to point out to him exactly what information he should furnish to me. When I asked for information I meant all information.

Q. Were you ever refused any specific request for information which you made to the company at any time? A. There has never been a specific denial of information. There is a great deal of information which I never received.

Q. Why didn't you receive it? Because you didn't ask for it? A. I asked for it but it was never given to me. Sometimes I asked repeatedly.

Q. In what instances? A. Promotion expense account, for instance, flowage basin account.

[9722] Q. What were you told concerning your request in connection with promotion expense? A. I was told they didn't know exactly what was in that account.

Q. Do you consider that a refusal to produce information? A. It is not a refusal to produce information but I don't know whether the company has exhausted all its efforts to find the information. They told me there was additional material located in the test laboratory in Highlandtown. To my knowledge they never went over there to get this additional information on the promotion account, if it existed.

Q. Did you go there? A. No, I did not. I considered when I made the request of the company my responsibility in that regard was ended.

Q. You considered it was perfectly all right for you to make a determination, even though you knew there were facts not in your possession?

* * *

[9723] THE WITNESS: I did not state I knew of the existence of any further facts. I stated that I knew there was certain material filed. I don't know the nature of them. They were filed in Highlandtown in a test laboratory. They may have included additional facts. To my knowledge they were not investigated by the company to ascertain whether the promotion expense account, which happened to be the one we are talking about, whether there was any

additional information in there, which would reveal the nature of the promotion expense account.

By Mr. King:

Q. We are talking about the rockfill now. A. The last thing we were talking about was promotion expense account.

Q. My question related to whether or not you knew there was any information in those files about which you have just spoken which you did not determine which related to the rockfill in the ramp. A. I did not know whether there was any information in those records or not.

Q. You stated you did not ask any of the company engineers to make the specific determination as to the amount of rock removed. That is correct, isn't it? A. That is right.

[9724] Q. Did you ask any of the Power Commission Staff engineers to make that determination for you? A. No, I didn't consider it necessary.

Q. You knew, did you not, that Mr. Howell had made a rather detailed investigation in connection with the facts surrounding the excavation in the tailrace? A. No, I did not.

Q. You did not know that? A. I knew that he had done some work on it. I don't know how detailed his investigation was. I never discussed with him exactly what he did in that regard.

Q. Mr. Newlands, do you know whether there was any equipment removed from the tailrace, that is construction equipment, in 1907? A. At what time in 1907?

Q. Any time during the year 1907? A. Yes, there might have been two periods when equipment was removed —at the end of the work done by the subcontractor, after he had been flooded out, the equipment may have been moved at that time, probably was. Again after the work which the company had done during the spring and early summer of 1907, equipment probably was removed at that time.

Q. Had that removal anything to do with the cessation period?

[9725] Do you understand that question? A. I was trying to determine exactly what you meant.

Q. I will clear it up for you. What I meant was—did in your opinion the cessation period cause the removal of the equipment in the two instances you have cited? A. No.

Q. Mr. Newlands, now do you know whether or not the northern part of the deflection wall was completed from elevation 115 to approximately elevation 128 and the southern end was completed to the full height to elevation 151 in 1908? A. I knew that the deflection wall had been raised. I did not know the exact height to which it had been raised. I believe I did know that the southern section was completed. I don't remember knowing the exact height to which the northern section was raised.

Q. Did you make any investigation to determine that fact? A. I examined all the records which had been available to me. So far as I knew there were no records which disclosed it. If there had been they should have been given to me in response to my request of Mr. Chase.

Q. Did you make any specific request for this particular information from any of the engineers of the company while you were conducting your investigation? [9726] A. None other than the general request which I made to Mr. Chase for all information concerning this period.

Q. Did you request any of the Staff engineers, and by Staff I mean Staff of the Federal Power Commission, to make that investigation for you? A. No, because I knew that they didn't have any more information available to them than I had so far as I know.

Q. Did you ever ask them? A. No, I never asked them.

Q. Did you consider that the Staff engineers had any more capability in making this determination than you had?

* * *

THE WITNESS: Is your question applied only to the amount of work done on the deflection wall?

By MR. KING:

Q. For the time being, yes. A. No, I don't think that an engineer would have or would be more capable of determining how high the deflection wall had been built if that fact were actually available in the records somewhere.

Q. In other words, you don't think the Staff engineers would be any more able to determine that than you. Is that [9727] right? A. Not that particular fact if that fact were available. It is just a matter of reading it.

Q. Reading it where? Off of a drawing? A. In the records.

Q. What records? A. Any records. They might be correspondence records or a construction diary.

Q. Do you consider yourself qualified to interpret a construction diary? A. I think so.

Q. Do you consider yourself qualified to interpret a drawing? A. In some respects, not every detail.

Q. Have you ever—— A. That is I can determine from a drawing what the general nature of the work being done is, but I don't know all the engineering details.

Q. In what instances have you made a determination of a drawing? A. I secured drawings of the work done at the tailrace, or rather the toe of the dam, for instance. Mr. Wetzel also brought down some drawings showing the work done on some of the items which the company now is claiming for plant.

Q. And you interpreted those drawings? [9728] A. With Mr. Wetzel's assistance.

Q. Is Mr. Wetzel an engineer? A. He has done considerable engineering work. I don't know whether he holds an engineering degree.

Q. Mr. Newlands, can you take a drawing and determine from it how much work has been completed? A. To be more specific, if there were a drawing showing the heights to which the deflection wall had been completed I

believe I would be capable of reading that information off of the drawing.

Q. Did you ever see a drawing which would enable you to determine how much work had been done at any particular or given time? A. You mean in respect to Pennsylvania Water and Power Company's plant?

Q. Yes, or any other company so far as that is concerned.

• • •

THE WITNESS: I have not seen any drawings which indicated the extent of completion of construction. As a matter of fact, they usually would not indicate that.

[9729] Q. Do you know, Mr. Newlands, whether concrete also was poured on the piers at the end of the ramp and some miscellaneous excavation was done for the fish ladders, powerhouse approach, railroad tunnel, and the spillway at the shore end of the powerhouse? A. Yes, I believe so.

Q. Did you make an investigation to determine how much work in this connection was done? A. As I have said repeatedly before, I examined all of the records which were available to me during that period to determine exactly what was done and asked for further information.

Q. Did you ask for any specific information in connection with this subject matter from any of the engineers connected with the company? A. No, my request was a general question for all information.

Q. Did you ask for any assistance in making your determination from the Staff engineer? A. As to what was done on this particular group of work?

Q. Yes. A. No.

Q. Mr. Newlands, will you turn to page 22 of Exhibit 51? At the bottom of the page you used the words, "Except for some excavation of the tailrace". Is the work which you and [9730] I have been discussing properly in your opinion described by the words that I quoted to you from your exhibit? A. Yes, I believe so.

Q. Did you know, Mr. Newlands, whether or not from November, 1907 to October 1908, Mr. Cooper and Mr. Sanderson and Mr. Porter and Mr. Hutchinson continued to work on drawings and completed them during that time? A. Are you referring to Mr. Cooper individually?

Q. Mr. Cooper or his firm. A. That is not a fact. Mr. Cooper was in China during part of that period, or in the Orient.

Q. You mean it is not a fact that Mr. Cooper's firm or Sanderson and Porter nor Mr. Hutchinson worked on the drawings and completed them from November, 1907 to October 1908? A. So far as I know neither Mr. Cooper nor Mr. Hutchinson personally worked on the drawings. I do know that Mr. Cooper's New York office and his staff of engineers worked on drawings during that period. I also know that Sanderson's and Porter's New York offices worked on drawings during that period. Those costs, by the way, have been allowed in my determination of original cost.

* * *

[9731] By Mr. King:

Q. Mr. Newlands, have you eliminated any amounts expended for supervision over the drawings we have been talking about? A. I have allowed actual direct supervision of the preparation of those drawings. It is possible that some of these drawings passed through Cooper's or Hutchinson's hands. I have disallowed all of Cooper's fee which would be applicable to the period of cessation as well as all of Hutchinson's salary applicable to the period of cessation.

Q. Wasn't all of the work of Cooper's firm done directly under his supervision? A. No, it certainly was not. The New York office which was drawing these plans was under the direct supervision of a Mr. Parsons.

Q. Mr. Cooper was not hired to devote all of his time to this project, was he? A. That is right.

Q. Neither were Sanderson and Porter? A. That is right.

Q. Now, Mr. Newlands, will you refer to page 22 of Exhibit 51? A. Yes, sir.

Q. Under the subdivision "Suspension of Work" on that page you state, do you not, that on November 1, 1907 "All [9732] construction work was halted except for maintenance and cleaning up work and placing of a small amount of concrete necessary to protect the existing plant." Is that correct? A. Yes.

Q. What do you mean by "small amount of work," Mr. Newlands? A. That term is a relative term. The amount of work done was small in comparison with the size of the project and the amount of work which had been going on previously to November 1, 1907.

Q. By the words "small amount of work" you intended to cover most of the items we have recently been discussing. Is that correct? A. That is right. This particular term "small amount of work" refers to the concrete which was placed during the one or two months immediately following November 1, not to the work which was done during the tailrace excavation period.

Q. What do you mean by "necessary to protect the project"? A. I believed it was considered necessary at that time to complete any work which was in a half-completed stage in order that floods would not damage it, and I believe to bring certain of the walls up to a certain height for the same reason.

[9733] Q. Was any work done of a nature that was not necessary to the completion of the project? A. During what period?

Q. The period we have just been discussing. A. Oh, yes.

Q. What? A. The work which was charged to the cessation account for one thing. The cost of cleaning up the plant did not contribute to the completion of the project.

Q. You mean by that that you never clean up the

ground or machinery at all during construction? A. No. I mean by that that the clean-up work which was done in order to prepare for cessation was of tremendously greater extent than would have been done while construction activities were in progress.

Q. What was the type of this clean-up work which you referred to? A. It would be necessary to strip all of the forms from the concrete and store them. It would be necessary to provide a safe and dry place for their storage. It would be necessary to take all the construction tools which were scattered at various places on the construction project, bring them to one place, grease them and otherwise prepare them to protect them against the elements, and to store them in a safe place if such a safe place were available, or [9734] even to construct a shed if it were possible to do so and it were economical to do so. It would mean cleaning up any obstructions around the place which might make the company liable to other persons who happened on the project while the cessation was in progress if the property were not properly patrolled.

Offhand that describes the work that I can think of now. There is other work in connection with cessation that I don't recall at the moment.

Q. What do you mean by storing forms? A. They would be piled up in some sort of order and they might be put under shelter.

Q. Does your answer contemplate an understanding that the company at that time intended to re-use those forms? A. Yes, some of them would naturally be re-used, I would say. The forms for the dam, for instance, I imagine could be shifted from one section to another, or at least part of them could. The dam had not been completed when construction stopped.

Q. Mr. Newlands, do you know whether or not the concrete work on the spillway was completed at the time the forms were removed except for the slots? A. Which spillway are you referring to—you mean the dam itself?

Q. The spillway. Do you know what a spillway is? [9735] A. Yes, there can be several spillways. The dam itself is a spillway.

Q. How many spillways are there? A. I believe there was another section of the dam where there was a spillway for ice conditions. It was called an ice chute but it is a spillway.

Q. Where is this ice chute which you call a spillway? A. It is not in existence today.

Q. What became of it? A. There are several ice chutes, by the way. Perhaps I should be more specific.

Q. Where are they? A. Some of them are through the powerhouse substructure. I was not referring to those. I was referring to the spillway between the powerhouse structure and the land, the shore on the Lancaster side. At one time they had made provision for a spillway to take care of icing conditions which might occur. The railroad tunnel ran under that spillway.

• • •

[9738] By Mr. King:

Q. Now, Mr. Newlands, will you please refer to page 38 of Exhibit 51? A. Yes, sir.

Q. Do you have that page in front of you? A. Yes, I have.

Q. Was the interest rate shown there averaging somewhat less than six per cent determined by you after a study of the loans outstanding during the construction period? A. That is correct.

Q. Now, Mr. Newlands, assume that $1,000 is borrowed by Mr. "A" from a bank and that "A" agrees to pay to the bank interest at the rate of five per cent and a one per cent commission, and at the end of the year "A" pays the lending bank $1,060 in full payment of the loan, plus interest and commission. What in that assumption is the interest rate? A. It would be six per cent.

Q. I beg your pardon? A. Six per cent, that is the total interest rate including the commission.

Q. You mean by your answer that is the effective [9739] interest rate, the six per cent you referred to? A. Well, you don't usually speak of it as an effective interest rate in connection with that type of loan.

Q. Just interest rate? A. That is right.

Q. Now, Mr. Newlands, assume "A" borrows $1,000 from the bank at five per cent interest but a one per cent commission of $10 is deducted from the cash received by him at the time the loan is made, and he therefore receives cash of only $990. Assume further that at the end of a year "A" pays the bank $1,050 in full payment of the loan and interest. Is the interest rate in excess of six per cent in that assumption? A. It would usually be considered to be six per cent.

Q. I asked you if it would be in excess of six per cent. A. Well, you can make a calculation, reducing the principal amount, based on the $990 received by the person and that would give you an interest rate slightly in excess of six per cent.

Q. Mr. Newlands, I show you a one-page document entitled "Pennsylvania Water and Power Company Calculation of Average Cost of Money to Susquehanna Contracting Company for the period from April 14, 1905, to November 1, 1907." [9740] This is a photostatic copy of one of the working papers which you furnished us. I ask you to examine a copy and ascertain if that is correct? A. Yes, it appears to be a copy of the working paper which we supplied to the company.

MR. KING: May we have the document I just described marked for identification as Exhibit 236?

TRIAL EXAMINER: Yes, it may be so marked.

(The document referred to was marked for identification as Exhibit No. 236.)

MR. KING: I herewith hand Your Honor three copies and five copies to Mr. Goldberg.

By Mr. King:

Q. You said that was a photostatic copy of your work? A. Yes, that is right.

Q. Is Exhibit for Identification 236 the working paper which furnished the basis for your calculation of the weighted average interest rate of 5.98 per cent included in the narrative of page 40 of Exhibit 51? A. That is right.

Q. Does your method of computation as shown in Exhibit for Identification 236, Mr. Newlands, give any weight to the fact that the one-half per cent commission paid to Knickerbocker Trust Company was paid in advance? A. I did not deduct the amount of the commission [9741] from the principal amount of the loan in making this interest determination for several reasons: One is that the commission as such was not deducted from the principal of the loan. It was a separate payment.

Another reason is that the calculations would have resulted in only a very slight modification in the figures that show here. It wouldn't have amounted to even one-tenth of one per cent.

A third reason is that in determining effective interest rates you usually are talking about determining effective interest rate of bonds. The interest on bonds usually is paid semi-annually. In this case these interest payments were made annually. If you are going to determine an effective interest rate which is comparable to the effective interest rates which are usually determined for bonds you would have to take into consideration the fact that interest payments for the first six months were deferred until the end of the year. That would be an offset against the payment of the commission at the beginning of the period of the loan. It would more than offset it, I might say.

Q. But as I understand your answer, then, your calculation does not take into effect the fact that the commission was to be paid in advance. Is that right? A. No, I did not say that. I say I did not deduct the amount

of the commission from the principal of the loan [9742] in determining the interest rate.

Q. Did you or did you not give effect to the fact that commission was paid in advance in Exhibit for Identification No. 236? A. Oh, yes, I gave it consideration in effect, because I didn't adjust for the fact that the interest had been paid at the end of the year instead of semi-annually, which is what would usually be done in the case of bonds. That is the way the effective interest rate on bonds is calculated.

Q. In Exhibit for Identification 236, how did you give effect to what we have been discussing? A. I allowed one to offset the other.

Q. Point it out on the exhibit. Do you have one in front of you? A. I have one in front of me. It does not appear as a separate item on the exhibit.

Q. Then you give no effect to it in the exhibit for identification No. 236, is that right?

MR. GOLDBERG: I object to that question, Mr. Examiner, as contrary to what the witness has stated. He just answered the precise question.

MR. KING: It doesn't appear there.

MR. GOLDBERG: He has explained why if you will just listen to him.

[9743] TRIAL EXAMINER: Objection is overruled.

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: That is not so, as I have explained before.

By MR. KING:

Q. Just a minute. You say that is not so? A. That is right.

MR. GOLDBERG: Let him finish his answer, please.

TRIAL EXAMINER: Finish your answer.

THE WITNESS: That is not so because I offset the fact that the interest payment itself was made at the end of the year, which was a much larger amount than the commission, by the way, against the fact that the commission was paid at the beginning of the period.

By MR. KING:

Q. Will you point out on the Exhibit for Identification Number 236 in front of you just how you gave effect to the fact that the commission was paid in advance by columns. The exhibit has, as I understand it, five columns. Take the first column. That includes dates. Is that correct? A. That is right.

[9744] Q. Is it given effect in that column? A. No.

Q. Do you give effect to it in the next column? A. No.

Q. In the next one entitled, "Number of Days to November 1, 1907"? A. No.

Q. In the next column entitled, "Total Days"? A. No.

Q. In the last column entitled "Interest Paid for Period to November 1, 1907"? A. It is given effect by a combination of the figures shown in the last column and the total dollar days.

Q. How can it have effect in the last column if it does not appear in any of the others? A. Because I am saying I offset two opposing items. The figures are not there.

Q. That is what I want. The figures do not appear on Exhibit for Identification 236? A. That is right. I offset the two facts because I knew that one fact would more than counterbalance the other and make my interest rate smaller, if anything, rather than larger.

* * *

[9745] Q. I asked you to look at 169, Mr. Newlands, Exhibits 168 and 169. A. I had the wrong ones. What is the question now, please?

(Question read.)

By Mr. King:

Q. You were looking at the wrong exhibits, as I [9746] understand it. A. Yes.

Q. Now that you have the correct ones will you state whether you considered them in connection with your preparation of Exhibit 51? A. Yes, I did.

Q. Did you consider they had any material effect upon any of your determinations in Exhibit 51? A. They had some effect. I don't know just how material. I considered other facts besides these in that connection.

Q. Was the effect slight? A. Well, there was other evidence which I considered had equally as great weight, perhaps even greater weight.

Q. How much greater? A. I can't give you any exact percentage of weight.

Q. Fifty per cent greater weight; 25 per cent greater weight? A. I have never attempted to determine the exact weighting of each of the exhibits I examined and how they affected my determination. I know that these entered into my determination.

Q. How did you reach any conclusions if you didn't know how much weight you gave to different pieces of evidence? A. In this particular case the evidence was all to the same effect. It was not contrasting evidence. I didn't [9747] have to know the weighting to be given to each piece of evidence if it all bore on the same point and had the same tenor.

Q. You gave weight to Exhibits 168 and 169, however? A. Yes.

Q. And it was less weight than you gave to other exhibits which you considered. Is that correct? A. I say it may have been slightly less than I gave to other exhibits.

Q. Did you consider Commission's Exhibit 199? I believe you have that before you. A. No, I have not.

Q. That is did you consider it in connection with your preparation of Exhibit 51?

I hand you respondents' copy of that exhibit and ask you to look at it. A. Yes, I have looked at it.

Q. Did you consider that exhibit in connection with the preparation of Exhibit 51? A. Yes, I did.

Q. Did you give it any material effect in connection with your recommendations or conclusions of Exhibit 51? A. It was considered by me in connection with the determinations in Exhibit 51 and received weight in that regard.

[9748] Q. Did you give it the same weight you gave Exhibits 168 and 169? A. About the same, I would say. It is the same type of information.

Q. Did you take any expert advice, either legal or otherwise, in connection with your disposition or weighting of these exhibits we have been referring to? A. By "expert advice" what do you mean?

Q. Any legal advice? A. No.

Q. Any financial advice? A. No.

Q. Any engineering advice? A. No, certainly not.

Q. Now, Mr. Newlands, in connection with your consideration of the three exhibits, namely 168, 169 and 199, did you examine Sections 20 and 21 of the Act of June 7, 1879, as amended, of the Pennsylvania laws? A. No, I did not. I examined the capital stock tax returns themselves.

Q. Of the company? A. That is right. I don't remember whether they have an excerpt from the particular paragraphs you are mentioning on the tax return. They do describe, I believe, or at least give information as to how the values are to be determined.

[9749] Q. You read them, you say? A. Yes.

Q. What do you understand was the requirement at that time, namely 1905, 1906 and 1910, of the Pennsylvania laws for valuing corporate stock for tax purposes? A. Are you asking me for a legal opinion?

Q. You said you read the form. I am asking you what conclusion you came to from that reading in connection with what the Pennsylvania law required? A. Yes, but

I didn't state that I had read the Pennsylvania law. I said I had read what was on the form. If there was any excerpt on the form I read it. I am not certain whether I have read the Pennsylvania law or not.

Q. You said, as I understood it, that the excerpts gave some indication as to the effect of the Pennsylvania law. A. That is right.

Q. I am asking you your opinion as an accountant. What did the material which you read indicate to be the effect of the Pennsylvania law at the time in question, namely, in 1905, 1906 and 1910? A. The information on the tax returns plus other correspondence and memoranda which were in the file indicated to me that the company was supposed to declare a value on its capital stock equal to the actual value of the assets behind that capital stock at the date of the determination which, [9750] in the first period at least, was the first fifteen days of November of that particular year.

Q. And that is your understanding from reading the form as to what the Pennsylvania law required. Is that correct? A. That is right. There seemed to have been some question involved as to whether liabilities should be deducted before determining the cash value, but other than that my answer stands.

Q. It was with that understanding of the effect of the Pennsylvania law at the time in question that you considered the Exhibits 168, 169 and 199. Is that correct? A. That is right.

Q. What did the form show in connection with the deduction of liabilities, if it showed anything? A. It didn't show anything. I discovered that fact in the correspondence, that is except that the information on the tax return was so worded that it might indicate that liabilities should not be deducted. It didn't specifically state that liabilities should or should not be deducted.

Q. That was the conclusion you reached as a result of examining the form? A. That is right, yes.

Q. How did you finally construe the effect of the form, that it was proper to deduct the liabilities or not? A. I didn't construe the form.

[9751] Q. I thought you said you read it. A. I did.

Q. Took the understanding you derived from reading it into consideration in valuing and preparing the exhibits we are talking about? A. That is right; to some extent.

Q. You made no determination, then, as to whether in your opinion liabilities could be deducted? A. I am not certain whether the company, in filing this return, finally decided that liabilities should be deducted before determining cash value. The question was raised but I didn't find the answer.

Q. That is in your investigation you did not determine any answer. A. That is right.

Q. And you thought it was unnecessary to pursue the matter further to determine the answer. Is that correct? A. Since they declared there was no value I thought it was a fruitless search. The answer would have been the same in either case, unless you got a negative answer for the stock.

Q. So you concluded, as I understand it, you did not have to take any legal advice in connection with the Pennsylvania law in order to properly construe and give weight to Exhibits 168, 169 and 199. Is that right? [9752] A. I didn't have to give legal weight to determine what the purpose of the filing was.

Q. I didn't refer to legal weight. My question is did you or did you not consider it was necessary in your consideration of these exhibits that you take legal advice in connection with the effect of the Pennsylvania statutes? A. No, I did not think it was necessary.

Q. Assume that the effect of the Pennsylvania law, Mr. Newlands, to which I have referred in 1905, 1906 and 1910 was that only a nominal value would be placed upon corporate stock for tax purposes if the corporation had no net earnings and if the stock did not have an established

market value during the year. Under that assumption would capital stock taxes paid during those years have any effect upon your determination as to the value of the stock for any other purpose than taxation?

* * *

THE WITNESS: You are asking me to assume that that fact was actually known at the time these tax returns were filed?

By MR. KING:

Q. I am asking you to assume that that was the effect of the law of Pennsylvania at the time in question, namely 1905, 1906 and 1910. A. And that these returns were filed with knowledge of [9753] that assumption?

Q. That is correct. A. The weight I would give to it—I would give weight to it in my determination.

Q. What weight? A. I don't know the exact percentage.

Q. Then do you mean that you would have changed your determination in connection with your consideration of Exhibits 168, 169 and 199, if the law had been as I have asked you to assume it was? A. Do you mean, would I have given——

Q. Any different consideration than you did to those exhibits? A. No, I don't believe so.

Q. Then as I understand it you would have concluded that the exhibits were material in connection with indicating a value for all purposes on McCall Company stock, even though the law was as I have asked you to assume it?

* * *

[9754] THE WITNESS: Yes, because the exhibit itself contains statements by the officers and directors as to what information was available as to the value of the stock. That information is good no matter what the Pennsylvania law says you have got to declare.

* * *

[9757] By Mr. King:

Q. Let's assume in connection with the construction of the Holtwood project there had occurred a flood which lasted for a period of six months, and that because of the existence of that flood no construction activity could be carried on.

Would you exclude that six months' period from the construction period in computing interest during construction? A. No, I don't believe I would.

Q. You would allow that? A. That is right, if it were an engineering impossibility to continue to work during that period.

Q. Would you allow the overhead during that period? A. Yes, so long as it was intended to go right along with construction and there was no reason to assume that it would be stopped.

[9759] By Mr. King:

Q. Mr. Newlands, will you turn to page 45 of Exhibit 51? A. That is the text?

Q. Of the text, yes. You refer, do you not, on that page to an explanation furnished you by Mr. Bortner at your request? A. That is right.

Q. Did you not furnish Mr. Bortner a longhand list of ten questions which you desired answered during the investigation? A. That is one of the items furnished. I made other requests besides that list of questions.

Q. But you submitted those ten questions? A. At one time I did, yes.

Q. Did Mr. Bortner furnish you with written answers [9760] concerning these questions? A. He furnished me with written answers. Whether they covered everything in the questions I am not certain at the present moment.

Q. You read the material he furnished you, didn't you? A. Yes.

Q. Is the information which you indicate you got from Mr. Bortner on page 45 of Exhibit 51—strike that, please.

Did Mr. Bortner furnish you with a memorandum dated May 6, 1945—May 16th, 1945? A. I will have to look that up.

Q. In response to your request? A. It is over on this table. May I get it?

Q. Please do. A. Yes, I was furnished such a memorandum.

Q. I show you a copy of the memorandum I just referred to and ask you if you will look at it sufficiently to determine whether that is a copy of the one you have? A. It appears to be. I have not compared every item there item for item but it appears to be the same.

* * *

[9761] (Thereupon, the document referred to above, with schedule, was marked Exhibit No. 237 for Identification.)

* * *

By Mr. King:

Q. Mr. Newlands, you have stated, have you not, that to the extent that these expenses, namely, the ones we are talking about, represented first surveys of properties you would allow them. Is that correct? A. That is correct.

Q. Did you make any determination to ascertain which of the surveys represented first surveys? A. It was impossible to do that from the information [9762] which was available to me.

Q. Did you request anybody to make an investigation to determine that fact? A. I requested Mr. Bortner to produce all of the facts concerning the flowage basin which would support their inclusion in plant account.

Q. Did you specifically ask him to make a determination as to which of the surveys represented first surveys? A. No, if I asked for information for support it is up to the company representative to furnish all information which he considers important.

MR. KING: I move to strike all of the witness' answer after the word "No."

TRIAL EXAMINER: Motion to strike is granted.

* * *

[9765] By MR. KING:

Q. * * * What did you mean, Mr. Newlands, when you stated a moment ago that you had allowed the expenses representing first surveys of property? What did you understand the meaning of the word "survey" to be in that connection? A. I don't believe I made that exact statement.

The amounts I have allowed for surveying property might include inadvertently, because I didn't know, second or third surveys. But I presumed that they contained first surveys since they were charged to survey account in the books.

Q. That is not my question. What did you mean by the word "survey" used in that connection? A. As used in Exhibit 51?

Q. By you as used in Exhibit 51 or as you used it in your last answer. A. My use of the word "survey" in Exhibit 51 was [9766] confined particularly to property surveys.

Q. And confined to property surveys alone? A. That is right, if I remember my paragraph correctly.

Q. By "property surveys" do you mean surveys to ascertain boundaries? A. Yes, at the time that the property is purchased.

Q. Now, Mr. Newlands, have you ever developed or assisted in developing a water survey's profile or a rating curve? A. No, I have not.

Q. Mr. Newlands, is it or is it not a fact that all you know about the engineering salaries and expenses of 1911 to 1924, referred to on page 44 of Exhibit 51, was derived from the information received from Mr. Bortner in the

memorandum of May 16, 1945? That is Exhibit for Identification No. 237. A. Did you mean page 44 or 45?

Q. On page 44 of an item entitled "Engineering Salaries and Expenses," do you not, 1911 to 1924? A. That is right, yes.

Not quite all of the information I received came from Mr. Bortner. I examined, and my assistants examined, a great number of the vouchers. We also examined what payroll information we could find. We examined the analyses of the account on the books. There were slight bits of information in there.

[9767] Q. In where? A. In these various sources which, however, did not contain enough information to tell me the nature of the charges that were being charged to flowage basin account segregation of the charges between the various types of work, what work was being done, when it was being done, or what the purpose of it was.

Q. So that all the information, as I understand it, you have about this particular subject matter, other than what you were able to determine from the vouchers and analyses, came from Mr. Bortner. Is that correct? A. There was some supplementary information in the fifteen filing cabinets. There, again, it is impossible to relate exactly the information shown there with the actual charges on the books.

Q. Was there any supplementary information in the fifteen filing cases relating to the period after 1910? A. Yes.

Q. There was? A. Yes.

Q. Can you specify what that was? A. There were various letters to Bennett, for instance, whose salary and expenses are charged in flowage basin account, a portion of them, at least, during 1911 and 1912.

Q. Weren't those letters in connection with storage [9768] reservoirs and not engineering salaries and expenses? A. Not all of them, no.

Q. Can you give us the date of one letter which you found which does relate to engineering salaries and ex-

penses after 1910 from the fifteen filing cases? A. I cannot do that offhand, no.

Q. How much time would it take to do that? A. I probably would have to look through my files. It might take ten or fifteen minutes. Of course, that wouldn't exhaust the subject, however. I have not taken a copy of all the letters I saw in the files.

Q. Why? Because the ones you didn't copy were immaterial? A. No, because it was an impossibility. I copied only those which were most important.

Q. In your opinion? A. That is right.

Q. Why did you not include in Exhibit 51 all of the information furnished you by Mr. Bortner? A. It is not necessary for me to include in my report every bit of information I get from every source.

Q. Go ahead. A. It would require several volumes in an exhibit of this sort if I were to do that.

• • •

[9769] By Mr. King:

Q. I asked you why you did not include that information, Mr. Newlands. A. Because the accounting report which we submit in these cases is intended primarily to describe the conclusions which we drew and give, perhaps, the main facts upon which they are based, not all of them.

Q. In drawing your conclusions did you have in mind all of the facts furnished you by Mr. Bortner? A. Certainly.

Q. Did you give effect in your conclusions to all the facts furnished you by Mr. Bortner? A. Yes.

Q. Do you refer any where in Exhibit 51, either at page 45 or elsewhere, to either Schedule "A" or Schedule "B" attached to the memorandum of May 16, 1945, Exhibit for Identification 237? A. No, I do not.

[9770] Q. Mr. Newlands, I refer you to page 46 of Exhibit 51. Do you have that before you? A. Yes.

[9771] Q. Can you tell me what investigation, if any, you made in connection with your recommendation that expenses

of the Lancaster office and Mr. Bushong's salary be disallowed from 1916 on? A. May I have that question, please?

(Question read.)

THE WITNESS: I investigated the properties purchased during the entire period from 1910 to 1935 or 1936, secured from Mr. Bortner a list of the properties purchased, also secured from the analyses of the accounts themselves, the flowage basin account, a list of the properties purchased. I examined the 15 filing cabinets for any indication of what Mr. Bushong or his assistants in the Lancaster office were doing at that time. I asked Mr. Bushong to furnish me with whatever additional information, any information, he could give me concerning the activity of the Lancaster office and Mr. Bushong during this entire period.

By MR. KING:

Q. Mr. Bushong is dead, isn't he? A. Yes.

MR. GOLDBERG: I think you said you asked Mr. Bushong.

THE WITNESS: I meant that I asked Mr. Bortner.

• • •

[9772] By MR. KING:

Q. I show you copy of a memorandum dated March 29, 1945, entitled "Re, Lancaster Office Expense," together with a copy of schedules dated April 5 and April 14, 1945, and ask you to examine those documents. A. My other papers are in another volume. May I check those?

Q. Certainly. [9773] A. Yes, I was furnished with those schedules.

• • •

(The documents referred to were marked for identification as Exhibit Number 238.)

• • •

By Mr. King:

Q. Mr. Newlands, do you have in front of you at this time your set of Exhibit for Identification 238? A. Yes, I do.

Q. The schedule of April 5, 1945, indicates, does it not, Mr. Newlands, that property was acquired during the years 1921, 1922, 1923 and 1924. Isn't that correct? [9774] A. That is right. That is what the statement would indicate.

Q. Did you make any investigation to determine whether the properties mentioned in the Schedule of April 5, Exhibit for Identification 238, were actually acquired during those years? A. I compared the information given here with the information we had drawn off of the flowage basin accounts.

Q. Did you determine the properties listed in the Schedule of April 5 in the Exhibit for Identification 238 were acquired? A. During those years?

Q. Yes, during those years. A. And you are referring now only to the items included under "Deed Acquired"? That would represent the purchase of the property.

Q. That is right, Mr. Newlands? A. Yes, I determined that those properties had actually been acquired.

Q. Did you make an investigation for the purpose of determining, Mr. Newlands, whether or not Mr. Bushong, during the years 1916, to and including 1924, was active in connection with acquiring property shown on the Schedule we are discussing, that is the one of April 5, 1945, in the Exhibit for Identification 238? [9775] A. I examined all the information which was available to me concerning it and we examined a great number of the deeds. I believe Mr. Bortner was requested to furnish us any information as to which properties Mr. Bushong had purchased personally. I believe some were probably purchased by agents.

MR. KING: May we have the answer to that question read, Mr. Examiner?

(Question read.)

By MR. KING:

Q. You mean agents for the company? A. That is right.

Q. Other than Mr. Bushong? A. Well, they may have been acting for Mr. Bushong—they may have been acting for the company.

Q. Did your investigation enable you to determine to whom the agents you referred to reported to? A. No. In a good many cases I imagine they would report to Mr. Bushong.

Q. Do you know of any case in which they would not? A. Well, I don't know as a matter of fact whether any of the agents did not report to Mr. Bushong. I wasn't able to determine in some cases who they reported to.

Q. In your determination in connection with both the Lancaster office expense and Bushong's salary did you [9776] rely primarily upon information furnished you by Mr. Bortner? A. That was one of the items. It was not the primary consideration, no.

Q. What was the primary consideration? A. There wasn't any primary consideration. I considered all of the facts as I knew them.

Q. Where did you get the facts you speak of? A. Some of them came from the 15 filing cabinets, some came from the discussions I had with Mr. Bushong and Mr. Diehl, whom I believe was there at one of the conferences.

MR. GOLDBERG: You mean Mr. Bortner?

THE WITNESS: Yes, Mr. Bortner and Mr. Diehl. Some of it may have come from the analysis of the accounts themselves and the vouchers involved.

By MR. KING:

Q. Did you find any material in the 15 filing cases in connection with this item? A. I found material in the

15 filing cases which indicated that Bushong did a great deal more than buy property.

Q. I asked you, Mr. Newlands, if you found any information in the 15 filing cases in connection with the particular item we are now discussing. [9777] A. In connection with this purchase of property?

Q. Yes.

• • •

THE WITNESS: I thought I was following your lead. I thought you were asking me whether I found anything in the 15 filing cabinets which showed Mr. Bushong's activities in connection with the purchase of these particular properties. Is that correct?

MR. KING: That is correct.

By MR. KING:

Q. Did you?

MR. GOLDBERG: "These particular properties". Is that the schedule in Exhibit 238?

THE WITNESS: Listed in Exhibit 238?

MR. GOLDBERG: Yes.

MR. KING: That is correct.

[9778] MR. GOLDBERG: Thank you.

By MR. KING:

Q. Go ahead. A. Yes, there was some evidence concerning the purchases of the earlier property, mostly of a general nature. In other words, I recall one letter which mentioned the fact that Mr. Bushong was to buy the properties along Conestoga Creek, and there are other letters of that nature.

Q. Did you find anything in relation to the properties acquired after 1916 in the 15 filing cases? A. Not including 1916, is that correct?

Q. Well, yes. A. Including 1916, from 1916 on?

Q. Say from 1917 on. A. Yes, I believe there were memoranda and correspondence in the files regarding flashboard cases which contained references, I believe, to the purchase of property in this later period. I believe that was so. I also found references in connection with the purchase of the property used for the river coal operations in various of the memoranda in the 15 filing cabinets.

Q. Do you now recollect the date of that correspondence to which you referred? A. No, I couldn't remember that detail.

[9779] Q. Is it not a fact, Mr. Newlands, that the schedule dated April 5, in the Exhibit for Identification 238, shows that 16 properties were acquired by the company from 1916 to and including 1924? A. That would seem to be a fact based on the statements given here.

Q. Well, is it or isn't it a fact? A. Well, I would have to check with my other working papers to determine that. I believe this is correct.

Q. Now, Mr. Newlands, what investigation, if any, did you make to determine facts concerning the Benjamin Davis mortgage which you referred to on page 46 of the text of Exhibit 51? A. I asked Mr. Wetzel to furnish me with the facts concerning the Benjamin Davis foreclosure.

Q. Mr. Wetzel, you say? A. Mr. Wetzel, that is right.

Q. Is that all? A. That is right, yes. I might add that of those properties purchased from 1920 to 1924, many of them were for the river coal recovery operations, which at that time was a proposition handled by Holtwood Coal Company as a commercial marketing operation. It had nothing to do with the hydro operation.

Q. Weren't those properties to which you referred [9780] also useful in the flowage basin? A. No, because the company had flowage rights over the same property. They acquired the lien at the time they decided to go into the river coal recovery operations in order to obtain a place for their riverside coal plant. They selected the site at

Shenks Ferry because the railroad happened to be located at an advantageous position for river coal recovery operations.

Q. Didn't title of the lands about which you are speaking, Mr. Newlands, go under the name of Penn Water? A. Title was taken to the land by Penn Water and leased to Holtwood Coal Company.

Q. Then the answer to my question is "yes," is that correct? A. That is right, yes.

Q. Mr. Newlands, do you know that as a matter of fact there were four separate actions filed in the lower courts of Lancaster County and two appeals in the upper court concerning the title to the Ben Davis property between the years 1913 and 1919? A. No, I did not.

Q. Did you ever make any investigation to determine that fact? A. No, I never knew it was necessary to make such an investigation. From the information I had received [9781] the company had originally purchased a mortgage on that property and in 1919 Mr. Wetzel informed me that the mortgage was foreclosed. He didn't tell me any of these other details you are now mentioning.

Q. In any event you didn't ask Mr. Bortner anything concerning the Benjamin Davis mortgage, did you? A. No, because I thought I had all the information available or necessary.

• • •

[9783] By Mr. King:

Q. Mr. Newlands, I direct your attention to page 47 of Exhibit 51, with particular reference to the statement made at the top of the page, "Sundry Legal Fees." A. Yes, sir.

Q. Do you have that before you? A. That is right.

Q. Did not Mr. Bortner, in response to your request, furnish you with a memorandum dated August 6, 1945, in [9784] connection with the matter we are discussing? A. May I see your copy? I don't seem to have it here.

Q. You certainly may. A. Yes, I have not yet located them in my papers. Are you going to ask questions about it? I want to locate it.

Q. Is the copy I show you a copy of the one which you have in your file? A. It appears to be, without a direct comparison.

Q. Did you actually receive a document dated August 6, 1945, from Mr. Bortner in response to your request? A. I believe so.

• • •

(The document referred to was marked for identification as Exhibit Number 239.)

• • •

[9787] By Mr. King:

Q. Page 34 of the text of Exhibit 51. Do you have that in front of you, Mr. Newlands? A. Yes, I have that.

Q. On that page you have recommended that the Commission disallow portions of fees paid to Cooper, Sanderson and Porter and part of the salary paid to Hutchinson, have you not? A. That is right.

Q. Did you recommend the elimination of approximately thirty thousand dollars paid to Cooper as shown by your Schedules 12-B and 14 of Exhibit 51? A. Can you give me the page number for quick reference?

Q. Page 39, I believe. A. You mentioned another one.

Q. Page 39 of the schedule and page 43 of the schedule.

The Witness: May I have the question now, please?

(Question read.)

The Witness: That is correct.

Trial Examiner: What are the figures which add up to $30,000?

The Witness: The item under "Engineering Experts salaries to Hugh L. Cooper, hydraulic engineer, $14,107.21",

and on page 43 the first item under the top grouping of claims against McCall Ferry Power Company "Hugh L. Cooper, completion bonus, $15,819.06".

[9788] The slight discrepancy between the total of those two and the flat amount of thirty thousand dollars is due to an adjustment made with Cooper on his traveling expense account.

MR. KING: I believe I referred to the figure as approximate in my question, your Honor?

By MR. KING:

Q. Was your sole reason for recommending the disallowance, Mr. Newlands, of approximately thirty thousand dollars because Cooper did not complete the work in your opinion for which he had contracted? A. That is one of the reasons. The other reason that the company incurred an expense of sixty thousand dollars to complete the work. The sixty thousand dollars was paid to Empire Engineering Corporation to complete the work which Cooper had started.

Q. Do you know when Cooper ceased working on the project? A. I don't understand exactly what you want me to answer there.

Q. I want you to answer as to the fact.

MR. GOLDBERG: I think you understand what the witness means.

TRIAL EXAMINER: Proceed.

THE WITNESS: Cooper never did any actual work on the project. He supervised it. He was not at McCall Ferry all [9789] the time. There is no way for my telling or anyone telling exactly what time he spent there. His work in connection with the construction would, of course, have to stop with the cessation of the work.

Q. When was that? A. November 1, 1907.

Q. Do you know whether Cooper's firm or he individually was responsible for the work on the tailrace in

1908? A. Yes, that work came under the supervision of Cooper's department.

Q. Did you make any investigation, Mr. Newlands, to determine whether the services of Cooper or his organization were performed in return for any part of the thirty thousand dollars of Cooper's compensation you have recommended for elimination? A. I tried to determine it by reviewing all of the facts which were available to me.

Q. Did you determine it? A. I determined that Cooper had not completed his work for which the total fee would be payable to him.

Q. Did you determine, Mr. Newlands, whether Cooper performed, or his organization performed, work in return for any part of the approximately thirty thousand dollars which you have recommended for elimination? A. I determined that Mr. Cooper did not perform all of the work he should have in return for that thirty thousand [9790] compensation.

* * *

By Mr. King:

Q. I asked you, Mr. Newlands, if he performed any of it.

Mr. Goldberg: This was a completion bonus, wasn't it, we were talking about?

Mr. King: Talking about the thirty thousand dollars Mr. Newlands recommends for elimination.

Mr. Goldberg: Completion bonus.

The Witness: That is an extremely difficult question to answer because it involves spreading Cooper's fee over the work he did. It is impossible for anyone at this time to make that spread. Mr. Cooper himself was probably the only one who would have the information to do that.

By Mr. King:

Q. I asked you if you did it.

Mr. Goldberg: Let the witness finish.

TRIAL EXAMINER: Just a minute. You may finish.

THE WITNESS: No, because it was impossible from the information which was available to me.

[9791] Q. Did you consider part 28 of Exhibit 27 in connection with your determination with regard to this matter? A. Yes, I did.

Q. Did you read part 28 of Exhibit 27 in connection with your determination? A. Yes, I did.

Q. Mr. Newlands, I show you photostatic copy of a letter dated January 30, 1908 from Hugh L. Cooper to McCall Ferry Power Company, and ask you if you examined that letter or a copy in connection with making your determination?

• • •

THE WITNESS: I believe I have seen this letter in the files.

• • •

(Thereupon, the document referred to above was marked Exhibit No. 240 for identification.)

• • •

MR. GOLDBERG: Who underscored certain of the sentences [9792] appearing on page 2 of the Exhibit, Mr. King?

MR. KING: I don't know who did that at this moment.

MR. GOLDBERG: Do you know whether the underscoring was done in 1908 or by someone recently going through the correspondence?

MR. KING: I assume it was by somebody recently.

MR. GOLDBERG: Someone connected with the company, you think?

MR. KING: Yes.

By MR. KING:

Q. Mr. Newlands, did you make the underscoring? A. No, I did not.

Q. Mr. Newlands, I show you a photostatic copy of a letter dated March 11, 1908 signed by Cary T. Hutchinson, and directed to Mr. H. F. Dimock, president of McCall Ferry Power Company. I ask you if you considered that letter in making your determinations in connection with Exhibit 51? A. Yes, I have seen that letter and considered it in making my determination.

• • •

(Thereupon, the document referred to above, was marked Exhibit No. 241 for Identification.)

• • •

[9793] By Mr. King:

Q. You say you considered that letter we have just referred to, Mr. Newlands? A. Yes.

Mr. Goldberg: Where is the attachment? I note the opening paragraph of Exhibit 241 says "I am attaching a copy of letter just received by Mr. Cooper."

Mr. King: In the files of the company.

Mr. Goldberg: This is not a complete letter without the attachment.

Mr. King: Well, we will be glad to furnish you copies.

Mr. Goldberg: I would like to have the attachment produced.

Mr. King: We will be glad to furnish that to you.

• • •

By Mr. King:

Q. Mr. Newlands, in making your determination as to the elimination of the amount of approximately thirty thousand dollars paid Mr. Cooper, did you consider work performed by [9794] him or members of his organization on drawings during the year 1908? A. Yes, I did. Those costs have been allowed in my determination.

Q. But you made no allowance in connection with Mr. Cooper's supervision. Is that correct? A. That is cor-

rect, because an additional fee of sixty thousand dollars had been paid to Empire to complete Cooper's work. I was faced with the proposition of disallowing either the sixty thousand dollars or the thirty thousand dollars. I chose the smaller figure.

Q. Mr. Newlands, did you recommend for elimination approximately $9,200 paid to Sanderson and Porter in your Schedule 14 of Exhibit 51, page 43 of the schedule?

MR. GOLDBERG: May I have the question, please?

(Question read.)

THE WITNESS: That is right.

By MR. KING:

Q. Was your sole reason for making the recommendation to which you have referred that Sanderson and Porter did not complete the work contracted for by them? A. No, it was that fact plus the fact that Pennsylvania Water and Power Company and J. E. Aldred, Receiver, incurred expenses to complete the work which Sanderson and Porter should have done.

[9795] Q. Do you know when Sanderson and Porter ceased work? A. They never began the work on the installation of the machinery.

Q. Do you know when they ceased the work they did perform? A. I believe that some drawing work was going on during 1907 and 1908 in Sanderson's and Porter's New York office. Those expenses we have allowed. I don't know the exact date when that drawing work stopped, but that would be the only work which was going on during that period, during the period of cessation.

Q. Can you give us some idea as to the amount of the expenses which you say you allowed? A. Yes. On page 38 of the schedules——

Q. Would you wait just a moment until I find that page, Mr. Newlands? A. Yes, sir.

Q. All right. A. Under the title "Overheads, Administration", the last item in that group reads, "New

York Office of Sanderson and Porter". For the year 1908 there are expenses of $6,567.40 stated.

Q. Was that part of their fee? A. No, that was the cost of making the drawings to which you referred during this period of cessation.

Q. How much of the fifty thousand dollar fee have you [9796] allowed? A. How much have I allowed?

Q. If any? A. I don't seem to have all the figures here necessary to make that determination, but it was about $32,000.

Q. Then you have eliminated about eighteen thousand dollars, is that correct? A. No, I eliminated $9,210.52.

Q. Did you read the contract between Sanderson and Porter and McCall Ferry Power Company, Part 29 in Exhibit 27? A. Yes, I did.

Q. What did you do with the balance of the dollars representing the difference between $32,000, approximately, and the $9,200 you just mentioned? A. I didn't have to do anything with those dollars. They never were paid to Sanderson and Porter.

Q. Mr. Newlands, did you make any investigation to determine whether any part of the work performed by Sanderson and Porter was performed in return for any part of the approximately $9,200 you have recommended for elimination? A. It was impossible to spread the Sanderson and Porter fee over the work actually done and the work to be done on any information that I had.

Q. Did you endeavor to do it? A. I endeavored to determine all of the information [9797] which would enable me to do so if it could be done, but I decided that it could not be done, and I did not make such a determination.

* * *

By Mr. King:

Q. Mr. Newlands, during the recess were you able to check in connection with Exhibit for identification 239? A. I was not able to find my copy.

Q. Were you able to inform yourself sufficiently to say whether the Exhibit for identification 239 is a copy of the document which you were furnished? A. Yes, I believe this is a copy of the document furnished to me.

Q. Mr. Newlands, did you recommend on Schedule 12-B page 39 of the supplement of Exhibit 51, that the amount of $10,499.94 paid to Mr. Hutchinson for the period November, 1907 to July, 1908 be eliminated? A. That is right.

Q. Did you also recommend at page 33 of the text of Exhibit 51 that an additional five thousand dollars paid to Mr. [9798] Hutchinson be eliminated? A. That is right.

Q. Was your recommendation in connection with the elimination of these two amounts based solely on the ground that no work was done by Mr. Hutchinson after October 31, 1907? A. No, it was not.

Q. What else was it based upon? A. Based upon the fact that the payments made to Mr. Hutchinson would not have been necessary. If the project had continued to completion Mr. Hutchinson would have been paid during the time full construction was going on. The amounts paid to Mr. Hutchinson during this period represent an added cost, added overhead which would not have been incurred if the construction had proceeded to completion without the cessation.

Q. Is it your position that none of the work done by Mr. Hutchinson during this period contributed to the completion of the project? A. It did not deduct anything from the total construction period of the project.

Q. Did it contribute to the completion of the project? A. It may have, but it represented added expense which would not have been incurred if the cessation had not taken place.

[9799] Q. Did you consider Commission's Exhibits 175 and 181 in reaching your determination to recommend the elimination of these two amounts? Do you have copies of those before you, Mr. Newlands? A. I think I have.

MR. GOLDBERG: What were the numbers? 175 and 181?

MR. KING: That is correct.

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: Yes, I considered them.

By MR. KING:

Q. Those exhibits indicated to you that Mr. Hutchinson did perform work during 1908. Isn't that correct? A. Without reading it all the way through it indicates to me that Mr. Hutchinson made a report to Mr. Dimock of the situation in 1908 and that Mr. Cooper reported to him on April 13, 1908 as to the projected work from April to October, 1908.

Q. Does that mean the answer to my question is "Yes"?

THE WITNESS: I will have to have the question again.

(Question read.)

THE WITNESS: It indicated that Mr. Hutchinson did some work but not that the work contributed to the completion of the job.

By MR. KING:

Q. I didn't ask you that. I just asked you if it [9800] indicated to you that he performed work during the period we are discussing. The answer is "Yes", as I understand it. Is that correct? A. He performed work of some nature.

Q. Mr. Newlands, did you know who Boyd Ehle was? A. Yes.

Q. Who was he? A. He was Mr. Hutchinson's assistant. He was resident engineer at the job of McCall Ferry Power Company.

Q. Was he the only person who worked under or for Mr. Hutchinson? A. No, there were other persons.

Q. He was one of the ones who worked for Mr. Hutchinson? A. That is right.

Q. Mr. Newlands, I show you a file taken from the company's records, which file was obtained by your Staff during its investigation, and which contains approximately 70 letters to Hutchinson from Ehle and from Ehle to Hutchinson, during 1908. Did you or any member of your staff working under your direction consider that file?

• • •

[9801] THE WITNESS: I cannot tell without looking at the particular file.

By MR. KING:

Q. Will you look at it, Mr. Newlands? A. Yes, I have seen this file in connection with my investigation.

Q. What consideration, if any, did you give to the letters in that file? A. I considered the facts as indicated by the letters.

Q. Have you considered those facts in arriving at your determination to recommend the elimination of the two amounts paid to Mr. Hutchinson? A. That is right.

Q. Do you know whether or not Mr. Hutchinson brought suit against McCall Ferry Power Company to collect an amount of $13,416.59? A. Yes, I believe so.

[9802] Q. Do you know that in addition to bringing suit he attached available property of McCall Ferry Power Company? A. Yes.

Q. Do you know that that suit was settled for less than the amount claimed by McCall Ferry Power Company? A. As I understand it it was settled by the payment of the $5,000 to which you have referred previously.

Q. Mr. Newlands, did the file which I have just exhibited to you, and which you said you considered in making your determination, indicate to you that Hutchinson did work during 1908? A. It indicated that he was engaged in some activity in connection with the project.

• • •

[9806] By Mr. King:

Q. Do you have Commission Exhibit 158, Mr. Newlands, in front of you? A. Yes, I have.

Q. That is a letter from P. G. Bartlett of Simpson, Thacher and Bartlett to Mr. Cary T. Hutchinson, dated January 20, 1906. Is that correct? A. Yes.

Q. Did you take that letter into consideration in reaching your recommendations and conclusions and suggestions in Exhibit 51? A. Yes, I did.

Q. What consideration did you give paragraph 1 of that letter? A. Do you want to know how I used it?

Q. I want to know what the first paragraph means to you. A. It means that Harvey Fisk and Sons were to distribute a part of the common stock which was owned by Cary T. Hutchinson.

Q. You mean it indicates to you that Cary T. Hutchinson [9807] owned all of the stock? A. It indicates to me that at this time he did not own all of the stock.

Q. What does the second paragraph mean to you? A. It indicates to me that Harvey Fisk and Sons were acting as a trustee to keep the stock owned by Hutchinson in safe-keeping for him.

Q. You mean the part owned by him or all of the stock? A. It indicates to me all of the stock.

Q. And the first paragraph indicates to you that the writer of the letter was referring only to a part of the stock. Is that correct? A. That is right. There apparently seems to have been a change in the ownership of the stock.

Q. You mean during the time the letter was written? A. No, during the period in which it was held in safe-keeping by Harvey Fisk and Sons. That is a change in the ownership of part of the stock, of course.

Q. Now, I show you a photostatic copy dated January 18, 1906 from Cary T. Hutchinson to Simpson, Thacher and Bartlett and ask you if you examined that letter?

* * *

THE WITNESS: I have seen that letter.

* * *

[9810] Q. Mr. Newlands, will you turn to page 9 of the Schedule of Exhibit 51? Do you have that before you? A. Yes, I have.

Q. I direct your attention, Mr. Newlands, to Job Order No. C-2640 in the amount of $20,615. Do you find that item? A. That is right.

Q. Was not that job in service, Mr. Newlands, at the end of December, 1945? A. Not that I know of. It was not included in the power bill at that date.

Q. You deny that it was in service? A. I just don't know. So far as I know it was not.

Q. I call your attention to Job Order No. B-2694. Do you find that? It is further down the page from the one I just referred to. A. Yes, I have that.

Q. Was that in service at the end of December, 1945, if you know? [9811] A. Well, that is a credit item. It is a reduction of the costs which appear on the books. If this amount were closed to plant accounts the plant accounts would be reduced.

Q. Take the item "Job Order C-2740" in the amount of $207.82. A. Yes.

Q. Was that in service at the end of December, 1945? A. I will have to look in my work papers. I think I may have some information on that. I don't recall offhand.

Q. Will you refer to your work papers? A. No, I have no information as to whether that job was placed in service. It was not included in the power bill, however.

Q. How about the prior one that I inquired about, C-2640? Do your work papers throw any light or information throw any light on that? A. My work papers would indicate that that had not been placed in service.

Q. What is the date of those work papers? A. January 24, 1946. I believe I have stated previously that was not included in the power bill.

Q. Now, Mr. Newlands, take item Job Order B-2711. Was that in service at the end of December, 1945? A. Did you say B-2771?

Q. B-2711—$2,195. [9812] A. My work papers would indicate that that had not been placed in service and it was not included in the power bill.

Q. Now, take the next item, C-2722 in the amount of $1,071.13. Was not that in service at the end of December, 1945? A. Ordinarily items of that nature are in service immediately that they are purchased; that is calculating machines and furniture and so forth.

Q. Does that mean your statement is that that item was in service at the end of that time? A. That probably was in service at the end of 1945.

Q. Take the next item, C-2725, in the amount of $14,992.75. Was not that item in service at the end of December, 1945? A. This indicates it was not. The property was purchased from T. S. Martin by contract dated December 10, 1945. It was property used by Martin in recovering river coal from the river. By that date I believe river coal operations would have stopped and there would be no opportunity to put it in service until river coal operations began again in the spring. I understand that the equipment was pretty dilapidated in any case.

Q. Do you know what date the river coal operations stopped in 1945? A. No, I do not know the exact date.

Q. Then how do you draw the conclusion you just stated? [9813] A. It is my impression that river coal operations usually stop before this particular date.

Q. You mean that is an assumption on your part. Is that correct? A. It is an assumption based on things I have seen in the records, but I cannot put my finger on the exact information. That item also was not included in the power bill.

Q. Do you know whether or not that property represented by that job order was used to store the river coal

fleet over the winter? A. Whether the particular property which was acquired here did that?

Q. That is right. A. No, I don't know, but——

Q. That is all I asked you, Mr. Newlands, if you knew.

Turn to page 10 of the schedules, which is the next page to the one we have been discussing, and refer to the item represented by Job Order C-2642 in the amount of $463.20.

Was not the property represented by that item in service by the end of December, 1945? A. Yes, that was placed in service on December 14, 1945. That was not included in the power bill, either.

Q. Take the next item represented by Job Order C-2672 in the amount of $678.75. Was not that in service at the end of December, 1945? [9814] A. That item went into service on December 26, 1945, but was not included in the power bill for 1945.

Q. Take the next item, Job Order No. C-2701 in the amount of $886.51. Was not the property represented by that item in service at the end of December, 1945? A. That property went into service on December 7, 1945, but was not included in the 1945 power bill.

Q. Take the next item, C-2704 in the amount of $396.57. Was not the property represented in that item in service at the end of December 1945? A. That job was placed in service on December 22, 1945, but was not included in the power bill for 1945.

[9815] Q. Take the next item, Mr. Newlands, Job Order Number C-2707 in the amount of $800. Was not the property represented in that item in service at the end of December, 1945? A. My explanation for that item would be similar to the explanation for Job Order 2725, purchase of——

Q. 2725? A. That is correct, purchase of Thomas S. Martin and Pequea Fuel Company.

Q. That is on page 9, the job order you just referred to? Is that correct? A. That is right. It consists of coal barges in dilapidated condition purchased from Martin

Coal Company. So far as I know they were not in service at that date.

Q. Do you know whether that property was in service during December of 1945? A. I don't know definitely, but from the information I do have available I would say it was not in service. That item was not included in the power bill for 1945, either.

MR. KING: May we have the last question and answer read back, Mr. Examiner?

TRIAL EXAMINER: Yes.

(Question and answer read.)

[9816] By MR. KING:

Q. You mean the property was not being used? A. That is correct, by Pennsylvania Water and Power Company.

Q. Do you know that fact or are you guessing at it? A. No, I am drawing that conclusion from the facts that are available to me concerning this transaction.

• • •

[9831] By MR. KING:

Q. Mr. Newlands, would you please turn to Exhibit 56? Do you have that in front of you, Mr. Newlands? A. Yes, I have that.

Q. Did you prepare that exhibit? A. Yes, I prepared this exhibit.

Q. Do you assume full responsibility for the exhibit? A. Yes, I do.

Q. Would you please give me the basis for the calculation of the amount of $4,495,500 in column 1 of this exhibit?

• • •

[9832] THE WITNESS: That represents the amount of cash paid in, represents 60 per cent of the amount of cash paid in on the McCall Ferry bonds which were exchanged for Pennsylvania Water and Power Company securities.

By Mr. King:

Q. That represents, then, cash paid in on bonds. Is that right? A. Yes. I can clarify my explanation if you are uncertain as to what I mean.

Q. I think we understand what you mean, Mr. Newlands. Does that same basis apply, or rather does that same calculation apply to the amount of $4,495,500 from the years 1911 to 1945? A. To 1925, did you say?

Q. 1945. In other words, does that same basis apply in connection with all of the figures in column 1 on Exhibit 56? A. That is right. It is included all through there.

Q. Mr. Newlands, again referring to column 1 of Exhibit 56, the year 1915—that is the dollars opposite the year 1915—do not those dollars represent only the [9833] cash paid into the company on approximately 45,000 shares of common stock? A. It represents cash paid into the company on all the common stock that was outstanding at that time. I have forgotten whether that is the exact number of shares outstanding or not.

Q. How many shares were there? A. Well, the authorization was 50,000 shares originally.

Q. What I want to know, Mr. Newlands, is how many shares of Penn Water common stock does the amount of $4,495,500 apply to. A. What amount, what number of shares?

Q. Correct. A. It applies to 49,950 shares.

Q. Don't you mean 44,000 instead of 49,000? A. No, 49,950.

Q. Was it $100 par stock? A. Oh, that amount of cash paid in applies to all the stock outstanding at that time, not just the 49,950 I mentioned. The amount was 84,950.

Q. How many shares of stock went to the McCall bondholders? A. 49,950 shares should have gone to the McCall bondholders but a few of them were not exchanged. That is, [9834] J. E. Aldred bought $66,000 worth of bonds. However, I have included those bonds in this calculation.

Q. You mean the 49,000? A. That is right.

Q. Well, isn't it true that the only cash represented in the figure we are discussing represented those 49,000 shares? A. The amount of cash I have shown in column 1 represents the only cash that was paid in on any outstanding capital stock. The total capital stock outstanding was 84,950 shares.

Q. Well, Mr. Newlands, doesn't the $4,495,500 represent cash that was paid in by the McCall Company bondholders? Isn't that correct? A. That is right.

Q. And they received only the 49,000 shares that you have just mentioned. Is that correct? A. That is right, there was no cash paid in on the other shares.

Q. Now, will you refer to column 2 on that exhibit. Do not the dollars in column 2 opposite the year 1915 represent dividends paid on approximately 85,000 shares? A. That is right.

Q. Now, Mr. Newlands, would not the 7.6 per cent in column 3 opposite the year 1915 be substantially reduced [9835] if the dividends shown in column 2 were those paid only on the number of shares represented by the $4,495,500? A. If you make that assumption and make that calculation you would have a smaller percentage, but that is not what I was doing here.

Q. I am not asking what you did. I am asking you to answer my question. Will you please figure—Do you have some scratch paper in front of you? A. Yes.

Q. What percentage would be if you divided the amount in column 1 into the dividends which were paid to the stockholders who paid in the cash? A. Do you mean by that the capital stock which went to the McCall Ferry bondholders?

Q. That is right. A. You don't happen to have the amount of dividends that applied to that stock, do you?

Q. It was $4 a share, Mr. Newlands. A. It would be approximately 4.4 per cent.

Q. Would there be a similar reduction in each year if you made the same calculation for each year? A. If you

made a similar calculation based on your assumptions, you would obtain a similar reduction. I don't know what would be the exact percentage, but there would be some reduction. [9836] Q. It would be substantial, wouldn't it? A. Well, I haven't made the calculation for later years. I am not certain. It would amount to at least one or two per cent, I imagine, in any year.

Q. The one you just calculated amounted to approximately 45 per cent, didn't it? A. When I said one or two per cent, I meant one or two per cent as compared with 18 or 25 per cent. I wasn't referring to a proportion between the percentages shown here and the percentage I just calculated.

Q. I want the proportion. A. Let me make myself clear. When I arrived at my calculation I arrived at 4.4 per cent which represented the relationship of the dividend of $199,800 which would be payable on the shares originally given to the McCall Ferry bondholders.

Q. I am asking if you made that same assumption all down the line in column 3 would you not get a substantial reduction?

• • •

[9837] A. I would obtain a reduction. It would be not 45 per cent which you mentioned, nor anywhere near that, but I don't know what it would be.

• • •

[9935] SAMUEL JOSEPH

• • •

CROSS-EXAMINATION.

By MR. SPARKS:

• • •

[9956] Q. Do returns required by investors depend upon the investors' appraisals of the risks present in the investment?

• • •

THE WITNESS: Yes.

[9958] Q. Does the cost of capital depend upon the investor's appraisal of the risks present in the investment? A. Yes.

[9964] Q. Is the ownership of Penn Water common stock widely distributed, Mr. Joseph? A. Sufficiently so to be traded.

[9965] Q. Mr. Joseph, can you name ten other electric utility common stocks which are more widely held than the Penn Water common stock?

THE WITNESS: I don't know that I can.

[9972] Q. Mr. Joseph, are you familiar with the Federal Communications Commission's study of the problem of the rate of return on public utility regulation dated June 15, 1938? A. Yes, I am.

[9973] Q. I call your attention, Mr. Joseph, to page 76 of that report and to the following words:

> "While it is true that the prospects of a future rise or fall in the market price of stocks have their influence (and at times may even be controlling), it is believed that the financial and operating characteristics of the particular utility eventually dominate the investing public's evaluation of its securities. In many cases this will not result unless the period used is long enough to even out the effect of market factors extraneous to the individual corporation's situation. In any event, however, it seems to be generally conceded that the long-run average earnings-price ratio, more accurately than any other single factor, reflects the investor's composite evaluation of all fundamental influences affecting the corporation."

Q. Do you agree with those statements?

• • •

[9974] A. I do agree with the last sentence.

Q. And you are in substantial agreement with the other sentences that I have read. Is that correct? A. Yes.

Q. When you had in mind the Bluefield decision for the purpose of preparing Exhibit 46, what did you consider to be the meaning of the word "investments" which is contained in the clause "—investments in other business undertakings which are attended by corresponding risks and uncertainties"? A. Investments there I think means, or may be taken to mean, the outstanding securities of other similar enterprises.

• • •

[9975] Q. In the preparation of the evidence of the fair rate of return which is contained in Exhibit 46, did you consider or assume the adoption by the Commission of any particular kind of rate base? A. I assumed that the Commission would allow a fair rate of return applied to a rate base which would be at least equal to the investor's investment in the property.

• • •

[9984] Q. Now, Mr. Joseph, you have stated that Exhibit 46 would be an adequate sound basis for the determination of a fair rate of return for the Detroit Edison Company, and I assume that you would also state, would you not, that the Exhibit would be an adequate and sound basis for the determination of a fair rate of return for each of the other fourteen electric companies shown on page 38-A of the exhibit? A. It would be very helpful.

Q. Well, would it be adequate and sound basis for the determination of the fair rate of return? A. After I had made the check that I say I would like [9985] to make, I think I could then say that it would be for each of these fourteen companies an adequate and sound basis.

Q. In other words, you would say Yes to my question if your investigation of each of the companies disclosed no peculiarities which would indicate to you that different individual special treatment ought to be given to one of the companies. Is that correct? A. Exactly right; yes, sir.

* * *

[9988] Q. Now, Mr. Joseph, why did you exclude from Exhibit 46 any data with respect to cost to the company of debt capital experienced by Penn Water? A. Why did I not include it?

Q. Right. A. Because the information shown in my opinion was sufficient, having in mind that the Commission would have before it a complete detail concerning the cost of debt capital of the Pennsylvania Water and Power Company from another witness.

* * * *

[9993] Q. Just prior to the noon recess, Mr. Joseph, you referred [9994] to Exhibit 51 in this case which was Mr. Newlands' report for data showing the experienced costs of debt capital to Penn Water, did you not? A. Yes, I did.

Q. On what pages of that Exhibit are those costs shown? A. One reference is found on page 4.

Q. Are there any other pages on which those costs are shown? A. You might also refer to page 6, and I think that is the extent of it in Exhibit 51.

Q. Do you know of any other exhibit which contains that data? A. It may be contained in the balance sheet exhibit.

Q. Do you recall the number of that exhibit? A. No, I do not.

Q. Could you ascertain whether it is contained in the balance sheet exhibit? A. Yes, I will.

Q. Now, what does Exhibit 51 show to have been the experienced cost of debt capital to Penn Water, Mr. Joseph? A. It shows that in 1939 Penn Water issued

$10,900,000 face amount of 3¼ per cent bonds at 102. It shows that in 1940 Penn Water issued $10,962,000, 3½ per cent bonds at 103. The first series was due in 1964; the second series was due in 1970. You can conclude from that that the [9995] experienced cost of capital for these issues was in the neighborhood of 3¼ per cent.

• • •

Q. Well, then, is it correct to say that Exhibit 51 provides data which enables you to determine the yield at the price to the public, but that it does not include data showing the experienced cost of capital, debt capital, to Penn Water? [9996] A. For that issue? For that issue, Exhibit 51 does not have all of the information sufficient to determine the precise cost of the capital on these bonds. However, the information is quite readily available, I am sure.

Q. Well, when you say it is quite readily available, Mr. Joseph, do you know whether it is available as evidence in this case? A. No, I do not.

Q. I understood you to say, I believe, before the noon recess, that such data should be considered by the Commission in its determination of fair return. Is that correct? A. Yes, it should. Of course you understand, Mr. Sparks, that we are talking about a very, very small item.

Q. In what connection do you make that observation, Mr. Joseph? A. Well, I mean that in the illustration that I gave where the bonds sold at par and the yield was 3¼ per cent, the cost to that capital to the company is not going to be very much over 3¼ per cent.

• • •

[10028] Q. Isn't it true, Mr. Joseph, that in recent years the restrictions which we have mentioned provided in indenture provisions have resulted in all bonds being of higher quality? A. The tendency would certainly be that way, yes.

Q. And that is true, is it not, of the bonds [10029] represented in the indices on pages 1 to 19 of Exhibit 46? A. Generally I would say so, yes.

* * * *

Q. Well, isn't it true that the decline in yields as shown in your averages is for reasons other than the decline in the return expected by investors on bonds of identical quality? [10030] A. It contains the effect of what we have been discussing.

Q. Well, are you saying, then, that the decline as shown in your averages includes the decline brought about by these tightening of protective features in indentures and the consequent improvement in the quality of the bonds? A. Well, it includes the effect of that, yes.

Q. In other words, then, the decline in the average yield shown on page 5 of Exhibit 46 is due in part to a lessening of the risks assumed by bondholders? A. Well, it includes the effect of that element. If you were to say that a portion of this decline would have taken place, all other things being equal because of the better protection, that would probably be true. But the decline has not taken place because of the better protection. Am I clear on that?

Q. Well, I gathered from your previous answer that that was one reason for the decline. A. For a decline?

Q. For the decline reflected in your study, namely, the increase in protective features in the indentures. A. Well, perhaps I can explain my point by illustration: The investor, let us say, is satisfied today that he is getting better protection in the indenture than he was years ago. He probably is, and on that score he [10031] says, "I will accept less of a return than I would years ago."

But it does not follow that he today believes he is assuming less risk in the purchase of a utility bond than he did in 1920. Isn't that clear?

Q. Why not? A. Well, one reason that I might mention would be that many people believe that the regulatory authorities adopting the principles that the utility

shall be allowed a return only upon investment are setting about to wreck the utility, and it may be that some investors of that notion, that if they get a return only on their investment, that is not enough. We are assuming risks tremendously greater than we did in 1920 when we could expect that the regulatory authorities would allow us a return on just about what we asked for by way of reproduction cost, and so on.

Now, I am saying that the effect of what we have been discussing is included in these averages, but it does not follow that the decline has taken place because investors now believe that investment in utility bonds over-all are so much safer than they were in 1920, because of these indenture provisions.

* * *

[10033] Q. These tightened protective features which we have been referring to, Mr. Joseph, result in additional burdens being assumed by others than the bondholders, do they not? A. Yes, that is probably true. When the bondholder is better protected, the other investors are assuming certain additional burdens.

* * *

[10034] Q. Then you do not agree that the risk of which the bondholders are relieved are shifted to the common stockholders. Is that correct? A. There is a shifting, yes.

Q. To the common stockholder? [10035] A. To the other investors.

Q. Which would include the common stockholder? A. Which would include the common stockholders.

* * *

[10040] Q Assuming that all other factors are equal, is the cost of new money to an enterprise higher or lower than the cost of money for refinancing? A. Probably higher.

* * *

[10049] A. You asked me concerning the number of stockholders of Pennsylvania Water and Power Company.

I find in Moody's Manual of Investments that the number of stockholders, common stockholders as of December 15, 1945, is reported as 6528.

• • •

[10056] Q. Is the cost of capital to a particular utility enterprise the measure of a fair rate of return to that utility enterprise? A. Not always, no.

Q. What are the exceptions in your opinion, Mr. Joseph? A. Well, you have certain costs of capital that [10057] may be changeable, and if they can be changed to benefit the utility and the public, that change should probably be considered in establishing the fair rate of return rather than the actual cost of the outstanding capital. I have in mind if outstanding bonds, for example, are at very high interest rates which can and should be refunded, then in establishing the fair rate of return the authorities might consider what could be done in such a refunding operation.

Q. Now, are there any other exceptions, Mr. Joseph, which you have in mind? A. The cost of capital that was incurred many years ago in connection with the issuance of other securities would likewise be superseded by allowing what is today a fair rate of return upon the remaining investment. I have in mind this: If 30 years ago the company that you spoke of issued stock at a cost to it of 15 per cent, and we are today considering what is the fair return for such a company, we would say that the fair return is what other similar investments today are yielding. I think maybe that would become more clear, Mr. Sparks, if we reversed the example that I gave. It seems to me that is usually clearer to utility representatives.

If some years ago the utility issued stock at a cost to it of two per cent and today similar investments are [10058] earning six per cent, the utilities are quick to realize that the allowance of only two per cent would be rather unfair.

Q. Are there any other exceptions, Mr. Joseph? A.

And so I say that in determining the fair rate of return, the attempt is to allow what is fair upon similar investments today, and the cost of capital, unless it is for some reason frozen, does not have a decisive effect upon the fair rate of return.

Q. Well, what you are saying, then, Mr. Joseph, is this, is it not? That today's cost of capital to the particular utility enterprise is the measure of the fair rate of return to that enterprise? A. Well, perhaps that means what I have said. The attempt is to allow the utility a fair rate of return based upon what other similar investments are yielding, subject, however, to the fact that if the particular utility under review is for some reason burdened with certain costs that it can't escape, that should be taken into consideration. I mean, for example, if the Pennsylvania Water and Power Company bonds had been issued at five per cent, let us say, with the approval of the Securities and Exchange Commission or the Federal Power Commission or some public authority, were not now refundable, these interest rates then were an inescapable cost to Penn Water and Power [10059] Company and I should think those costs would be allowed by the Regulatory Commission in the overall return.

• • •

[10082] Q. Mr. Joseph, what would be the direction of the effect of these figures on page 44 if the fair rate of return were to be determined in say 1933? A. If we were determining a fair rate of return for a utility in 1933, I would say that the tendency of the [10083] direction which you are asking me about would be downward. It would be so not only because you would get it from this sheet, but because at the pit of the depression if you were charged with finding a fair rate of return for a utility, I think you would be disinclined to find that the rate should be very high.

You would be more inclined to feel that if the utility can get along with a certain low rate for a period of time while the nation is suffering from a very grave depressi n,

and if that low rate would be fair, you would be inclined to have the utility take some share of the effects of a depression.

Q. Well, then, Mr. Joseph, I take it from your answer that in periods of prosperity the direction of the effect or the tendency of the direction of the effect would be upward of the data on page 44? A. Well, I suppose you draw that conclusion because I have said that in a period of depression the direction or tendency might be downward.

I feel somewhat differently about it today in interpreting these figures today. If I were charged with the responsibility of finding a fair rate of return for Pennsylvania Water and Power, I would have this information before me. I would have other information before me. I would feel that a determination made from reviewing what investments of a similar [10084] nature of yielding would be a sound one. I would look at pages 41, 42, 43 and 44, and there I would find nothing that would indicate to me that Pennsylvania Water and Power is going to be in any serious jeopardy if I were to allow it a rate of return determined to be fair from a review of what other similar investments are today yielding.

Q. Does that mean, Mr. Joseph, that if you were determining the fair rate of return today, you would give less effect to the statistics shown on pages 41 to 44 of your exhibit than if you were determining the fair rate of return in 1933? A. Probably so, but I would say it somewhat differently.

In 1933 the country was faced with a situation which required a somewhat different consideration, but today the level of activity is such that we need not make that special sort of allowance or determination.

• • •

[10088] Q. Mr. Joseph, will you turn, please, to pages 46 and 47 of your Exhibit 46. What is the significance and meaning of the data shown on those two pages of your ex-

hibit for the determination of the fair rate of return to Penn Water? A. These again are general economic statistics of the level of economic activity and are matters which I consider are of interest to those charged with the duty of determining fair rate of return for a public utility.

Q. Well, Mr. Joseph, was the basis of your selection of these data on pages 46 and 47 the fact that they may be of interest to the Commission? A. And helpful to the Commission in solving the problem of fair rate of return.

Q. In what way would they be helpful? A. Well, again, I say that if you are charged with the responsibility of determining a fair rate of return, you are interested in what the level of economic activity throughout the country is. To say otherwise, it seems to me, Mr. Sparks, would be to attempt to maintain the position that Penn Water and Power is in such a situation that [10089] it operates independently of the country as a whole. If it could be shown that Pennsylvania Water and Power's earnings were so safe and so secure that whatever happened to the country at large would have very little or any effect upon Pennsylvania Water and Power, then I would say that perhaps these indices and figures were superfluous. But if Pennsylvania Water and Power is a part of our general economy and is subject to those influences which affect our general economy, then in considering what is a fair return for that utility you would be interested to find out how the economy as a whole is getting along.

Courts and Commissions have reviewed statistics of a similar nature in their reviews of the problem of fair rate of return.

* * *

[10166] CLIFTON H. HOWELL.

• • •

CROSS-EXAMINATION (Continued).

By MR. MYSE:

• • •

[10179] Q. Did you have discussions or did you confer with any of the customers of Penn Water in connection with the loads and operations on their system? A. Yes, I did.

Q. Which customers? A. Particularly Consolidated of Baltimore and the Pennsylvania Power and Light relative to the 25-cycle supply. I did not interrogate them at all on the 60-cycle supply.

Q. What did you learn from Baltimore in connection with the loads on the 25-cycle system? A. That the 25-cycle load was holding up pretty well.

Q. Did you go into anything more specific with respect to the load shape of Baltimore in connection with their demands on the 25-cycle system at Holtwood? A. No, I did not.

Q. What about the 25-cycle demands by Pennsylvania Power and Light Company on the Holtwood system? Did you go into any particulars with respect to their load shape? A. Yes, that had reduced considerably over the years. It was about 6,200 kilowatts at the time I made my inquiry to the Pennsylvania Power and Light, having at one time been about 15,000.

[10180] Q. Is that the conclusion from your investigation that the demands by Pennsylvania Power and Light Company on the 25-cycle system of Holtwood would continually decrease? A. Down to a point. They have one rather large customer there, and it seemed that that load would hold up fairly well. They were undertaking at that time to eliminate a number of small 25-cycle customers and replace them with 60-cycle service.

Q. Other than this one customer to which you referred, the 25-cycle demand by Pennsylvania Power and Light

Company on the Holtwood system will tend to decrease in the future. Is that right? A. I say down to a certain point. I couldn't see where one of their large customers would go below, very much below, its present demand.

Q. Did you investigate that one customer you speak of to determine whether or not they had any plans to change over to 60-cycle? A. No, I didn't. It seemed sufficient to spend no more time on it after having been advised by some of the engineers, the commercial engineers of the Pennsylvania Power and Light Company, as to the intentions of this company.

Q. When you say "this company" you mean this one company? [10181] A. The Crown Cork and Seal Company.

Q. It is really Armstrong Cork? A. Yes, Armstrong.

Q. What load would Armstrong Cork continue to take from the Holtwood system?

MR. GOLDBERG: You mean Pennsylvania Power and Light, don't you?

THE WITNESS: I don't believe I recall exactly what the Armstrong Cork load was. It was something less than 6,000.

By MR. MYSE:

Q. Did you investigate at the Pennsylvania Power and Light Company to determine whether or not any of their converters would be used in serving Armstrong Cork, that is converting 60-cycle energy to 25-cycle energy? A. No. I asked them what they expected to do with these converters, being so much larger than their present load. They said they were going to hold them in. They saw no reason to change them. But they did not lead me to believe at all that they would convert 60-cycle to 25 for the purpose of the Armstrong Cork.

Q. How much capacity in converters from 25- to 60-cycle, or the reverse, does P. P. and L. now have. A. 15,000 kilowatts to the best of my recollection.

• • • •

[10183] (The reporter read the following question:

"Q. At page 2 of Exhibit 47, paragraph 1, and again beginning at page 8 and continuing on to page 15 you discuss, as I understand it, the 25-cycle generating facilities at Holtwood. Is that right?")

THE WITNESS: That is correct.

By MR. MYSE:

Q. As I understand it, the purpose of operating the eight out of the ten main generating units is to supply 25-cycle service to certain customers. Isn't that correct? A. Well, the eight generators are to develop 25-cycle power. I wouldn't say certain customers.

Q. Who uses the power, as you put it, which is generated by the eight 25-cycle generators at Holtwood? A. The output is sold to Baltimore with the exception of that which is sold in Pennsylvania.

• • • •

[10195] Q. At page 16, paragraph 1, beginning at line 8 of Exhibit 47, didn't you there make some statements about the capacity supplied Pennsylvania Power and Light Company? A. Yes, I had previously said that this morning, that I found that they supplied approximately 6500 kw to the Pennsylvania Power and Light.

Q. How did you determine that fact? [10196] A. Conferences with the engineers and officials of the Pennsylvania Power and Light Company.

Q. Didn't those engineers tell you what the relative proportion of the supply to Baltimore was at the same time? A. No, we didn't discuss Baltimore.

Q. In terms of the 6500 kw capacity supplied, as you say, to Pennsylvania Power and Light Company in 1944,

roughly what proportion is that of the total capacity available from the 25-cycle system at Holtwood?

MR. GOLDBERG: May I have the question, please?

(Question read.)

THE WITNESS: It would be the ratio of 6500 to the 25-cycle capacity generating capacity at Holtwood, which I believe is 87,000.

• • •

[10206] Q. As I understand your exhibit, Mr. Howell, you show in it that there are two hydro units and two steam units at Holtwood which provide 60-cycle service. Is that [10207] right? A. Yes.

Q. Where is the output of those units disposed? A. Through the 60-cycle transmission system of the Holtwood and Susquehanna Companies.

Q. How does any of that energy get on the facilities of Susquehanna? A. There are 60-cycle circuits running from Holtwood through Safe Harbor on the 220 k. v. to Baltimore. That is a possibility.

Q. Well, did you make any investigation to determine whether or not there ever was any such energy arriving on the 220 kv circuits from Safe Harbor to Baltimore? A. No, I did not.

Q. Then you can't say whether or not that actually happens, can you? A. No. There is also a 60-cycle circuit running into the Pennsylvania Power and Light system.

Q. From your knowledge of the operations as you testified at page 1009 as to the Holtwood property, can you tell me whether or not the 60-cycle generation at Holtwood is transmitted to and used almost entirely by Pennsylvania utilities to the north? A. No, I didn't make any investigation to determine the flow of power at any point. From an operating standpoint [10208] it would seem reasonable to expect that the major portion of this 60-cycle generation at Holtwood would go into Pennsylvania, to the Pennsylvania 60-cycle customers.

Q. You say the major portion of it. Other than this disposal you referred to a moment ago through the Safe Harbor system and the 220 kv lines system, which you said you did not study, how else could it be disposed of? A. I don't know of any other circuit except through the frequency changer.

Q. Did you make any examination or study to determine how much of the 60-cycle hydro and steam generated energy at Holtwood was converted from 60-cycle to 25-cycle energy? A. As I said before, the preparation of Exhibit 47 did not require such determination.

Q. The answer is you did not make such determination? A. No, I didn't.

Q. So you don't know what proportion of the 60-cycle generation was converted at Holtwood? A. No, I don't know. I didn't determine those figures at all.

Q. There is no electrical connection between the 60-cycle system and the 25-cycle system at Holtwood, is there, Mr. Howell? A. No, there is no electrical connection. There is a mechanical connection through the frequency changers.

• • •

[10210] By Mr. Myse:

Q. Referring to the 25-cycle transformers at Holtwood Substation to which you referred in your Exhibit 47, as I understand your statements in that exhibit you say that seven out of nine of those transformers are used for Baltimore. Is that correct?

• • •

[10211] The Witness: I am referring to page 16 of the Exhibit 47 under the title of "Holtwood Sub-station". I do not find where I have said that 7 out of 9 of the transformers are devoted to Baltimore service.

By Mr. Myse:

Q. Isn't that the fact? A. I don't recall that detail at the moment.

Q. Isn't that what you meant when you so stated at page 17 in the Table III, column 7? A. Yes, that is stated on page 17, Table III, main transformer data, which is a leaf which was taken out of the revised engineering data to which I have previously referred as provided by the Holtwood Company.

Q. Don't you agree with the statement? A. Yes, that is what it states, 7 transformers. Two of the nine are provided for Lancaster service.

Q. Those two which provide for Lancaster service, did you make any investigation to determine whether or not those two, in addition to being used for Lancaster service, are used for Baltimore at various times? [10212] A. No, I didn't investigate the bus connections there. It might be they could shift those. I don't know.

Q. If I told you it was a fact that in addition to the 7 transformers that you show on page 17 as used for Baltimore than the two transformers also shown on that page as used for Lancaster are in addition used for Baltimore at times, would you agree? A. Yes, they could readily be if that arrangement is made on the bus.

MR. GOLDBERG: You mean if it is the fact does he agree it is the fact. If it is the fact I will even agree to it.

By MR. MYER:

Q. Well, is it the fact? A. I said I did not investigate those transformer connections to the bus. I don't know what the arrangement is for transfer.

* * *

[10227] Q. At page 2 of Exhibit 47, paragraph 5, the last sentence, you have stated "This line—" referring to the Gunpowder line, I believe "—is leased to the Baltimore Company." Is that correct? A. Yes, sir.

Q. What evidence did you base that statement on? A. I took that from one of the transmission line drawings that I secured from the Pennsylvania Water and Power Company.

Q. Did you make any other investigation other than just taking the phrase off the drawing? A. I asked one of the officers, I believe it was Mr. Gunn, if the Baltimore Company owned this so-called Gunpowder Line or if the Pennsylvania Water and Power Company owned it. I was told that the ownership laid with the Susquehanna Transmission Company.

[10228] Q. Nevertheless you said it was leased by Baltimore? A. That was the best information I had, and it seemed a reasonable one, since the Baltimore Company was using the line, and it was owned by the Holtwood Company or its subsidiary. Obviously there would be some consideration paid by Baltimore for the use of the line.

Q. You say Baltimore is using the line. Do they actually operate the line? A. It connects with one of their substations and runs out to Gunpowder carrying their power.

Q. They don't furnish the labor to maintain it, do they? A. I can't answer that exactly in the affirmative. My impression is that it is maintained by the Holtwood organization.

Q. Did anyone ever refer you to a document or other paper or writing which might be called a lease covering the use of these facilities? A. No, nobody.

Q. Did you make any investigation to determine whether there was such a thing? A. In seeking information for this exhibit it seemed sufficient to me to read from one of your published documents that it was a leased line and to confirm from one of the important people of the company that the line was owned [10228-a] by the Holtwood Company or its subsidiary.

Q. Did you get that confirmation in writing? A. No, I got it verbally.

Q. Baltimore Company also uses another facility owned by Susquehanna known as the Highlandtown Substation, doesn't it? A. They only use pot head terminals to their cables so far as I know.

Q. Well, they use some facilities. A. Some portion of them, yes.

Q. Do you consider those facilities leased to Baltimore Company? A. If I remember correctly, the contract provides that space will be provided by Holtwood for the terminals of these cables, I mean the contract between the Holtwood Company and the Baltimore Company provided the space for these terminals to the cables.

• • •

[10229] Q. This much is true, isn't it: That the Highlandtown facility is really a distribution facility. Isn't that correct? A. If I understand your question to mean that there are cables and pot heads that are located in the Highlandtown Substation to be a part of the distribution, I think that is correct.

Q. There would also be some other facilities in the [10230] substation in connection with those pot heads and cables which would be distribution facilities, would there not?

• • •

THE WITNESS: The remaining part of the substation as I interpret it is the terminus of a transmission line and is a transmission substation.

• • •

[10314] SAMUEL JOSEPH.

• • •

CROSS-EXAMINATION (Continued).

By MR. SPARKS:

Q. Referring to page 10,050, Mr. Joseph, and to the data which you gave on that page pertaining to the two bond issues of Penn Water, have you included in the per cent figure of 3.20 in line 10 and the per cent figure of 3.14 in line 15 any redemption costs associated with the refunded debt? A. I don't think those costs are included,

no. They are not generally included by the Securities and Exchange Commission.

Q. Have you included any part of debt discount and expense associated with the refunded debt in those two per cent figures? A. No, and I don't think it should be included.

Q. Why not, Mr. Joseph? A. Because that is not cost of this capital. That is cost of prior capital.

• • •

[10315] Q. Could Penn Water avoid the payment of redemption premiums in retiring old bonds in order to be able to take advantage of lower interest rates? A. No.

Q. If bonds are sold at a discount or at a premium, does not the discount or premium represent in effect adjustment of the nominal interest cost expressed by the coupon rate? A. Yes, it does, and therein lies the reason for my previous answers. As you have just said, the redeemed securities might well have been issued either at a discount or a premium, and the interest rate might well in either case be adjusted to the same figure. It is for that reason that the accident of the terms of the prior issue do not in my opinion affect the cost of capital of the existing issue.

• • •

[10318] Q. Have you stated, Mr. Joseph, why you have omitted such costs from your exhibit? A. I think that is quite well explained, yes. I might summarize to say that there are such costs only by reason of the accident of the style or fashion of the previous financing, and that in my opinion the costs or the premium are not costs associated with the new financing.

• • •

[10354] Q. Is it correct to say that the basis of the selection of the ten companies was the availability of earnings reports, the availability of market prices of the common stocks, and the representativeness of the market prices? A. Yes, and the representativeness of the utility itself.

Q. Are these common stocks, Mr. Joseph, of more than average marketability? A. The common stocks of these ten companies are of more than average marketability compared to the common stocks of utility companies generally.

Q. Is that true also of the additional four common stocks? A. Yes, it is.

[10355] Q. Is it true that nearly all of the fourteen companies have plant accounts in excess of $100,000,000 and that the ownership of their common stocks is widely distributed? A. I think that is true.

Q. What is the total number of electric and electric gas utilities having common stocks outstanding in the hands of the public for which market prices and earnings information are available as at about the end of 1945; do you know? A. I don't know the exact number. I know that it is a good many more than fourteen.

Q. What would be your answer, Mr. Joseph, if I asked you the same question with respect to January, 1940?

Would you care to have the question read? A. There the answer would be that it is probably a good many more than ten.

Q. What has been the variation among the fourteen companies with respect to proportion of gross income available for the common stockholders? A. I don't have that figure in mind. There is probably a substantial variation.

Q. Would you think, Mr. Joseph, that that variation would range from about forty per cent to 100 per cent? A. It very well might.

Q. Have you determined the average relationship between leverage and earnings-price ratio? [10356] A. Not the precise relationship, no.

Q. Is there such a relationship? A. Yes, there is.

Q. Can you tell us what it is generally? A. The tendency would be for the company having more stock outstanding percentagewise in relation to total capital to have a lower earnings price ratio.

Q. What has been the variation among the fourteen companies with respect to proportion of equity income paid out as dividends? A. I don't know exactly. There has probably been a considerable variation.

Q. What has been the variation among these fourteen companies with respect to the existence of dividend restrictions?

MR. GOLDBERG: Imposed by a regulatory body?

MR. SPARKS: Yes. That would include indentures, as well.

THE WITNESS: I don't know the variations in the restrictions on payments of dividends of tnese various fourteen companies.

By MR. SPARKS:

Q. Have you determined average relationship between earnings-price ratio and the proportion of equity income paid out, Mr. Joseph? A. No, that is probably not determinable.

[10357] Q. Does the equity income paid out affect the earnings-price ratio? A. Yes, it does.

Q. And as I understand your previous answer, that is not measurable, the effect? A. There is no precise measurement of the effect, no.

Q. What is the variation among the fourteen companies with respect to size as measured by gross revenue? A. There is quite a variation.

Q. Would you say it is substantial? A. Yes, I would.

Q. Have you made any study to determine the average relationship between earnings price ratios and size? A. The earnings price ratio would tend to be lower for a larger company, all other things being equal.

Q. What is the variation among the fourteen companies with respect to proportions in non-electric business? A. Well, some are exclusively electric and some are not.

Q. Have you made any study to determine the comparative investor appraisals of investments in electric and gas or transport operations? A. Well, I have dealt with that problem. I think that the investor appraises the electric operations more highly than he does other utility operations.

Q. What is the meaning of the term "Earnings-price [10358] ratios," as you have used it in connection with page 38 and page 38-A of Exhibit 46? A. It is the relation of earnings to price. Generally the earnings are for the most recent period, the most recent that is to the date of the price that you are using.

Q. Have you finished your answer, Mr. Joseph? A. Yes.

Q. How are the earnings ascertained, Mr. Joseph? A. Generally they are published yearly.

Q. Mr. Joseph, would the return expected by equity investors be approximately 7.11 per cent for the purpose of this proceeding if the rate of return determination were to be made as of January, 1940?

THE WITNESS: May I have that question again, please?

TRIAL EXAMINER: Yes.

(Question read.)

THE WITNESS: No, not necessarily.

By MR. SPARKS:

Q. Would the return expected by equity investors be approximately 12.92 per cent for the purpose of this proceeding if the rate of return determination were to be made as of March, 1942? A. I would make the same answer there, Mr. Sparks.

Q. Is the return expected by equity investors approximately 4.88 per cent for the purpose of this rate of return [10359] determination as of the present time? A. As at March, 1946?

Q. Well, I am speaking of the present proceeding, Mr. Joseph. A. Well, to the extent that the data have changed, you might use later data. And the 4.88 is not necessarily identical with the return that is expected by investors because of the discounting factor that we have previously discussed.

Q. Would you say, Mr. Joseph, that the lower the earnings price ratio the better the quality of the common stock as viewed by investors, while the higher the earnings price ratio the lower the quality of the common stock as viewed by investors? A. There would be such a tendency, Mr. Sparks.

* * * *

[10410] Q. Mr. Joseph, do not investors' appraisals and investment choices determine and establish the market prices? A. Yes, they do.

Q. How, then, can the investor in this appraisal process start with the earnings-price ratio? A. He starts with an earnings-price ratio which he then adjusts.

* * * *

[10427] Q. Mr. Joseph, in which of the other instances shown on page 38 A have adjustments been made for non-recurring tax reductions in stating earnings for 1945? A. By me in no instances.

Q. Well, were they made by anyone? [10428] A. By the companies, do you mean?

Q. For instance? A. I don't know.

Q. Did you make no investigation of that when you took the figures for your earnings column on page 38-A? A. I made no such investigation.

Q. You just accepted figures from the source which you used. Is that correct? A. I accepted the published figures; yes, sir.

Q. You made no adjustments of any kind. Is that correct? A. Because I thought it would be improper to do so.

Q. And you accepted those figures without any question in your mind. Is that correct? A. That I was doing the right thing; yes, sir.

• • •

[10430] Q. Mr. Joseph, do the earnings which you have used in computing the earnings-price ratios on page 38 of Exhibit 46 for periods earlier than the calendar year 1945, exclude in all cases income resulting from non-recurring tax reductions? A. To the extent that the exclusion was made by the company in its published reports; yes, sir.

• • •

[10438] Q. Mr. Joseph, yesterday we mentioned the $2,300,000 item in connection with Detroit Edison. I show you the Detroit Edison Company annual report to stockholders for 1941 and refer you to page 9, the paragraph at the bottom of the page which reads as follows:

> "In computing Federal income and excess profits taxes for 1941, we deducted from taxable income the five per cent call premium, $2,500,000, paid for redemption of series 'D' bonds on March 1, 1941, plus the unamortized bond discount and expense amounting to $700,000. We estimate that these non-recurring allowable deductions reduced our Federal income and excess profits taxes by $2,300,000."

Have I read that correctly? A. Yes, sir.

Q. Now, was net income adjusted by the company for that amount, Mr. Joseph? A. I take it that it was not.

• • •

[10441] Q. Well, let me ask you, Mr. Joseph, didn't the $2,300,000 item have the effect of increasing the income account for the year 1941 or the net income for the year 1941? A. Yes, sir.

Q. And the $664,000 that you are talking about is the reduction in the income account for the year 1941. Is that correct? A. That results—may I see that statement

again, please? (Document handed to the witness.) That is correct, the 664 is a reduction.

Q. And you made no adjustments for either of those figures in your statement of the earnings for Detroit Edison for 1941. Is that correct? A. I made no adjustments, and I consider that any adjustment of such a nature would be improper.

• • •

[10469] Q. Well, you haven't, Mr. Joseph, informed yourself to any extent on adjustments that the investor would make in the earnings-price ratio with regard to any one of the companies shown on page 38-A, have you? A. I think I am generally pretty well informed on that subject.

Q. Well, you haven't indicated that information in your exhibit, have you? A. Because I believe it unnecessary to do so.

Q. Well, do you believe it unnecessary to do so because you go back to your first premise that the earnings-price ratio is sufficient evidence of the investor's appraisal? Is that correct? A. Well, there are grounds for that judgment, yes.

• • •

[10471] Q. Mr. Joseph, the earnings-price ratios which you show on page 38 were all computed in the same manner that you computed the earnings-price ratios on page 38-A, were they not? A. Correct.

Q. So that in the computation of any of the earnings-price ratios on page 38, you made no adjustments of a character similar to those we have been mentioning today, have you? A. I did not adjust the published figures, no, sir.

• • •

[10511] MR. MYSE: Mr. Examiner, we are prepared to initiate the cross-examination of the witness Davis this morning. How far we will get this week I am not sure, of course, but before I call the witness Davis back to the stand for cross-examination I would like

to direct your attention to Section VII of Exhibit 47 and point out that an examination of that section by me shows that it is entirely a characterization or interpretation of various contracts which are already in evidence in this proceeding by a witness who is not a lawyer and who is, as I understand, an engineer who has rushed in where normally lawyers and even judges have feared to tread.

For that reason, I object to the receipt in evidence of Section VII of Exhibit 47, and I suggest that it would be appropriate to have a ruling on that objection at this time, because if the objection is sustained it may save two to three days of cross-examination on that section.

MR. HALL: Will you read back that statement?

(Statement read.)

MR. HALL: Mr. Examiner——

TRIAL EXAMINER: There doesn't have to be any discussion on it. What the Examiner has in mind are two things: First of all a legal document is an attempt to put into writing something that a non-lawyer has conceived of at the beginning, and [10512] therefore while it would be quite appropriate to sustain motions to strike or objections to questions put to a witness who is not a lawyer as to the legal effect of a contract, however, the Examiner is not prepared to rule that a witness who understands the operations of an electric utility may not testify as to what operations are involved or called for or covered by the contract.

MR. MYSE: Well, Mr. Examiner, that may all be true, but I think if you will examine Section VII there is very little about operations in there, and it is entirely an interpretation of the contracts. It is pretty obvious to me that it is a legal interpretation of those contracts. There is nothing in there about operations.

TRIAL EXAMINER: The Examiner is not prepared to rule that that section does nothing other than interpret that contract in a legal sense, and the Examiner is not prepared to rule that it does even that.

Now, the other matter that the Examiner had in mind is this: This witness prepared an exhibit and testified as to allocation. He couldn't have done it without referring to the contracts, and Section VII may be necessary to consider in connection with a determination as to how the witness did consider those contracts.

MR. MYSE: Well, in answer to that, I think that is probably true, that in the witness' Exhibit 64, he had to make [10513] certain assumptions as to the interpretation of contracts, but that doesn't necessarily follow from that that a witness who is not a lawyer can come in here and introduce an exhibit which is an interpretation of the contracts. That is a legal matter which properly is argument in a brief, and no other place.

TRIAL EXAMINER: I don't see any legal argument in Section VII.

MR. HALL: Mr. Examiner, I think it is perfectly apparent to everyone——

TRIAL EXAMINER: Just a minute. I don't require any further discussion on the matter. The objection is overruled and the motion is denied.

MR. MYSE: I call Mr. Davis.

Thereupon

GEORGE H. DAVIS

resumed the stand, and having been previously duly sworn, was examined and testified further as follows:

CROSS-EXAMINATION (Continued).

By MR. MYSE:

Q. Mr. Davis, unless I specifically inform you otherwise, you may assume that as far as this morning is concerned my cross-examination is directed to your testimony and the statements appearing in Section VII of Exhibit 47.

Now, as I understand your testimony and the Exhibit 47 [10514] and the Section I have referred to, you included therein certain statements with respect to the contract between Penn Power and Light Company on the one hand and Safe Harbor and Holtwood on the other. Am I correct in that? A. That is right.

Q. Now, first of all at page 45 of Exhibit 47, paragraph 11, you state that that contract remains in force to October 31, 1946. Do I understand by that statement that the contract is no longer in force? A. No, it is an automatically renewable contract and at the time this was written so far as any notice of cancellation which is required 18 months prior to expiration, '46 was the earliest that it could be cancelled.

* * *

[10515] Q. Now, that contract as I understand your testimony obligates Holtwood and Safe Harbor jointly and severally as "Generating Companies" to supply certain requirements in the Lancaster and Harrisburg areas of the Pennsylvania Power and Light Company and the distribution area of the former Pioneer Electric Light Company adjacent to Holtwood. Isn't that correct? A. That is correct.

Q. Now, under that contract, Pennsylvania Water and Power Company is authorized to act as the agent for Safe Harbor. Isn't that right? A. That is true.

Q. Do you know whether or not that contract was entered into with the approval of Baltimore Company, and when I say Baltimore Company you can assume I mean the Consolidated Gas Electric Light and Power Company of Baltimore. A. As I understand it, all contracts since 1931 have to have the approval of Baltimore Company before they are entered into.

Q. Were they so approved? A. I assume they were.

• • •

[10516] Q. Now, what would you say that the major amount of revenue paid by Pennsylvania Power and Light Company is for? A. You mean in the bill rendered by Holtwood?

Q. No, sir. I said revenues paid by Pennsylvania Power and Light Company.? A. They pay for firm power delivered to supply the Lancaster load requirements under this contract.

Q. As a matter of fact, they also make payments for interchange energy which is received from the Holtwood-Safe Harbor system. Isn't that correct? A. That is true.

Q. They may also pay for special facilities under that contract. Isn't that right? A. That is true. That is a matter of the delivery of the energy which they really pay for.

MR. MYSE: May I have that answer, please?

[10517] (Answer read.)

By MR. MYSE:

Q. Well, you agree, do you not, that the interchange transactions are separate and distinct from firm power transactions, don't you? A. They are billed at a different rate under different provisions of the contract.

Q. And they are measured separately, too, are they not? A. That is true.

• • •

[10537] Q. Now, Mr. Davis, at page 44, the top paragraph of Exhibit 47, you made a statement, as I understand it, that under the contract the obligation of the generating companies may be reduced somewhat at their option during periods of low flow. Is that a fair summary of what your statement means? A. That was provided for in the original contract or in this contract.

Q. That is 76 you are referring to. Isn't that correct, Exhibit 76? A. That is right.

Q. Now, that means, does it not, that if during a period [10538] of low flow as defined in the contract, and I think you also made a note of it in your Exhibit 47, requirements of some other customer of Holtwood or Safe Harbor or both demands the use of some of the capacity or energy generated at Holtwood or Safe Harbor, the generating companies have the option of reducing the demand by Pennsylvania Power and Light Company and serving that other customer. Isn't that correct? A. I don't quite follow that.

Q. Well, is my statement correct or not?

THE WITNESS: Would you read that statement, please?

(Question read.)

THE WITNESS: I don't seem to recall any statement to that effect. The only modification that this paragraph provides for is that they may take the option of having the Lancaster load requirements on Holtwood reduced by 20 per cent during periods of low flow, and Pennsylvania Power and Light under that option could ask for 20 per cent excess during periods of high flow.

By MR. MYSE:

Q. Well, periods of low flow means, does it not, days on which the river flow at Holtwood is below 25,000 cfs. Isn't that correct? A. I believe that is the way they define it.

Q. Now, if you had a day of average river flow during a day at Holtwood of 20,000 cfs, as I understand that pro-

vision, and I want you to correct me if I am wrong, Holtwood would have [10539] the option of reducing the demands made by Pennsylvania Power and Light Company on the Holtwood-Safe Harbor system by any amount up to ten per cent on the peak. Is that correct? A. They would have that option if they accepted it under this contract.

Q. I am wrong. It was any amount up to twenty per cent. A. Twenty per cent on off-peak periods and ten on on-peak periods. You said it right. You said on-peak periods.

Q. It would be any amount up to twenty per cent during on-peak periods on low-flow days. Isn't that right? A. That is right.

* * *

[10546] Q. Now, referring to page 48 of Exhibit 47, you say that the contract involving supply to the Coatesville area of Philadelphia Electric Company continues until March 31, 1942. Am I to understand that is the time that contract terminated? A. That is automatically renewable for periods of three years unless an 18-months' notice is given to cancel it.

* * *

[10547] Q. The contract we have been referring to is identified in this record as Exhibits 73, 74 and 75. Is that correct? A. That is correct.

Q. Now, under that contract Hydro, as defined in that contract, is obligated to furnish the requirements of the Coatesville area. Isn't that correct? A. That is true.

Q. And how is Hydro defined in that contract? A. They call Holtwood and Safe Harbor "Hydro."

Q. That means that Safe Harbor as well as Pennsylvania Water and Power Company is obligated under that contract, does it not? A. It means it is a party to the contract.

Q. Doesn't it mean that it is obligated? A. The only obligation Safe Harbor has left is to reaffirm its oper-

ations under the other contract under which it sells its whole output.

MR. MYSE: I move to strike the answer, Mr. Examiner, [10548] as wholly unresponsive to my question.

TRIAL EXAMINER: The motion to strike is denied. What is the other contract that you referred to?

THE WITNESS: E, F and G.

MR. MYSE: We will get to that in due course, Mr. Examiner, but I would like to have an answer to my question as to whether or not Safe Harbor is obligated under this contract in his opinion?

MR. GOLDBERG: Mr. Examiner, it has been answered and the motion to strike it has been denied.

TRIAL EXAMINER: Do you have anything further to add to your previous answer?

THE WITNESS: As an engineering and operating matter, Safe Harbor has no physical ability to do anything under this contract.

By MR. MYSE:

Q. I didn't ask you about the physical ability. I asked you about the obligation. A. If it is a legal obligation, I don't know.

Q. Then if there is a legal obligation, you haven't considered it as one, have you? A. I have not.

• • •

[10550] Q. Now, how are the demands measured under Exhibits 73, 74 and 75 for purposes of billing? A. That is a 30-minute integrated demand, as I recall.

Q. Now, do you agree that if the same service had been measured on an integrated hourly basis, the demand would have been less? A. It would have to be the same or less.

Q. It would probably be less, would it not? A. Very likely it would.

• • •

[10551] Q. Mr. Davis, will you look at Article II, Section 1 of Exhibit 73? It is that Article II that spells out the obligations of the parties, does it not? A. Yes.

Q. And it indicates that Hydro shall be obligated to supply the requirements of Philadelphia Electric Company at Coatesville. Isn't that right? A. That is what it says.

Q. And the contract also says that Hydro means Safe Harbor and Penn Water. Isn't that correct? A. That is right.

Q. And there is no distinction drawn between Safe Harbor and Penn Water, is there? A. No, Safe Harbor is ignored entirely.

Q. Is there any distinction drawn between Penn Water and Safe Harbor? A. None whatever.

Q. You say Safe Harbor was ignored entirely. Was that your testimony? A. That is right.

Q. As I understand that, that means it is ignored by [10552] making itself a party and calling itself one of Hydro. Isn't that correct? A. The two names go under the title of Hydro in this contract.

Q. And that is true throughout the contract, isn't it?

MR. GOLDBERG: Let him finish.

By MR. MYSE:

Q. Had you finished? A. There are no operating acts specified to be performed by Safe Harbor.

Q. Are there any operating acts specified in the contract to be performed by Penn Water? A. No, they are specified to be performed by Hydro. Holtwood is the only company that has any ability to perform them.

MR. MYSE: I move to strike the answer with respect to the ability of Holtwood, Mr. Examiner, as not responsive to my question.

TRIAL EXAMINER: The motion to strike is denied

By Mr. Myse:

Q. But so far as the contract is concerned, there is no difference drawn between Penn Water or Holtwood as you call it and Safe Harbor. Am I correct in that? A. Holtwood and Safe Harbor are combined in the [10553] contract under the designation of Hydro.

Q. And there is no difference specified in the contract between the two. Is that correct? A. No.

• • • •

[10563] Q. Now, as I finderstand your Exhibit 47, pages 52 to 54, and the Tables 9, 10 and 11, which accompany those pages, you were there referring to the contract between Holtwood or Pennsylvania Water and Power Company, Safe Harbor, Baltimore Company, Pepco on the one hand, and The Pennsylvania Railroad on [10564] the other, identified in this proceeding as Exhibit No. 10. Is that right? A. That is right.

Q. Now, under that contract, the contract defined the word "Supplying Companies," does it not? A. Yes.

Q. Now, who are the Supplying Companies? A. Those are the four companies on the one hand as against the railroad company on the other, including Washington Company.

Q. When you say Washington Company, you mean Potomac Electric Power Company? A. That is right.

Q. Now, who are the "Electric Companies" as defined in that contract? A. They are the other three—Baltimore, Holtwood and Safe Harbor.

Q. What is the distinction between the Electric Companies and Supplying Companies in terms of obligations under that contract? A. Washington Company has no obligation to supply power unless it has it available. The total obligation for continuous service is placed on the Electric Companies.

Q. Now, can you refer me quickly to that provision of the contract identified as Exhibit No. 10, which you say [10565] relieves Pepco of the obligation to supply certain

services? A. Well, there is one reference to it in Section 2 of Article XII on page 22, but there is another one that is more specific than that.

Q. Section 2 of Article what? A. Article XII on page 22.

Q. Well, in Exhibit 10 there are different page numbers applicable, are there not? A. Oh, this is in the original contract, that page and article that I was referring to.

MR. GOLDBERG: Article XII, page 36 in the official exhibit.

By MR. MYSE:

Q. And that reference you made a moment ago to Section 2 of Article XII, actually appears on page 37. Is that right?

MR. GOLDBERG: He doesn't have the official copy before him.

THE WITNESS: The second paragraph on page 37, yes.

By MR. MYSE:

Q. Now, what other place in Exhibit 10 shows any reference to the relief for Washington Company or Pepco from the obligation to serve the railroad with certain services? A. That is the only one I recall. This is a little more than the one I referred to in the original contract.

[10566] Q. Now, under Article II, however, that provides, does it not, for the contractual supply as an obligation to the Railroad Company, as the obligation of Electric Companies? A. That is true.

Q. And Electric Companies is defined in the same contract as Safe Harbor and Penn Water without distinction. Isn't that correct? A. That is right. Safe Harbor, Penn Water and Baltimore without distinction.

Q. I stand corrected.

Who furnishes the special facilities for the railroad use under Exhibit 10? A. Certain lines and substations are furnished by Holtwood. Generating and converting facilities are supplied by Safe Harbor.

Q. Are any of the facilities listed on Table 9 of Exhibit 47 supplied or furnished by Baltimore Company? A. I believe not.

Q. Don't you know that they are not? A. I know they are not.

Q. As a matter of fact, they are all furnished by either PEPCO, Safe Harbor, or Penn Water. Isn't that correct? A. That is right.

[10567] Q. And to be entirely accurate, some of them are furnished by Susquehanna Transmission Company of Maryland, are they not? A. That is true. I have referred to Holtwood always in my study as including Susquehanna Transmission of Maryland.

• • •

[10568] Q. Now, Mr. Davis, these special facilities shown on Table 9 of Exhibit 47 to the extent they are furnished by Safe Harbor, are used in furnishing service to the railroad both in Pennsylvania and Maryland, are they not? A. They are used in delivering service to Holtwood and Baltimore.

• • •

Q. Does that mean that none of the facilities shown on Table 9 owned by Safe Harbor are used for furnishing service to the railroad? [10569] A. They are used for furnishing service to Holtwood, who in turn furnishes it to the railroad and to Baltimore.

Q. So that the energy generated by means of those facilities is actually consumed by the railroad. Is that your answer? A. That is right.

Q. Now, when you say that the services are furnished to Holtwood who in turn furnishes it to Baltimore, what do you mean by that? A. I mean that Safe Harbor generation is all sold at the low tension side of the transformers at the Safe Harbor plant to Holtwood and to Baltimore.

Q. How did you arrive at the conclusion that it is all sold at those low tension transformers to Holtwood? A.

That was the operating arrangement described in the contract.

Q. Which contract do you now have reference to? A. The contract identified as E, F and G.

• • •

[10570] Q. If I understand your testimony you say it is sold there because of the provisions contained in the contract identified as E, F and G. A. That is right.

Q. And that is the sole basis you have for that conclusion? A. That is right.

Q. Now, if I understand your testimony with respect to the services furnished to the railroad at both Thorndale and Perryville, those services originate at Safe Harbor, do they not? A. That is right.

Q. At least in large part? A. The energy is generated largely at Safe Harbor.

Q. Well, as a matter of fact, I don't think my statement was correct, Mr. Davis.

The services furnished to the railroad are furnished at Conestoga and Perryville. Isn't that correct? A. They are delivered to Holtwood's transmission system [10571] at Conestoga and Holtwood transmits to Thorndale and Perryville, or they are delivered to Holtwood's facilities at Safe Harbor, which is Conestoga. That is the same thing.

Q. You don't mean to say that Holtwood transmits to Thorndale, do you? A. They deliver to the railroad at Safe Harbor for Thorndale and deliver to Holtwood at Safe Harbor for Perryville.

Q. But there is no transmission facility owned by Holtwood or Safe Harbor between Conestoga and Thorndale, is there? A. Thorndale is just a metering point. That is the railroad's transmission line that goes from Safe Harbor to Thorndale.

Q. So the services delivered to the railroad west of Thorndale are delivered at Conestoga, are they not? A. That is right.

Q. And the services delivered to the railroad for use by the railroad south of Perryville are delivered at Perryville? A. That is right, delivered to Baltimore at Perryville.

Q. We will get to that in due course, but they are actually delivered to the facilities of the railroad at Perryville, are they not? A. To the facilities of the railroad, that is right.

[10572] Q. Now, the energy which you say is delivered to the railroad for railroad use west of Thorndale and south of Perryville is all 25-cycle single phase energy, is it not? A. That is right.

Q. Some of it may be converted from 60-cycle three phase energy at Safe Harbor. Isn't that right? A. That is true.

Q. Some energy may also be converted from 60-cycle three phase and furnished to the railroad at Benning in the District of Columbia. A. That is right.

Q. Now, as I understand it, all of the 25-cycle energy generated at Safe Harbor is transmitted through the Conestoga sub-station. Is that right? A. That is the way I understand it, yes.

Q. But not all of that energy is transmitted over the Perryville line, is it? A. No.

Q. Only that portion used from taps off the Perryville line is transmitted over the Perryville line. Isn't that correct? A. There are four circuits on the Perryville line. Two of them normally operate to deliver energy south from Perryville, and the other two north from Perryville, and there are two taps on the south lines, one at Fishing Creek and one at Conowingo.

[10573] Q. Fishing Creek is in Pennsylvania, isn't it? A. Yes.

Q. And Conowingo is in Maryland. A. Right.

* * *

[10578] Q. Isn't it a fact that some of the energy that is ultimately transmitted through Conestoga sub-station is

energy received at Safe Harbor from Baltimore Company? A. That is right.

Q. That is what is known as backfeed from Baltimore. A. I think so, yes.

Q. Do you know whether the amount of backfeed received [10579] at Safe Harbor and ultimately transmitted through Conestoga sub-station is substantial in amount? A. A substantial amount of backfeed reaches Safe Harbor. How much of it goes to the railroad company, I don't know.

Q. Did you make any study to determine the relative proportions of the backfeed which ultimately goes to the railroad? A. The proportion of backfeed used for firm power is the only proportion that I used or determined. Whether it was firm power delivered to the railroad or to some other customer, I didn't distinguish.

Q. You know that there was some amount of that backfeed, however, that did go to the railroad? A. I think so, yes.

Q. I think you testified just a moment ago that the energy furnished to the railroad via Conestoga sub-station was sold by Holtwood Company, as I remember the testimony. A. Some of that energy might be Baltimore's entitlement from Safe Harbor, and some Holtwood's entitlement. Any part of it that was made up of Holtwood's entitlement was sold by Holtwood.

Q. So when you were talking in terms of sales in that connection, you are referring back to the contract E, F and G when you are talking about entitlements, are you not? A. That is right.

[10580] Q. Now, is there anything in Exhibit 10 which specifies as to who sells the services to the railroad at various points? A. I don't think it is in Exhibit 10, no.

Q. You say you don't think. Will you tell me whether it is or not? A. There is nothing in Exhibit 10 which specifies any particular amount to be furnished by any particular party.

[10581] Q. And there is nothing in that Exhibit 10 which specifies that the energy delivered in Pennsylvania to the railroad is a sale by Holtwood and the energy delivered in Maryland to the railroad is a sale by Baltimore, is there? A. I don't think so. I haven't seen it.

Q. You say you don't think so. Don't you know there isn't? A. I never found it.

Q. Well, you studied it—— A. I am pretty well convinced it is not there.

Q. The fact is it isn't there. Is that right? A. I will take your word for it.

Q. I don't want you to take my word for it. Isn't it true? A. I will confirm it.

* * *

[10583] Q. Is there anything in Exhibit 10 which specified that Holtwood's service area is in Pennsylvania and Baltimore's service area is in Maryland? A. No.

* * *

[10590] Q. And as a matter of fact all bills rendered to the railroad company are rendered by Consolidated Gas Electric Light and Power Company of Baltimore? A. That is right.

Q. So that what those dollars represent in the last column of Table 9 and in column 4 of Table 11 for the various years, and what those kwh represent in the second to the last column of Table 10, and in the column 3 for the various years on Table 11 are an arbitrary division of the kwh delivered to the railroad in Pennsylvania as compared to the kwh delivered to the railroad in Maryland, together with an arbitrary division of the dollars received by Baltimore based on those kwh delivered in the respective areas. Isn't that right? A. The dollars are divided on the ratio of kilowatt hours, but I wouldn't say the kilowatt hours was an arbitrary division. It is an actual measurement.

Q. It is a measurement of the kilowatt hours delivered in each area. A. That is right.

Q. There is nothing in Exhibit 10 of the Pennsylvania [10591] Railroad contract which specifies those respective geographic areas, is there? A. Nothing.

• • •

[10601] Q. How is Safe Harbor compensated for the 25-cycle single phase energy which is ultimately used by the railroad in Pennsylvania and Maryland? A. It is compensated for all of its energy by Holtwood and Baltimore.

Q. I didn't ask you about all of its energy, Mr. Davis. I asked you about this portion of the 25-cycle single phase energy ultimately used by the railroad in Pennsylvania and Maryland. How is it compensated for that? [10602] A. That is included in all of it.

Q. Specifically how does it get its compensation? A. From Holtwood and Baltimore for its total output.

Q. Now, what contract if any does it get that compensation under? A. The E, F and G.

Q. Does it get any under H and I? A. Safe Harbor?

Q. Yes. A. It gets nothing under H and I.

Q. How is Safe Harbor compensated for the energy furnished to the railroad in Pennsylvania?

MR. GOLDBERG: I object to that, Mr. Examiner. It has been answered.

TRIAL EXAMINER: I will permit it.

THE WITNESS: Safe Harbor gets compensation for everything it produces at the——

By MR. MYSE:

Q. I haven't asked you about everything it produces. A. Anything you want to name is included in "anything it produces", and the answer will be the same.

Q. I would like a specific answer as to how it is compensated for the 25-cycle single phase energy used by the railroad in Pennsylvania.

MR. GOLDBERG: That has been answered twice.

[10603] TRIAL EXAMINER: Do you have any doubt about what he has said?

MR. MYSE: Yes, I think he is clearly evasive on the point.

TRIAL EXAMINER: Now, can you answer the question directly?

THE WITNESS: There is no specific item of energy set out for any compensation. It is all compensated for in one block at the Safe Harbor low tension transformer terminals.

By MR. MYSE:

Q. Under what contract? A. E, F and G.

Q. Do I understand, then, that Safe Harbor is compensated for the 25-cycle energy ultimately used by the railroad in Pennsylvania under E, F and G?

* * *

THE WITNESS: It doesn't make any difference where any energy that is generated at Safe Harbor is used. It is all [10604] compensated for at the terminals of the transformers in the Safe Harbor plant.

* * *

Q. Well, how is Penn Water compensated for the energy that is consumed by the railroad in Maryland?

MR. GOLDBERG: Which energy?

MR. MYSE: The 25-cycle single phase energy.

MR. GOLDBERG: You mean which Penn Water sells?

THE WITNESS: Any energy that Holtwood is entitled to from Safe Harbor that goes into Maryland is sold by Holtwood to Baltimore Company.

By MR. MYSE:

Q. How does it get its compensation from the Baltimore Company for that energy? A. It gets its compensation through H and I.

Q. How does Safe Harbor get its compensation for the special facilities it provided to the railroad under the contract identified in this proceeding as Exhibit 10? [10605] A. Under the contract E, F and G.

Q. There is no doubt in your mind that those special facilities provided by Safe Harbor were provided solely for the use of the railroad? A. That was the cause of their being installed.

Q. Well, now, how is Penn Water or Holtwood as you call it compensated for those facilities which it installed for the use of the railroad, namely the Conestoga substation and Perryville line? A. It gets compensation from Baltimore by the portion of the bill that is remitted to Holtwood.

Q. What about that portion of the Perryville line that lies in Maryland? How does Holtwood get its compensation from Baltimore for that portion? A. It would get it the same way.

Q. Through F and I? A. It would get what it does not get from the railroad through H and I.

Q. Well, does the amount which Baltimore pays Penn Water, and as I understand that, on Table 10, the last column shows the amount, compensate Penn Water for special facilities provided for the railroad? A. That is right.

Q. All of the special facilities provided for the railroad? [10606] A. Well, it is the same proportion of the special facilities that it is of the energy, and if Holtwood supplies more or less of those special facilities than it gets compensation for in this bill, that is washed out under the terms of H and I. It would get any difference there.

• • •

[10607] Q. Do you know what proportion of the special facilities provided by Penn Water to the railroad are provided for use in Pennsylvania as distinct from use in Maryland? A. Penn Water provides very little special facilities for use in Maryland.

Q. Well, they provide part of the Perryville line, don't they? A. That is right. The Perryville line and Conestoga substation is supplied entirely by Holtwood——

Q. Well—— A. —for delivery to Perryville, Fishing Creek and Conowingo.

* * * *

Q. Well, now, insofar as the delivery to the railroad at Fishing Creek is concerned, that is a very small percentage of the total delivered over the Perryville line. Isn't that right? A. I think so. Yes.

Q. So you can say substantially all of the use of the Perryville line is for service to the railroad in Maryland. Isn't that correct? A. The only other outlet is through the trolley meter [10608] at Perryville. Otherwise, that would be delivered to the railroad at Perryville in Maryland.

Q. Can't you answer my question directly, Mr. Davis?

* * *

THE WITNESS: Well, only half of the Perryville line is connected so that it can supply anything in Maryland except through the trolley. The other half is for the supply or for connection with Philadelphia Electric Company.

By MR. MYSE:

Q. Well, at least to that extent that you have half of the line serving the railroad, substantially all of that half is used for service to the railroad in Maryland? A. A large portion of that half is supplied to the railroad in Maryland.

Q. And similarly a large proportion of Penn Water's investment in Conestoga substation is used for service to the Perryville line which in turn is largely a service to the railroad in Maryland. Isn't that right? A. The same proportion of the substation as the line.

Q. Now, with respect to these other two circuits you spoke of, are they used solely for interchange, as you call it, with P. E.? A. They deliver power to the railroad lines

at Perryville [10609] which supply service north of Perryville, and that is interchange with Philadelphia Electric Company.

Q. Both of them? A. Both.

Q. The two circuits? A. That is right.

Q. Is that the only use made of those lines? A. There is no use except to deliver power to the Philadelphia Electric Company's area, to the railroad in the Philadelphia Electric Company's area.

Q. Now, what you mean by that I take it is that you don't have any doubt that the energy which is transmitted over those two circuits to Perryville is not used for the railroad, do you? A. Oh, no. It is all used for the railroad.

• • •

[10634] Q. And when you say the Philadelphia Electric Company's [10635] area, I take it you refer to a contractual area under some contract which is not in evidence in this proceeding. Is that right? A. It is my impression that in the interchange contract it specifies north of Perryville and east of Thorndale as Philadelphia Electric Company's area, and west of Thorndale and south of Perryville as the electric companies' area.

MR. GOLDBERG: May we have the exhibit number reference of the agreement you just referred to?

THE WITNESS: That is Exhibit Number 134.

• • •

TRIAL EXAMINER: Electric companies?

THE WITNESS: That means Holtwood, Safe Harbor and Baltimore, according to the contract. I find that in the interchange agreement.

By MR. MYSE:

Q. You do find it? A. Yes.

Q. What Section? A. That is Section 1.

• • •

[10651] MR. MYSE: I would like to know now, Mr. Examiner—it is a very simple question—whether or not when he used the phrase "Holtwood sales" he meant that Holtwood was acting as agent for itself and Safe Harbor. I don't know what his answer is, and I would like an answer to that question.

MR. GOLDBERG: You mean, did he consider that Holtwood sells it alone?

MR. MYSE: No, sir, that isn't the question.

TRIAL EXAMINER: He may answer the question, but you are not called upon to construe the contract any further than you construed it in preparing the exhibit and your testimony.

THE WITNESS: I construed it in my exhibit as Holtwood dealing with Philadelphia Electric Company and with Pennsylvania [10652] Power and Light Company for the sale of firm power just as if Safe Harbor had never been mentioned in the contract.

By MR. MYSE:

Q. Do I understand that answer to mean you did not consider that Holtwood was acting as agent for Safe Harbor? A. I didn't consider that word "agent" at all.

Q. Well, did you consider that Holtwood was acting as agent for Safe Harbor when you said Holtwood made the sales to the three Pennsylvania customers that I referred to on Table 4? A. I considered that Holtwood was making those sales itself.

Q. Does that last answer mean that you did not consider Holtwood as agent for Safe Harbor? A. Holtwood was selling the power——

TRIAL EXAMINER: Just a minute, Mr. Witness.

Answer the question as directly as you can.

THE WITNESS: I haven't answered as directly as I might because I don't know just what he is putting into

that word "agent"; whether he has some legal concept I don't understand or not.

TRIAL EXAMINER: You are not called upon to guess what counsel is trying to eventually arrive at through his questions. You just answer his questions as put to you and if on re-direct examination your counsel still decides there is something [10653] that should be covered, he may bring that out.

THE WITNESS: I considered in all the study I have made that Holtwood was acting alone.

By MR. MYSE:

Q. That it was not acting as "agent" for Safe Harbor? A. No.

Q. Now, the amount of "Holtwood sales of energy" shown on Table 4 of Exhibit 47 for Pennsylvania Railroad Company in the year 1944 is actually the amount of energy delivered to the railroad in Pennsylvania. Isn't that correct? A. That is true.

Q. Now, who collected the money for that delivery? A. Baltimore collected the entire amount from the railroad company, and Holtwood collected for this 194 million from Baltimore.

Q. You say Holtwood collected for the 194 million from Baltimore. Actually what happened was that the total amount collected by Baltimore was divided up on the basis of the ratio of 194,082,000 kwh to the total amount of energy furnished the railroad in the year 1944. Isn't that right? A. That is right. That is the way they handled the bill.

Q. Now, Holtwood didn't actually render a bill to the Pennsylvania Railroad, did it? A. No, the railroad didn't care which one the power came [10654] from.

• • •

[10657] Q. Now, Table 5 of Exhibit Number 47, you show what is labeled Pennsylvania Water and Power Company monthly revenues and payment for interchange power over

northern ties, and you include what you label "Purchases and Sales, Pennsylvania Power and Light Company," do you not? A. That is right.

Q. Now, actually the purchases and sales of interchange to Pennsylvania Power and Light Company are made [10658] by Generating Companies as defined in that contract. Isn't that correct? A. That is what the contract says.

Q. And "Generating Companies" again includes Safe Harbor as well as Pennsylvania Water and Power Company. Isn't that right? A. That is also stated.

TRIAL EXAMINER: What contract was that?

* * *

Q. And the agreement we just mentioned a moment ago [10659] is the one covering the purchases and sales to Pennsylvania Power and Light Company, as you label it, which has been identified in this record as Exhibit Number 76 and 77. Isn't that right? A. That is right.

* * *

[10660] Q. While we are on homework, at 10523 you agreed to make a check to determine what part of the supply to the Lancaster area was from Safe Harbor, did you not? A. I said I didn't remember whether I had ever done that, and you asked me to check up and see if I had and I found I had never figured out a percentage, although you asked me if a large portion of the delivery did not come from Safe Harbor, and I find that it did.

* * *

[10662] Q. Is there anything in Item H beginning with page 25 of the supplemental agreement, page 27, the supplemental agreement as of June 1, 1931, which specifies the transmission services or facilities furnished to Baltimore by Holtwood? A. The provision for the transmission from Safe Harbor to Baltimore is not included in this contract, that is from Safe Harbor to Baltimore. From Holtwood to Baltimore is what is provided here.

Q. Is there anything provided in either H or I concerning the provision of transmission services or facilities from Ellicott City to Takoma Park? A. No.

Q. Where do you have to go to find anything in any contract covering those services or facilities? A. You find those in E, F and G.

[10663] Q. Can you be more specific to the article in E, F and G involved, or articles? A. Article VII on page 9 is the description of the transmission services.

Q. That however, covers only the 220 volt transmission services between Safe Harbor and Baltimore and does not cover the 220 transmission line between Ellicott City and Takoma Park, does it? A. No, that is in a supplement, I believe.

Q. Well, let's see if we can specify which supplement and which paragraph. My understanding is that it is Item "F" consisting of the supplemental agreement as of August 1, 1932. Isn't that correct? A. That is right.

Q. So it can be said that in so far as transmission services and facilities are concerned, P. W. furnished service to Baltimore under E, F and G. Isn't that correct? A. That is right.

* * *

[10685] Q. Well, are you saying that Unit Number 2 of the 25-cycle single-phase generating units was provided in the initial development of Safe Harbor? A. The general provision is in the railroad contract for Electric Companies, so-called, to provide all the necessary generating, transmission and switching equipment.

Q. It doesn't say that the generating facilities to be provided by Electric Companies under Exhibit Number 10 shall be provided by either Penn Water or Safe Harbor, does it? A. It says Electric Companies.

Q. It doesn't specify who shall provide the facility, does it? A. I don't find anything except "Electric Companies shall provide——"

Q. So the answer is it doesn't specify. Isn't that right? A. That is right.

Q. Now, was the Number 2 Unit at Safe Harbor—that [10686] is, the 25-cycle single-phase unit we have been referring to—provided under the terms of E, F and G or Exhibit Number 10 which you have just referred to? A. That was provided for under the provisions of Exhibit Number 10.

Q. Now, how about the frequency changer at Safe Harbor? Is that also a facility provided under Exhibit 10, or is it a facility provided under Article V of Item E, page 8, that we referred to? A. That seems to be provided for under Article III of Exhibit 10 also included in the statement "All Generating Transmission Switching Equipment."

Q. Then as I understand your answer, it was not provided under Item E. A. That is right, I believe it was not.

Q. And again Exhibit Number 10 does not specify which of the Electric Companies was to provide the converter equipment at Safe Harbor or any other place, does it? A. It does not.

Q. With respect to these cable circuits that you made reference to as having been provided under Article V of Exhibit E, those weren't just ordinary cable circuits, were they? A. They were cable circuits similar to the shorter run of cable between generator and bus, only this happened [10687] to be a long run.

Q. There was an abnormality in their location, however. Isn't that correct? A. That is true.

Q. That abnormality that I have reference to is a tunnel that was required through a hill back of Safe Harbor hydro plant. Isn't that correct? A. So I understand.

Q. And that tunnel involved some pretty costly work, did it not? A. I believe so.

Q. There was also an elevator involved to the top of the hill. Isn't that right? A. There might be. I never saw it.

[10688] Q. And all those costs were incurred by Safe Harbor, were they not? A. That is right.

• • •

[10694] Q. Well, now, does Penn Water or Susquehanna furnish any energy or capacity services via the Gunpowder line? A. No.

Q. Merely furnishes the facility. Isn't that correct? A. That is all.

Q. And there is no furnishing of energy in connection with the furnishing of those facilities. A. No.

• • •

[10700] Q. Now, I understand your testimony to be in the last few answers, that Exhibit 11 did not change the obligations, whatever they were, under Exhibit 10. Is that correct? [10701] A. I believe you are right.

• • •

[10703] Q. Now, at page 55 of Exhibit 47 in the second paragraph under the heading "Introduction" you say that under H and I Baltimore Company purchases all power and energy available to Holtwood in excess of that delivered in Pennsylvania for the above requirements, and as I understand your statement at [10704] page 55 when you say in excess of that delivered in Pennsylvania for the above requirements, you were referring to the requirements specified in the immediately preceding paragraph. Is that right? A. That is right.

Q. Now, the requirements that you specify in the immediately preceding paragraph are limited to firm power requirements, are they not? A. Yes.

Q. So that your statement as you have it on page 55 in the second paragraph under the heading "Introduction" means, as I understand it, that under H and I Baltimore Company purchases all power and energy available to Holtwood Company in excess of the firm power requirements delivered in Pennsylvania. Is that right? A. Yes.

Q. Now, will you point out to me in what provision of H and I it limits the amount available by reference to the firm power requirements? A. The words used are "In excess of that required to supply other customers", and my interpretation was that only the firm power is a requirement.

Q. Will you refer me to the Article in H and I that you relied upon for that construction? A. That is stated in Article 4, on page 6.

[10705] Q. Well, now, just a moment. Have you finished your answer? A. I was looking for another place, but I haven't found it.

Q. Will you do so, please? A. I don't find any other place right now.

Q. Article 4 on page 6 in Item H is in the contract agreement dated December 31, 1927, is it not? A. That is true.

Q. Now, in your opinion hasn't Article 4 been superseded by the supplement dated June 1, 1931, also included in Item H? A. That is true.

Q. So that Article 4 is no longer applicable. Isn't that right, Mr. Davis? A. I don't know that that is superseded by any other statement of entitlements. I think that still holds that all energy available in excess of requirements of other customers, is the entitlement of Baltimore.

Q. Is it your testimony that Article 4 in Item H is not superseded by Article II of Item H, page 28? A. That is what I was looking for. That seems to be the latest agreement, although——

Q. Well, do you agree with me that Article II, page 28 of Item H has superseded Article 4 on page 6? [10706] A. I believe that is right.

Q. Now, is there anything in Article II, page 28 or 29 which says what you say at page 55 of Exhibit 47? A. This says, "Not otherwise disposed of in performance of now existing contracts".

Q. And that would include energy disposed of under existing contracts for interchange purposes, would it not? A. My interpretation is that anything in excess of requirements which are obligations of contracts for firm power is at the disposal of Baltimore Company, and is disposed of in these other contracts in accordance with Baltimore's request or approval.

Q. You make that construction in the light of the language in Article II, page 28 and 29 of Exhibit H. Is that right? A. Well, that is part of it.

Q. Well, what other language, then, and when I say "language" I am referring to language in the contract, Item H, now in effect? A. Well, I would make that interpretation also in connection with the statement on page 28 in the middle of the top paragraph.

Q. That is a "Whereas" clause you are referring to, is that right? A. That is right.

[10707] Q. Now, what particular statement in that paragraph do you have reference to now? A. That is in regard to "coordination can be attained and greater economies effected by the sale to Electric of all Power's electric power and energy (including that to be purchased from Safe Harbor) available for such sale,".

Q. Well, if the energy is sold to P. P. and L. for example, it isn't available to Baltimore, is it? A. It is sold to P. P. and L. when it can be sold more economically there than it can be used in Baltimore or some other place on the system.

Q. When it is so sold, it isn't available to Baltimore, is it? A. No, that is sold because Baltimore can get more advantage out of it by selling it there than by having it delivered down to the city.

Q. You say Baltimore sells that energy? A. It is sold for the account of Baltimore.

Q. Are you saying that the sales of interchange energy shown on your Table 6, for example, which you label inter-

change transactions by Holtwood, are all transactions for the account of Baltimore?

TRIAL EXAMINER: What table is that?

MR. MYSE: 6, for example, or table 5.

THE WITNESS: Yes, that is what I am saying; that is a sale of Baltimore's entitlements.

[10708] By MR. MYSE:

Q. That isn't what my question was. My question was, are you saying that those sales you show on Table Number 5 and Table Number 6 of Exhibit 47 as Sales by Holtwood or transactions by Holtwood are all transactions for the account of Baltimore? Now, will you answer that question, please? A. Yes.

Q. That is your statement, is it? A. That is right.

Q. Where in these cases are the deliveries made for the account of Baltimore? A. They are made over the northern connections of Holtwood with the northern companies.

Q. Those deliveries are made in Pennsylvania for the account of Baltimore, I take it. A. That is right.

TRIAL EXAMINER: What are you talking about now, these Pennsylvania Water sales to Metropolitan Edison, Pennsylvania Power and Light?

THE WITNESS: Interchange power, yes, not firm.

By MR. MYSE:

Q. Those deliveries are made by whom in each case? A. Those deliveries are made by Holtwood.

Q. And they are made off the facilities of Holtwood [10709] to the facilities of the various Pennsylvania utilities we have been referring to? A. That is right.

Q. In your opinion do the sales take place at that point? A. Yes.

Q. Who collects the revenues for such sales? A. Holtwood collects it in the first instance.

Q. Who renders the bills for such sales? A. Holtwood renders the bills.

Q. Those sales are all—that is the amount of the sales I take it are all metered in Pennsylvania. A. That is right.

Q. Does Baltimore Company report those sales in its FPC Form 1——

MR. GOLDBERG: Would that be decisive?

MR. MYSE: I am just asking him the question. He seemed to think it was decisive in other connections.

TRIAL EXAMINER: All right.

THE WITNESS: Did you ask a question?

MR. MYSE: Yes. Will you read it back, please?

(Question read.)

By MR. MYSE:

Q. —report for the year 1944? A. No, I believe not. [10710] Q. Now, you are not saying, are you, that Baltimore is a party to the interchange contracts with the Pennsylvania customers, are you? A. No.

Q. Have you ever found any document any place, anywhere, in which either Penn Water or Baltimore made such a statement—that is, that the sales to the Pennsylvania customers we have been referring to are made for the account of Baltimore? A. I don't know of any.

Q. What did you base your opinion on? A. I based that on the general conditions of contract H and I under which Baltimore pays for all the costs of that energy and outside of the firm obligations that Holtwood has in Pennsylvania, Baltimore has the direction of what shall be done with it, as to where it can be disposed of to the greatest advantage of Baltimore.

Q. Now, in what provision of Item H and I do you find any specification of the authority to Baltimore to make a direction for the disposition of Holtwood or Safe Harbor

energy for that matter? A. Safe Harbor energy is not included in that.

Q. Let's confine it to Holtwood energy then. A. Holtwood energy and its entitlement from Safe Harbor.

[10711] Q. You point out to me, if you can, and I am telling you in advance there is no such provision, but I would like to have you point it out if you can, or whatever provision you relied on in making that statement.

MR. GOLDBERG: You mean you think there isn't, Mr. Myse?

MR. MYSE: I am sorry I was interrupted. May I have the question.

TRIAL EXAMINER: Read the question.

(Question read.)

THE WITNESS: I relied on the condition in contract H and I which places Baltimore in the economic position of being benefited by anything that is done with interchange energy in excess of firm power, and being damaged by anything that is done to decrease the revenue received from it. In other words, it is based on the economic position of the old adage of "Who pays the fiddler has a right to call the tune."

By MR. MYSE:

Q. But I am asking you, Mr. Davis, which specific article are you now referring to when you make those statements? A. The provision of Baltimore paying the entire costs of Holtwood generation plus its power bill from Safe Harbor.

Q. Are you referring to Article III, page 29 of "H" [10712] when you make that statement? A. That is where it starts to specify——

Q. Well, where else? A. Just a continuation of that which specifies all the payments to be made.

Q. Is there anything in Article III that says Baltimore has the authority to direct the disposition of Holtwood

energy? A. No, I get that from the general operating arrangement and conversation with the operating committee.

Q. Who in the operating committee? A. Well, I have talked with Mr. Spaulding and Mr. Greer. That particular information didn't come from Mr. Spaulding.

Q. Did it come from Mr. Greer? A. Mr. Greer in general conversation said that that energy is placed where it will be of the greatest economic advantage to Baltimore Company.

Q. Did Mr. Greer ever tell you that Baltimore had the authority to direct the disposition of Holtwood energy? A. No, that is my translation of it.

Q. Now, where did you get that translation from, other than the statements that you received from Mr. Greer? A. This situation that is presented here in Article III of Contract "H."

[10713] Q. And is that the only article you have reference to in the contract? A. The article which provides for Baltimore Company standing responsible for all the costs of Holtwood Company.

Q. Well, is Article III the only one you have reference to in making that statement? A. I don't have any other in mind right now.

Q. Well, look through the contract and tell me. I think it is very important to find out what you were referring to when you arrived at that conclusion. A. Well, we will let it stand on that article.

Q. That is the only one you had reference to? A. That is all I have in mind at the present time.

Q. Now, Mr. Greer is an employee of Consolidated Gas Electric Light and Power Company of Baltimore, is he not? A. I understand so.

Q. Don't you know? A. I never saw his pay check. I understand he is an officer of Safe Harbor Water Power Corporation and is a member of the organization of Consolidated.

Q. When you say "a member of the organization," you mean an employee? A. That is right.

Q. Well, as a member of the operating committee he represents Baltimore, does he not? [10714] A. I think so.

Q. Don't you know that? A. It is my understanding that he does.

Q. Don't you know it?

MR. GOLDBERG: Mr. Examiner, I submit if the witness states that is his understanding, that is his answer.

THE WITNESS: I have seen his signature on operating committee statements.

By MR. MYSE:

Q. Do you know that signature is as a member of the operating committee on behalf of Baltimore? A. That is the way I understand it.

Q. He certainly doesn't sign any documents presented by the operating committee as an officer of Safe Harbor, does he? A. That title is not attached, no.

Q. In having these conversations with either Mr. Greer or Mr. Spaulding, did either one or both of those gentlemen tell you who did make the operating arrangements for interchange sales? A. I think the direct negotiations are made by Holtwood; that is, the contract with the northern companies is with members of the Holtwood organization.

Q. And Holtwood carries out the arrangement, too, don't they? [10715] A. That is right.

Q. Who actually makes the decision as to what energy will be sold as interchange? A. I think the Holtwood organization does what you might call the determination of when it can be interchanged advantageously one way or the other.

Q. Where does all this energy originate that is sold as interchange to the Pennsylvania customers, do you know?

A. Holtwood and Safe Harbor. Sometimes some will come up from Baltimore.

Q. Do you know how much that latter amount is? A. It is a very small amount. I don't recall.

Q. What do you understand by the following, what do you understand the meaning to be of the following phrase:

"Electric shall be entitled at all times to all the electrical capacity and energy from time to time available to Power . . . and not otherwise disposed of in performance of now existing contracts, . . ."

A. That was what I had in mind when I said requirements that are obligations of Holtwood to supply power and not voluntary when-as-and-if arrangements of interchange.

MR. MYSE: Let's have the answer, please.

TRIAL EXAMINER: Read the answer.

[10716] (Answer read.)

THE WITNESS: I should add I mean in excess of those firm obligations and not including the interchange.

By MR. MYSE:

Q. Well, as I understand your testimony, then, you construe the phrase "—not otherwise disposed of in performance of now existing contracts" to mean not otherwise disposed of in performance of firm power obligations under now existing contracts. Is that right? A. That is the way I interpreted it.

Q. And you have so interpreted that language in all your studies in this record. Is that right? A. I have used it in that way in the studies.

Q. Now, did you recognize the language I used in my question as the language appearing in Article II of Exhibit "H"? A. That is right.

MR. GOLDBERG: That is not exactly as it appeared in Article II. Is that right, Mr. Myse?

MR. MYSE: You had made the same construction; however, of the language that does appear in Article II of Exhibit "H." Isn't that right?

THE WITNESS: That is correct.

By MR. MYSE:

Q. Now, if you will refer to page 56 of Exhibit 47 [10717] under the heading "Service to be Performed," sub-paragraph (d) you say "After satisfying its firm power commitments to Pennsylvania Company, Philadelphia Company, York Company and Railroad Company, to place the balance of its available power and energy at the disposal of Baltimore Company," do you not? A. That is right.

Q. And I take it that that language in Exhibit 47 is the result of your construction of Article II of Exhibit "H", page 28 and 29. A. That is the same statement I just made to you as what I interpreted (d) to be.

Q. Now, will you look at page 41, please, of Exhibit 47? Under paragraph (c) you say that the available output of Holtwood is disposed of under a contract for the sale of all the balance of available power and energy to Consolidated, do you not? A. That is right. That is another statement of the same idea.

Q. However, immediately preceding that you pointed out that part of the available output of Holtwood hydro is disposed of under certain interchange contracts. Isn't that right? A. That is right.

Q. Do I understand you to mean now that you would [10718] like to change the statement at page 41, sub-paragraph (c)? A. That balance should include the interchange, that is true.

Q. Then your statement as it appears on page 41 is not correct in your view. Is that right? A. That misconstrues a bit the basis on which I have proceeded, that the interchange is a part of the excess to which Baltimore is entitled.

Q. At least it is inconsistent with the statements I have referred to on page 55 and 56. Isn't that right? A. That statement there should include the interchange in that balance available to Baltimore.

[10719] Q. Now, if as you say, Baltimore is entitled to the balance of energy and capacity available from Holtwood only after firm power commitments in Pennsylvania have been taken care of, that means it is entitled to the balance of all of the energy no matter what the river flow conditions there are. Isn't that right? A. That is true.

Q. So that it isn't just entitled to the balance of the energy under average riverflow conditions? A. It is entitled to the balance as it comes.

Q. Well, my statement is correct, that it is not entitled to only the balance under average riverflow conditions, is it not? A. Oh, it is entitled to the balance each year whatever the flow produces.

Q. And if the riverflow for a particular year is in excess of average over a thirty-year period, they are entitled, as I understand your testimony, to the energy which is the balance available even though that amount of energy is in excess of the energy which would be produced under average riverflow conditions. Isn't that right? A. Yes.

Q. And the same thing is true with respect to capacity available after firm commitments have been met up in Pennsylvania if you are right in your construction. Isn't that right? [10720] A. That is right.

• • •

[10724] Q. Yesterday I asked you certain questions with respect to 73, 74 and 75, which is the Coatesville contract, and at page 10548, lines 13 to 15 in response to a question by the Trial Examiner you stated that "As an engineering and operating matter, Safe Harbor has no physical ability to do anything under this contract", and I take it you were referring to the contract identified in these proceedings as Exhibit 73, 74 and 75. Is that right? A. Yes.

Q. Now, as a matter of fact, Holtwood has substantial generating facilities, does it not? A. Yes.

Q. And Safe Harbor has substantial generating facilities? A. That is true.

Q. From which facilities are available a substantial amount of energy and capacity and other services. Isn't that correct? A. That is true.

Q. And there is a transmission line connecting the Safe Harbor plant with the bus bar facilities at the Holtwood plant, is there not? [10725] A. That is right.

Q. And there is another transmission line running from the bus bar in the Holtwood plant to the Philadelphia Electric Company area at Coatesville, Pennsylvania, is there not? A. That is right.

Q. Now, given those generating facilities at Safe Harbor connected to the area of the Philadelphia Electric Company system at Coatesville, Pennsylvania, by a transmission line, do you still say that Safe Harbor has no physical ability to generate energy and have that energy delivered to Philadelphia Electric Company at Coatesville?

MR. GOLDBERG: Is this a hypothetical question you are putting to the witness?

MR. MYSE: No.

THE WITNESS: Certainly it has physical ability to generate energy, but that is all.

By MR. MYSE:

Q. Does it have physical ability to generate that energy and have it delivered to Coatesville? A. No.

Q. It has no physical ability. Why do you say that? A. Because it has no transmission line to get it there.

Q. So, as I understand your testimony, Safe Harbor has no physical ability to do anything under contracts 73, 74 [10726] and 75 because it has no transmission line which it owns to get the energy there. Is that it?

MR. GOLDBERG: Just a minute.

Is that question asking him if that is what he meant by his answer at lines 13 to 15 of transcript 10548?

MR. MYSE: Read the question. I think you misconstrued it.

TRIAL EXAMINER: Read the question.

(Question read.)

MR. GOLDBERG: In other words, the question as I understand it, Mr. Examiner, refers to the questions and answers just had this afternoon and not to the answer given on transcript 10548.

MR. MYSE: Well, Mr. Goldberg can construe it any way he wants. I think my question is clear.

TRIAL EXAMINER: All right. You may answer the question, Mr. Witness.

THE WITNESS: As an engineering and operating matter, Safe Harbor has no physical ability to do anything under the Coatesville contract because, first, it has no transmission line, and second, it has no energy after it leaves the plant to deliver. It is sold before it goes through the transformers at Safe Harbor.

By MR. MYSE:

Q. Well, the amount of energy that it has left after [10727] whatever sales you had reference to has nothing to do with physical ability, does it?

TRIAL EXAMINER: I think you are arguing with the witness now.

MR. MYSE: I would like to understand what he meant by physical ability.

TRIAL EXAMINER: I think it is clear. I will rule the question out.

* * *

Q. Now, what provision of the contracts in these proceedings if any do you base that latter statement on, that is namely, it has no energy to be sold after it leaves the transformers at Safe Harbor?

MR. GOLDBERG: I think it is repetitious, Mr. Examiner. All we have got to do is look at transcript 10548, and the preceding answer at the bottom of 10547 which precedes that answer on 10548.

MR. MYSE: I don't see any place where I asked this question.

MR. GOLDBERG: It is the same subject matter.

MR. MYSE: That may be true, but this is a different question.

[10728] MR. GOLDBERG: You use new words——

TRIAL EXAMINER: Just a minute.

MR. GOLDBERG: That doesn't make it less repetitious.

The answer I refer to begins at line 22 on page 10547.

MR. MYSE: Mr. Examiner, I must object to that kind of interjection by Commission counsel. I think it is highly unwarranted in the middle of my cross-examination.

TRIAL EXAMINER: All right.

Just let me have a chance to read it, please.

Read the question.

(Question read.)

TRIAL EXAMINER: I don't agree counsel is repetitious on the basis of what has been said on pages 10547 and 10548, but I do think it is repetitious on the basis of all the testimony.

MR. MYSE: I haven't even begun to ask him about the Safe Harbor contract if that is what he had reference to.

TRIAL EXAMINER: The question taken in its present place in the cross-examination is ruled out.

By MR. MYSE:

Q. Mr. Davis, did you have any reference to the contract E, F and G, Article II or Article III in making the

statements you made this afternoon with respect to the ability of Safe Harbor to perform physical operations in connection with the contract, Exhibits 73, 74 and 75?

[10729] MR. GOLDBERG: Roman II and III of "E". Is that it?

THE WITNESS: Did you name another Article—besides Article II in E——

MR. MYSE: II and III.

THE WITNESS: Well, those are the articles that I rely on for saying that Safe Harbor has no energy after it leaves the plant. As soon as it strikes the transformers, it belongs to Holtwood, and Holtwood has the transmission line. It belongs to either Holtwood or Baltimore, and Holtwood has the only means of delivering it from Safe Harbor to Coatesville.

TRIAL EXAMINER: Now, I think the fact that counsel—just a minute.

Read me the first part of the answer.

(Answer read.)

TRIAL EXAMINER: I think the fact that counsel was able to name the provisions which he appeared to be confident the witness would affirm as those upon which he would base his answer to that question, sustains the Examiner's previous ruling. The question could only lead to repetitious testimony.

MR. MYSE: I want to say to the Examiner that I wasn't confident and I am still not confident that those are the only provisions, and I want to pin him down to that.

TRIAL EXAMINER: You may not be confident, counsel, but the Examiner is.

By MR. MYSE:

[10730] Q. Now, the construction of Article II of Exhibit —or Item E that you have just referred to—is basic to all your studies in this record, is it not? A. That is right.

[10738] Q. Well, you may correct any statement you made immediately prior to the recess as far as I am concerned. A. You asked me under what contract the energy from Baltimore to Safe Harbor over the 220 kv lines was sold to Holtwood. I answered wrongly, E, F and G. It has nothing to do with that contract. It is sold under H and I.

Q. As a matter of fact, you answered E, F and G twice in your answer, did you not? A. I might have, but H and I is the right answer.

Q. Now, what provision under H and I do you now have reference to? A. Article 6 provides for supply of backfeed.

Q. That is Article 6 of Item "H"? A. That is right.

Q. Now, is there any other Article in any of the contracts that you know of which covers the purchase by either Holtwood or Safe Harbor of backfeed or any other energy from Baltimore? A. There is no provision for any purchase of anything by Safe Harbor. I have nothing in mind about another provision for the purchase by Holtwood from Baltimore.

Q. You say you have nothing in mind. The fact is, there isn't any. [10739] A. I don't know of anything.

Q. Now, Article 6 of Item "H", page 9, is also included in the contract dated December 31, 1927. Is that right? A. Article 6 is in the 1927 contract.

Q. And do I understand your testimony to be that you are of the opinion that Article 6 is still in effect? A. Yes, that is my opinion.

Q. Now, Article 6, however, provides only for the purchase of steam-generated energy, does it not? A. That is right.

Q. And it provides for the purchase of such steam-generated energy from Baltimore on a daily net basis, does it not? A. That is right.

* * *

[10781] Q. Now, at page 1170 of the transcript of the direct testimony——1170 through 1172—you testified with respect to certain sources of basic data, instructions as to method in presenting your Exhibit Number 64, did you not? A. Is that the transcript for yesterday?

Q. No, sir, that is back under your direct testimony, a long, long time ago. A. Oh, 1170, not 11,000. Did you ask a question?

Q. Yes, will you read it, please?

(Question was read.)

THE WITNESS: That is generally my statement of the sources of my information.

By MR. MYSE:

Q. Well, do I understand from your testimony at those pages that you assume no responsibility for the accuracy of the basic data? [10782] A. That is right.

* * *

[10783] Q. Now, also at 1171 you stated that you consulted Mr. R. T. Greer of the Baltimore Company. A. That is right.

Q. And then you go on to say that he is in charge of the operations of the interconnected system. Now, what [10784] interconnected system did you there have reference to? A. Baltimore, Holtwood and Safe Harbor.

Q. Do you mean to say that Mr. Greer is in charge of the operations of Holtwood Company? A. He is a member of the committee that handled the interconnection, and for his company he is in charge, as I understand it, of the interconnection arrangements.

Q. Well, does that mean to you that Mr. Greer is in charge of the operations of Holtwood Company? A. No.

* * *

[10785] Q. Is that the only subject matter that you conferred with employees of Baltimore Company on in connection with your Exhibit 64? A. I believe that is right.

Q. What other employees other than Mr. Greer did you confer with? A. None other than Mr. Greer before the preparation of Exhibit 64.

Q. How about after the preparation of Exhibit 64? A. My conferences after that, Mr. Gibbs, Mr. Thomas and Mr. Greer.

Q. When you say Mr. Thomas, you mean Mr. Ralph L. Thomas? A. That is right.

Q. Were the subjects of those conferences related solely to capacity value or dependable capacity? A. Oh, the general subject of handling the energy in excess of the firm power requirements came into the conversation.

* * *

[10787] Q. Did you use any data from the 1944 Form 12 report filed with the Federal Power Commission by Consolidated Gas Electric Light and Power Company of Baltimore? A. We used the peak loads of the Pennsylvania customers at the time of the system peak. That was the only place we found those reported.

Q. Is that the only place you found that data and relied upon it for your Exhibit 64? A. Yes. The peaks of the Holtwood-Safe Harbor system peak were at another time, and were not used.

* * *

[10804] Q. Now, as I understand your testimony at page 1170, lines 5 to 9 inclusive, you there attempted to state the general purpose of your Exhibit 64. Is that right? A. That is right.

Q. And as I understand that testimony, that purpose is to determine all costs associated with the rendering of a particular service or group of services to a particular customer to compare those allocated costs with the charges collected for the service or services which are involved. [10805] Isn't that right? A. I don't find those words in that answer.

Q. Well, will you tell me whether that is your purpose and my understanding of your testimony? A. The purpose was to make an analysis of capital costs, operating expenses, all other costs of Holtwood and Susquehanna Companies, and to allocate those to the service furnished to various customers.

Q. Well, my question is, however, is my statement of your purpose correct or not, and I assume you would like to have it read back now. Would you? A. Yes.

TRIAL EXAMINER: Read the question.

(Question read.)

By MR. MYSE:

Q. Isn't that a correct statement, Mr. Davis? A. May I ask what you mean by a group of services?

Q. Well, for example, in the case of Edison Light and Power Company there were a number of different kinds of services involved, and that is what I had reference to when I said "group of services." A. If I recall those kinds of services, they were merely conditions of the delivery of electric power and energy. I did not segregate any of those conditions. I did not separate the cost to apply it to any of those conditions. [10806] My cost analysis was based on the amount of power and energy delivered, and the costs include all such things as facilities for the delivery, facilities for furnishing reactive current whenever it was furnished, and furnish other conditions necessary to deliver power and energy in the form the customer required to put to beneficial use.

Q. Now, with that understanding of the meaning of group of services, will you now tell me whether my statement of your purpose is correct or not, and if you would like to have it read back, I assume the Examiner will allow it. A. No. The group of services that you speak of are not separated in any allocation that I have made except where isolated costs for a transmission line, or some facility that is isolated, there is no other separation of any

group of services. The rest of it is delivery of power and energy.

Q. All right, Mr. Davis, but with that understanding will you tell me whether my statement of your purpose is correct or not? A. If you consider my statement equal to yours, it is, but I can't translate it into your terms.

Q. When you say your statement is equal to mine, you mean your statement defines group of services as I used it. Is that what you mean? A. Well, if you think my statement does apply to [10807] group of services as you used it, then your statement is correct.

* * *

Q. From your knowledge of the operations of the Safe Harbor and Holtwood developments, would you say that they are operated as a unit? A. They are operated like two power plants in the system.

Q. Well, wouldn't you say that the way these particular power plants are operated that they are operated as a unit? A. You mean as if they were all in one location and building?

Q. Yes. A. They are operated that way so far as the operation of the plants go.

Q. That is all I asked you about, Mr. Davis. Isn't that right? A. As far as the operation of the plants go.

* * *

[10813] Q. Mr. Davis, as I understand the purpose of your exhibit 64, it was to determine only the cost incurred by Penn Water in rendering whatever services it rendered to its several customers. Is that right? A. That is right.

Q. So that there are no costs included in your Exhibit 64 incurred by Safe Harbor except those costs which may be covered by the payment that Penn Water makes to Safe Harbor under item E, F and G. Isn't that right? A. That is right, one-third of Safe Harbor's total costs.

Q. Now, as I understand it, that payment by Penn Water to Safe Harbor we have just referred to was neither

intended to nor does it cover any of the costs of Safe Harbor incurred by Safe Harbor for any of the services rendered to the railroad [10814] in Maryland. Isn't that right? A. I have so treated it.

Q. Well, isn't my statement correct? A. I think so.

Q. However, you have included in your exhibit 64, have you not, certain costs incurred by Baltimore Company in connection with the rendering of backfeed service under the contract identified in this exhibit as item H and I. Isn't that right? A. That is right.

* * *

[10846] Q. So that the maximum steam capacity required on the Holtwood Safe Harbor system occurs throughout the year. Isn't that right? A. That is not a clear way to put it.

Q. Well, is my statement correct or not? A. Not exactly. Maximum steam requirement to carry the [10847] load is what I defined as the critical period. Holtwood-Safe Harbor system turns out what it can, and any excess goes into another system, and they have no peak for which they are specifically responsible.

Q. You mean they have no firm power obligations. A. Yes, they have some firm power obligations, but they don't stand alone responsible for them.

Q. Well, who else is responsible for supplying the peaks under those firm power obligations? A. Baltimore Company is standing back of the peaks on those firm power obligations.

Q. And you say that despite the fact that Baltimore isn't obligated at all under the contracts which created those peaks. Is that right? A. That statement is based on the relative economic condition that is the result of the application of contract identified as H and I, under which in effect the entire output of the Holtwood system is sold for the account of Baltimore. Baltimore gets all of the revenue from it, pays all of the costs, and in effect its

economic effect is the same as if Baltimore were leasing that plant.

Q. Did I understand you to say, Mr. Davis, that you are now saying that all of the output of Holtwood and Safe Harbor is sold for the account of Baltimore? A. Practically, in economic effect, and the coming back [10848] to the responsibility for the peak loads of the Pennsylvania customers, if those loads are defaulted on, and the service is not supplied, it makes no difference to Holtwood's income or financial position. It makes no difference to the financial position of any other company, but Baltimore is the only one that is hurt, and it would be just as damaging for Baltimore to allow those loads to be defaulted on as any other load in the Baltimore area, down in the city of Baltimore.

Q. Mr. Davis, will you point specifically to any provisions in item H or I upon which you rely for making the statement you have just made with respect to the sale of all of the Holtwood and Safe Harbor output for the account of Baltimore? I would like to have you be more specific if you can with respect to the provisions in the contract. A. I think you understood what I said, that the general economic position in which Holtwood and Baltimore are placed by the application of all the provisions of the contract identified as H and I, wherein Baltimore pays all the costs, gets all the revenue from all of the power that is sold, and in economic effect all of the output is sold for Baltimore's account and so credited.

Q. Well, then, do I understand your answer to be that you cannot be more specific other than to point to the entire contents of the contract? Is that right?

* * *

[10849] THE WITNESS: That is right.

* * *

[10858] Q. Now, of course the water storage at the Holtwood and Safe Harbor sites may be regulated on a greater

than a weekly cycle. Isn't that correct? A. That is done in case of emergency, and that is the extra capacity that is figured for additional draw-down. Dependable capacity is first figured on the regular weekly recovery schedule.

Q. Well, isn't it a fact that the operation of those hydro plants at those two sites may be operated on a seasonal [10859] draw-down basis? A. You don't have seasonal storage.

Q. Well, are you saying that they can't be operated on a seasonal drawn-down basis? A. They are not what you call storage plants on a seasonal basis. They are run-of-river plants. They can operate on storage for a period of a week, probably.

Q. Now, as I understood it, you said normal operation was on a weekly re-fill basis. Is that right? A. That is right.

Q. Is there any reason why they can't be operated on the basis of draw-down in a series of weeks? A. Oh, they would be in case of emergency. That is how the pondage is used. If they had a serious outage at some other place, they can draw the pond down to a point beyond any possibility of refilling at the beginning of the next week, but sooner or later they have to back off, and the storage capacity or the dependable capacity that has been figured on a weekly refill will not be there unless the river flow comes up.

Q. Well, do you know whether or not the riverflow conditions on the Susquehanna are such that the Holtwood and Safe Harbor hydro plants can be operated on a weekly cycle with a series of draw-downs, and then gradually bringing the water level up again? [10860] A. That probably is done, taking the chance that the riverflow will increase. If it doesn't you have got to back off and carry the load with steam.

Q. In order to do that, you have to know the probabilities of riverflow, do you not? A. Well, that is true. You take a chance on it.

Q. Do you know whether or not there is any increased generation at the Conowingo hydro plant which is available to the Penn Water and Safe Harbor system when you have increased draw-down at Safe Harbor and Holtwood? A. Of course any increase in the draw-down delivers that much more water to the Conowingo plant.

Q. I understand that, but if that water is used for the generation of energy, is it available to Penn Water and Safe Harbor system? A. On a "When, as and if" basis, it might be. There is no commitment to supply it except the general agreement to furnish emergency service and to coordinate.

Q. But under those conditions, it would be available to the Penn Water-Safe Harbor system? A. It would be available if they had it to spare.

Q. You might plan it that way. Isn't that right? A. As far as system planning, if you mean installing additional capacity, as I understand it those plans are for the requirements of their own system and they do nothing that [10861] gives any assurance that they are going to have it available for Holtwood, Safe Harbor or Baltimore. If they have it, they are willing to furnish it.

Q. Are you saying that Safe Harbor, Holtwood and Philadelphia Electric, at its Conowingo plant, never plan to utilize the energy in coordinated operation between the systems which arises out of increased draw-down at the Safe Harbor and Holtwood orperations?

MR. GOLDBERG: May I have that, please?

THE WITNESS: I didn't say that.

TRIAL EXAMINER: Yes.

(Question read).

By MR. MYSE:

Q. Do you know whether or not they do make such plans? A. No, I don't know.

Q. Do you think that this is a fair statement, Mr. Davis: A run-of-river-plant refers to those plants whose

operations can't be regulated over a period of more than a few hours, either from storage at site or above, but whose operation is in general controlled by the volume of flow which must be utilized as it occurs or be wasted?

MR. GOLDBERG: A fair statement as a general definition or applied specially?

MR. MYSE: As a general definition.

THE WITNESS: As that term is generally used, a period of [10862] a few hours is much more restrictive than you would ordinarily find.

Q. You don't agree with that statement, then. A. That is rather narrowly confined, more so than the term is generally used. I don't agree with that as a general use of the term.

Q. Now, it is a fact, however, that the operation of the Safe Harbor and Holtwood plants can be regulated over a period of more than a few hours. Isn't that right? A. That is true.

Q. And their operation is not in general controlled by the volume of flow in the Susquehanna River which must be utilized as it occurs or be wasted? A. Pretty close to that. In March, April and May they would probably like to use more of it, but they can't, so it is wasted.

Q. That is during the high-flow months. A. That is right.

* * *

[10863] Q. Do you mean to say by that that if the load that the Holtwood-Safe Harbor plants actually serve is a sharp load that it would not have more dependable capacity available from their operations than if it was a flat load, so to speak? A. Oh, surely, but that is what I gave you in my previous answer, that there is no load that is specifically a Holtwood-Safe Harbor load. It is theirs when they can carry it. It is someone else's when they can't.

Q. Certainly they have a load commitment to the Pennsylvania customers, do they not? A. They have a com-

mitment, but they couldn't keep the [10864] commitment if they didn't have help.

Q. They could get that help from the Pennsylvania customers themselves, could they not? A. They could if they had it to spare, but they don't do anything to assure that they will have it.

* * *

[10865] Q. Are you saying that if there were no interchange contracts with the Pennsylvania customers, that that would have no effect on a determination of dependable capacity for the Holtwood and Safe Harbor systems? A. It might be given some consideration, but I don't believe so because it would simply mean that while off-peak capacity in Baltimore is there already, it might be cheaper to get it from Pennsylvania, and it would be gotten there. If it was more expensive than the energy from Baltimore, then Baltimore would furnish it under the present method of operation.

* * *

[10870] Q. As I understand your Exhibit 64, you used what is termed non-coincident peak method of allocating demand costs. Isn't that right? A. That is right.

Q. There are other methods of allocating demand costs. Isn't that true? A. Yes, there are a number of methods of allocating demand costs.

Q. Well, one other method is the coincident peak method, or what is commonly referred to as the peak responsibility method. Isn't that right? A. That is another method, yes.

Q. Now, the non-coincident peak method which you used requires the determination of the maximum non-coincident demands of all the customers. A. That is right.

Q. And it assumes that the costs associated with the different demands of each customer are in proportion to the ratios of the maximum demands of each customer to the [10871] total of the non-coincident maximum demands of all the customers. A. That is right.

Q. And that is an assumption, isn't it? A. Well, that is the way they are allocated in Exhibit 64.

Q. But that is an assumption, isn't it? A. That they are proportionate?

Q. Yes. A. That is right.

Q. Have you made any study in this case for the purpose of Exhibit 64 or otherwise to determine whether or not the costs of Holtwood do vary in proportion to ratios of the maximum demands of each customer to the total of the non-coincident demands of all the customers? A. No, I have made no special study on that.

* * *

[10874] Q. Now, isn't it true, Mr. Davis, in using the non-coincident peak method as you have in Exhibit 64, the peak demands of the various customers that are used in that method should be on the same basis? Isn't that right? That is, they should be measured on the same basis. A. Oh, you mean whether they are one hour or thirty minutes?

Q. That is right. A. Surely, that is true.

* * *

[10924] SAMUEL JOSEPH

* * *

CROSS EXAMINATION (continued)

By MR. SPARKS:

* * *

[10954] Q. What is the significance and meaning of the earnings-price ratios shown in the last column of page 40 of Exhibit 46 for the purpose of the determination of the fair rate of return to Penn Water? A. Here we have a list of all of the common stocks of electric operating utilities offered to the public during the period 1935 to 1945. The last column shows the earnings-price ratio as at the time of the offer. Looking at that column and having in mind a certain cost that the utility bears, you have a view of cost of capital on common stocks to these utilities.

This, then, combined with the information [10955] shown at pages 38 and 38-A would give you an idea of what rate should be allowed on the equity of Pennsylvania Water and Power in a rate proceeding.

Q. How would you get an idea of what should be allowed, Mr. Joseph, in that respect by examining the earnings offering price ratio shown in the last column of page 40? A. Well, your own mental processes would determine that. You are interested in finding out what is fair to allow for Penn Water. Well, you say, in accordance with the Bluefield case and in accordance with the theory generally, "We will allow what investors seem to be requiring." You look at page 40 and pages 38 and 38-A, make up your mind as best you can what that requirement is.

* * *

[10960] Q. What companies on page 40 of Exhibit 46 are companies comparable to Penn Water so far as risks and uncertainties are concerned as that latter term is used in the Bluefield case? A. All of them.

Q. Didn't I just ask you a few minutes ago if all of the companies on page 40 are comparable to Penn Water so far as risks and uncertainties are concerned, and didn't you say [10961] "No"? A. Well, if I did, I should have changed that answer. We are dealing with this problem: You have to select data from amongst all of the data available on companies whose risks are comparable to Penn Water. You do that by dealing with operating electric utility companies. That is my understanding of one way of selecting companies of comparable risks.

Now, having selected companies of comparable risks your question is, are these companies within that selection very close to, or have the same characteristic of Penn Water. I say there are differences, certainly. Penn Water is a hydro company. Perhaps none of these companies has a major operation as a hydro-electric company.

Q. All right. Now— A. I hope that explains the apparent inconsistency. You can't say these companies are

similar or dissimilar, however you approach the problem. They are similar in my view under the definition of the Bluefield case.

Q. What do you mean "similar in your view", Mr. Joseph, within the meaning of the Bluefield case, as to corresponding or comparable risks, and uncertainties? A. Well, I mean this: If I had selected for page 40 statistics on brewery companies, let us say, then I think there would be a very definite argument as to whether the Supreme Court meant by "comparable risks" to compare a brewery [10962] with a hydro-electric plant. But when I select operating electric utility companies, and include therein all of the information which is available, attempting thereby to refrain from any personal judgment as to the figures which should be included, then I have met the requirement of the Bluefield case.

Q. Let's see if I understand what you are saying, Mr. Joseph. That is, you construe the Bluefield decision where it refers to investments in companies having corresponding or comparable risks and uncertainties to be satisfied in a presentation for determination of a fair rate of return if that presentation includes companies merely of the same industrial class. Is that correct? A. Same general class, yes, sir.

Q. In other words, the fact that all of these companies on page 40 are electric operating utilities is sufficient in your judgment to meet the requirement of the Bluefield decision so far as comparable risks and uncertainties are concerned. Is that correct? A. Yes.

Q. And in your view you need make no other investigation of any of these companies to determine comparability other than to determine that they are electric operating companies. Is that correct? A. I think that is correct, yes.

* * *

[11091] GEORGE H. DAVIS

• • •

CROSS-EXAMINATION (Continued)

By MR. MYSE:

Q. You may recall, Mr. Davis, that Friday evening we were discussing the variations in demands made by the various Pennsylvania customers on the Holtwood-Safe Harbor [11092] system, do you not? A. That is right.

Q. Now, what do you understand by the term of "diversity" between demands? A. Demands that do not occur at the same time.

Q. Well, if demands of two customers had greater diversity than the demands of two other customers, what would you understand by that situation? A. I would understand that the two customers having greater diversity, there would be a greater difference between the sum of their individual maximum demands and the simultaneous demands of the two.

Q. And that would occur if there was a wide divergence between the times of the maximum demands of the two customers as compared to the divergence in the time of the second set of two customers. Is that right? A. A greater difference between the maximum demands of each customer and the demand that it happened to have at the time when there was a coincident maximum.

Q. Now, it is possible, is it not, that the diversity between peak demands of various customers may change from time to time? A. It usually does.

Q. And it is also possible that the diversity between the demands of the customers on the Holtwood-Safe [11093] Harbor system would change as between the year 1944, 1945 and 1946. Isn't that right? A. It probably did.

Q. And what that means is that the sum of the co-incident demands probably changed as between the years 1944, '45 and '46. Isn't that right? A. Without doubt it did.

Q. That also means, does it not, that you would have a consequent change in the unit costs of capacity, for example. Is that right? A. That is true, as I figured the unit cost based on the sum of the individual maximum demands.

Q. Now, the other day we mentioned one other method of determining cost to be allocated between customers in the case where you have facilities used jointly for various customers, that was the peak responsibility method. Isn't that correct? A. That is true.

Q. Now, that method assumes that the costs associated with the demands of each customer are in proportion to the ratios of the coincident demands of each customer at the time of the maximum peak demands on the system to the total maximum peak demand on the system. Isn't that right? Would you like to have that read back? A. I think that was a little twisted up there.

[11094] TRIAL EXAMINER: Read the question.

(Question read.)

THE WITNESS: Under the method of peak responsibility, the capacity costs are allocated on the ratio of each customer's demand at the time of system peak to the total coincident system peak.

MR. MYSE: Well, that is what I intended to say. Now, will you have my question read back and see whether or not you agree with it?

TRIAL EXAMINER: I don't see the necessity of reading the question back if that is what was meant.

MR. MYSE: I want to see if there is any divergence between what I asked and what the witness stated.

TRIAL EXAMINER: You will have the transcript available.

MR. MYSE: May I have the witness' last answer read back, then?

TRIAL EXAMINER: Yes.

(Answer read.)

By MR. MYSE:

Q. Well, that means, does it not, that the peak responsibility method assumes that the costs associated with the demands of each customer are in the same ratio as the ratio of each customer's demand to the total demand at the time of system peak? [11095] A. That is right.

Q. However, that assumption isn't always valid, is it? A. No, I don't think it is. That is, the assumption that the costs are associated with the ratios of individual peaks to simultaneous peak at that particular hour. There are too many variations that come in there.

Q. Do you agree with this statement, Mr. Davis: The system capacity and the use of that capacity during the most severe operating conditions and on the coincidental system peak day are the important conditions which influence demand costs? A. Yes, I think that is generally true.

Q. Do you think that statement is applicable to this proceeding in determining allocation of costs of Holtwood? A. In other words, you are asking whether I think the peak responsibility method should be applied to this case?

Q. I didn't ask you that. I asked you whether that statement which you say is generally true should be applied to this case. A. As I understood your statement, it was that the system peak demand is the important thing in determining capacity costs.

[11096] Q. Well, will you read back my statement. I don't think you have stated it exactly the way I have.

TRIAL EXAMINER: Yes.

(Statement read.)

THE WITNESS: Yes.

* * *

[11100] Q. Now, as I understand your Exhibit 64, you allocated hydro production costs associated with installed capacity which was in excess of the dependable capacity which you used for December of 1944, and classified those costs as energy costs? A. That is right.

Q. Well, who makes use of that energy created by the capacity available in excess of the dependable capacity in December? A. Oh, that is used by all customers just the same as any other energy.

Q. Well, at 1195, lines 7 through 13, you point out there it is the larger load during these periods of high river flow that constitutes the use of what you call the excess installed capacity to produce the greatest practicable amount of energy from the available water. Do you not? A. That is right.

[11101] Q. Now, since that was in answer to what should appear as a question at line 5, but actually appears as an answer, as I understand that testimony you were relating that larger load to the load delivered to Baltimore. Is that right? A. Well, more of that load goes to Baltimore, more of that energy goes to Baltimore during periods of high river flow, of course.

Q. Well, does any of it go to the Pennsylvania customers? A. It might. It goes wherever it can be used to the best advantage.

Q. Are you referring now to interchange transactions? A. That is right.

Q. You are not referring to firm power transactions? A. It could go to the firm power loads. You can't control where any particular energy goes.

Q. But I say that most of it goes to Baltimore. Is that right? A. I said more of it goes to Baltimore, more of the energy generated at the hydro plants goes to Baltimore during periods of high river flow.

* * *

[11104] Q. Well, now, as I understand your Table I, that is Roman I of Exhibit 64, the purpose of that table was to

show the assignment of Penn Water or Holtwood and Susquehanna costs associated with facilities used primarily for the service to one or more customers directly to the customers for whose service they are used. Isn't that right? A. That is right, together with the balance shown in a pool for later allocation.

Q. Well, I was going to get to that, Mr. Davis. A. Oh, excuse me.

Q. And that Table I also shows, as I understand you now, the assignment of whatever costs you thought proper to assign associated with facilities which were used jointly by all customers and you assigned those costs to a pool. Isn't that right? A. That is right.

Q. And that means, as I understand your testimony in support of the exhibit, that all of the items included in what you call pool costs are costs associated with facilities used by all of the customers in varying amounts. Isn't that right? A. That is the way they were considered, yes. [11105] Q. And that was your assumption? A. That is right.

Q. And you assumed the entire production plant at Holtwood, since you assigned it as a pool cost, was used for service to all customers of Penn Water. Is that right? A. That is right.

Q. Now, actually, the production equipment at Holtwood consists of basically two classes of equipment, that is, 25-cycle and 60-cycle generating equipment and steam 60-cycle generating equipment? A. That is true.

Q. You separated the steam and the hydro, did you not? A. Proper operating costs, yes, and in allocating costs from the pool I separated steam from hydro.

Q. Well, your Table I shows them separately and that was intended to show all of the costs associated with the steam production plant separate from the hydro production plant. Isn't that right? A. That is right.

Q. Now, you also show some $15,847,486 worth of equipment as hydro production plant assigned entirely to the pool. Isn't that right? A. That is right.

[11106] Q. And that hydro production plant that you there show consists largely of the generating units and associated equipment used for the production of energy capacity and other electrical services. Isn't that right? A. That is right.

Q. Now, eight out of the ten main generators are 25-cycle generators, aren't they? A. That is right.

Q. And they are used largely for service to Baltimore, are they not? A. That is true, except for a small amount which might go through a frequency changer.

Q. They are not used for service to Coatesville, are they? A. You could hardly find a significant amount of that power probably getting to Coatesville.

Q. Well, except for that insignificant amount they are not used for service to Coatesville? A. That is right.

Q. And they are not used for service to Metropolitan Edison Company, in 1946, or were they used for service to Edison Light and Power Company or Metropolitan Edison Company or both in 1944? A. Those units were not, no.

Q. I supposed you would say that Pennsylvania Power [11107] and Light Company did use those 25-cycle units to a minor extent in the year 1944. Isn't that right? A. That is true. They used some 25-cycle power.

Q. Now, it is clear, is it not, that so far as those eight out of the ten main generating units at Holtwood are concerned, they are not used by all other customers, are they? A. That is true.

Q. So to the extent you have those eight out of ten generating units and all the associated costs that go with it included in your hydro production plant as a pool cost, you are a little bit inconsistent, are you not? A. Those costs are allocated to the various customers on the basis of use, and this generating cost, production plant, is put in the pool here because I have made no distinction as between the cost of 60-cycle power and 25-cycle power at Holtwood, so that in the allocation later on some customer using 60-cycle power only gets an allocation from these

costs on the basis of his total use, which is a combination cost of 25 and 60-cycle, and I didn't consider that any particular injustice was done to the customer by allocating on that basis.

Q. Well, certainly you can't say that the 25-cycle generating units at Holtwood which consist of eight out of the ten are used jointly for service to all the customers, [11108] can you? A. The whole plant is used jointly—

Q. I didn't ask you about the whole plant.

TRIAL EXAMINER: Answer the question.

MR. GOLDBERG: Mr. Examiner—

TRIAL EXAMINER: Just a minute, it is clear. Read the question.

MR. GOLDBERG: I was merely going to request that the witness be able to complete his explanation.

TRIAL EXAMINER: It isn't necessary. Read the question.

(Question read.)

THE WITNESS: I told you I lumped those eight generating units in the rest of the plant and allocated the plant as a whole.

MR. MYSE: I submit, Mr. Examiner, that is not an answer to my question.

TRIAL EXAMINER: Answer the question.

THE WITNESS: I have not segregated the costs to allocate to any customer.

By MR. MYSE:

Q. I still don't think that is an answer, but you can't say, can you, that the 25-cycle generating units at Holtwood are used jointly for service to all customers, can you? A. Saying that those particular units can't be [11109] assigned specifically to customers using only 60-cycle power doesn't change my former answer.

Q. Well, will you answer my question, please, Mr. Davis? A. I will say that specifically if I picked out those eight units, I couldn't assign a portion of their use to a 60-cycle customer.

Q. You would have had to assign almost all of their use to Baltimore Company, would you not? A. That is right.

Q. And that means you would have had to assign all the costs associated with the generation of those eight out of ten units, would you not? A. That is true. That wouldn't have changed my result except as 60-cycle power might be a different cost from 25-cycle, and I don't think there is a difference.

MR. MYSE: Mr. Examiner, I move to strike the answer after the words "and that would not have changed my result." That is not responsive.

TRIAL EXAMINER: I won't strike it, but I instruct the witness not to volunteer, but simply answer the questions.

By MR. MYSE:

Q. Now, I think a few days back you agreed with me that there were seven out of nine, at least seven out of [11119] nine, 25-cycle transformers at Holtwood substation used exclusively for Baltimore. A. Those go in the same category as the generators.

Q. Now, the fact is that you have included the costs associated with the Holtwood substation equipment in line 22 of Table I of your Exhibit 64 and assigned all of such costs to pool, have you not? A. What line did you say?

Q. 22. A. That is right.

Q. And the fact is at least those seven are not used jointly for all customers. Isn't that right? A. They are in the same category as the generators.

Q. And the remaining two if they are used jointly at all are used jointly for service to P.P. and L. and Baltimore. Isn't that right? A. That is right.

Q. As I understand it, however, you did assign some of the 25-cycle facilities owned by Holtwood or Susquehanna direct to Baltimore, did you not? A. The Highlandtown Substation, you mean?

Q. I think that is one of them, is it not? A. That is right.

Q. And the Highlandtown line itself. Isn't that another one? [11111] A. That is right.

Q. Now, at lines 7 and 8 of Table I of Exhibit 64 you show that you assigned the 220 kv lines known as the Westport and the Riverside Line, two-thirds to Baltimore and one-third to pool. Isn't that right? A. That is right.

Q. And as I understand your testimony at pages 1176 to 7, you did that largely on the basis of the transmission of energy in both directions over those two lines. Is that correct? A. Yes.

Q. Now, does that mean that you assumed that the transmission of the backfeed energy North over those lines is not a use by Baltimore of those lines? A. You mean by that for the benefit of Baltimore?

Q. Yes. A. I assumed that was for the benefit of Holtwood.

Q. Then you would say that the transmission of that backfeed is not for the benefit of Baltimore. Is that your testimony? A. Largely not.

Q. You say largely not. To what extent is it a benefit to Baltimore? A. That backfeed occurs in various amounts at various times during the period of low flow when the bulk of it [11112] goes up to Holtwood, it is to enable Holtwood to meet its contractual obligations with Pennsylvania customers which it could not do without that assistance, and that is the particular reason for considering it a benefit to Holtwood, and not to Baltimore.

Q. Well, Mr. Davis, I haven't asked you about the benefits to Holtwood. I am asking you about the benefits to Baltimore. Will you confine your answer to that? A. The two are a division of the use.

Q. Will you tell me to what extent you considered backfeed a benefit to Baltimore? A. Backfeed during periods other than extreme low flow is used to help carry the Pennsylvania loads during off-peak periods in order to enable the hydro plants to do their best in furnishing peak service. That is a benefit to Baltimore. It is also a benefit to the hydro plants, because without that you couldn't credit them with anything like the dependable capacity that they actually do furnish.

Q. Well, without that backfeed, you couldn't credit Baltimore with all the savings resulting from interchange with the Pennsylvania customers either? A. A small amount of that backfeed is used directly for interchange. It is a small amount which I did not take into consideration.

Q. Isn't it a fact that as a result of the amounts [11113] of backfeed, there is made available much larger amounts at different times of energy for purposes of interchange with the Pennsylvania customers? A. It might be true.

Q. Well, isn't it a fact? A. Specifically, I haven't any figures to show what effect backfeed has on the interchange with the Pennsylvania customers.

Q. Well, isn't it a fact that by the receipt of backfeed over the 220 kv lines the Safe Harbor-Penn Water system is thereby enabled to store water for use for interchange purposes at different times. Isn't that right? A. Well, that is true, other than on system peak periods that that could be used for interchange.

Q. And it is so used? A. I expect it is.

* * *

[11114] Q. Now, let's get back to my question, Mr. Davis. The fact is that Baltimore benefits by all of the interchange transactions which result from the back-feed that [11115] comes north on the 220 kilovolt lines, isn't that correct? A Baltimore benefits from all of the operations of the whole system.

Q. I haven't asked you about all of the operations, Mr. Davis. Will you confine yourself to the backfeed and interchange transactions. A. This is one of them and it gets some benefit from that.

Q. When you say "some", they get all of the savings do they not, that are credited to the Safe Harbor-Holtwood system? A. That is true. They get all the revenue that is received by Holtwood from any source.

* * *

THE WITNESS: There is a net bill rendered to Baltimore, and that bill is reduced by every cent of revenue that Holtwood receives from any source. In that way Baltimore gets [11116] benefit from every transaction that Holtwood makes.

By MR. MYSE:

Q. So it may also benefit by reason of any back-feed transmitted north on the 220 kilovolt system which may be used in connection directly or indirectly with firm power sales to the Pennsylvania customers. Is that right? A. That is true. It can't help but benefit from it.

Q. So, too, Baltimore may benefit from the fact that back-feed is transmitted north on the 220 kilovolt lines, and converted at Safe Harbor and used for railroad purposes. Isn't that correct? A. In the same way, that is correct.

Q. So that it appears that so far as back-feed transmission over the 220 kilovolt lines is concerned, Baltimore benefits by that back-feed. Is not that correct? A. That is true in the same way as I explained.

Q. But you don't call that a use for Baltimore. Is that right? A. No, I have considered that a use to enable Holtwood to perform the function that it does, and of course if it performs it, Baltimore gets the benefit of it. If it was not assisted to perform that, Baltimore would lose the contracts by default in Pennsylvania, and of course would lose all that revenue. In that way you can say Baltimore

has to do it to save its own revenue, but it does it so that Holtwood [11117] can perform.

* * *

[11144] Q. Now, at line 25 you allocated all of the general plant to pool, did you not? A. That is right.

Q. And that again is on the assumption that all of that plant is used by all customers jointly. Is that right? A. That is right.

Q. Did you examine the character of the items included in that figure of $779,707 at line 25 to determine whether or not there were any of those items which were used exclusively for one or more customers? A. No, there was no detailed examination of that, just general plant that couldn't be assigned, so far as I was able to discover, to any particular customer.

Q. Well, would it surprise you very much to find that there are items of cost included in that figure relating to equipment used entirely in connection with the Highlandtown line which you have allocated 100 per cent to Baltimore? A. Well, that would be news to me.

Q. If that is the fact, wouldn't that mean that some of those items in the general plant, line 25, column 6, should be allocated to Baltimore? [11145] A. Well, I would have to know the nature of the items. Of course some of this is allocated to Baltimore. It is simply put in the pool to be allocated on a different basis than directly a hundred per cent.

Q. I understand that, Mr. Davis, but if any item in there were used 100 per cent for Baltimore, it should be allocated directly to Baltimore in column 5 in your view. Isn't that right? A. That would be the natural way to do it if that could be identified.

Q. Now, likewise, if there are any items in that figure at line 25, column 6 which are used exclusively in connection with transmission facilities, it should be allocated in proportion to the manner that you allocated transmission facilities. Isn't that right? A. Well, a portion of

this item is allocated to transmission. That is, all of the pool is segregated between production and transmission and then these general items are spread to the different classes on the ratio of the direct investment, so a part of it gets there in any case.

Q. But it doesn't get there in any case, as you put it, in the manner and under the theory that you have used in making up Table I of Exhibit 64, does it? A. No, it gets there through a general allocation [11146] from the pool.

Q. And that allocation to the various customers may not be in the same proportion as it would be if you had allocated directly in cases where they are used exclusively for a customer? A. That is possible.

Q. Did you examine the character of the items included in that total of 779,707, line 25, column 6, Table I of Exhibit 64? A. I don't recall that I did.

Q. Did you examine any of the items appearing in line 24, column 6 of Table I of Exhibit 64? A. No, I treated intangible and general plant as general items and allocated them on a general basis.

Q. And what that means, does it not, is that all general and intangible plant is assumed to be used in connection with the items allocated to pool? A. And it is allocated to all the customers on the basis of use.

Q. And it means, does it not—well, was your answer "yes" to that last question? A. It is in the pool, yes.

Q. And that answer means, does it not, that none of the intangible or general plant is assignable to items like Violet Hill Switching Station, or Holtwood-Lancaster [11147] line, or the Engleside Switching Station, the Donegal and Donegal Tap Switching Stations, or any of the other items for which there were no amounts allocated to the pool? Isn't that right? A. It is not allocated to those items of property. It is allocated to those companies.

Q. Well, are you saying that there is no intangible or general plant assignable to Baltimore, or any of the other

companies specified in Table I by reason of the fact that there are the various facilities that you show in columns 1, 2, 3, 4 and 5 allocated to those companies? A. I had no segregated items of general or intangible plant, and I allocated nothing directly to an individual customer on the basis of the individual items.

Q. Now, since you say you did allocate the items appearing in line 24 and 25 to the various customers in accordance with their use of capacity and energy, that means, does it not, that you are not allocating those costs to the various customers in proportion to their direct use of certain facilities? Isn't that right? A. I had no segregation of individual items. The allocation was made entirely on the total on the basis of use.

Q. Well, how did you know that the various customers used that intangible and general plant in proportion—that [11148] is, directly in proportion to the basis that you split up the pool costs? Did you make any investigation to determine whether that is the fact or not? A. I never had any breakdown of those items that I used. I used them only in total.

Q. Well, I don't think you have answered my question, Mr. Davis. Did you make any investigation to determine whether or not the general and intangible plant was in fact used by the various customers in the same proportion as you split up the pool costs? A. I have no recollection of having any information that there were directly allocable items contained in those two accounts.

Q. I didn't ask you that, Mr. Davis.

* * * *

THE WITNESS: I made no investigation to determine any direct items that belonged specifically to an individual customer.

MR. MYSE: Mr. Examiner, I haven't asked him that.

TRIAL EXAMINER: That doesn't answer the question, Mr. Witness. Take the question again.

(Question read again.)

THE WITNESS: What I intended to say was that I didn't.

[11149] By MR. MYSE:

Q. Now, it is a fact, is it not, that none of the amounts shown in line 26 as total plant in service includes any amounts which were associated with construction work in progress in the year 1944? Isn't that right? A. That is true.

Q. Nor do those amounts at line 26 include any amounts associated with plant held for future use by the company in 1944. Isn't that right? A. They do not.

Q. Isn't it a fact that in line 22 which you label, "Transmission" in the amount of $1,560,090 in column 6, Table I of Exhibit 64 is included the amount of investment relating to the Manor Substation? Isn't that right? A. I think so.

Q. Well, can you check it for me and determine that? A. All right.

It would include that. It includes everything that is not specifically allocated in the items above.

Q. Well, Manor Substation is the switching point near Safe Harbor plant where the connection is made between the lines to Safe Harbor plant to the circuit to Westport and to Riverside. Isn't that right? A. Yes.

Q. So that in reality it is a terminal switching [11150] station for the 220 kv lines. Isn't that true? A. That is right.

Q. So that if it is to be allocated at all, it should be allocated in the same manner as the Westport and Riverside lines. Isn't that right? A. That might be an acceptable way to do it.

Q. Isn't it right, if you are right on your allocation of the Westport and Riverside lines? A. That is probably true.

* * *

[11151] Q. As I understand your testimony at page 1179 with respect to line 2 of Table II, you also obtained all those figures from the Commission accountants. Is that right? A. That is right.

Q. So you take no responsibility for the accuracies of any of those figures on that line? A. No.

Q. Where did you get the figures for working capital appearing on line 6 of Table II of Exhibit 64? A. The cash working capital is twelve-and-a-half per cent of the operating expenses. Materials and supplies are reported by the company in the Form 1 report.

Q. Well, are you saying—I think it is correct and you can correct me if I am wrong—that the total working capital appearing in line 6, $590,000, you obtained from another Commission Exhibit? Isn't that right? A. Yes, that checks with the figure that was presented in another exhibit.

Q. Well, you say it checks with it. Are you saying that you made an independent determination of the amount in [11152] column 7? A. No, I made no independent determination. I simply spread the two items of cash working capital and materials and supplies on a ratio of operating expenses and of investment to the various customers and the pool.

Q. Then, as I understand it, you take no responsibility for the accuracies— A. For the total amount, no.

Q. Nor do you take any responsibility for accuracies of either of the amounts in columns 1 through 6. Isn't that right? A. No, I do not.

* * *

[11162] Q. Now, what is this adjustment credit to administrative and general expenses which you deducted in arriving at $1,789,874 balance of operating expenses, as you call it, for the year 1944? A. That is the item that was shown on the Holtwood bill to Baltimore.

Q. Shown how? A. Shown as a credit.

Q. Well, are you saying that Holtwood doesn't incur that expense of $9,703? A. That is an adjustment that was made on the Holtwood bill in connection with general expense which I accepted as a credit here on the advice of the accountants.

Q. Well, did you make any investigation to determine the character of the item and the purpose for which it was credited on the bill? A. No.

Q. Would you be surprised to learn that the entire amount of $9,703 was actually incurred as operating expense in 1944 by Holtwood? A. The only thing that I knew about it was that it was credited on the bill as a deduction.

Q. Would you be surprised to learn that it was an operating expense? A. I couldn't check that because I didn't know what it [11163] was.

Q. Well, if part of that amount had been incurred in paying a salary of one of the employees of Holtwood Company, would you consider it an operating expense? A. Surely.

Q. If part of that amount had been incurred in paying insurance obtained by Holtwood Company, would you consider it as an expense, an operating expense? A. Surely.

Q. If part of that amount had been incurred by Holtwood in paying fees to directors, would you also consider that an operating expense? A. Surely.

Q. So if those three items that I just mentioned are included in the figure of $9,703, and since you have deducted that in arriving at operating expenses, you have not allocated all operating expenses of Holtwood Company to that extent, have you? A. If those are operating expenses, I have taken them out.

* * *

[11164] Q. Now, at line 2 you show an item of $992,535 which you label as the bill for Safe Harbor power. Is that right? A. Yes.

Q. And that bill, I believe you agreed at one time, was not the actual bill in 1944. Isn't that right? A. No, that is the cost of Safe Harbor power as developed in Exhibit 60.

Q. Well, you don't take any responsibility for Exhibit 60, do you? A. No, I just took the figure out of Exhibit 60.

Q. So you take no responsibility for the accuracy of this figure in line 2. Isn't that right? A. That is correct.

Q. Now, you know, however, that the amount actually paid to Safe Harbor was $1,214,533 in 1944, do you not? A. That is right.

Q. And that payment was required under the terms of E, [11165] F, and G in 1944, wasn't it? A. That is right.

• • •

Q. Well, now, in the year 1944, whatever was paid by Penn Water to Safe Harbor includes compensation to Safe Harbor, does it not, for special facilities used for service to the railroad. Isn't that right? [11166] A. Compensation paid to Safe Harbor by Holtwood includes one-third of all of its costs, special facilities and other costs.

• • •

Q. Well, to the extent that it does cover one-third of Safe Harbor's costs, it covers a portion at least of the costs incurred by Safe Harbor in providing special facilities for railroad use, and I am referring to the 25-cycle single-phase facilities. Isn't that right? A. That is correct.

Q. And to the extent that the payment by Penn Water to Safe Harbor includes or covers one-third of Safe Harbor's costs, it includes compensation to Safe Harbor for Safe Harbor's facilities used for railroad purposes in Maryland as well as in Pennsylvania. Isn't that right? A. It includes one-third of all of them.

Q. Isn't my statement correct? A. I think that is true, yes.

Q. So that the payment from Penn Water to Safe Harbor includes some compensation, undefined, of course, for services rendered to the railroad in Maryland which you say was for the account of Baltimore. Isn't that right? A. That is right.

Q. Do you know approximately what percentage of the facilities owned by Safe Harbor are used for service to the railroad in terms of dollars? [11167] A. No, I don't know the percentage.

Q. I take it, then, you wouldn't be able to give me the figure as to the approximate percentage of Safe Harbor facilities used for the railroad in Maryland in terms of dollars. Is that right? A. The investment in facilities for the railroad was given to me as $1,934,300.

Q. That is total investment for railroad facilities, you say, at Safe Harbor? A. Yes.

Q. What percentage is that of the total investment at Safe Harbor? A. I don't happen to have that total figure before me.

Q. Well, that million-some-odd dollars, however, is just the investment in special facilities. Isn't that right? It does not include whatever investment may be made at Safe Harbor in order to make the service to the railroad effective, and I have reference to the substructure under the 25-cycle generator units, for example. A. I think it includes all of the excess costs over what would have been the cost of a 60-cycle machine. That is what I was informed.

Q. So that it does not include all of the costs or [11168] investment of Safe Harbor in facilities now used for service to the railroad? A. No, it doesn't include all the cost of the generators, only the excess, as I understand it.

Q. So as I understand it, you would be unable to tell me without further investigation what percentage of the investment or costs in the form of operating expenses incurred by Safe Harbor in connection with facilities used

for the railroad are to the total costs incurred by Safe Harbor? A. No, I wouldn't be able to do that.

Q. Do you know roughly or approximately what percentage of the Safe Harbor facilities that are used in terms of dollars for service to the railroad are used for service to the railroad in Maryland? A. Well, my allocation of that would be 39 per cent.

Q. Well, are you saying that 39 per cent, then, represents the percentage which you would apply in allocating the dollars of investment, or operating expenses incurred by Safe Harbor for purposes of railroad service to the service to the railroad in Maryland? A. Yes, that is the ratio of the total output of the 25-cycle end of Safe Harbor plant to the energy going through for Maryland service over the Perryville line.

Q. And that allocation, then, would it not be on the [11169] basis of use of energy only? A. That is right.

Q. It would have no elements in it relating to the use of capacity, would it? A. Well, that would allocate the capacity cost on the basis of energy only, that is true.

Q. Now, as I understand your testimony, the figures on line 4 again you obtained from the Commission Accountants and you take no responsibility for them. Is that right? That is line 4, Table IV. A. That is right.

* * *

[11176] Q. Now, if Baltimore had billed Penn Water for the backfeed it actually received in 1944, there would have been a bill for backfeed purchased, would there not? A. You mean if they had rendered a bill there would have been a bill?

Q. Yes. A. Yes.

Q. And there would have been a corresponding expense by the amount of that bill. Isn't that correct? A. That is true.

Q. And as I understand it, that bill, if it had been rendered in 1944, would have been upon the basis specified

in Article 6 of Exhibit Item "H". Isn't that right? A. If there had been a bill for backfeed—

[11177] Q. In 1944. A. —from Baltimore to Holtwood?

Q. That is right. A. There would have been in accordance—well, I believe that is the only basis in the contract that shows a specific method of billing, in 1944 they did not use that method.

Q. But if they had, that would be the basis that they would have used. Isn't that correct? A. That is the only thing in the contract that I know of that would have given them a basis to render a bill.

Q. Now, to the extent you have not included the dollars actually paid out by Holtwood to various Pennsylvania customers for interchange purchases, you have not included all of the costs incurred by Holtwood in line 6 of Table IV, Exhibit 64, for the year 1944. Have you? A. No, I have treated that on a net basis as a revenue.

Q. I didn't ask you how you treated it. The fact is you haven't included all the expenses of Holtwood in Table IV. Isn't that right? A. That is true.

Q. So that Table IV does not reflect all the actual costs of Holtwood. Isn't that right? A. It reflects all those that were not paid for by [11178] Pennsylvania customers.

Q. Well, will you tell me whether my statement is right or not? A. You are right as far as you go.

* * *

Q. Now, here again as I understand it, you are not [11179] responsible for any of the figures nor do you testify as to the accuracies of any of the figures in line 7 of Table V nor in line 17 of Table V, nor in line 18 of Table V. Am I correct in that? A. That is right.

Q. And likewise, as I understand it, you do not intend to be responsible for or are you testifying as to the accuracies of the amount shown in line 19 of Table V. Isn't that right? A. That is right.

* * *

[11261] Q. Now, actually of course in line 23 you didn't take the total billing demand of the railroad. You multiplied it by some percentage to arrive at the figure of 28,397. Isn't that right? A. Yes.

Q. What percentage did you use? A. I used the percentage of the total energy supplied to the railroad in Pennsylvania for the month of December, which was 38.9 per cent.

• • •

Q. 38.9 per cent of what? A. Of the total energy supplied to the railroad—was supplied for service in Pennsylvania.

Q. Then as I understand it, you are attempting to arrive at the demands of the Pennsylvania Railroad in Pennsylvania by using a ratio based upon energy transmitted and delivered in Pennsylvania to the total energy transmitted to the railroad. Is that right? [11262] A. That is right.

• • •

[11267] Q. And the actual losses during the peak hour in December 11, 1944 at 6 p.m. were the result of the transmission and generation during that hour. Isn't that right? A. That is right.

Q. And the transmission and generation during that hour was greatly in excess of what would have been transmitted and generated had there been adverse flow conditions during that hour. Isn't that right?

• • •

THE WITNESS: It could have been different. These were the actual for '44.

By MR. MYSE:

Q. It probably would have been less, would it not? A. That would be assumed as a probability.

Q. Well, you as an engineer, wouldn't say, would you, that if you had an amount of energy transmitted and generated less than 300,000 during an hour that the transmission

losses and station uses nevertheless would remain the same [11268] as they were with 300,000, would you?

• • •

[11269] Q. Actually you evaluated the amount of dependable capacity available from those two plants at only 251,500 kw, haven't you? A. That is right.

Q. Now, under conditions of generation of 251,500 kw, or kwh during that hour, there would be less than the actual amount of 23,000 kw in terms of station use and losses. Isn't that right? A. That is probably true.

• • •

[11280] Q. Now, will you look at Table V-A of Exhibit 64, line 1, column 2, and you there show the installed capacity at the Holtwood hydro plant of 104,000 kw, do you not? A. That is right.

Q. Do you know how much of that 104,000 kw is 25-cycle capacity? A. I didn't take that into account in this study.

Q. I haven't asked you that, Mr. Davis. I asked you whether you know how much of it was 25-cycle capacity. A. Something like 80,000, if I recall.

Q. Well, 80,000 checks with my figure. Does that refresh your recollection? A. Yes.

Q. Now, that 80,000 of installed 25-cycle capacity is used principally for Baltimore. There is no question about that, is there? A. That is delivered to the Highlandtown Substation.

Q. And used principally for Baltimore, is it not? A. I would assume that most of the time it is.

Q. What other use there is is the small amount that goes to the Lancaster 25-cycle Area. Isn't that right? A. Well, what might go through the frequency changers in Baltimore and come back up to Safe Harbor over the 220 kv lines.

[11281] Q. In any event, it is delivered to Baltimore before it goes through the frequency changers? A. It is delivered to Baltimore. That is right.

Q. Now, as I understood the figures in column 4 of Table V-A, you arrived at the conclusion that the dependable capacity for the total of the two hydro plants was 67½ per cent of the installed capacity. Isn't that right? A. Yes, that is right.

Q. And you applied the same 67½ per cent in determining what proportion of the 104,000 at Holtwood hydro was dependable capacity and arrived at 70,221 kw. Is that right? A. Well, the 70,221 is a proportionate division of the total dependable to the hydro plants on the ratio of their installed capacity.

Q. But it is 67½ per cent of the 104,000 kw. Is it not? A. It ought to be. I didn't figure it. It wasn't arrived at in that way.

Q. But the fact is, it is that ratio, isn't it? A. That is what it should be.

Q. So that means that you have assumed that the dependable capacity at Holtwood is 67½ per cent of the installed capacity at Holtwood hydro. Isn't that right? [11282] A. That is right.

Q. Now, if you took 67½ per cent of the 80,000 kw of 25-cycle capacity at Holtwood, how much would you arrive at? My figures show 54,000. Is that right? A. Approximately right. That is, my mental arithmetic hits at approximately that point.

Q. That means, does it not, on your basis there is 54,000 kw of dependable capacity in terms of 25-cycle capacity at Holtwood. Isn't that right? A. That is right.

Q. And most of that is used for Baltimore, isn't it? A. Most of it is delivered to the Baltimore system, that is right. What excess they get on 25-cycle, they get a deficit on 60-cycle.

Q. Now, I think in looking at Exhibit 42, page 20, which is a sheet for December 11, 1944, at 6 p.m., which is the Area 6 system peak, if I recollect the 54,000 kw was the amount actually delivered during the Area 6 system

peak in terms of 25-cycle. Isn't that right? A. It could have been.

Q. Well, let's look at it and check it. A. It says 54,000 delivered to Highlandtown.

Q. According to Mr. Roland, is that right? A. That is right.

Q. And that was 25-cycle capacity, wasn't it? [11283] A. That is 25-cycle. That is right.

Q. Do you have any idea of what the average amount of capacity was during all of the Area 6 system peaks over the life of the contract identified in this record as Item "H" and "I"? A. No, I do not.

Q. That would be from 1931 down to date, would it not? A. That would be. I haven't studied those figures.

Q. Well, I have a figure of 58,000 kw as the average 25-cycle capacity delivered during all of the Area 6 system peaks over the life of this contract I have referred to. I wonder if you could check that figure for me?

TRIAL EXAMINER: You may refresh his recollection.

MR. MYSE: Well, if it does and he agrees with it, that will save him the problem of checking it.

THE WITNESS: I don't think I ever saw that average.

MR. MYSE: Will you check it for me?

MR. GOLDBERG: That sounds like a figure that would be within the ability of the company to check readily enough rather than within the ability of the witness.

MR. MYSE: That is why I gave him the figure.

MR. GOLDBERG: Just giving him the figure doesn't help him. We will have to consider whether we can do it readily. I do know it is a figure they can check.

MR. MYSE: Does that mean you decline to furnish that [11284] figure?

MR. GOLDBERG: That means what I just said.

By Mr. Myse:

Q. Will you attempt to check it, Mr. Davis, and tell me whether it is correct? A. I will make the attempt.

Q. Now, prior to 1931, 25-cycle capacity was all that Baltimore got from either the Safe Harbor plant which wasn't in existence or the Holtwood plant which was in existence. Isn't that right? A. I have made no study of 1931 conditions.

Q. Well, I haven't asked you for that, but isn't that the fact that prior to 1931 there was no Safe Harbor plant— A. Oh, true.

Q. So that all the energy and capacity that Baltimore did get was in terms of 25-cycle capacity from Holtwood. Isn't that right? A. All except what it might have gotten from the steam plant.

Q. Well, you are not saying that any of the steam plant energy ever got down to Baltimore via Highlandtown, are you? A. Oh, no.

Q. So it must have been 25-cycle capacity. Isn't [11285] that right?

Mr. Goldberg: I object, Mr. Examiner. The witness has stated he hasn't studied it. All we are getting is a lot of speculation on the record.

Trial Examiner: The objection is sustained.

By Mr. Myse:

Q. Of course that 10,820 kw does not represent the amount of energy delivered to Baltimore during any one hour during the year 1944, that is, the maximum amount, does it? A. No, this is based on an estimated dependable capacity. This is not any actual quantity. It has nothing to do with all these actual figures you have been giving here as 1944 actual conditions. If they could depend on 1944 actual conditions all the time, there would be a big increase in the dependable capacity estimate here.

* * *

[11334] Q. Now, before we leave Table V-A of Exhibit 64, as I understand that deduction in line 27 of 94,043 kw which you say is Baltimore's two-thirds' share of Safe Harbor, the justification for that deduction is based upon your construction of the contract identified in this record as Items "F" and "G". Isn't that right? A. That is right.

Q. Now, there is one other thing on Table V-A that occurs to me at this moment. Take a look at the firm demand of 51,000 kw shown on lines 16, which you say is the firm demand for P.P. & L. Company. Now, that demand for P.P. & L. Company, was included, plus ten per cent reserve, in the figure of 92,400 shown in line 20 which you deducted from a figure of 228,500 kw on line 12, column 5, which you show as the net dependable capacity available for load. Isn't that right? A. Yes.

Q. Now, after making a deduction for the Pennsylvania Railroad Company in Pennsylvania December billing, you arrive at a figure of 104,863 kw in column 5 on line 25 as what you call the balance available for Baltimore [11335] from Holtwood and Safe Harbor. Isn't that right? A. That is right.

Q. And that balance available is supposed to be the dependable capacity available to Baltimore at the time of the most adverse flow of record. Isn't that right? A. At the time of most adverse flow in the month when the system peak occurs, yes.

Q. And that would be the most adverse flow conditions of record for the month of December? A. That is right.

Q. Now, at page 44 of Exhibit 47 you pointed out—and I think we had some testimony with respect to an option on the part of the Generating Companies under Exhibit 76 and 77 to reduce the requirements of P.P. and L. by 20 per cent during peak periods on low flow days. Isn't that right? A. That option is in the contract, yes.

Q. Now, if that option is in effect, it means, does it not, that in addition to the 104,863 kw that you show as the

balance of dependable capacity for Baltimore from Holtwood and Safe Harbor under adverse flow conditions, there is at least 20 per cent of the 57,200 kw that you show as the firm load for Pennsylvania Power and Light Company under that option. Isn't that right? A. If the option was in effect, you say?

[11336] Q. Yes. A. That is right.

* * *

[11347] Q. As I understand your Table V-d of Exhibit 64, Mr. Davis, that table has the purpose of showing, among other things, the ratios of the non-coincident maximum demands of all the customers of Holtwood to the sum or total of all of those non-coincident demands; is not that right? A. That shows that, yes, in column 2.

Q. Now, of course you recognize, do you not, that that 10,820 shown as the annual maximum demand in kw by Baltimore does not represent the maximum load furnished Baltimore during the year 1944 from the Holtwood-Safe Harbor system, is not that right? A. Certainly.

Q. It is something else other than the maximum load furnished, isn't that right? A. That is the amount of dependable capacity that would be left to Baltimore under adverse conditions.

Q. Now, one of the assumptions implicit in the method you pursued in Exhibit 64—that is, the non-coincident method—is that the ratios which you developed in column 2 of Table V-d of that Exhibit, when applied to the joint costs which you show as pool costs will apportion all of those pool costs in proportion to the use that each customer makes of the total capacity available. Isn't that right? A. That is right.

[11348] Q. And that means you must have the annual maximum demands in each case on a comparable basis. Does that not follow? A. Yes.

Q. Now, that demand shown for PP & L, the 66,000 in column 1, line 1 of Table V-d, is a demand shown or reported on an integrated hourly basis, is it not? A. Yes.

Q. And it does include whatever demands there were by the Big and Little Inch pumping stations during the war, which has been changed somewhat? Isn't that right? A. It includes whatever they were in 1944.

Q. And it also is a demand during wartime? A. It is a demand during 1944, yes.

Q. Now, the demand you show for Philadelphia Electric Company in Column 1, line 2 of Table V-d of Exhibit 64 is not a one-hourly integrated demand, is it? A. I believe that was measured on the 30-minute basis.

Q. And if it had not been measured on a one-hourly basis, it would be somewhat less, would it not? A. It might have been slightly less. In that type of load, there is not a great deal of difference between an hour and a half hour demand.

Q. Did you make any investigation to determine how much less it would have been? [11349] A. Well, in a general way, yes, noting that the hourly demands, one after another, were hardly changed, that is, very slightly changed. You can justly assume that a half hour demand is not going to be greatly different.

Q. What do you find as the difference between the demand that you used and the one hourly demand which would be comparable to the demand shown in line 1 for PP & L Company? A. I did not find any particular amount. Just observing the very slight change from hour to hour in the Philadelphia Electric demands as they are measured, or from month to month, the maximum demand one month after another showed that the load was very uniform, and that you would not expect any serious difference between the one hour and the 30-minute demand.

Q. But you did not make any investigation to determine actually how much it was, did you? A. I did not have any one-hour measurement, no.

Q. So that in fact, your demand shown for P. E. Company is not comparable to the demand shown for PP & L?

A. There may be a slight difference in the demand shown here and the one-hour demand.

Q. Well, you didn't have the one-hour figures for PP & L Company, either, until you asked for them, did you? A. No, a lot of this stuff I did not have until I [11350] asked for it.

Q. Didn't you ask the company for the one-hour demand on P-E Company? A. I took the demand that they used in billing. I did not ask them for one-hour demands, no.

* * *

[11353] Q. Now, a moment ago you said on a system like Philadelphia Electric Company you believed there was very little difference between the demand determined on a 30-minute basis, and the demand determined on a 1-hour basis, did you not? A. I assumed that there would not be difference enough to make any significant change in the answer in this study.

Q. And is that because it is a relatively small system? A. Well, it was a rather small system.

Q. Well, is that the reason why you came to that conclusion? A. Not especially.

Q. That did not have any bearing on your conclusions, then? A. I don't remember that I thought of that particularly.

Q. Now, with respect to the demand by the Baltimore Company and the Holtwood-Safe Harbor system, there is quite a difference between demands figured on a 30-minute basis and on an hourly basis; is not that right? A. You are talking about actual demands now?

Q. Yes, sir. A. There might be.

Q. There not only might be but there is? [11354] A. There probably is.

Q. And that is due, among other things, to the fact that one of the large steel plants, Bethlehem Steel Company, is connected to the Baltimore system. Isn't that right? A. It might be. I did not investigate that.

Q. Well, don't you know enough about steel company operation to know that that causes considerable swing in the load? A. That is true.

Q. Now, who takes care of those swings in the loads as far as the Baltimore System is concerned.

MR. GOLDBERG: I object to that as repetitious. I think it was taken up both with the witness Roland and with the witness Davis in connection with the cross-examination on the contract aspect of his testimony.

TRIAL EXAMINER: He may answer.

THE WITNESS: With regard to any particular swings at any particular time, I could not tell who takes them up. Of course the swing load coming on to a large system like that will spread itself according to the way governors on generators are set. If all generators are operating on governors the most sensitive governor would take more of the load.

By MR. MYSE:

Q. Well, under most adverse flow conditions of record, which were the conditions which you assumed in arriving at [11355] the conclusions you did in Exhibit 64, at least for purposes of determining demands of Baltimore, all of the steam generating units would be on what is called base load; is not that right? A. That probably would, yes.

Q. And all of the hydro units, particularly the units of Safe Harbor and Holtwood, would be on the peak of the load; isn't that right? A. Those would be used as peaking plants.

Q. So, if there are any swings under those adverse flow conditions caused by the Bethlehem Steel Company plant connected to the Baltimore Company's system, all of those swings would be taken care of by the Holtwood and Safe Harbor hydro units; is not that right? A. That does not absolutely follow.

Q. But the likelihood is that they could; is not that right? A. Well, they might.

Q. And the probabilities are that they would; isn't that right? A. If all steam-generating plants were operating on blocked governors, they would have to take them all. But steam plants take some swings. They cannot help it.

Q. But under those adverse flow conditions, any spinning reserve would be in the hydro plants, would it not? [11356] A. That is probably true.

Q. Well, now, in your view, Mr. Davis, is the carrying of those swings by the hydro plant at Safe Harbor and Holtwood at times of adverse flow a use of the capacity at those plants in excess of the dependable capacity that you determined? A. Well, the dependable capacity, as determined here, is on a one-hour basis.

Q. Well, perhaps you misunderstood my question. I do not think that answers it. A. Dependable capacity is calculated on the basis of the highest one-hour load.

Q. Well, I am talking about the swings within the one-hour under adverse-flow conditions. A. Well, those are averaged out, and the average forms the one-hour.

Q. Well, isn't it a fact that under those conditions, that is, adverse-flow conditions, where there are swings taken care of by the hydro plants at Holtwood and Safe Harbor, that the taking-care of those swings is a use of the capacity at those plants in excess of whatever amount of dependable capacity might be available at those plants? Isn't that right, Mr. Davis? Can you answer that question? A. Those swings could be something in excess of the one-hour integrated load.

[11357] Q. And they might be considerably in excess, isn't that right? A. I do not know how much.

Q. Well, to the extent they are in excess, that is a use of capacity in excess of dependable capacity averaged over the one-hour; isn't it? A. That is right.

Q. Now, if the Holtwood and Safe Harbor hydro plants were not there, Baltimore would have to have additional steam capacity to take care of those swings, would it not? A. I could not answer that. I do not know how much steam capacity would be out of operation at that time, if any, or how much would be used part of the time. There are always high cost steam plants that are not used on base load except in dire emergencies.

Q. Well, whether or not they have to have those high cost steam units, they would have to use them if the hydro plants were not there, would they not? A. That is right.

* * *

[11393] Q. Now, if you refer to Table VI of Exhibit 64, please, in column 7 of that table, line 5, you show a credit to Baltimore of $501,268. Is that right? A. Yes.

Q. And you figured that credit, at least in your testimony at page 1197, at an energy cost of four mills per kilowatt hour. Isn't that right? A. Yes.

Q. Where did that energy cost figure come from? A. Well, that is a compromise between Baltimore's increment cost of energy and the total average production cost. It is an approximate figure.

Q. Would you say that that is a figure which might be considered the actual cost plus 10 per cent of Baltimore Company? A. No, that probably is a little low for that. I probably should have used a little higher figure.

Q. Well, how much do you think you should have used? A. Well, from information that has been brought out since this exhibit was prepared, I would think it should be 4.6 mills.

Q. You would think that 4.6 mills then represents the cost to Baltimore plus 10 per cent?

MR. GOLDBERG: Cost to Baltimore of what?

[11394] MR. MYSE: The cost of the energy.

THE WITNESS: Well, that is not as much as the overall production cost plus 10 per cent.

By Mr. Myse:

Q. Well, do you think it would represent 10 per cent? Do you think it would represent the costs reported by Baltimore Company on its monthly production statement?

Mr. Goldberg: Reported as what, increment cost?

Mr. Myse: Whatever costs are reported by Baltimore.

Mr. Goldberg: What was it?

Trial Examiner: Do you understand the question, Mr. Witness?

Mr. Goldberg: I would like to have it read.

The Witness: You mean in the Form 1 report for 1944?

By Mr. Myse:

Q. Well, what I am referring to is Article 6 of Item H which says, "The costs to be used are those reported on Electric's"—that is Baltimore Company's—"monthly production statement covering the month during which steam energy was furnished to Power"—that is Holtwood.

Now, was that four mills or 4.6 mills that you have just made reference to intended to cover the costs so described in Article 6 of Item H? A. No, that was just a general figure of somewhere between Baltimore's over-all average production cost and its [11395] increment costs, trying to assign a reasonable cost to this service regardless of contract prices.

Q. Well, then, as I understand your testimony, your rate of four mills, or the new one that you just mentioned of 4.6 mills, has no relation whatsoever to the costs described in Article 6? A. No, that was not considered.

Q. Just to get my own understanding straight, was that 4.6 mills you just mentioned in your view a cost to Baltimore or a cost to Holtwood? A. No, a cost to Baltimore.

Q. Now, just how do you arrive at the four mills? A. I just took a reasonable figure, what I thought was a reasonable figure between what they reported for increment costs, which I thought would be a little too low, and probably average over-all production cost might be a little too high.

Q. What was that incremental cost that they reported? A. It was three and a fraction mills, if I recall.

Q. What was the average cost that you considered? A. I think the average cost was 4.3, or something like that.

Q. 4.3? A. Yes.

Q. Now, did you examine the cost figures at all that [11396] they reported either as incremental or average to determine what was included in those figures? A. I took the steam production cost.

Q. Well, my question to you is, did you go back of the figures that they reported to determine what made up the incremental cost or the average cost that they reported and which you used? A. I used the figures that were reported on Form 1.

Q. Then I understand that you did not go back of the figures other than to look at Form 1? A. That is all.

Q. Now, you applied the four mills rate in coming to your credit to Baltimore of $501,268 to the net hourly backfeed received from Baltimore in 1944; isn't that right? A. That is right.

Q. And you didn't adjust that net hourly amount to any average water year, did you? A. No.

* * *

[11397] Q. Now, if you had adjusted the backfeed to an average water year, you would have gotten somewhat less kwh on a net hourly basis, would you not? A. I don't know what I would have gotten.

Q. Well, you know that the year 1944 was a below-average water year, don't you? A. That is true.

Q. And when you have lower flows, you have more backfeed; isn't that right? A. You usually do.

Q. So that when you have higher flows, you have less backfeed? A. You probably would.

Q. And you would probably have had less backfeed on a net basis in an average year than the 125 million? A. I might have had.

[11398] Q. So, if you want to adjust your figure for a credit to Baltimore on an average-water year basis, you should use if anything, if you are going to use net hourly figures at all, the net hourly figures on an average water-year basis. Isn't that right? A. It might be true.

Q. And if you applied four mills to that, you would come out with less credit; isn't that right? A. If you applied four mills to a smaller number of kilowatt hours, it would be a smaller amount of dollars. The total cost to Baltimore was probably more than the net hourly.

* * *

[11399] Q. I don't want to go all over this again, Mr. Davis, but Article 6, Item H is the only contract existing between Baltimore and Holtwood so far as backfeed is concerned; is not that right? A. No.

Q. What other contract is there? A. Items H and I together provide for backfeed.

Q. Now, can you find any other specific article in H and I which says anything about backfeed? A. Well, when it says that the resources will be pooled and there will be coordinated operation to get the greatest effect, that means sometimes there will be backfeed, and it is agreed there will be.

Q. Are you now referring to Item H and Item I and what article? A. I am referring to the article that provides for cooperation, pooling of resources and coordination of [11400] operation.

Q. Are you referring to Article VIII by any chance? A. Yes, that is a description of what I had in mind.

Q. Is that the only article you have in mind? A. I did not have any particular article in mind. I had the pro-

vision for coordination, pooling of resources for the greatest over-all benefit to the system.

Q. Now, if Article 6 of page 9 of Item H is applicable to the purchase of power and steam-generated energy from Baltimore by Holtwood, the rates clearly specified in there are on a daily net amount basis. Is it not? A. I believe that is what it says in—

Q. And if you use—

MR. GOLDBERG: I don't think he finished.

THE WITNESS: That is what it says in that article. That does not say that that is Baltimore's costs, or that that is a cost figure that must be used in allocating costs to the system.

. . . . . .

[11407] Q. Now, Mr. Davis, the fact is that none of the revenue from the interchange sales to the Pennsylvania customers is in fact turned over by Baltimore to Holtwood, is it? A. Not in cash, no.

. . . .

[11415] Q. Now, at Table VI-a, of your Exhibit 64, you add another item to the actual bill rendered by Holtwood to Baltimore, an item in the amount of $133,750, isn't that correct? A. That is correct.

Q. That means, does it not, that in your revenue shown on line 5, column 9 of Table VI of Exhibit 64 as revenue from Baltimore you have included the amount of $133,750 as a Conowingo backwater payment, is that right? A. That is right.

Q. Now, actually that payment of $133,750 was not in fact received by Holtwood Company from Baltimore Company; isn't that right? A. It was received from Conowingo.

Q. And you would not stretch your imagination to say that Conowingo is Baltimore Company, would you? A. Acting for it in this case.

Q. Does that mean that you do say that Conowingo is in fact the Baltimore Company? [11416] A. No.

* * * *

[11418] Q. In any event, it appears that the Conowingo agreement you had reference to when you included this Conowingo backwater payment in Table VI-a of your Exhibit 64 was made in 1926 or 1927, at least; is not that right? A. I am informed that it was earlier than 1931.

Q. And it was long prior to 1931? A. Yes.

* * *

Q. As I understand it, you added that figure of $133,750 as a revenue of Baltimore on the assumption that Baltimore Company is entitled to something, for which Baltimore Company would otherwise have been obliged to pay. Isn't that right? A. That is right.

Q. Now, are you saying that Baltimore Company was entitled to something that occurred long prior to the 1931 agreement? A. Well, I was looking at it from the point of view of 1944. They got this money from Conowingo by sacrificing something in the value of the plant. If they had not done [11419] that, that value of the plant would have been available to Baltimore, and Baltimore would have paid the extra $133,000.

Q. Well, what is there in Item H and I which says they are entitled to something which was sacrificed before H and I became effective? A. Nothing. It was the way they were operating in 1944. I just took it on the conditions as they existed at that time.

* * *

Q. Well, now, as I understand your testimony, you are saying that if that amount of capacity and energy which was lost by reason of the Conowingo transaction had not been lost, Baltimore would have been entitled to it. Is that right? A. Yes.

Q. And that therefore Baltimore would have been obliged to pay for it? A. Baltimore would under H and I, have paid for it.

Q. Would they have been obliged to pay any more than they are now paying? [11420] A. They would have paid the $133,000 more.

Q. Well, they would have had more energy and more capacity, too, for that payment? A. Supposedly, yes.

Q. But you have not allocated any of the cost of that lost capacity or energy to Baltimore, have you? A. No, I admit that should be done. That is the thing that is wrong with that. All I can see is that some costs should be allocated along with that service. That might be estimated as the amount of loss that is shown in the contract.

Q. Well, it might be estimated at the same amount as the revenues, $133,750. Isn't that right? A. No, the amount of loss is more nearly an estimate of the cost of that. The excess amount is only due to the fact that Conowingo could get more value out of that water than Holtwood could, so it enabled them to sell it at a higher price.

Q. Now, actually under the terms of the contract, as you showed in your Exhibit 47, you show that Holtwood's loss of energy output and demand value in not developing its tailrace level to the foot of Cully's Falls was $72,000 a year, was it not? A. That is right.

Q. And you also show on the next page, page 69, that [11421] $61,750 annually was agreed upon as the losses by Holtwood Company in addition to the loss of energy output and the demand by reason of not developing the tailrace level at the foot of Cully's Falls; is not that right? A. All the losses I recollect are the $72,000.

Q. Well, look at page 69, item (d). A. That is Holtwood's participation in Conowingo's gain. They split the gain that Conowingo got in excess of $72,000 fifty-fifty between the two.

Q. Then you have a different copy than I have. It says, "Holtwood's participation in Conowingo's gain as compensation for other losses by Holtwood," does it not? A. Yes.

Q. And that $61,750 represents those other losses, does it not? A. That is a general statement of other losses unevaluated. The $61,750 is a fifty-fifty split of the extra value that Conowingo can get out of that water.

Q. But it is for other losses by Holtwood, is it not? A. That is stated there.

Q. Well, you do not have any doubt of that, do you? A. Well, they could not find what those losses were. It is simply $61,000 not related to any loss.

* * * *

[11426] Q. At some place in your testimony I recollect that you said only a small amount of backfeed transmitted over those lines is used directly for interchange with the Pennsylvania customers. Is that right? A. That is right.

Q. That means that the major portion of the backfeed is used in connection with conversion at Safe Harbor for railroad use or in connection with the firm supply to Pennsylvania customers to the north. Isn't that right? A. That is right.

Q. And it is also true, is it not, that a major portion of whatever interchange is sold to the customers to the north comes from the Penn Water-Safe Harbor generation, [11427] that is, it is actually generated at either Holtwood or Safe Harbor. Isn't that right? A. That is right.

Q. By far the major part of it is generated at Safe Harbor. Is that correct? A. That might be true.

Q. The greatest purchaser of interchange is Pennsylvania Power and Light Company. Is that right? A. Yes.

Q. There is a direct connection from the bus at Safe Harbor with the Harrisburg area where most of that interchange goes. Is that right? A. That is true.

Q. So almost all of the interchange furnished to the P.P. and L. comes from the Safe Harbor bus. Is that right? A. A good portion of it, yes.

Q. By far the largest proportion of it is generated at Safe Harbor? A. That is probably true.

Q. So far as there is interchange with Philadelphia Electric Company over the railroad circuits, that is the Perryville line, that also comes off the Safe Harbor bus. Isn't that right? A. That is true.

Q. And a good share of it is converted at Safe Harbor [11428] and converted from the backfeed which comes up from Baltimore on the 220 lines. Isn't that right? A. A good share of the interchange?

Q. With Philadelphia Electric via the Perryville line? A. Some of that comes up from Baltimore.

Q. You don't know how much it is, then; is that the idea? A. I know how much the total backfeed is.

Q. You don't know the proportion of the backfeed which is actually converted at Safe Harbor, transmitted over the Perryville line, and used for purpose of interchange with Philadelphia Electric. Is that right? A. No.

Q. Since most of this backfeed is generated at either Holtwood or Safe Harbor, or at Safe Harbor—strike that, please.

Since most of the interchange which does go to Pennsylvania customers is generated at either Holtwood or Safe Harbor, does it not follow, that the amount of backfeed which comes up over the 220 lines has no relation to the amount of interchange furnished the Pennsylvania customers? A. Very little.

* * *

[11434] CROSS EXAMINATION (continued).

By MR. STURTEVANT:

* * *

[11454] Q. Now, Mr. Davis, I should like to ask you some questions regarding the use that is made of the output of the 25-cycle generating units at Holtwood. I do not want to add to the mass of figures which already have been presented, particularly since you have not yet analyzed the

data for 1946. But I do want to enumerate generally some of the ways in which the 25-cycle output is used.

[11455] First, a part of the 25-cycle output is normally transmitted to Lancaster and supplied by Pennsylvania Power and Light Company to its 25-cycle load. Is that correct? A. That is true.

Q. Second, a part of the 25-cycle output is converted to 60-cycles by the frequency changers at Holtwood for supply to the 60-cycle customers of the Holtwood Company. Is that correct? A. Part of it is.

Q. Do you know the capacity of the frequency changers at Holtwood? A. They are rather small, as I remember it. There are two six-thousands or seven-thousands kilowatt—

Q. Two of them together have a capacity of 12 to 14,000 Kw? A. That is the way I understand it.

Q. And the amount of the 25-cycle load converted at Holtwood is often limited solely by the capacity of the Holtwood frequency changers. Is that correct? A. That is true.

[11456] Q. Third, some of the 25-cycle output is transmitted to Baltimore, converted there to 60-cycles, and returned to Pennsylvania over the 220 KV lines for supply by the Holtwood Company to the Pennsylvania customers. Is that correct? A. Probably by displacement, that is, more energy is transmitted to Highlandtown, more 25-cycle energy than the load in Baltimore requires, and it is converted to 60-cycle and used for 60-cycle loads in Baltimore which, of course, releases other 60-cycle energy to be delivered up to Safe Harbor over the 220 KV lines.

Q. Some of the output is transmitted to Baltimore and, without the necessity of conversion, is in effect exchanged for 60-cycle steam generated energy which is sent by Baltimore Company to Pennsylvania for supply by Holtwood Company to the Pennsylvania customers. Is that right? A. Surely, that is true.

Q. Fifth, 25 cycle output at Holtwood Company is frequently transmitted to Baltimore in exchange for part of Baltimore Company's two-thirds share of Safe Harbor output, and the latter is sold by Holtwood Company to th Pennsylvania customers, either as firm energy or interchange. Is that right?

THE WITNESS: May I have that again, please?

(Question read).

THE WITNESS: That is true. More than Holtwood's generation and one-third of Safe Harbor that is left after the firm [11457] power customers are supplied is transmitted to Baltimore, that is the amount transmitted is much more than that balance, which is, of course, a portion of Baltimore's share of Safe Harbor power which is going through the Holtwood system and down over their 25-cycle line.

By MR. STURTEVANT:

Q. In these five operations I have mentioned, Mr. Davis, the output of the 25-cycle generators at Holtwood is directly or indirectly used for supplying customers of the Holtwood Company in Pennsylvania. Now, in the sixth place, principally during the higher ranges of flow, 25-cycle energy is transmitted from Holtwood to Baltimore without any substitution or exchange for 60-cycle energy and is supplied by Baltimore Company to its 25-cycle customers. Is that right?

MR. SPARKS: May we have the question, please?

(Question read).

THE WITNESS: That is a little difficult to answer. Of course, at times the 25-cycle energy is all used in Baltimore as such. At other times, much more is delivered to Baltimore over the 25-cycle line than it has 25-cycle load to require it. In that case, either by displacement or by direct

conversion and transmission back to Safe Harbor, it is supplied to Holtwood for use in Pennsylvania.

* * *

[11460] Q. Now, Mr. Davis, do not the facts which have been mentioned and also the figures which you have just quoted prove that the 25-cycle generating units of Holtwood are used directly or indirectly for supply to all of the customers of the Pennsylvania Water and Power Company? [11461] A. Well, that is true. By displacement they supply energy into the 60-cycle system which can go any place.

Q. Mr. Davis, is it feasible or proper to assign specific generating units, or costs at the Holtwood plant, to any particular customer? A. I didn't think so, and I didn't do that.

Q. Then your Exhibit No. 64 is correct in assigning all of these costs to what you term the "pool"? A. That was my idea of the best way to allocate all of those production facilities.

Q. Is not the same thing true of the Holtwood substation costs? A. That would be true, also.

* * *

[11464] Q. Is it not a fact that large amounts of the Baltimore Company's two-thirds entitlement of the Safe Harbor energy are diverted to Holtwood Company for use by Holtwood in supplying its firm load in Pennsylvania? A. That is true.

Q. Shouldn't this diverted Safe Harbor energy be treated just like backfeed steam energy for purposes of determining the cost of service to the Pennsylvania firm customers? A. So far as Baltimore's two-thirds share of Safe Harbor is concerned, I have left that out of my allocation entirely, both energy and cost of it. So far as Holtwood's one-third share of Safe Harbor energy is concerned, so far as that was used for the Pennsylvania customers I have considered only the net amount sold to those

customers and the net revenue received, and have considered that a sale for the account of Baltimore and credited the revenue accordingly.

* * *

[11471] STANLEY W. ROLAND

* * *

REDIRECT EXAMINATION (Continued)

By MR. GOLDBERG:

* * *

[11476] Q. During your cross examination Mr. Myse asked you a number of questions with respect to frequency changers and their operations in an electrical system. (For example, Transcript 9135, etc.) Will you please define "frequency changer" for the record? A. I would define a frequency changer as follows: A frequency changer is a machine which converts the power of an alternating current system from one frequency to another, with or without a change in the number of phases, or in the voltage. This definition appears on page 64 of the American Standard Definitions of Electrical Terms.

Q. In your opinion does a frequency changer and a transformer perform a similar function in a transmission network?

* * *

[11477] THE WITNESS: The answer to your question is yes. The function of the transformer is to transfer energy from one circuit to another where the voltages of the circuits are different. The function of the frequency changer is to transfer energy from one circuit to another where the frequency and sometimes the voltage and phase of the two circuits are different.

* * *

[11488] RECROSS EXAMINATION

By Mr. MYSE:

Q. You have testified this morning, Mr. Roland, that the function of the transformer is, as I understand your testimony, similar to the function of a frequency changer, is that right? A. In a broad sense that is true, yes.

Q. Well, why do you say in "a broad sense"? Are there some differences? A. Well, certainly there are differences. One is a rotating machine and one is not.

Q. What are the differences in functions, then? A. I stated what the difference in function was.

Q. Well, I don't think I got all that down. A. I said the transformer was to transfer energy from one circuit to another where there was usually a change in voltage and that the frequency changer is to transfer energy from one circuit to another where there is a change in frequency [11489] and sometimes in voltage and in phase.

Q. Now, you say that the transformer is used for the purpose of transferring energy from one circuit to another with a concurrent change in voltage, is that right? A. Yes.

Q. And that transfer from one circuit to another is a transfer of actual energy by the application of Poyntings theorem. Is that right? A. There is such a thing as Poyntings law or Poyntings Theorem, but as far as I am concerned the transfer can take place without regard to Poyntings law.

Q. Well, the fact is in a transformer electrical energy is transmitted right through the transformer using the transformer as the guiding system, as we put it in the Hartford case. Isn't that right?

* * *

[11490] THE WITNESS: The energy is transferred from one circuit to the other. Now, as to what process is involved, I could not explain that.

By Mr. Myse:

Q. You mean to say there is no electrical energy transmitted through a transformer, Mr. Roland? A. Of course there is.

Q. But there is no electrical energy transmitted by a frequency changer, is there? A. In the same broad sense, there is yes.

Q. There is no electrical circuit between one end of the frequency changer and the other? A. No, there is a mechanical link there, but viewing the thing broadly from a functional standpoint they both do the same thing. Both the transformer and the frequency changer do the same thing.

[11491] Q. You are not saying, are you, Mr. Roland, that the shaft which connects up the two ends of the frequency changer actually transmits electrical energy, are you?

A. No, that is mechanical energy.

Q. So there is that difference between a frequency changer and a transformer? A. There is a difference in the type of equipment used but broadly the function is the same. They transfer energy from one circuit to another.

Q. Well, now, in that same broad sense, a turbine will transfer energy from the steam pipelines to the electrical circuit, is not that right? A. Well, there is a distinction. The transformer and the frequency changer are parts of the transmission network, and in that network they do perform that function of linking together various parts of the network.

Now, when you get back into the turbine you are out of the network.

Q. You don't consider, then, that the steam turbine end of the generator is part of the electrical system, is that right? A. Not a part of the electrical system, no, not the turbine.

Q. Is it not part of the generating system, then? A. Oh, yes, it is part of the mechanical end of the [11492] system, the generating system, yes.

Q. Well, what about the shaft which connects up the steam turbine and the generator, is that part of the electrical system or not? A. Well, I suppose any differentiation would be somewhat arbitrary there. I don't know just where you would draw the line on that.

* * *

[11574] SAMUEL JOSEPH

* * *

CROSS EXAMINATION (Continued)

By MR. SPARKS:

* * *

[11584] A. I have this in mind, Mr. Sparks: Utilities that have reasonable capitalizations would obtain substantially the same fair rate of return, other things being equal. For example, the capitalization for a utility may be entirely reasonable if it is 50 per cent bonds and 50 per cent stock, or if it is 40 per cent bonds, 20 per cent preferred and 40 per cent common stock. The utilities which fall within the range of reasonable capitalization therefore fall in the same range with respect to the fair rate of return. They create no special problems, though the precise nature of their outstanding securities may be different.

Q. Are you saying, Mr. Joseph, that those utilities having reasonable capitalizations would have the same rate of return? A. Would command approximately the same fair rate of return, yes, sir.

Q. When you use the word "command" there, do you mean that they should be allowed the same fair rate of [11585] return? A. Yes, sir.

Q. What are the data in Exhibit 46 which may be considered in determining or estimating the cost of equity capital to Penn Water as a component of the fair rate of return? A. The cost of equity capital to Penn Water is not shown in Exhibit 46.

* * *

Q. I don't think that answers my question, Mr. Joseph. It was, what are the data which may be considered in a determination or the estimating of the cost of equity capital to Penn Water as a component of the fair rate of return. A. The cost of equity capital to Penn Water is unnecessary in a determination of the fair rate of return for Penn Water. Furthermore, I am not at all sure that it can be obtained.

Q. Is it true, then, in view of your last answer, Mr. Joseph, that the cost of debt capital to Penn Water is not to be considered in arriving at a fair rate of return? [11586] A. No, that is a somewhat different problem. If the cost of debt capital to Penn Water appears to be reasonable, then in my opinion it may be accepted as one of the elements for the establishment of a fair rate of return.

Q. What are the other elements? A. Bear in mind that you are talking about different things when you are talking about the cost of equity capital and the cost of funded debt capital. Cost of funded debt capital is rather easily determined, its reasonableness quite easily determined, but the cost of equity capital is a far different thing and can not in most cases be readily determined.

* * *

[11592] Q. So that it is correct to say that the measures of the credit of an enterprise are the yield rates at which creditors buy bonds as well as the earnings-price ratios, if those earnings-price ratios express the prospective return basis upon which the stock is sold in the market? A. I think that is a fair statement, yes, sir.

* * *

[11597] Q. Should the rate of return be fixed at a lower level than otherwise merely because of an absence of the prospect of need for new capital? A. The tendency would probably be that way, I believe.

Q. Are you saying, Mr. Joseph, that the rate of [11598] return should be fixed at a lower level than otherwise merely because of an absence of the prospective need for new capital? A. My answer is based on the fact that I

believe that if there were a need for substantial new capital, the rate of return might have to be slightly higher than otherwise.

Q. In the absence of the need, then, I take it from your answer you would say the rate of return should be lower. Is that correct? A. It would tend to be lower.

Q. Well, should it be? A. Well, it should imply a fairness in the situation that I am trying to eliminate, Mr. Sparks. It would be lower because when you raise new capital you tend to pay a little more than is fair on existing capital.

* * *

[11621] Q. Mr. Joseph, at page 10354 you said that the basis of selection of the ten common stocks included in the averages shown on page 38-A was in part the "Representativeness of the Utility itself;" what did you mean by that term "representativeness of the utility itself"?

* * *

[11622] A. Well, is the utility generally of a class that may be used in representing the electric industry?

Q. And that is what you meant when you used the term, "representativeness of the utility itself," on page 10354? A. Yes, sir.

Q. Do you mean, Mr. Joseph, that any electric operating utility would be within that class? A. Unless there were some circumstance that made it a special situation, that would be true.

* * *

[11638] Q. Now, then, I have referred to your answer beginning at line 8 and ending at line 20 on page 10072 and I ask you whether you meant by that answer that it is not necessary for the Federal Power Commission to have your testimony and Exhibit 46 in order to determine a fair rate of return for Penn Water? A. I think a fair rate of return could be determined without it.

Q. Then your answer to my question is yes, is that correct? A. Yes.

* * *

[11767] GEORGE H. DAVIS

* * *

REDIRECT EXAMINATION (Continued)

By MR. GOLDBERG:

* * *

[11769] Q. At transcript page 10538 and 10539, Mr. Myse asked you about the effect of an option in the Penn Water-Pennsylvania Power and Light Company agreement which you had discussed at page 44 of Exhibit 47. Was that option in effect in 1944? A. No.

Q. Was it in effect in 1945? A. No.

Q. Does that mean that the option had no bearing on the operations of the agreement between Holtwood and Pennsylvania Power and Light Company in 1944 and 1945? A. Yes.

* * *

[11773] Q. Referring to the question and answer beginning at transcript 10813, line 22 and ending at transcript 10814, line 4, are we to understand that you have ignored the costs of Safe Harbor incurred for services supplied to the railroad in Maryland? A. No, you are not.

Q. Did you ignore Safe Harbor's costs involved in rendering service to the railroad in Maryland? A. No.

Q. Will you please explain why you say no? A. Because all of Safe Harbor's costs are reflected in the payments made by Consolidated and Holtwood to Safe Harbor under Items E, F and G.

Thus, since Holtwood's payment of one-third of those costs is included in the total costs with which I was dealing in Exhibit 64, I have not ignored any costs which may be involved in the rendering of service to the railroad in Maryland for the account of Baltimore.

In other words, one-third of Safe Harbor's total costs [11774] are included in Holtwood's costs for whatever service those costs may have been incurred, and I have treated that one-third as Holtwood's costs, which they are.

Q. At transcript pages 10814 and 10815 you were questioned concerning the assignment of facilities which are directly related to the service of only one customer.

Have you assigned such facilities directly to the particular customer in all cases? A. No, not in all cases.

Q. Now, will you explain why you haven't done that in all cases? A. The bill for Safe Harbor power rendered to Holtwood was not analyzed for the purpose of attempting to segregate costs of single-phase from the costs of three-phase generation at Safe Harbor, but was all assigned to the pool.

This appeared to be warranted because of the flexibility in operation of the single-phase and three-phase generators provided by the frequency changer and the resulting ability to transfer power from the single-phase to the three-phase buses, or in the reverse direction.

From the fact, however, that single-phase equipment represents some investment in excess of equivalent three-phase equipment, and that in actual practice only a small proportion of the single-phase generation is converted for use in the three-phase system, it probably could be said that it is [11775] more accurate to segregate this excess cost and assign it proportionately to the railroad service in Pennsylvania and in Maryland on the same basis as the allocation of the Conestoga Substation. If this method were to be followed, it would reduce the pool costs by $46,900, and increase costs allocated to Baltimore by 39 per cent of this amount or $18,291, and increase costs assigned to the railroad for service in Pennsylvania by 61 per cant, or $28,609.

* * *

[11776] Q. Now, at transcript pages 11106 and 11107, you were asked about the use of the 25-cycle equipment at Holtwood for serving customers other than Baltimore Company.

Do you wish to modify any of your answers on those pages? A. Yes, my answer on page 11106, line 11 requires some modification.

Q. Will you please state what modification you think is required? A. The energy going through the frequency changer from the 25-cycle to the 60-cycle bus on the peak day was as much as 14,000 kilowatts during certain hours, which was considerably larger than I had indicated.

Furthermore, I find that during the peak day of 1944 as much as 6,000 kilowatts during one hour were delivered to Pennsylvania Power and Light Company at Lancaster. These data I find in Exhibit 42, page 20, column 40 and 42.

Page 20 of the same exhibit, column 40 through 43 also shows that during the hour ending at 6 p.m., December 11, 1944, 4,000 kilowatt hours were delivered to Pennsylvania Power and Light Company, 54,000 kilowatt hours were delivered to Highlandtown and 12,000 kilowatt hours delivered to the frequency changer for transfer to the 60-cycle bus at Holtwood.

Q. The hour you refer to was the peak hour on the [11777] interconnected system? A. That 6 p.m., December 11, was the hour of system peak for 1944.

Q. At transcript 11106, line 15, you stated that you could hardly find a significant amount of power from the 25-cycle generators at Holtwood getting to Coatesville.

Have you had an opportunity to review any data for the purpose of verifying your answer? A. Yes, I have.

Q. What have you reviewed? A. The data in Exhibit Number 42.

Q. And as a result of that review, what have you found? A. I find on page 20 of Exhibit 42 in column 35 during the hour ending 6 p.m., December 11, 1944, that 55,000 kilowatts were sent out from the 13 kv 60-cycle bus at Holtwood to Holtwood's customers in Pennsylvania.

I also find on the same page, line 23, for the hour ending 6 p.m. of the same day that 12,000 of the 55,000 kilo-

watt hours were supplied from the 25-cycle generators at Holtwood.

In other words, I find that the use of 25-cycle generation during the hour of system peak in Area 6 for supply to Holtwood's Pennsylvania customers was a significant amount.

* * *

[11779] Q. At transcript pages 11107 and 11109 you were asked about the joint use of eight out of ten generating units at Holtwood for service to all customers. Is that right? A. Yes.

Q. Through these questions the ratios that you used in allocating total pool costs were applied to Holtwood hydro plant alone and at page 11392 it was computed that 16 per cent of the costs of this plant had been allocated to Baltimore, whereas 80 per cent of the generators were 25-cycle and with two exceptions, their total output was delivered to Baltimore. Does that present a true picture of the situation? A. No, it does not.

Q. Why not? A. The ratio on which costs of a group of properties are allocated does not necessarily apply separately to each individual item in the group. Pool costs were allocated as a group including Holtwood hydro and steam, one-third of [11780] Safe Harbor and some transmission facilities, and if one customer received only 25-cycle energy and another received only 60-cycle energy, no injustice was done by allocating to each the average cost of 25 and 60-cycle energy. There are several reasons why the allocation results in no injustice.

In the first place, there is no signficant difference between the cost of 25-cycle generation and the cost of 60-cycle generation at Holtwood.

In the second place, the largest part of the output of the 25-cycle generators at Holtwood has to be delivered to Baltimore whether it can be used there or not, because outside of the exceptions previously noted, it is the only outlet for the 25-cycle output from Holtwood.

Furthermore, Exhibit 42 shows that an amount equivalent to about 35 per cent of the 25-cycle energy delivered at Highlandtown is simultaneously transmitted back to Safe Harbor over the 220 Kv lines for use in its 60-cycle system in Pennsylvania. In view of this situation, it is clear that the costs of 25-cycle generation at Holtwood and perhaps, some part of the cost of the Highlandtown transmission should be allocated to the pool.

Q. At page 11144 you were questioned as to the allocation of general plant on the basis of the average of the classified plant and it was stated in criticism of that method that some items in general plant were used entirely [11781] in connection with the Highlandtown line.

Do you consider that your method needs correcting for that reason? A. No, I do not.

Q. Will you state why not? A. General plant is made up of a number of items which are not considered susceptible of direct classification with any of the standard property groups. It is impractical to allocate general plant item by item, and while any item related—if there was such an item—entirely to the Highlandtown line would not be allocated 100 per cent to Baltimore by my method, which is the method commonly used, there would be allocated to Baltimore a portion of some other items only remotely related to it so that the over-all result is considered as accurate as it is practicable to obtain.

TRIAL EXAMINER: When you say it is a method commonly used, do you have in mind any particular case?

THE WITNESS: In practically every case that I have ever seen, intangible and general plant is spread over the classified items on the ratio of the totals of each classified group.

TRIAL EXAMINER: Do you know of any reported case where that has been done?

THE WITNESS: I don't have one in mind right now. I think it is a very common method of allocating property that [11782] is not susceptible of classification into the standard groups of production, transmission, distribution.

TRIAL EXAMINER: Do you have any reported case available in your notes?

THE WITNESS: I have no recollection of one at this time. I think I could easily find one.

By MR. GOLDBERG:

Q. At pages 11259 to 11264 you were asked concerning the demand you used for the railroad load which you substituted for the actual demand at the hour of the interconnected system peak. Why did you use the billing demand instead of the actual demand at the hour of system peak? A. The railroad load creates such rapidly fluctuating demands that the load at any selected hour may greatly misrepresent the capacity requirements for that load.

This fact is fully recognized by the railroads and the power suppliers and demand charges are based on the average of several maximum daily demands during the month instead of the single maximum, such averages being considered more accurately representative of the capacity required.

Such an average also serves as a more accurate measure of the cost of service to such a load than would the actual load at one particular hour.

The demand charge from the Pennsylvania Railroad Company is based on the average of the three highest daily maximum [11783] demands during the month, and this billing demand for the month of December was used for the purpose of determining the capacity required for this load.

Q. At transcript 11265 you were asked about the actual station use and loss in connection with dependable capacity under adverse flow conditions, which was reported as 23,000 kilowatts at the time of system peak.

Will you please explain why you used that figure? A. Because it was the amount actually reported in Form 12 for "Baltimore System" at the peak hour when 300,000 kilowatts was generated.

Q. Should any revision be made in that 23,000 kilowatts, in your opinion? A. Yes, I believe so.

Q. What revision should be made? A. Since in my study, 251,000 kw is used as the estimated generation under adverse conditions, I think the 23,000 should be proportionately reduced to reflect the loss associated with the 251,500 kw.

* * *

[11788] Q. Mr. Davis, isn't it a fact that special facilities represent a part of the costs of delivering kilowatt hours? A. Certainly. Ordinarily all those costs of the special facilities would be included with the other costs and computed on the basis of kilowatts and kilowatt hours.

* * *

[11789] Q. In other words, if I understand your answer, Mr. Davis, setting them up separately is a matter of form rather than of substance. Isn't that so? A. Yes.

MR. SPARKS: I am sorry. I don't understand that now. Setting what up separately?

MR. GOLDBERG: Costs of special facilities.

* * *

[11790] By MR. GOLDBERG:

Q. At Transcript pages 11177 and 11178 Mr. Myse asked you whether Table 4 included all of the costs of Holtwood Company and you testified that Counsel's statement was right so far as it went, isn't that right? A. Yes.

Q. When you testified at Line 4 of Transcript 11178 that "You—" —meaning counsel for Respondent— "are right [11791] as far as you go," what did you have in mind? A. The costs to which he referred as not being included in Table 4 were costs of interchange energy purchased from

Pennsylvania customers, which costs were entirely offset by the sale of interchange energy to the same customers, resulting in a net revenue which I took into account.

Q. In other words, it hasn't been left out in the sense that it has been ignored. Is that right? A. No, it has not.

* * *

[11885] RECROSS EXAMINATION (Continued)

By MR. MYSE:

* * *

[11896] Q. Now, will you look at E, F and G for a moment, Article VII, page 10? A. I don't have a copy of that contract with me.

Q. We will furnish you with one.

That article covers generally the furnishing of transmission lines by Holtwood to Baltimore for the transmission of energy sold by Safe Harbor to Baltimore. Isn't that right? A. That is right.

[11897] Q. And included in that article on page 10 is a provision that if for any reason Holtwood fails to transmit or cause to be transmitted to Baltimore any of the energy sold by Safe Harbor to Baltimore Co., Holtwood will forthwith purchase all such energy from Safe Harbor at Safe Harbor and pay therefor at the rates payable by Baltimore Company under Article V of E, F, and G. Isn't that right? A. That is right.

Q. Now, that means, does it not, that if Penn Water or Holtwood, as specified in that contract, fails to transmit whatever energy may be sold by Safe Harbor to Baltimore, it is required to pay for all that energy itself, isn't it? A. That is right.

Q. And receive it. Isn't that right? A. That is right.

Q. Now, you don't find anything like that in any of these Pennsylvania contracts, do you? A. No.

Q. Now, what effect, if any, did you give to these various provisions in Articles IV, V, VI, VII, VIII and IX

of the Items "H" and "I", and Article VII of E, F and G in your Exhibit 64?

* * *

[11898] MR. GOLDBERG: I don't think that there is anything in the redirect examination of the witness Davis, Mr. Examiner, or during the cross examination of the witness Davis by Mr. Sturtevant, which makes that a proper question, and I object to it on that ground.

TRIAL EXAMINER: The objection is overruled.

THE WITNESS: These particular articles in H and I are the basis for the statement I made on cross examination that in economic effect the entire output of Holtwood is sold for the account of Baltimore, and they are the basis for my considering that the interchange energy was a part of the residual to which Baltimore was entitled and was sold for its account.

The basis for my including that revenue in the revenue received from Baltimore—

By MR. MYSE:

Q. Well, I don't want to dispute with you, Mr. Davis, but as I understood your testimony at that time you were limiting the basis for those conclusions to Article VIII of H and I.

Do you now include Articles IV, V, VI, VII and IX, as well as Article VIII? A. I don't want to pin it to those. I think I stated I included the entire contract without picking out parts that specifically applied.

[11899] Q. Well, did you consider Article VII of E, F and G in any way in coming to the conclusions you did in Exhibit 64? A. Only except that the costs of transmission are included in Holtwood's costs.

Q. Well, if tomorrow Holtwood Company were to fail to transmit the energy sold by Safe Harbor to Baltimore, what effect would that have on your Exhibit 64? A. I hadn't considered that.

Q. Well, can't you consider it now in answering my question?

MR. GOLDBERG: What is your question now? I object to the question, if I understand it, Mr. Examiner, because it has been answered.

MR. MYSE: Well, it has only been answered by saying he hasn't considered—

TRIAL EXAMINER: The objection is overruled.

THE WITNESS: If tomorrow the 220 kv lines should fail—

By MR. MYSE:

Q. Mr. Davis, let me correct you. I haven't said that. I said that if tomorrow Penn Water should fail for any reason to transmit the energy sold by Safe Harbor to Baltimore, how would that affect your Exhibit 64? A. Well, if I understand you, that is the same thing.

Q. Well, in my mind it is not.

TRIAL EXAMINER: You may answer the question, Mr. Witness, [11900] as you started there.

THE WITNESS: It would simply mean a redistribution of the energy sold by Safe Harbor to Baltimore.

By MR. MYSE:

Q. In that event, all the energy sold by Safe Harbor would be sold—at least whatever was sold to Baltimore prior to the time of that failure would be sold to Penn Water. Is that it? A. It would be sold to Holtwood and delivered to Baltimore by Holtwood.

Q. And then Holtwood's cost of purchased energy, as you considered it in Exhibit 64, would be increased, would it not? A. Yes.

Q. It would be increased by the amounts of the payments theretofore made by Baltimore Company. Isn't that right? A. I am not sure about that.

Q. Well, doesn't the contract say in the event of such a failure Holtwood—that is, Penn Water—is required to purchase whatever energy was theretofore sold by Safe Harbor Company at Safe Harbor to Baltimore, and pay Safe Harbor for that energy at the amounts that Baltimore Company theretofore paid Safe Harbor under Article V? A. It says that in the amounts payable under Article V is an amount that will yield Safe Harbor a seven per cent [11901] return in addition to all operating expenses.

Q. And in considering Article V in connection with what it says under Article II, it would mean that Baltimore Company's proportion of the payments is two-thirds of those expenses. Isn't that right? A. That is right.

Q. So that in the event of failure to transmit the energy sold by Safe Harbor to Baltimore, Penn Water or Holtwood's expenses would be increased by two-thirds of the total expenses of Safe Harbor. Isn't that right? A. That is a point I hadn't considered before.

Q. Well, isn't it right? A. If there were no transmission of energy, that is if none of the energy sold by Safe Harbor to Baltimore were tranamitted by Holtwood, it would seem that might be a possible effect.

Q. Well, it would also be true if only some of the energy sold by Safe Harbor to Baltimore were not transmitted by Penn Water to Baltimore. Isn't that right? A. There might be a proportionate reduction in the payment.

Q. So that if there were a failure tomorrow by Penn Water to transmit whatever energy is sold by Safe Harbor to Baltimore under E, F and G, it would have a material effect on your Exhibit 64, would it not? [11902] A. It might be true.

Q. Well, it not only might be true, but it would have a material effect. Isn't that right? A. Well, for the period during which that lasted, it would be probably the same conditions as if the line hadn't been built.

Q. And if that were an indefinite period, it would continue to have that effect on the conclusions you reached in Exhibit 64. Isn't that right? A. Well, that would be the same as if any other radical change in equipment or arrangements should happen, and became permanent. I did not attempt to foresee those things in Exhibit 64.

* * *

[11905] Q. You pointed out that the Pennsylvania contracts are on an automatic, or as you put it, an automatically renewable basis. Is that right? A. Yes, that is right.

[11906] Q. And that means, as I understand it, that unless they are terminated under the terms of the contracts by either of the parties thereto, they would extend indefinitely into the future. Is that right? A. That is right.

Q. And that means that if they were so extended automatically and indefinitely into the future, Penn Water would continue to render service under those contracts, and the very terms of the contracts, until long after the Baltimore contract—and that is "H" and "I"—had terminated by its own terms. Isn't that right?

* * *

[11907] THE WITNESS: If the Pennsylvania contracts are continued indefinitely to the end of time, and the Baltimore contract is not renewed, your statement would be correct.

* * *

[11926] Q. Did you make any investigation to determine how many hours out of the year 1944 or any other year, there would have been more 25 cycle load converted at Holtwood if there had been greater capacity in the frequency changers at Holtwood? A. I made a partial investigation, not of every hour in the year, but of a selected number of hours in the year when Holtwood would be short of 60 cycle capacity to supply its Pennsylvania customers, but had an excess of 25 cycle capacity, and the 25 cycle capacity

was delivered to Baltimore, and Baltimore returned 60 cycle energy at the same time. The capacity in the frequency changers was limited at Holtwood, but they had more capacity in the frequency changers [11927] down in the Baltimore system.

Q. Did you determine how many hours in the year 1944 or any other year that that condition existed that you just referred to? A. I only studied the 20 days that we obtained hourly readings on for 1944.

Q. Those 20 days aren't typical in your opinion, are they? A. Well, there are some typical days there. That is not a Gallup Poll cross-section of the year, I will admit.

Q. Well, which days did you consider were typical in making that last answer?

MR. GOLDBERG: You mean typical in connection with the study you are now pursuing?

MR. MYSE: That is right.

THE WITNESS: I would say significant days, such as peak days.

By MR. MYSE:

Q. Are you now saying that there are no typical days in Exhibit 42 in connection with the matter we are now pursuing? A. No, I did not say anything like that.

Q. Well, then will you point out to me which ones you so consider as typical? A. Well, there are typical days of the different [11928] periods. You can't have a typical day for the whole year. There are typical days of low flow periods, typical days of high flow periods, typical days of maximum load period.

Q. Well, then, as I understand you, there are no typical days in Exhibit 42 for the year? A. I do not think there is such a thing.

* * *

[11931] Q. Now, I am interested in having you go back to Exhibit 42 and point out just what days you considered

low-flow when there was 25 cycle generation converted to 60 cycle at Holtwood. Can you do that quickly for me? I think you would look at column 42 in each case, would you not? A. From 25 to 60, is that right?

Q. Now, which of the days in Exhibit 42 did you consider low-flow days when there were substantial amounts of energy shown in column 42 of Exhibit 42? A. I will correct my statement there. I was looking to the column where it goes the other way.

Q. Which column were you looking at? [11932] A. I was looking at column 36.

Q. So that means, does it, that so far as Exhibit 42 is concerned, it was the low-flow days when you would expect to find and did find the major portions of the sixty cycle energy at Holtwood being converted to 25 cycle, is not that right? A. Yes.

Q. And it was the high-flow days, so far as Exhibit 42 is concerned, that you did find that substantial portions of 25 cycle energy at Holtwood was converted to 60 cycle energy, is not that right? A. Yes.

Q. Now, if you will refer a moment to page 11776 of the transcript of February 27, you there referred to the same subject matter, did you not? A. Yes.

Q. Except that in that case you were referring to the specific hour and day of December 11, 1944.

Now, that particular day was a high-flow day, was it not? I think if you will look at Exhibit 43 you will find that it is 37,400 Cfs. A. Yes, that is called a high flow day.

Q. Now, if it had been an adverse flow day—that is, a low-river flow day, the conditions with respect to conversion would have been quite different, is that right? [11933] A. That should be true.

Q. Well, it would be true, is not that right? A. I expect it would.

* * *

[11936] Q. Now, at various times in your testimony you have [11937] testified about 25 cycle energy being trans-

mitted from Holtwood to Highlandtown in an amount more than the Baltimore load requires, and specifically at page 11456 you reiterated that statement, line 5, did you not? A. Yes.

Q. Now, did you make any study to determine during what hours of any year, including the year 1944, Baltimore's 25 cycle requirements are less than the 25 cycle delivery at Highlandtown? A. No, I did not study the Baltimore load—25 cycle load. It is only a question of frequency changer capacity at one end or the other.

Q. Well, in order to make your answer at page 11456—in order to make it an answer that means something, you would have to know what proportion of the time Baltimore's 25 cycle requirements are less than the amount of 25 cycle delivery at Highlandtown, would you not? A. No, there is considerable 25-cycle generating capacity in Baltimore also which could—and there is converting equipment in Baltimore. I made no special study of the Baltimore load, either 25 cycle or 60 cycle customers' requirements.

Q. Isn't it a fact that at the time you gave that testimony on February 10, 1947, you did not know whether or not there was any 25 cycle generating capacity at Baltimore? [11938] A. I don't recall that I did not.

Q. Well, did you know at the time you gave your testimony on February 10, 1947, that there was some generating capacity of 25 cycle capacity at Baltimore? A. I do not know whether I recalled it at that particular time. I had known, and I do now.

Q. Well, at page 11459 you said, at lines 13 to 16, you did not know whether there was any actual generating capacity at 25 cycles at Baltimore. Are you changing that testimony now? A. I didn't recall it—at that time.

Q. Well, is there, or is there not? A. There is.

* * * *

[11939] Q. Well, if there are some plans to remove the 25 cycle generating capacity at Baltimore, that would les-

sen the likelihood of displacement as you use the term at page 11456. Is not that right? A. Well, Baltimore generates less—could generate less 25 cycle energy and generate more 60 cycle and let its 25 cycle load be served through Highlandtown, and supply the 60 cycle energy to Holtwood, because Holtwood needed 60 cycle and had an excess of 25 cycle energy. That was the condition I referred to and that could exist even after some 25 cycle generating equipment might have been removed.

Q. Well, the fact is that if you remove the 25 cycle generating capacity at Baltimore, it would—to that extent—lessen the probabilities that you spoke about at page 11456, beginning line 5, is not that right? A. I would think it would increase the probability.

Q. You mean if they took out the 25 cycle generating capacity at Baltimore that thereby the amount of Baltimore requirements of 25 cycle energy would be less? A. No, it would not affect the requirements for 25 cycle energy.

Q. The requirement from some other system would be thereby [11940] increased. Is not that correct? A. Yes, that is true.

Q. And the only place it can get it is from Holtwood? Is that not right? A. They have to take what there is at Holtwood, whether they need it or not.

Q. Well, now, the fact is you just do not know whether Baltimore needs the 25 cycle capacity from Holtwood or not, do you? A. I know they have to take it whether they need it or not.

Q. But you do not know whether they need it? A. I have made no study of the 25 cycle load in Baltimore.

Q. So that means you do not know whether they need it, is not that right? A. Yes, sir.

* * *

[11941] Q. Now, at the bottom of page 11456 and the top of [11942] page 11457, you were talking about Holtwood's

one-third of Safe Harbor, and Baltimore's share of Safe Harbor power. Were you there referring to what you called the two-thirds entitlement of Baltimore? A. That is right, I believe.

Q. Well, in giving your testimony at the bottom of page 11456 and the top of 11457, were you referring to Baltimore Company's two-thirds share on an hourly, a daily, or an annual basis? A. Well, this question is not based on an annual basis. It is based on frequent times.

Q. Well, I am asking you what you had in mind. A. I was answering the question, and I think I had in mind that this was at times during the year and not an annual amount.

Q. But my question to you now is: When you were referring to Baltimore's share which you said was a two-thirds share, were you referring to it on an hourly, daily or an annual basis? A. I did not think specifically about hourly or daily but just at certain periods of time within the year.

Q. Well, will you think about it now and tell me whether you are referring to Baltimore's share on an hourly, daily or annual basis?

* * *

[11943] THE WITNESS: Not on an annual basis. It might have been on an hourly or a daily basis. More likely an hourly basis would fit.

By MR. MYSE:

Q. Now, back on page 11456, line 21, you say, "That is true," to the statement by Mr. Sturtevant that some of the 25 cycle output at Holtwood is transmitted to Baltimore in exchange for part of Baltimore's two-thirds share of Safe Harbor output, and used for interchange purposes with Pennsylvania customers, is that right?

* * *

THE WITNESS: I think that happens at times.

By MR. MYSE:

Q. Now, that energy that is used for interchange purposes under the assumptions you made in Exhibit 64 is a use for the benefit of Baltimore, is not that correct? A. Well, you cannot divide that energy that comes up [11944] as to its use for interchange, or firm power. That is, I could not at the time I was preparing Exhibit No. 64 until later on when it was divided and it was shown that a small portion was used for interchange.

Q. I did not ask whether you could divide it. I asked you whether or not that interchange we are speaking about, which comes up over the 220 lines, is—at least that portion of it undivided, if you will—constitutes a use of those lines for the benefit of Baltimore? A. I would say that small portion that was actually used for interchange was furnishing an outlet for Baltimore's energy.

Q. You say it is a small portion. Have you ever made any investigation to determine what portion is interchange use and what is firm power? A. No, Mr. Spaulding did that for me.

* * *

[11946] Q. Is it a document entitled, "Allocation of Assumed Energy Entitlements for the Year 1944". Is that what you had reference to, Mr. Davis? A. Well, that was the title placed upon the later tabulations after they were requested, but they bear the same figures that are on Exhibit 143 for the two months there shown, and the title on that is "Energy Purchased by Baltimore from Holtwood Company, from Safe Harbor Company and Energy Purchased by Baltimore Company from Holtwood Company".

Q. Well, you recollect enough about Exhibit 143, now, do you not, to know that that exhibit was not furnished to you by Mr. Spaulding, is not that right? A. It was not furnished to me at all except from the filed exhibit.

Q. Filed by whom? A. I believe that was introduced—I do not remember who introduced that.

MR. GOLDBERG: Goldberg marked it.

MR. SPARKS: Mr. Goldberg introduced it.

By MR. MYSE:

Q. Now, will you look at the document entitled, "Assumed Energy Entitlement, 1944", which you referred to, and [11947] point out to me whether there is anything on that document which divides the energy displaced, as you called it, at Baltimore which comes up the 220 lines between energy used for the purposes of interchange and energy used in connection with firm power requirements, and I haven't referred to Exhibit 143, Mr. Davis? A. These are the same figures that are on your so-called "Assumed Tabulation".

Q. I am asking you to refer to this document (indicating). Will you do so, please, and point out to me anything in the nature that I asked for.

* * *

THE WITNESS: This document does not divide the backfeed into the amount used for firm power and the amount used for interchange.

* * *

[11950] Q. Now, at page 11457, beginning line 16, you say, as I understand it, at times the 25 cycle energy generated at Holtwood is all used in Baltimore as such, is that right? A. That is what the statement says.

Q. Well, I didn't quote the statement, but I want to know if that means that at times the 25 cycle energy generated at Holtwood is all used in Baltimore as such? A. Well, I meant the amount transmitted to Baltimore. I did not mean the exceptions of what might have gone through the frequency changer or up to Lancaster; those exceptions of course should be a part of that answer.

Q. And those exceptions, however, are pretty minor. Is not that right? A. At times they are. At other times they are not so minor.

Q. Well, what is the maximum amount of any one of those exceptions in terms of kilowatts during any one hour? A. Oh, I think about 14,000 through the frequency changer, and 6,000 to Lancaster.

Q. That would mean 14,000 kwh. during an hour? A. Yes.

Q. Converted from 60 cycle energy to 25 cycle energy? A. Yes.

[11951] Q. And did you say the maximum amount transmitted to Lancaster in terms of 25 cycles was 6,000 kw? A. That is the way I remember it.

* * *

MR. GOLDBERG: I think there has been a reversal of that 60 and 25 cycle. It is the question preceding the question about the 6,000 kw.

* * *

THE WITNESS: Well, you hypnotized me. It was——

By MR. MYSE:

Q. Do you want to correct your answer with respect to conversion at Holtwood given a few answers back? A. That the 14,000 kilowatts was converted from 25 cycle to 60 cycle instead of the reverse as it was stated.

Q. That would be one of the exceptions you had in mind. A. Yes.

Q. Now, it is also true that there could be times when 14,000 kw is converted from 60 to 25 cycles and that would increase the amount transmitted to Baltimore in terms of 25 [11952] cycle. Is not that right? A. The capacity is there to do that.

Q. Well, that happens at times, doesn't it? A. It might, I expect it might. I do not recall any.

* * *

[11956] Q. Now, will you turn to page 11464, line 5, please. Lines, 5 through 7, where your answer appears. You there used the term or the phrase that Safe Harbor energy is diverted to Holtwood Company. What did you there mean in connection with the use of that phrase? A. It is delivered to Holtwood instead of being delivered physically to Baltimore.

Q. Well, the fact is that all of Safe Harbor energy is delivered physically to Holtwood; isn't that right, and when I say Holtwood, I mean Pennsylvania Water and Power Company. A. I do not understand that is so.

Q. Well, is it not a fact that all Safe Harbor energy—and by that term I understand you to mean energy [11957] generated at Safe Harbor—is delivered physically to Pennsylvania Water and Power Company? A. Oh, I get you, yes—delivered to their transmission line.

Q. Now, what did you mean there when you said some of that Safe Harbor energy is diverted to Holtwood Company? A. I meant that is delivered to either the Holtwood bus or to Holtwood's Pennsylvania customers.

Q. And by that phrase "Pennsylvania customers," I take it you are referring to Pennsylvania Power and Light Company, Philadelphia Electric Company at Coatesville, Metropolitan Edison Company at York, and The Pennsylvania Railroad Company? A. That is right.

* * *

Q. So that as I understand your testimony now, you are saying there at 11464 that something more than the mathematical amount of one-third of the energy generated at Safe Harbor is in fact delivered to Holtwood's bus, or to the various Pennsylvania customers that I just enumerated; is that right? A. That is right.

[11958] Q. Well, did you ever make any determination as to the exact amount of that diversion, as you put it, in 1944? A. Yes, I studied that. I found that the amount in excess of one-third of the Safe Harbor output that was delivered

into the Holtwood system outside of the 220 kv. lines was the same amount that Baltimore received in excess of its entitlement from Holtwood in excess of the firm power demand.

* * *

Q. Now, what is this amount you referred to as the amount Baltimore received in excess of its entitlement from Holtwood in excess of the firm power demand? A. Well, I was explaining the entitlement from Holtwood, its entitlement from Holtwood which is one-third of Safe Harbor plus Holtwood generation, minus the firm power requirements in Pennsylvania.

Q. Well, that amount that you have just referred to in your last answer depends upon the assumption that all that Holtwood receives from Safe Harbor is the mathematical figure of one-third of Safe Harbor's output. Isn't that right? A. Yes, if it receives more than that one-third then [11959] that same amount in excess is delivered to Baltimore over what its entitlement would be if it received only one-third.

Q. I did not ask you anything of that kind, Mr. Davis. I asked you what was the amount, or if you had ever determined the amount in excess of one-third of the Safe Harbor output delivered to the Holtwood System, other than to the 220 kv lines. Now, can you give me that figure? A. I do not have the figure with me, but I determined that that was the same figure that Baltimore received in excess of its entitlement from Holtwood.

Q. Well, whatever it is the same as, is the amount substantial? A. Yes, quite a large amount.

Q. And you say all of that substantial amount in excess of one-third of Safe Harbor's output delivered to Holtwood's system other than the 220 kv lines is this diversion that you are talking about at 11464; is that right? A. That is what I meant there by "diversion", yes.

Q. Now, is there anything in any of the contracts identified in this record, particularly H and I, which speci-

fies such diversion? A. No, the contract provides that Holtwood will transmit Baltimore's two-thirds of Safe Harbor output to Baltimore.

Q. Well, now, just a moment. Where does it provide [11960] that? Are you referring now to page 10 of Exhibit H and Exhibit I that we referred to this morning? A. I do not know what page it is on.

Q. In E, F and G, I mean.

MR. GOLDBERG: Let the witness finish his answer.

By MR. MYSE:

Q. What other provisions did you have reference to? A. There is no other provision in the contract except the provision for coordination in H and I.

Q. We have gone into that in great detail, have we not? A. Yes, but it is still pertinent.

Q. Now, what is the provision that you referred to in H and I, is what my question related to, relating to the requirement of transmitting Baltimore's two-thirds, as you say? I would rather think it is in E, F and G, but if you know of one in H and I, I would like to have you point it out. A. It probably is in E, F and G. If you happen to know where it is, we can save time.

Q. I know of no place in H and I, but I can refer you to E, F, and G, if you think that is where it is. A. I would recognize it if I saw it. Yes, that is provided in E, F and G.

Q. Then I take it what you had reference to was [11961] Article VII of Items E, F and G that we had reference to this morning? A. That is right.

* * *

Q. Is there anything in that Article VII which says Holtwood shall transmit two-thirds of Safe Harbor's output to Baltimore? A. No, it says Holtwood shall transmit energy to Baltimore.

Q. Whatever it may be? A. That is right.

* * *

[11962] Q. Well, my question to you was—And let us make it a new question if you did not so understand it—Are the 60 cycle generating resources from Pennsylvania Water and Power Company, plus whatever it actually receives from Safe Harbor that is generated at Safe Harbor, adequate to take care of all the firm power services in Pennsylvania?

* * *

[11963] THE WITNESS: As I understand the question now, it is: Are the generating resources of Holtwood plus the total generating resources of Safe Harbor adequate?

By MR. MYSE:

Q. No, plus the amount of energy received by Holtwood from Safe Harbor which is generated at Safe Harbor adequate to take care of the firm power services of Pennsylvania?

* * *

THE WITNESS: There are times when it is not adequate.

* * *

[11964] Q. Now, Mr. Davis, referring again to page 11464 in the same line relating to what you call "diversion" of Safe Harbor energy, is it not a fact that most of what you would call diversion of Safe Harbor energy from Baltimore is for the purpose of supplying interchange customers? A. It might be.

Q. Well, isn't that the fact? A. No, I would not say most of it. 60 cycle energy is all commingled. You cannot assign any particular part of it to interchange and the other part to firm power, that I know of.

Q. A good share of it, however, is used for interchange, is it not? A. If you segregate the interchange and compare it with what comes from Safe Harbor, you might say that; but I do not see that there is any reason for doing that.

[11965] Q. Where else does the interchange come from that is supplied by either the Holtwood or the Safe Harbor

system to the Pennsylvania customers? A. Well, it comes up from Baltimore. It comes from Safe Harbor.

Q. Are you saying that backfeed is also used for interchange purposes? A. To a very small extent.

Q. Then the balance of the interchange must have been generated either at Safe Harbor or Holtwood? A. Yes, sir.

Q. Or it might have been interchange that was generated at one Pennsylvania customer and sold to another Pennsylvania customer? A. That could be.

* * *

Q. Now, assuming that some of this Safe Harbor energy is, in fact, diverted—as you put it—for use in connection with firm power supply in Pennsylvania, how does Baltimore get its compensation for that diversion? A. It gets it through H and I.

[11966] Q. By a reduction in the bill from Holtwood to Baltimore, is that what you mean? A. A credit of the revenue obtained from that energy.

Q. And that has the effect of reducing Baltimore's bill from Holtwood; is not that right? A. That is right.

Q. Now, other than the provision of Article III of H and I which covers the payments made by Baltimore to Holtwood, is there any provision in any of the contracts on record in this proceeding which covers this compensation to Baltimore for this so-called diversion that you spoke of at page 11464? A. I do not recall any.

* * *

[11969] Q. Now, in your Exhibit 64, you credited to Baltimore the net interchange revenues, did you not? A. Yes.

Q. You did not, however, charge against Baltimore the costs incurred in rendering interchange services, did you? A. No, I charged that off against the railroad, either Pennsylvania or Maryland.

Q. But you did not charge it to Baltimore, did you? A. No, except through the railroad.

Q. To the extent that some of that interchange cost was chargeable to the railroad in Maryland, you did charge it to Baltimore, but that is the only extent you charged it to? A. The rest was charged to the railroad in Pennsylvania.

Q. Now, what did you do with respect to the costs incurred in operating and having available the two north circuits on the Perryville line? Where did you charge those costs? A. The total line was charged—was divided between Baltimore and the railroad in Pennsylvania.

Q. But the fact is that almost 95 per cent of that line is used either for the railroad in Maryland or for interchange purposes. Is not that right? A. Yes, that interchange is rather tied up with railroad service. It is difficult to say whether that is [11970] for the benefit of anything else except the railroad.

Q. Well, it is not very difficult for you to say, however, that it is for the benefit of Baltimore, is it? A. That it goes through Perryville south, that is for the benefit of Baltimore.

Q. And also that that goes through Perryville north is for the benefit of Baltimore, isn't that right, as interchange? A. The net interchange, yes.

Q. And yet you have not charged the costs incurred in using that line for interchange purposes to Baltimore other than the small amount which might be associated with railroad service in Maryland, have you? A. Did you say small amount?

Q. Well, whatever the amount is. A. The other day you said it was practically all of it.

Q. Well, you have not charged those costs against Baltimore, have you? A. No.

* * *

[11977] Q. Take a look at page 11782, please, starting at line 13. You were there testifying, as I understand your testimony—tell me if I am wrong—in connection with why you didn't use the actual demands of the railroad at the

time of the Area 6 system peak in connection with your Table V-A. Isn't that right? A. That is right.

Q. Now, the purpose of making the deductions of the demands of the various Pennsylvania customers and the railroad in V-A of Exhibit 64 was merely to determine what was left under your method of the dependable capacity available to Baltimore? A. That is right.

Q. And you weren't in that Table V-A concerned with [11978] the cost of service to the railroad, were you? A. No. We were concerned with a reasonable figure for the demand required by the railroad.

Q. Then as I understand your testimony you were not considering a reasonable figure for the demand of the railroad at the time of Area 6 system peak? A. Yes, that is what I meant.

Q. But the fact is you didn't use the actual demand, did you? A. No, not at that particular hour.

* * *

[11980] Q. Now, will you refer to the bottom of page 11783, the question beginning at line 20 and the answer through the ending at line 3 of 11784?

Does that answer to that question mean you do not need excess capacity to supply Pennsylvania customers except for the maintenance you referred to in that answer? A. Well, I meant that the excess capacity during high flow periods there is used to shut down steam equipment for scheduled maintenance.

Q. Well, you are not saying you don't need the capacity other than for scheduled maintenance? A. You need it for scheduled maintenance. You need it to replace the capacity that is taken out of service for scheduled maintenance.

[11981] Q. Well, whose scheduled maintenance are you there referring to? A. That would be steam maintenance mostly.

Q. Of the Pennsylvania customers? A. No, that is mostly Baltimore's maintenance that would use that excess capacity during high flow periods.

* * *

[11984] Q. Now, a little bit further along on that same page 11792, beginning at line 12, you testified, as I understand it, that Baltimore Company owns two-thirds of Safe Harbor development. Is that right? [11985] A. That is the way I understand it.

Q. Well, actually they don't own anything of the kind. They own two-thirds of the stock. Isn't that right? A. That is what I interpret to mean owning two-thirds of the property.

Q. So you interpret the ownership of two-thirds of the common stock by Baltimore Company as equivalent to the ownership of two-thirds of Safe Harbor development. Is that right? A. I have considered all through this study that Baltimore owned two-thirds of the Safe Harbor development.

Q. And as a result of that, you assigned what you call the two-thirds share of the energy available from Safe Harbor to Baltimore. Is that right? A. Well, I took that two-thirds share as the contract share of Safe Harbor energy to which Baltimore is entitled.

Q. Now, if the event happened that we mentioned this morning under Article VII of Items E, F and G—that is, that for some reason Penn Water failed to transmit the energy sold by Safe Harbor to Baltimore, and thereby was required to purchase all of it, Baltimore would no longer be entitled to two-thirds of the energy under E, F and G, would it?

* * *

[11986] THE WITNESS: Under those conditions, it would not.

By Mr. Myse:

Q. And even though it owned two-thirds of the common stock or owned two-thirds of Safe Harbor, as you construe that ownership, it would still not be entitled to two-thirds of the energy under those conditions. Isn't that right? A. That is right.

Q. So that the ownership of stock or of the property is no criterion of what Baltimore is entitled to? A. Not under catastrophic conditions.

* * *

[12211] JOHN M. NEWLANDS

* * *

Cross Examination (continued)

By Mr. Hull:

* * *

[12242] Q. Is Exhibit 61 not a study of depreciation? A. Exhibit 61 is a calculation of a reserve requirement for which Mr. Dunn is responsible and in which I assisted him.

Q. Is the reserve requirement the accrued depreciation in the property? A. Yes, it is the best measure of accrued depreciation in the property.

Q. Do you say that without any regard to what causes of depreciation are? A. No. It is my understanding that the calculation of the reserve requirement takes into consideration the causes of depreciation. They are mostly reflected in the service lives set on the property by the engineers.

Q. Did you take the several causes of depreciation into account when you reviewed and approved the computation of the reserve requirement as contained in Exhibit 61? A. No, I didn't have to. We used service lives as estimated by the engineers. I didn't even make the calculation [12243] which resulted in the annual and accrued depreciation.

Q. So that what you did you did wholly regardless of what the causes of depreciation are? A. No, that is not so. What I did was to assist Mr. Dunn in preparing a depreciation reserve requirement.

Q. And you told me that that is the accrued depreciation. A. It is the best measure of accrued depreciation in the plant, yes.

Q. And you say that without any consideration whatever as to what the causes of depreciation are? A. No, that is not so.

Q. Well, I thought you must have considered the causes of depreciation, and that is the reason I asked you the question. A. It was not necessary for me to consider the causes of depreciation in the work which I did to assist Mr. Dunn in preparing this report. Those causes of depreciation were considered by the engineers in setting their estimated service lives. Those estimated services lives were given to Mr. Dunn and he used them in calculating the annual reserve requirement. I didn't have to determine what the causes of depreciation were in the work which I did to assist Mr. Dunn in preparing Exhibit 61.

* * *

[12293] Q. Did you at any time in the course of your investigation in connection with this case make any inquiry into what [12294] was a fair return on the investment in each year of the company's operating history? A. No, I have not.

Q. Did you make any determination of the extent, if any, by which the "aggregate credit balances of current depreciation accounts" had been accumulated by the respondents from earnings in excess of a fair return on the company's actual legitimate original cost? A. No, I have made no such investigation.

Q. Do you know whether such a determination was made by anyone else? A. I do not know.

* * *

[12296] Q. Do you not consider your computation in Exhibit 57, and the recommendations contained in Exhibit 61 to be a recommendation to the Commission that straight-line depreciation, and a depreciated rate base be used in this case in arriving at a determination of what are fair and reasonable rates? A. Not necessarily. The Exhibit 57 was prepared to illustrate the terms of the Federal Power Act, which refers to net investment.

Q. And do I understand that you were endeavoring by Exhibit 57 to arrive at a net investment rate base, as that term "net investment" is used in the Federal Power Act? A. Yes.

Q. Can you direct me to the portion of the Act to which you refer? A. Page 4 of the Federal Power Act gives a definition of net investment.

Q. Well, now, that refers, among other things, to the deduction of aggregate appropriations of surplus or income held in amortization sinking fund or similar reserves, and also to aggregate credit balances of current depreciation accounts.

[12297] Now, what do you understand to be meant by aggregate credit balances of current depreciation accounts? A. To be balance in the reserve for depreciation.

Q. And that is what you understand this definition requires you to deduct? A. Yes, I would say so.

Q. Do you understand this definition to require you to deduct that in each and every case?

MR. GOLDBERG: Each and every company?

MR. HULL: Yes.

MR. GOLDBERG: I object to that.

By MR. HULL:

Q. Do you understand it to be a general rule applicable under all circumstances?

MR. GOLDBERG: I object to that, Mr. Examiner, because it is entirely irrelevant and immaterial,

whether he thinks it is a general rule. The question should be confined to this case.

TRIAL EXAMINER: You may answer the question.

THE WITNESS: Well, I think it is a general rule, but I imagine there may be instances in which the Commission might not deduct it under the terms.

By MR. HULL:

Q. Well, now, in that definition it is clearly stated that the deduction of the aggregate credit balances of current [12298] depreciation accounts are to be deducted "if and to the extent that such items have been accumulated during the period of the license from earnings in excess of a fair return on such investment."

That qualification is in there, is it not? A. That is right.

Q. So that unless that condition is met, no deduction need be made under that definition. Isn't that right? A. That is correct, yes.

[12299] Q. And you tell me you have made no inquiry to determine what was a fair return, and of course you could not without that determine whether or not the present aggregate balances have been accumulated in excess of a fair return. Isn't that right? A. That is correct.

* * *

[12304] Q. I asked you, as I recall yesterday, whether the purpose or one of the purposes of the reserve wasn't to provide for the replacement of property. I understood you to say it was [12305] to provide for the retirement of property. Then I asked you whether indirectly that is not for the purpose of replacing property, and I asked you at transcript 12,234, beginning at line 1, this question:

"To the extent of the original cost of property in service, the collection of depreciation expense and the holding of assets reflected by the reserve are for the purpose of insuring continuity of service through replacement of

equipment. Isn't that the fact?" Your answer given at line 9 is "No".

Now, was that answer correct in the light of what you have just testified to?

A. Yes, the answer still stands.

• • •

[12308] THE WITNESS: The depreciation payments made by the consumer are made so that he will bear the total cost of rendering service to him, and to return to the company the original cost of the facilities used in such service by the time of [12309] its retirement.

• • •

[12315] Q. Mr. Newlands, when an electric utility company finds it necessary to use capital for the replacement of property, what sources of capital are available to it?

MR. GOLDBERG: The same objection, Mr. Examiner. We are completely beyond the realm of any responsibility that this signature on Exhibit 61 implies.

TRIAL EXAMINER: The objection is overruled.

THE WITNESS: The company can use any cash on hand, or it can borrow the money from banks, on bonds, from investors, on notes, or it might even sell additional common stock or request its common stockholders to make a contribution to the company.

By MR. HULL:

Q. You don't mean by that assess the common stockholders? A. That is a possibility under some State laws. It isn't often done, or by the sale of additional common stock.

Q. It is a possibility under the Federal Power Act?

MR. GOLDBERG: I object to that.

MR. HULL: He has injected it.

TRIAL EXAMINER: He may answer the question.

[12316] THE WITNESS: The Federal Power Act, so far as I know, is mute on that point. That is a question for individual State laws.

MR. GOLDBERG: That is lawyer Newlands' statement.

• • •

[12318] Q. Mr. Newlands, would it not, instead of using a depreciated net investment rate base, be more just and equitable to both consumers and investors for a regulatory commission to use an undepreciated rate base and allow to the consumers a credit on the reserve for depreciation equivalent to the risk free rate of return on such balance?

• • •

[12319] THE WITNESS: In my opinion that would not be a fair and equitable procedure.

By MR. HULL:

Q. Would you state your reasons? A. Because the company should be entitled to earn only on the amounts of its net investment in the plant. To allow the company an additional return on a depreciation reserve in effect charges the consumer twice for the service he is getting.

Q. Just explain how he is charged twice. A. Because the consumer is already charged with the cost of giving the service, including a portion of the cost of the facilities of the company which have been used up in the service to the consumer during the year. He should not again be charged with an interest rate on a depreciation reserve.

Q. I didn't say charged with an interest rate on the depreciation reserve. I suggested his being given a credit on the balance in the depreciation reserve equivalent to the risk free rate of return on such reserve.

MR. GOLDBERG: You haven't mentioned the other side of it, [12320] with depreciation on an undepreciated investment.

MR. HULL: That is correct.

THE WITNESS: Well, that still means charging the consumer with the difference between the rate of return allowed to the company and the rate of return on risk free securities which in my mind has no bearing at all on the amount of return which the company should earn, which the investor should receive.

* * *

[12344] Q. Is it a fact that the annual depreciation provision by Penn Water consists of a base figure of $355,146.73, plus 2½ per cent on net additions since 1930 which provision is included in the Power Bill? A. The provision for depreciation on Penn Water and Power Company's books is determined by taking the same amount of depreciation based on service lives which had been taken in the year 1930, and adding to that 2½ per cent of net additions, as reported in the Power Bill.

Q. And the depreciation provision as thus made up is included in the power bill? A. In effect that is so, yes.

Q. Now, is it also true that this amount of annual depreciation provision so determined is credited to Account 250, Reserve for Depreciation? A. By the amount of depreciation so determined you mean the 355,000 plus the 2½ per cent?

Q. That is right. A. That is correct.

* * *

[12468] EDWARD L. DUNN

* * *

CROSS-EXAMINATION

By MR. HULL:

* * *

[12485] A. You will find that by referring to page 18, the balance per books as of December 31, 1945, is $8,976,358. However, due to the fact that the books do not reflect certain retirements which have been made but not recorded there is an adjustment necessary to the book reserves.

As the result of this adjustment and several other minor adjustments the depreciation per books as adjusted at December 31, 1945, is $8,763,118. The reserve requirement as of December 31, 1945, is $8,408,373.

Now, there is a slight difference in the two figures because the reserve requirement does not include provisions for maintenance and the company has indicated that its book reserves are supposed to include something for maintenance.

* * *

[12530] Q. Is there any account in the uniform system of accounts [12531] wherein you record as a single figure what you have termed as the net original cost? A. No, the system of accounts is designed to record depreciation reserves and the related plant cost separately as a matter of convenience and presentation. However, they should always be considered together. They are related items.

Q. On which side of the balance sheet does the original cost appear? A. On the lefthand side of the balance sheet.

Q. And the reserve for depreciation under the system of accounts appears on the righthand side? A. Yes, that is a matter of form. It is still a contra-account to plant investment.

Q. When I referred to the lefthand side, I referred to the asset side of the balance sheet, and I take it that is what you had in mind, too, is it not? A. The lefthand side is assets and other debits.

Q. And the righthand side is what? A. Liabilities, reserves, and other credits, including capital stock, long-term debt, and so forth.

Q. And what accounting entries do you make upon the retirement of a piece of property? A. Well, without going through the detailed entries, I suppose it will be satisfactory to give you the accounts in which the retirement finally rests?

[12532] Q. That is right. A. Plant account is credited, and the reserve for depreciation is debited with the cost of plant. Cost of removal is debited to the reserve and any salvage value is credited to reserve for depreciation.

• • •

[12549] Q. Did any member of the Commission's Staff make a determination of actual depreciation? A. Yes, in my opinion the reserve requirement would most nearly measure the actual depreciation or accrued depreciation at the end of 1945.

• • •

[12550] Q. Mr. Dunn, does your Exhibit 61 constitute a study which determines the depreciation which actually exists in the property of Penn Water? A. In my opinion the reserve requirement would most nearly measure the actual depreciation or accrued depreciation which exists at the end of 1945.

• • •

[12554] Q. Mr. Dunn, in your opinion should the amount of the balance in the reserve for depreciation of an electric utility company bear any relation to the amount of actual depreciation which had occurred in the property? A. Yes. It is desirable, in a properly computed depreciation reserve.

Q. What should the relation be? Should they be substantially equivalent? A. Yes. A properly computed depreciation reserve should be substantially equivalent to the reserve requirement and the accrued depreciation in the property.

• • •

[12631] Q. Mr. Dunn, do you agree with this statement, that it is extremely important in determining profits that all expenses applicable to a given year or period must be stated in that period? A. Yes, that is a recognized principle of income determination.

Q. And it is because of that principle, is it not, that you charged depreciation annually and thus spread the original cost of the property over the depreciation expense accounts of the several years during the service life? A. That is certainly one reason for spreading depreciation expense over the period to which it relates.

* * *

[12638] Q. Now, why do you believe it is equitable to charge an equal amount to each account period? A. It is equitable from the standpoint of the consumers or ratepayers because they are charged an equal proportion of depreciation expense year by year. They are charged with all depreciation expense, and the charge is neither more nor less than the equal proportion of the cost of the property used in rendering public service. It is equitable from the standpoint of the company because it is enabled to appraise the financial progress of the company by means of comparative income statements that show the progress of the company from year to year without distortion of one of the largest items of operating expenses, which is the depreciation charge.

That remains relatively stable, and only changes as additions to plant occur. Therefore it affords a much better basis of comparison than unequal or arbitrary amounts charged [12639] to income in the operating expenses.

Q. Then you do believe that it is equitable both to the consumers and the investors to equalize this substantial cost, which is involved with the annual depreciation cost, equalize that over the period of the service life of the property. A. In the case of Pennsylvania Water and Power Company, that is particularly true. I might add that that is the method that has been used by the company for many years. It has recorded such a method on its books since 1920. It has made such computations and used them in its tax returns from the very inception.

* * *

[12640] Q. Mr. Dunn, do you agree that the cost of depreciation is a part of the cost of service of an electric utility? A. Yes.

Q. And do you agree that all of the costs of service of the electric utility should be paid by the consumers? A. Yes, all of the cost of service.

Q. And do you believe that in addition to all of the costs of service the investor should be paid a fair return upon the investment? A. The return on the investment is included in cost of service to the consumers.

Q. You consider that a cost of service? A. To the consumers, yes.

* * *

[12720] Q. In connection with your recommendation for the deduction of that depreciation reserve as adjusted from the net investment rate base, did you make any computation of the amount of the fair return to which the company was entitled in each year of its operating history? A. No, I did not make such a computation in connection with my determination although I did consider the past financial history of the company and the results of its operations.

Q. Then you made no determination of the extent, if any, to which the aggregate credit balances of current [12721] depreciation accounts had been accumulated from earnings in excess of a fair return on the company's actual legitimate original cost, did you? A. No, I did determine, however, that the company did recover all of its depreciation charges through revenues and in addition to that earn a substantial profit.

Q. By "substantial profit", do you mean a fair return? A. Well, I didn't determine what a fair return was, but as I recall the average profit was around 10 per cent.

Q. You did not, however, determine what the fair return was? A. I did not determine what a fair rate of return was, nor a fair return in the past.

* * *

[12725] Q. In the illustration I have put, does not the deduction of the $10,000 in the reserve for depreciation from the investment rate base result in decreasing the utilities operating revenues by the amount of $600, which is the rate of return of six per cent multiplied by the balance in the reserve of $10,000? A. It only results in a decrease in the return as between the first and second year. It does not necessarily [12726] result in a decrease in what the return should be in the second year. You are simply comparing two years, but in the first year there was no deduction, and one was required in the second year which is not comparable to the first year by reason of the fact that the company has accumulated depreciation expense through the medium of operating expenses. There is a different situation.

MR. HULL: Now, I ask the reporter to read the question and I would like you to answer the question.

* * *

THE WITNESS: That is the only answer I can make.

TRIAL EXAMINER: You answered on the basis of return and the question was on the basis of revenue.

THE WITNESS: It was net operating revenue, and return is synonymous with net operating revenue.

* * *

[12729] Q. Now, Mr. Dunn, the amount of $600 which I have referred to is in fact six per cent on the original investment of 100,000—no, pardon me—is six per cent of the amount in the depreciation reserve balance at the end of the first year. A. What was the first part of the question? I didn't get it.

(Question read.)

THE WITNESS: I do not so consider it. I consider the fair return as the rate of return times the net investment, and not as related to the components of the investment.

* * *

[12740] Q. * * * You have testified that the purpose of the reserve for depreciation is "to provide for the retirement of property." Now, I call your attention to the fact that property is not retired until it is withdrawn from service. Nevertheless, the consumers have paid depreciation expense between the time of the installation of the property and the time of its retirement, and since the reserve is not necessary for any other purpose than to provide for the retirement of property, and since that comes at the end of the service life, the payments made by the consumers must be advances, must they not? A. Absolutely not. In the first place, the payments made by the consumers are not in the reserve. The payments made by the consumers were charged to operating expenses, that is the depreciation expense is charged to operating expenses.

Q. And a credit to the reserve? A. Well, the money recouped comes into the company in the form of revenues, not in the form of a depreciation reserve.

Q. That is quite true, but concurrently there is a [12741] credit to the reserve for depreciation. A. Yes, but that is not an advance.

Q. No, the bookkeeping entry of the reserve for depreciation isn't an advance. A. Nor neither is the charge.

Q. But the money that comes in to the company and is credited to the depreciation reserve is an advance from the consumer, is it not? A. No, it is not.

* * *

[12744] Q. Mr. Dunn, do you agree with this, that depreciation accounting results in the accumulations of money by a utility which are commonly refegred to as depreciation funds or depreciation reserve funds? A. Not ordinarily. The depreciation accounting could result in an accumulation of such funds if a separate depreciation fund were maintained on the balance sheet.

Q. In that event you say it would? A. It could result in that, yes, not necessarily result in it even then in case depreciation funds were not recouped.

Q. Now, if there is no ear-marked fund or funds, nevertheless the amount shown in the reserve for depreciation has actually been collected in cash from the consumers as depreciation expense and used to acquire other assets, there are nevertheless depreciation funds, are there not? A. Of course the depreciation charges that are collected from customers are much greater than the balance in the reserve because the balance in reserve has been reduced by retirement in the past.

[12745] If those charges have been retained in the business and invested in other assets, they are no longer referred to as depreciation funds because they have lost their identity.

Q. Would it be proper to refer to them as assets representing depreciation reserve balance? A. No, because it might be that the company has used the money to retire its bonds or some such procedure and there is no validity to the assumption that they have been retained in the business unless they can be identified.

Q. Do you agree that accumulated depreciation funds can't be returned to the investors of the capital but must be retained by the utilities so that when utility plant wears out in service funds shall be available to provide new facilities in replacement of the worn out plant? A. No, I do not agree with that. In fact, the statement is incorrect even as a theory.

* * *

[12790] Q. Have you included any amount in Account 100.3, Construction Work in Progress? A. Yes. The company sometimes had jobs which have been completed, but not actually recorded on the books as plant in service, and we have allowed those jobs which the company has included in the power bill, but which are still carried in the account Construction Work in Progress in the rate base.

Q. When a utility company undertakes the construction of new plant, at what point is the cost of that construction entered in the account "Construction Work in Progress"? A. The cost is entered in that account promptly

upon the posting of the vouchers making payment for labor, materials, supplies, and so forth.

Q. So that assuming that the construction period extended over a period of twelve months or eighteen months, and were made continuously during that period, the charges each month would properly be posted to Account 100.3. Is that correct? A. Construction work in Progress, yes.

Q. And when so posted, they would be proper to include in a net investment rate base, would they not? [12791] A. Not if the company was capitalizing interest during construction on the work in progress, because the plant in service would be only the completed work.

Q. Well, I understand that. The company can't expect to get both interest during construction and get the construction work in progress during the period included in the rate base, but—

• • •

[12799] Q. Has any part of Penn Water's investment in dams, reservoirs and waterways been excluded from the rate base in your calculation? A. No, we have allowed all the investment.

Q. You have not included in your net investment rate base any part of the assets reflected by the depreciation reserve balance, have you? A. Those assets are not identified, if there are such assets.

Q. Whether identified or not, you have not included them in your net investment rate base. Isn't that true? [12800] A. If the cash generated by depreciation charges, which in the case of Penn Water have been fully recouped by the company, has been invested in plant, they are included, or it is included in the rate base.

Q. Is your answer complete? A. Yes.

Q. If any part has been invested in securities, it has not. Is that correct? A. The company does have quite substantial investments in securities, and those investments are not included in the rate base.

• • •

[12801] Q. Do you know whether or not the Federal Power Commission has at anytime determined what was a fair rate of return for Penn Water? A. Not that I know of, and I am reasonably certain that this is the first rate case the Federal Power Commission has had with Penn Water.

• • •

[12803] Q. In your opinion, does the cost of service of an electric utility company include a return on the entire investment which the stockholders have made in the company? A. Not necessarily, because the fair rate of return is applied to the investment. The net investment in property used and useful in rendering public service. If part of the investment is devoted to non-utility properties, the company is not entitled to receive from its ratepayers a return on such investment.

• • •

[13255] Q. Do I understand that you would compute a net investment rate base under part 1 of the Federal Power Act in a different manner than in which you would compute a net investment base under part 2? A. If you understood that it is erroneous. I made no computation under part 1 of the Act.

• • •

[13256] Q. In determining a net investment rate base, would you determine differently under that definition than you would if you were applying part 2 of the Act, for instance, to property which was not licensed? A. I don't know. I have made no study of what I would do under that sub-section in this case.

Q. How would you compute the net investment rate base under part 1? A. It would depend on the facts of the case.

[13257] Q. Take the facts in the present case. A. I have not made a study of that. It is too involved. Besides, the company does not yet have a license.

• • •

[13259] Q. In making that computation of average and net plant balances, and the figures "average base" in column 9, did you or did you not consider the definition of net investment as contained in Section 3, sub-section 13 of the Federal Power Act? A. I did not consider it as related in that particular section. That is, I did not go to that section and read what net investment was and then arrive at these figures. I knew what net investment was under the rate cases the Commission has had in the past where they have used a net investment rate base.

Q. Are the figures which you have arrived at in Exhibit 57 figures which would be arrived at by the application [13260] of the definition of net investment in Section 3, sub-section 13 of the Act? A. As I previously stated, I have made no study of that.

Q. So you do not know whether it reflects net investment as there defined or not?

* * *

THE WITNESS: As I say, I have made no study of what net investment would be applying that sub-section to this property.

* * *

Q. And the concept of net investment which you did apply is what you understand to be the concept as found in the decisions of the Federal Power Commission. Is that correct? A. Well, it is more than that. I have testified on what net investment is in many rate cases, and the Commission has used that figure in its rate cases, so I know what the figure of net investment is in the Commission's rate cases.

Q. All right. Is net investment, as the Commission has applied it, computed in the same manner under part 1 and part 2 of the Act? A. In the only instance that I can recall where that occurred, it was.

[13261] Q. If depreciation expense is properly computed, collected and accounted for, the cash received as operating revenues is received by the company in advance of the time

when the property to which it relates is retired. Is that not true?

* * *

THE WITNESS: Of course, your statement contains an assumption as to the fact that such cash is actually collected in revenues. If it is, it is collected before the plant is retired because the depreciation allowance is for the current consumption of plant in service.

By MR. HULL:

Q. And the corresponding credits that are made to the reserve for depreciation are also made in advance of the charges that are made to the reserve for depreciation when the property is retired. A. The credits to the reserve are made currently with the accrual of depreciation.

* * *

[13268] Q. When you say it that way, do you include the reserve for depreciation among your liabilities? A. No, I never include the reserve for depreciation among the liabilities under any circumstances. It is not a liability.

* * *

[13318] Q. Mr. Dunn, apparently the capital surplus arises in that case because my assumption regarding plant account [13319] was not large enough. If the plant account were $200,000 and the capital stock $200,000 and the company had $75,000 in cash and $75,000 depreciation reserve, where would the difference between the depreciated original cost of the plant and the proceeds of insurance finally be reflected? A. Well, it is too difficult to give offhand answers to all of those assumptions. I can tell you tomorrow, if you wish.

Q. All right. I wish you would.

MR. GOLDBERG: In that assumption I take it the plant is $200,000.

MR. HULL: That is right.

MR. GOLDBERG: Reserve for depreciation is $50,000.

MR. HULL: Just a minute. Let me give the assumptions and we will get the answers tomorrow.

MR. GOLDBERG: All right.

MR. HULL: Original cost of the plant, $200,000; cash and securities, $75,000; total assets, $275,000; capital stock, $200,000; reserve for depreciation, $75,000; total liabilities, $275,000.

MR. GOLDBERG: Destruction of the whole plant by fire?

MR. HULL: No, a destruction of the group of property, the original cost of which was $100,000. The insurance recovery is $75,000, and the depreciated original cost of the property destroyed by fire is $50,000.

[13320] THE WITNESS: I am not sure but what I might need all the facts that would ordinarily be made available to me in that set of circumstances since you started to break down the reserve. I might need to know what the depreciation rate was, what the estimated service life was, what the age of the property was, and what the property was, and so on and so forth.

By MR. HULL:

Q. If you follow my assumptions—— A. I don't like to have these questions answered in the dark and then have them related to a specific case such as P.W.&P. Company.

Q. If you follow my assumptions that the depreciated original cost of the property destroyed is $50,000, you need no assumptions regarding service life or age. A. Oh, there might be an erroneous balance in the depreciation reserve which might affect the conclusions that I would reach.

Q. Oh, yes, and it might be that somebody faked the books and the actual capital stock liability was $250,000. But we are not dealing with assumptions like that. A. I don't know what we might get into.

Q. Just assume that the entries in the balance sheet are as I have given them to you, and that after properly computing a depreciation reserve with respect to the plant [13321] that is destroyed by fire the depreciated value is $50,000. You need not make any assumptions about service life at all. A. You say out of $200,000 of plant, $100,000 was destroyed?

Q. Plant representing $100,000 of original cost. A. And the reserve for that, the proper reserve for that was—

Q. $50,000. A. ——$50,000. Proper reserve for the balance of the plant was $25,000?

Q. That is right.

MR. GOLDBERG: Insurance recovery is $75,000.

MR. HULL: That is right.

THE WITNESS: I will give you the answer to that later.

MR. GOLDBERG: Has the question already been asked? Is the question what are the entries that would be made upon recovery?

By MR. HULL:

Q. What entries would be made to reflect the effect of the destruction of the property and the collection of proceeds on the plant account, and upon the reserve for depreciation, and I would like to know also where the difference between the depreciated cost of $50,000 and the proceeds of insurance of $75,000 will finally be reflected on the balance sheet. [13322] A. I don't believe I can answer that problem because it indicates that there might possibly be a reserve adjustment necessary and you just can't determine these reserve adjustments in the abstract. You have to have more information.

I would have to know all the facts that could be ascertained of the company's past financial policy and history by the Regulatory Commission with respect to depreciation in the past. I would be interested in knowing whether any reserve adjustments had been made in the past and why. I would be interested in knowing the estimated future life of the property. I would be interested in knowing whether the reserve had been recouped, whether the depreciation charges always had been recouped through earnings and so on.

Q. Mr. Dunn, the simple question I asked you is in conformity with the instructions and regulations of the uniform system of accounts? A. No, it isn't, Mr. Hull. It involves possibly a reserve adjustment, and the circumstances under which the depreciation reserve can be adjusted are not set forth in the system of accounts.

Q. Is it my understanding, Mr. Witness, that when you have a fire loss all of these problems you suggest are presented? A. If you lose fifty per cent of your plant in a fire loss, I assure you that very serious problems are presented.

[13323] Q. You have told me a lot of things you would be interested in knowing.

Can you tell me the things that you must know in order to give me the answer? A. The things I must know are all of the facts that can be ascertained regarding the company's past history and the estimated life of the property remaining.

* * *

[13358] Q. It is a fact, is it not, that if a reserve for depreciation for Penn Water is accumulated on the straight-line basis at rates determined by the estimated service lives shown in Exhibit 59, the reserve will be substantially greater throughout the life of the property than the amount necessary to meet retirements which are to be expected if the estimated service lives prove to be correct? A. That

will be true under the straight-line method or any other depreciation method.

Q. The excess of the reserve for depreciation over the estimated retirements, however, would be greater under the straight-line method than under any other method of depreciation accrual, would it not? A. I have a little trouble with your statement "excess of the reserve over the estimated retirements." The balance in reserve would not relate to the property retired but the property not retired. [13359] Q. Yes, but the point of my question is that the amount in the reserve would be substantially in excess of the charges to reserve for retirement of property throughout the life of the enterprise, is that correct? A. That is the same as your first question.

Q. Yes. A. I believe the answer was "yes."

Q. And the excess I refer to would be greater if the straight-line method is used than if any other method of depreciation is used. Isn't that true? A. I don't know that you referred to any excess. There is no excess. It is the amount required. I will say this in answer to the latter part of your question: That the straight-line method creates a higher reserve balance, all other facts being the same, than an interest method such as the sinking fund method or compound interest method.

* * * * *

[13374] A. When you record depreciation expense you record in operating expenses the current depreciation cost with a related entry to the reserve for depreciation. You do not record any payments received or money deposited.

* * *

[13444] THE WITNESS: Are you referring to the two million dollars in the reserve for depreciation?

By MR. HULL:

Q. Yes. A. As I said, that is a contra account to plant account, but no specific assets in the plant account can

be identified as assets reflected by the reserve for depreciation.

• • •

[13609] REDIRECT EXAMINATION

By MR. GOLDBERG:

• • •

[13615] Q. Now, I would like to draw your attention to the Accountants Handbook, third edition, W. A. Paton, Editor. And to page 747 thereof. At page 747 there is a paragraph which has this caption:

"Significance of Depreciation Reserve."

Is that right? A. That is correct.

• • •

[13616] Q. Will you read that, Mr. Dunn?

A. "Significance of Depreciation Reserve.

"The depreciation reserve or allowance, to the extent that it measures a careful and reasonable estimate of accrued depreciation, should be interpreted not as a true reserve, or appropriation of surplus, but rather as a contra account, or valuation account, modifying the gross book value of the depreciable fixed assets. In particular cases, the [13617] depreciation reserve may be in part surplus, as a result of setting up clearly excessive charges for depreciation, but this fact does not alter the nature of the typical reserve for accrued depreciation.

"The use of the term 'reserve', which is well nigh universal, is not altogether fortunate, particularly because of the standard use of this term in labeling genuine surplus appropriations, and also because a layman, in particular, tends to think of the depreciation reserve, when so named, as a fund of cash or other liquid assets set aside for the purpose of replacing the depreciating property at the end of its service life. The conventional depreciation reserve not only does not con-

sist of an actual fund, but can be said to represent or indicate a fund of property only in a very indirect way, if at all. The balance in the reserve or allowance for accrued depreciation represents just one thing—the estimated expiration in use of the depreciable property, shown in other accounts at cost or other gross book value. This can be emphasized by calling attention to the fact that it is quite possible to account for depreciation by avoiding the use of the reserve account entirely through the use of a procedure by which the credits are lodged directly in the plant accounts.

"The really significant element in the accounting for depreciation is the setting up of the charge to operation, [13618] and finally to revenue, by which the showing of net profit is restricted below the figure which would appear if the depreciation were neglected, and, as a result of which dividends are restricted to true net earnings and capital impairment is avoided.

"This does not deny the fact that where operation is successful—that is, where revenues are at least sufficient to cover all costs—assets tend to be built up at least to the amount of the accumulated balances in the reserve account, to take the place of the expired values, assuming the funds replacing expired values are not utilized in retiring liabilities or otherwise withdrawn from the business.

"Hatfield discusses three common misconceptions regarding the depreciation allowance:

"(1) The view that it represents a fund of money;

"(2) The view that it represents a reservation of profits;

"(3) The view that it constitutes inherently a provision for replacement.

"He shows that none of these views is sound, by pointing out that the reserve account represents noth-

ing more than an estimated expiration of asset values, that depreciation goes on whether there are any profits or not, and that the recognition of depreciation is a 'condition precedent to the ascertainment of profits,' and that depreciation [13619] acccounting should take the same form in the case of property which there is no intention or prospect of replacing as in any other case."

* * *

Q. Do you agree with the views expressed in the paragraphs you read? A. I do.

* * *

[14554] HANINA ZINDER

was called as a witness, and after having been duly sworn and examined, testified as follows:

[14555] DIRECT EXAMINATION

By MR. MYSE:

Q. What is your full name, Mr. Zinder? A. Hanina Zinder.

Q. What is your business? A. I am a consultant to Public Utilities on rate matters.

Q. Will you outline briefly your education and experience? A. I graduated from Carnegie Institute of Technology with the Degree of Bachelor of Science and Electrical Engineering in 1924.

In 1926 I obtained a Degree of Master of Business Administration from Northwestern University, specializing in the field of public utilities.

Subsequently I attended the Central Station Institute of the Commonwealth-Edison Company of Chicago and received a certificate of completion. I completed this course in 1927. As part of this course, I spent three three-month intervals in various departments of the company. In these

departments we carried on certain duties at the same time on the operations of the department.

I also attended courses at the University of Wisconsin in working towards a Ph.D. degree.

So much for my education.

[14556] As to my experience, upon graduating from Carnegie Institute of Technology in 1924, I entered the employment of the Commonwealth-Edison Company in Chicago. With the exception of a short leave-of-absence, of about four months, I was continuously employed in the Commonwealth-Edison Company for a period of approximately six years. Two years of this time was spent in the operating department of the Fifth Street generating station of the company, which at that time was the largest steam-generating plant in the United States.

Subsequent to my completion of the Central Station Institute course of the Commonwealth-Edison Company, I entered the contract department of the company where I was employed for approximately three years. My duties in this department consisted of making reports on the comparative costs of electric service for large commercial and industrial establishments in Chicago as between generation by the establishment itself and purchasing its total requirements from the company.

These reports frequently required allocations of costs of service as between private plant generation and purchasing their entire electric requirements.

The total allocations were between cost of steam heating, processed steam and electric generation. The work also involved an intimate knowledge of large power rates and their proper application to various establishments.

While engaged full-time at the Commonwealth-Edison [14557] Company, some time was spent evenings assisting in the preparation of an employee manual on public utility economics for the Middle-West Utility Company.

During this same period I instituted jointly with Dr. Paul J. Ravér a course in public utility rates and subse-

quently conducted as well a course in public utility operation and management. It was my understanding that the course started by Northwestern University in Public Utilities was the first course of that type in any university.

This university activity continued until I left Chicago in 1931.

For a period of approximately four years commencing in 1931, I was a member of the Staff of the Public Service Commission of Wisconsin. For the major portion of this period my title was that of Chief Rate Analyst. My work with the Public Service Commission of Wisconsin involved supervising the work of other rate analysts on the engineering and economic phases of rate investigations of electric, gas and water utilities. This included studies to determine not only the reasonableness of the overall earnings of the companies investigated, but also the determination of the proper relative relationship of the various rates, both retail and wholesale, based upon studies of the cost of service.

While I was with the Public Service Commission of [14558] Wisconsin, I was engaged on several occasions, part-time, on rate work for the Tennessee Valley Authority. This included investigation in the determination and design of the original rates and rate provisions, both retail and wholesale, of the Tennessee Valley Authority. During this same period; that is, from 1931 to 1935, I was engaged as a rate consultant for the Electric Home & Farm Authority.

My duties with this authority were to design and recommend a rate policy.

In 1935 I joined the Staff of the R.E.A. where I subsequently became Chief of the Rate Division. My duties at first were to assist in the formulation and to recommend the rate policies to be followed by this Administration. Subsequently, in accordance with the rate policies adopted, I participated in or supervised the negotiation for the purchase of power at wholesale by hundreds of rural electric cooperatives throughout the United States. Some of the negotiations involved controversies that required both for-

mal and informal appearances before the State Commissions, including the making and presentation of cost studies.

In December of 1937 I left the Rural Electrification Administration to join the Staff of the Federal Power Commission, initially with the title of Principal Engineer.

In 1938 I was made Chief of the Division of Rates and Statistics, which position I occupied with some changes in [14559] the designation of the Division and its activities for a period of approximately seven years until January 1, 1945.

My duties and activities as a member of the Staff with the Federal Power Commission are, of course, a matter of record with this Commission.

Briefly, these involved the direction and supervision of Commission Staff activities involving statistics, rates for both electric and natural gas companies, and engineering on natural gas matters.

At the time I joined the Staff of the Federal Power Commission it had just instituted its first rate investigation. It was my responsibility to recommend, supervise and administer the type, scope and policies to be followed in these and subsequent investigations as to rate and engineering matters.

Beginning with the Albany Lighting case of the Commission, and on through each rate case of this Commission thereafter, practically all of them required investigations, studies, and exhibits to be prepared on the allocation of costs between so-called jurisdictional and non-jurisdictional business. The direction and supervision of this work was one of my major responsibilities.

During the war I directed the Commission Staff activities under the Presidential Directives regarding the review and approval of War Power contracts. Practically all of these contracts involved the sale of large blocks of power, [14560] frequently at special rates. The determination of the reasonableness of these rates in most cases involved studies of costs, and in many cases cost allocations.

Similar work was continued after the war in assisting the War Department, Navy Department, and Reconstruction Finance Corporation with respect to the renegotiation of War Power contracts.

[14561] On January 1, 1945, I left the Commission and joined Mr. E. Holley Poe in carrying on a private consulting practice, and subsequently became an associate of E. Holley Poe and Associates. I continued this association and activity until September 1, 1946. During this period I engaged in a general consulting and advisory practice on rate and related matters involving both private and public utilities in the United States and Canada.

I was engaged as a rate consultant by the Bonneville Power Administration, and still continue in this capacity at the present time. Also during this period, I assisted in the preparation of portions of the testimony on behalf of the Natural Gas Industry Committee before the Federal Power Commission in their Docket G-580 and testified in the Washington hearing in this case.

Q. Now, Mr. Zinder, were you requested by Pennsylvania Water and Power Company to make a study of its costs allocable to Consolidated Gas Electric Light and Power Company of Baltimore?

A. I was.

Q. Have you prepared a study showing your determination of the cost of service of the Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland allocable to Baltimore Company?

A. I have.

[14562] Mr. Myse: I ask to have marked for identification the document described as "Determination of Cost of Service of Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland to Consolidated Gas Electric Light and Power Company of Baltimore." I understand the next Exhibit number is 319.

TRIAL EXAMINER: Yes. The document may be marked Exhibit 319 for identification.

(The document referred to was marked for identification as Exhibit Number 319.)

• • •

[14569] Q. Does Exhibit 319 show the costs of Penn Water and Susquehanna properly allocable to Baltimore Company?

• • •

[14570] THE WITNESS: It does.

• • •

[14573] WM. H. EICHHORN, JR.

was called as a witness, and after having been duly sworn and examined, testified as follows:

DIRECT EXAMINATION

By MR. KING:

Q. Will you give your full name for the record, Mr. Eichhorn? A. Wm. H. Eichhorn, Jr.

Q. What is your present position with the Pennsylvania Water & Power Company? A. Secretary and Assistant Treasurer.

Q. Will you state your educational background for the record, please? A. I am a graduate accountant, and a Certified Public Accountant in the State of Maryland.

[14574] Q. Will you state your experience, please? A. I have been employed in accounting work since 1926. Since 1931 with the Safe Harbor Water Power Corporation and Penn Water & Power Company.

Q. Mr. Eichhorn, have you prepared a statement showing reconciliation of the Federal Power Commission Staff's recommended disallowances from the company's electric plant accounts pursuant to Exhibit 51, Schedule 2, and testimony as presented by witness Newlands with Penn

Water Exhibit No. 25, consolidated statement showing original cost of electric plants as of December 31, 1945? A. I have.

Q. I show you a document consisting of a summary and five sheets with supporting schedules A to Q and ask you whether this is the statement of reconciliation to which I have just referred. A. Yes, it is.

* * *

TRIAL EXAMINER: The document will be marked Exhibit 320 for Identification.

* * * *

[14575] By MR. KING:

Q. Will you state briefly the purpose of this exhibit, Mr. Eichhorn? A. The exhibit is for the purpose of reconciling mathematically the Staff's proposed disallowances from the original cost as shown in Exhibit 51 with the company's Exhibit 25, and it sets forth the differences as items.

Q. Will you describe them briefly in this Exhibit 320? A. If you will turn to page 1 you will see that items 1, 2 and 4 make up the total amount shown as item 5, which is total electric plant recommended for allowance by the F.P.C. Staff.

Items 6, 7 and 8 total as item 9, amounts recommended by the Staff for disallowance. They total $3,753,843.75. The total of items 5 and 9 give you item 10, which is a total original cost of electric plant per Penn Water Exhibit 25. That amount is $36,704,706.47.

Q. Did you say the totals of 5 and 9—I see it now, Mr. Eichhorn. Those totals give you item 10. A. That is right.

Items 11 and 12 are disallowances conceded by the company and the total amount is shown as item 13, $99,906.39.

The deduction of item 13 from item 10 will produce the amount shown as item 14, the net revised original cost of

electric plant as of December 31, 1945, as claimed by the [14576] company.

Q. What amount? A. $36,605,700.08.

Those items on page 1 are shown in more detail on pages 2 to 6 inclusive, and the items shown on pages 2 to 6 are further supported by schedules A to Q, which are pages 7 to 58, inclusive.

Q. Does that complete your answer, Mr. Eichhorn? A. Yes, that completes the description of the schedule.

MR. KING: You may cross examine.

MR. GOLDBERG: Let me understand this. I think it is probably a statement which will have to come from Respondent's counsel.

Do the Respondents propose to submit other witnesses who will testify on the data, or any part of the data, in Exhibit 320?

MR. KING: The answer to your question is "no," Mr. Goldberg, but you will recall that heretofore we submitted for cross-examination, in connection with Mr. Gunn's cross-examination on original cost, Messrs. Wetzel, Bortner, Eichhorn and Chase, all of whom assisted Mr. Gunn in connection with the subject matter.

* * *

[14577] CROSS EXAMINATION

By MR. GOLDBERG:

* * *

[14579] Q. * * * Do I understand that you have made no decisions in preparing Exhibit 320 as to the propriety of the claimed costs. Is that right? A. That is right. It is purely a mathematical reconciliation setting up Commission disallowance, less the Company disallowance, and the net difference.

* * *

[14591] Q. As a matter of fact, if we look at Schedule K-1, you have a column entitled "Title of Job Order and Description of Item." Is that right? A. That is right.

Q. Those paragraphs that appear along with each item under that column are intended to be, I take it, items of explanation of the amounts which appear in the schedule. Is that right? A. Yes.

Q. That explanation isn't necessary for your reconciliation, is it? A. Well, I believe the explanation is necessary to [14592] an understanding of it, yes.

Q. Is there any explanation in either Exhibit 26 or Exhibit 27 of Job Order C-193? A. No, not in Exhibits 26 or 27, but these figures are a part of Exhibit 25.

Q. Is there an explanation in Exhibit 25? A. No, there is no explanation in Exhibit 25.

Q. You could have made a reconciliation between the staff's allowances and disallowances with respect to original cost and the company's claims regarding original cost without these explanations in Schedule "K". Isn't that so? A. No.

Q. Why not? A. Because they are not explained in Exhibit 51.

Q. Are they explained in your exhibits which were part of your direct case? A. This is the only place in the record that I know that they are explained because they were not explained in Exhibit 51.

Q. Now, then, you can make a reconciliation without that explanation. Isn't that so? A. Not an understandable one I believe.

Q. In other words, nobody would know what Job Order C-193 was about in connection with the company's claim unless you made this explanation which is in your reconciliation. [14593] Is that it?

* * *

THE WITNESS: That is true, and I believe the reason is that in the staff's Exhibit 51 the item was not set forth and explained what it was.

* * *

[14598] Q. Mr. Eichhorn, looking at page 35 of Exhibit 320, these descriptions that appear under the column entitled "Title of Job Order and Description of Item," are they verbatim copies of what appears in the job order as a description of the item? A. No, I don't believe they are verbatim descriptions of the job order. It probably has been added to a little for explanatory purposes.

Q. The explanation under the first one, for example, who prepared that explanation? Did you prepare it? A. Well, all the explanations of these details came from Mr. Wetzel.

Q. In other-words, Mr. Wetzel gave you the year of expenditure, the job order, the title of the job order as he wrote it, and his description of the item. Is that right? A. That is right.

Q. You didn't examine the job order yourself to ascertain whether the description was an accurate one, did you? A. No. I assumed the description was an accurate one. I worked with Mr. Wetzel a long time and find he is very reliable and I can depend on what he gives me. [14599] Q. Is that what you did, you depended on what he gave you? A. That is right, I depended on Mr. Wetzel for the details. Then, of course, all the schedules in the Exhibit 320 were submitted to Mr. Gunn and he made the final decisions as to what was to be in here.

Q. Did Mr. Gunn review the job orders? A. No, he did not review the job orders.

Q. Where does the information come from indicating that the amount involved in connection with the first item on page 35 was charged to the reserve for depreciation?

* * *

THE WITNESS: That came about in connection with our determination of original cost. That work all was done under Mr. Wetzel's supervision.

By MR. GOLDBERG:

Q. Mr. Wetzel, I take it, also supplied you with the information that certain amounts were either charged to the

reserve for depreciation or operating expenses on the company's books. Is that right? A. That is right, the detailed records of the original cost determination are under his charge and were made under his supervision.

Q. Who prepared the caption appearing on page 35, [14600] "Summary of Betterments, Arising Through Minor Items Charged in Error to Operating Expenses or to Reserve for Depreciation"? A. I believe I prepared the caption. I talked to Mr. Wetzel about the items he had given me and prepared the caption.

Q. When you say you talked to Mr. Wetzel about the items he had given you, did you talk to him for the purpose of securing an accurate title for the items? A. Yes, I asked him to make an accurate title. I believe these titles he has here are accurate.

Q. Did he write that title which I quoted? A. "Summary of Betterments—", etc?

Q. Yes. A. Well, I don't believe he wrote the title other than as I suggested it be written.

Q. Did you determine that all of these were betterments? By "all of these" I mean the items listed in the various schedules in K. A. Based upon the information he gave me, yes. We discussed them generally and I asked that a schedule be made up showing those that are betterments as distinguished from those that were additions and those that were replacements.

Q. And he gave you the segregation as it appears in Exhibit 320. Is that right? A. That is right.

[14601] Q. Did you decide that the items had been charged in error either to the operating expense accounts or to reserve for depreciation?

* * *

THE WITNESS: Well, based upon the data that he gave me as to the items it appeared to me that they were in error.

By MR. GOLDBERG:

Q. Did you decide that they were charged in error? A. Based upon the data he gave me I decided that they were in error.

Q. Did you select the caption "Charged in Error" which is the heading for two columns appearing on page 35 and the other pages all the way through, at least, page 45? A. You are speaking about the items as they appear here in this exhibit and not as they originally occurred in connection with the original cost study, I presume?

Q. That is right. A. Because I make a distinction of that type for this reason: Originally these items were discussed by Mr. Gunn, Mr. Luther, Mr. Wetzel and myself occasionally as they came up in connection with the original cost determination.

Mr. Gunn, along with counsel and myself, made the joint [14602] determination that all of these items that you see here in the K Schedules and in addition the ones which are set forth in Exhibit 51 in entries 18, 23 and 24 of that exhibit were in the nature of accounting errors, and that was the basis upon which I used the heading here, "Charged in Error" which you see in the K Schedules.

Mr. King: Of Exhibit 320?

The Witness: Of Exhibit 320.

* * *

[14605] Q. You spoke of the items being in the nature of accounting errors. What do you mean by "in the nature of accounting errors"? A. Simply that they were in error.

Q. You didn't say they were in error. You said they were in the nature of accounting errors. What does that mean? [14606] A. These items apparently were charged on Schedule K-1 starting on page 35. The items were charged to the reserve for depreciation or operating expenses instead of to electric plant.

Q. What enabled you to conclude that it was in error? So far I have not seen anything that is wrong. What made it in error? That is what I am trying to get at. A. Are you referring now to Schedule K-1?

Q. If you wish, you can talk about that one. That begins on page 35. A. That is right.

Based on the information on Schedule K-1, for example, the excess cost of the enamel signs over the estimated cost at current prices of varnished and baked signs being replaced in the amount of $336.24 should, at the time the cost was incurred in 1923, should have been charged to electric plant instead of the account "Reserve for Depreciation."

Q. Why? A. Because that is a proper place to have charged that type of cost.

* * *

[14614] HERBERT B. DORAU,

* * *

DIRECT EXAMINATION.

MR. HULL: Mr. Examiner, Dr. Dorau has been sworn and his qualifications are of record at transcript 797 to 801.

By MR. HULL:

Q. Dr. Dorau, do you have your rebuttal testimony before you? A. Yes.

Q. Were you supplied with a copy of the Commission Exhibits 59 and 61? A. Yes.

Q. Did you request the Pennsylvania Water & Power Company to classify its depreciable property according to the estimated lives offered in Exhibit 59? A. Yes.

* * *

[14619] TRIAL EXAMINER: The Examiner directs the witness to hand the Reporter a copy of the exhibit he has before him and the Reporter will mark it Exhibit 321 for identification.

(The document referred to above was received and marked for identification Exhibit 321.)

* * *

[14621] By Mr. Hull:

Q. Did you also request the company to prepare for you according to your specifications a distribution of property retirements as they would have taken place and would take place according to the life estimates as offered in Commission Exhibit 59, over the period 1911-2010? A. Yes.

Q. Did you also request and have prepared under your direction a calculation of the annual gross increment to a depreciation reserve on a straight line accrual basis using the estimated lives as set forth in Commission Exhibit 59 and the investment of the Company in depreciable plant by years from 1911 to December 1945 as determined by Commission Staff and a constant dollar investment balance from 1946 to 2010? A. Yes.

Q. In the preparation of the annual gross increment to a depreciation reserve on a straight line basis and other bases for which you used the investment of the company in depreciable plant what assumptions if any did you make as to the years subsequent to 1945? A. I assumed that retirements would be followed by replacements so as to maintain a constant investment balance by years for the period 1946-2010.

Q. Where are the results of these calculations set forth? [14622] A. On Exhibit page A-1 of my exhibit (Company Exhibit No. 321).

Q. Will you explain the tabulation on exhibit page A-1? A. Column 1 of this tabulation records a 100 year period set forth as years 1 to 100. Year 1 is 1911 and year 100, the year 2010.

Column 2 sets forth the cumulative retirements of depreciable property by years on the basis previously explained.

Q. I notice that the total in Column 2 reaches $30,129,460 in the 100th year, a sum in excess of the investment in depreciable property. Why does this occur? A. By the year 2010 and, in fact to some extent before, shorter lived property will have gone through one or more life

cycles of investment, retirement and replacement and thus appear more than once in the gross cumulative total by years.

Q. Will you continue with your explanation of the tabulation on exhibit page A-1? A. The third column on exhibit page A-1 reduces the cumulative accrual of retirements as forecast by Commission Exhibit 59 to a percentage basis with the total at the 100th year as 100 per cent.

The purpose of reducing the cumulative gross retirement forecast to an index is to afford comparison with the rate of accrual of a so-called depreciation reserve on the [14623] alternative bases indicated in columns 4, 6, 8 and 10 of this tabulation.

Reference to column 3, (the cumulative per cent accrual of estimated retirements) indicates that after an elapse of 43 years, 43 per cent of the period, less than 1 per cent (.75) of the anticipated retirements will have taken place and that after 50 years, i.e., an elapse of half the period, only 8.32 per cent of the retirements estimated to occur in 100 years will have taken place. Even after 75 years, an elapse of three quarters of the period, less than 50 per cent of the estimated 100 year retirements will have taken place.

Q. What significance do you attach to the rate at which estimated retirements actually accumulate? A. The rate of accumulation of retirements of the property of this company is very slow, a large part of the investment consists of long lived property so that the average estimated life is long and the date at which the liability to retire and replace matures is very remote. The economic significance of such a liability decreases with futurity and thus the bases of reserve accrual which, although wrong in principle may be practical enough when applied to short lived property, lead to economically absurd results when applied to long lived property and wholly unreasonable consequences when applied to such extremely long lived [14624] property as that of a hydro-electric establishment.

Q. Have you determined the average estimated life of the dollar investment in the depreciable property of Pennsylvania Water and Power Company? A. Yes, the dollar weighted estimated life (using the estimates of Commission Exhibit 59) and the 1945 investment of $26,718,506 was 64 years.

Q. Have you prepared a distribution of the $26,718,506 1945 investment in depreciable property by estimated life expectancy? A. Yes, the distribution in dollars and per cent, cumulative and non-cumulative is as follows:

	Invested Dollars		Percentage	
Group	Group	Cum.	Group	Cum.
100 yrs.	3,558,389	3,558,389	13.32	13.32
75 yrs.	5,729,951	9,288,340	21.45	34.77
70 yrs.	5,123,481	14,411,821	19.18	53.95
65 yrs.	221,324	14,633,145	0.83	54.78
60 yrs.	114,831	14,747,976	0.43	55.21
55 yrs.	3,282,026	18,030,002	12.28	67.49
50 yrs.	1,448,397	19,478,399	5.42	72.91

Total	26,718,506		100.00	

Q. Will you continue with your explanation of the tabulation on your exhibit page A-1? A. In column 4 under the heading "straight line"—"dollars" there are set forth by years the accumulated amounts which would accrue on a straight line basis and on the basis of the life estimates of Commission Exhibit 59 applied to the investment made by Pennsylvania Water & Power Company.

The same accumulation on a percentage basis is set forth in column 5.

The accumulated totals in columns 2 and 4 may be compared and the relative rate of accumulation may be compared by reference to columns 3 and 5. Such comparisons will indicate for example that,

At the end of 43 years 34 per cent of the gross accruals will have been accumulated but only .75 of one per cent of the retirements will have been made and that even,

At the end of 61 years when 25 per cent of the retirements will have accumulated, over 55 per cent of the gross reserve accumulations will have accrued.

[14626] In columns 6 and 7 similar information is set forth for a 3 per cent interest basis, in columns 8 and 9 for a 4¼ per cent interest basis and in columns 10 and 11 for a six per cent interest basis.

Comparisons may be made on an absolute or percentage basis. Such comparisons disclose the high and rapid rate of accumulation of the accruals on a straight line basis when compared with either the accumulated volume or relative rate of retirements or the accumulated accruals on any of the interest bases. Thus for example after 43 years when,

34.29 per cent of the straight line accrual will have been accumulated, and only

.75 per cent of the retirements will have been accumulated,

23.92 per cent of the reserve accrual on a three per cent basis will have been accumulated and

20.47 per cent on a 4¼ per cent basis and

16.66 per cent on a six per cent basis,

the accumulated reserve on a three per cent basis will be $8,950,907 as compared with $13,842,846 on the straight line basis and $7,467,502 on a 4¼ per cent basis and $5,902,808 on a six per cent basis.

Q. Have you prepared a chart setting forth the relationship indicated on exhibit page A-1? A. Yes. It appears on exhibit page A-2 of this same [14627] exhibit.

Q. Will you briefly explain the chart on exhibit page A-2 of your exhibit? A. This chart sets forth graphically the facts developed in the tabulation on exhibit page A-1.

It may be readily observed that,

(1) through the first 40 years of the life of the property the proportion of the retirements which would take place according to the life estimates of Commission Exhibit 59 is insignificant and relatively inconsequential and that,

(2) the relative accumulation of gross increment to a reserve to meet the cost of such estimated retirements on the 3, 4¼, and 6 per cent accelerates more rapidly than and remains relatively well ahead of the gross increment of retirements but

(3) that the gross accrual on a straight line basis far exceeds in relative rate of accrual even that of the gross accrual on a three per cent interest basis and is absurdly in excess of the rate at which retirements are estimated to accrue and that,

(4) obviously the use of a common percentage scale eventually brings the several curves together [14628] at the 100 year point since the several totals are each treated as 100 per cent in the 100th year.

How different the absolute totals of accumulated retirements and the gross totals of reserve accruals on the various bases remain even after 100 years will be developed in later tables and charts.

Q. Are these relationships further developed and set forth in the chart on exhibit page A-3? A. Yes.

Q. Will you briefly explain the chart on exhibit page A-3? A. The chart on exhibit page A-3 differs from the one on exhibit page A-2 in that the vertical scale is in per cent rather than dollars. There are plotted against the same horizontal scale of 100 years the absolute dollar

values set forth in the table on exhibit page A-1, columns 2, 4, 6, 8 and 10.

Examination of the chart on exhibit page A-3 indicates that,

(1) the absolute gross accumulation of estimated retirements is inconsequential for more than 40 years from inception, and that,

(2) the absolute gross accumulation of accruals on each of the alternative bases of [14629] reserve accrual is far in excess of the accumulated retirement requirements and that,

(3) the absolute gross accumulation of a reserve on the straight line basis at all times far exceeds the estimated cumulative retirements and is in excess of the estimated accumulated retirements after 100 years by more than 10 million dollars and in other years by the following amounts,

90th year	$13,367,330
80th year	15,460,640
70th year	14,782,256
60th year	14,465,007
50th year	14,594,603
40th year	12,289,035

(4) the accumulated gross accruals to the reserves on the several interest bases in each instance and at all times are in excess of the estimated accumulated retirements by a wide margin of safety which in the case of the three per cent interest basis exceeds the estimates of accumulated retirements in certain years by the following amounts:

	100th year	$ 7,296,114
	90th year	10,297,153
[14630]	80th year	11,613,702
	70th year	10,494,969
	60th year	9,781,073
	50th year	9,743,903
	40th year	7,513,521

Q. What is the purpose of the tabulation on exhibit page A-4? A. This tabulation sets forth the same facts as to estimated accumulated retirements and reserve accrual on the several indicated bases for the period 1946 to 2011. It differs in scope from the tabulation on exhibit page A-1. The accumulated absolute amounts and percentages are related to the calendar years indicated in column 1. The tabulation conveniently supplies the basis for the chart on exhibit page A-5.

Q. How does the chart on exhibit page A-5 differ from the one on exhibit page A-2? A. It is a cumulative percentage chart as the one on exhibit page A-2 but limited to the period 1946-2010, the horizontal scale is in calendar years. The larger horizontal scale is easier to read. The comparisons to be made are the same as on the chart on exhibit page A-2 and the same conclusions are appropriately drawn.

Q. Describe briefly the character and purpose of the tabulation on exhibit page A-6. [14631] A. The purpose of this tabulation is to afford ready comparisons between the investment in depreciable property and the reserve balances which would maintain on the basis of the life estimates of Commission Exhibit 59.

The assumptions on which the tabulations on exhibit page A-6 were developed are the same as those made in connection with the tabulation on exhibit page A-1. From 1945 a constant investment is assumed to result from replacement of retirements at an equal cost.

The tabulation on exhibit page A-6 can be related to the tabulations on exhibit page A-1. The difference between the cumulative estimated retirements of $30,129,460 after 100 years as set forth on exhibit page A-1 and the stabilized investment of $26,718,502 as set forth on exhibit page A-6 after 1945 represents the total of predicted retirements. The difference between the accumulated estimated retirements of $30,129,460 and the accumulated straight line reserve accrual of $40,367,910 ($10,238,450)

is obviously the balance which would be found in a straight line accrued reserve under these same assumptions and circumstances as set forth in column 3 of the table on exhibit page A-6 at the 100 year level.

Similarly the reserve balances as set forth in columns 5, 7 and 9 are the same as the differences between the accumulated totals of estimated retirements as set forth in [14632] column 2 of exhibit page A-1 and columns 6, 8 and 10 of the same tabulation.

The relationships between the investment in depreciable property and the reserve balances on the various indicated bases of accrual are most readily observed by reference to columns 4, 6, 8 and 10 which set forth the percentage relationships between the reserve balances and the investment in depreciable property. It may thus be noted that,

(1) the highest ratios, for the first 100 years are reached on each basis at the end of the 82nd year when,

(a) the reserve balance on a straight line basis reaches 60.4 per cent

(b) on a three per cent interest basis 46.6 per cent

(c) on a 4¼ per cent interest basis 41.4 per cent

(d) on a six per cent interest basis 35.3 per cent.

The high relatively sustained level is reached as early as the 48th year with a 56.2 per cent reserve ratio on the straight line basis, 37.9 per cent on a 3 per cent basis, 32.1 on a 4¼ per cent basis and 26.0 per cent on a six per cent basis.

[14633] During the last 52 years of the 100 year period the average ratio of year end balances to the investment in depreciable property would be as follows:

on the straight line basis—54.1 per cent
on the 3 per cent interest basis—39.1 per cent
on the 4¼ per cent interest basis—33.9 per cent
on the 6 per cent interest basis—28.1 per cent

This means that a reserve accrued on a straight line basis would on the average for a consecutive 52 years exceed 50 per cent of the investment in depreciable property, and that even on a three per cent interest basis the reserve would stand at an average of almost 40 per cent of the investment in depreciable property for more than half a hundred years.

High average ratios of reserve balance to depreciable property will also maintain from 1945 through 1957. The average ratios of reserve balances to investment in depreciable property for the year period 1945-1957 on the several bases would be as follows:

on the straight line basis—47.9 per cent
on the 3 per cent interest basis—30.0 per cent
on the 4¼ per cent interest basis—24.6 per cent
on the 6 per cent interest basis—19.0 per cent.

Q. Does the chart on exhibit page A-7 set forth the [14634] facts tabulated on exhibit page A-6? A. Yes.

Q. Will you briefly point out the more significant relationships set forth on this chart? A. The chart on exhibit page A-7 records the percentage relationship of the reserve balances on various bases to the investment in depreciable property as set forth in columns 4, 6, 8 and 10 of the tabulation on exhibit page A-6.

It visualizes the rapid use of reserve balance ratios for the first 48 years and the striking rapid use of the ratio of the straight line reserve balance to the investment.

It is also clearly indicated and observable that the ratio of the reserve balances on the several bases remain high and relatively stable for a period of 40 years following the rapid rise of the first 48-50 years and that the ratio of the straight line reserve balance holds at an ex-

ceptionally high level as compared with the ratios of reserve balance found on the 3, 4¼ and 6 per cent bases.

The substantial extent to which the reserve balance on the straight line basis exceeds that on the interest bases can readily be observed from the chart on exhibit page A-7. From the tabulation on exhibit page A-6 it may be determined that the annual reserve balance on the straight line basis exceeds that which would maintain on the several interest bases by the following amounts, at five year intervals:

[14635] Reserve Balance on Straight Line Basis Exceeds Balance on

Year	3% Basis	4¼% Basis	6% Basis
1945	4,456,381	5,730,750	7,030,413
1950	4,826,367	6,268,183	7,777,382
1955	4,915,061	6,435,033	8,051,959
1960	4,834,642	6,372,619	8,024,360
1965	4,699,148	6,233,115	7,893,317
1970	4,666,761	6,244,223	7,988,841
1975	4,477,622	6,038,095	7,796,113
1980	4,248,697	5,768,378	7,511,193
1985	4,013,324	5,480,172	7,194,768
1990	3,774,786	5,177,537	6,852,468
1995	3,371,402	4,617,230	6,113,193
2000	3,037,521	4,120,184	5,403,100
2005	2,946,871	3,940,102	5,087,196

Q. What general conclusion do you draw from the facts as developed in the tabulations and charts on exhibit pages A-1 to A-7, inclusive? A. The conclusions indicated by the facts alone are that,

(1) the estimated life of the depreciable property of Pennsylvania Water & Power Company is extremely long,

(2) the estimated life of a large proportion [14636] of the depreciable property of Pennsylvania Water & Power Company is beyond the limits of nor-

mal human discountability and calculation, i. e., beyond 40 and 50 years.

(3) accrual of a reserve to provide for the retirement of property at cost on a straight-line basis for such long life property results in the accumulation of a very large balance for very long periods of time (50 years and more) in excess of the cost of retirements, and that

(4) accrual of a reserve to provide for the retirement of property at cost on a 3 per cent interest basis for such long life property also results in the accumulation of a very large balance for very long periods of time in excess of the cost of retirements.

And furthermore as a matter of professional opinion I conclude that,

(1) the accrual of a reserve for the retirement at cost of depreciable property of such exceedingly long life on a straight-line bookkeeping basis results in an economic absurdity,

(2) the accumulation of a reserve against anticipated retirements more than 50 years in the future serves no practical or necessary business [14637] purposes,

(3) a basis of reserve accrual which results in an average reserve to investment ratio of 50 per cent for a future period of 50 years duration fails, by the test of common sense and end result, to establish a functional relationship to any necessary economic end, and that,

(4) a 3 per cent interest basis results in the accumulation of yearly and average reserve balances more than adequate to serve necessary economic ends and provide for the retirement of property at cost with a wide margin of excess of reserve for long periods of years.

Q. Did you make a determination of the number of years of future retirement liability, at cost of property, which the reserve balances accrued on a straight line, 3, 4¼ and 6 per cent interest bases would provide? A. Yes. The results are set forth in the tabulation on exhibit page B-1 and in graphic form in the chart on exhibit page B-2.

Q. Will you explain this tabulation on exhibit page B-1 and the chart on exhibit page B-2? A. The tabulation on exhibit page B-1 sets up opposite each year the number of years of future estimated retirements [14638] which the reserve balance as of the end of the indicated year will provide. Thus as of 1951 the reserve balance on a straight-line basis is equal to the total of the estimated retirements for the next 33 years or until 1984, on a 3 per cent interest basis the reserve balance would be equal to the retirement requirements for the ensuing 21 years or until 1972, on a 4¼ per cent interest basis the reserve balance would be equal to the retirement requirements for the ensuing 16 years or until 1967 and on the 6 per cent interest basis the reserve balance would be equal to the estimated retirement requirements for the ensuing 13 years or until 1964.

It should be obvious that this calculation does not include the continuing accruals on the several bases during the periods mentioned. This is clearly indicated by reference to the advance or subsequent years of retirements which the reserve balance at the end of the selected periods would still cover, thus,

(1) the reserve balance on the straight-line basis as of 1951 equals the retirement requirements for 33 subsequent years or until 1984 but by reference to 1984 it will be found that the estimated reserve balance is again adequate to meet the estimated requirements for the next 25 years,

(2) the reserve balance on the 3 per cent [14639] basis as of 1951 equals the retirement requirements for 21 subsequent years or until 1972, but by reference to

1972 it is found that the estimated reserve balance is again adequate to meet the estimated retirements for the next 21 years,

(3) the reserve balance on the 4¼ per cent interest basis as of 1951 equals the retirement requirements for 16 subsequent years or until 1967, but by reference to 1967 it will be found that the estimated reserve balance is then again adequate to meet the estimated retirements and then for the ensuing longer period of 17 years,

(4) the reserve balance on the 6 per cent interest basis as of 1951 equals the retirement requirements for 13 subsequent years or until 1964, but by reference to 1964 it will be found that the estimated reserve balance is then again adequate to meet the estimated retirements for the ensuing larger period of 15 years.

It may be noted that the calculations of the years of future retirement liability coverage which the various bases provide end at different years. The calculations for the straight-line bases in 1988, the 3 per cent interest basis [14640] in 1996, the 4¼ per cent interest basis in 1998 and the 6 per cent basis in the year 2000. In each instance calculations were discontinued when the number of future years coverage carried through the year 2010, the end of the 100 year period, the longest estimated life of any depreciable property class, thus by 1988, the reserve balance without reference to any additional credits would be sufficient to meet retirements through the year 2010 and similarly for the results on the other bases of accrual. Thus by 1988 the straight-line basis has accrued a sufficient balance to carry retirements through the period ending with 2010. Any accruals during the subsequent 22 years would provide an excess balance as of the year 2010. Similarly the 3 per cent, 4¼ per cent and 6 per cent interest bases would have provided the entire estimated retirement requirements respectively by 1996, 1998 and 2000 and similarly any addi-

tional reserve accruals would constitute excess balances at the year 2010.

A further basis of comparison of the results of the use of the alternative bases of reserve accrual may be provided by averaging the subsequent years of retirement requirements provided by the several bases of reserve accrual.

Limiting the period to the years 1911 through 1988 at which time the straight-line basis has accrued enough to carry retirements through the year 2010, it is found that [14641] the average years of subsequent retirements provided in advance are,

on the straight-line basis—31.8 years.
on the 3 per cent interest basis—24.6 years.
on the 4¼ per cent interests basis—23.2 years.
on the 6 per cent interest basis—19.2 years.

The chart on Exhibit page B-2 sets forth the relationships indicated by the tabulation on exhibit page B-1 graphically.

Q. What conclusions do you draw from the facts developed in and derived from the tabulation on exhibit page B-1? A. The number of future years of estimated retirements which would accrue on the straight-line basis is substantially in excess of the years of future retirements which would be accrued on the 3 per cent interest basis and far in excess of the years of retirement requirements which would be provided on the 4¼ and 6 per cent interest bases.

The facts developed in the tabulation on exhibit page B-1 further support my opinion and conclusion that the degree to which the reserve balance accrued on a straight-line basis in number of dollars and years of future retirement liability anticipate the possible need for retirement at cost, serves no useful economic purpose and that the degree to which a reserve accrued on a 3 per cent interest basis provides for and anticipates future liability to retire [14642] depreciable property at cost is fully adequate to serve all useful economic purposes.

Q. Have you prepared a comparison between the estimated retirements at cost of depreciable property to Pennsylvania Water & Power Company for moving 5 and 10 year periods ahead from each year from 1911-2010 and the reserve balances which would have been accrued on the straight line, and on the 3, 4¼ and 6 per cent bases? A. Yes, the results of the calculations of the retirement requirements for 5 and 10 year periods in advance from each year 1911-2010 are presented in the tabulation on exhibit page C-1 and graphically compared on exhibit page C-2 with the reserve balances which would result on the several bases as previously set forth in the tabulations on exhibit page A-6.

Q. Will you briefly explain the tabulation on exhibit page C-1 and the chart on exhibit page C-2? A. The tabulation on exhibit page C-1 consists of two parts, the first four columns accumulate the estimated retirements for moving 5 year periods and the second four columns for moving 10 year periods, thus for the five year moving period 1954-59 it would develop on the basis of the life estimates of Commission Exhibit 59, that $1,875,342 dollars of liability to retire would mature and that for the ten-year period 1954-64 on the basis of the same estimates, [14643] liabilities to retire $3,842,163 would mature and similarly for each 5 and 10 year moving period.

The purpose of these calculations is to provide a basis for comparison and a standard of adequacy of the reserve balances accumulated on the several bases previously calculated and set forth as is done in the chart on exhibit page C-2.

Reference to the chart on exhibit page C-2 discloses the extent to which the reserve balances (see tabulation on exhibit page A-6) on the several indicated bases exceed the liabilities to retire at cost for periods of five and ten years ahead.

Comparison of the estimated retirements for a moving five-year period with the reserve balances on the sev-

eral bases for each year of the 100 year period 1911-2010 indicates that on each and every one of the reserve accrual bases the balances far exceed any requirements and that the balances on the straight-line basis are many times the requirements at all times and literally huge by comparison.

It is also to be observed that the accrued net balance on the three per cent interest basis is substantially in excess of both five and ten year moving period estimated retirements and that only the reserve balance on a six per cent basis is ever low enough to approach the retirement needs for ten future years and that not until the 90th year. [14644] Q. Have you made calculations to determine the comparative rate base levels and stability resulting under alternative treatment of depreciation reserve balances accrued on the several alternative bases? A. Yes, I have made such calculations and determinations. The results are reflected in the tabulations on exhibit pages D-1 and D-2 and cartographically set forth in the chart on exhibit page D-3.

Q. Will you explain the tabulation on exhibit page D-1? A. The tabulation on exhibit page D-1 is set forth in parallel columns by years for the period 1946 to 2010. In column 2 there is set forth for each year the total investment, being the total plant investment at cost as of January 1, 1946, plus $620,000 of working capital. It is assumed that retirements will be followed by replacements and that the total investment will thus remain constant over the entire period. Column 3 sets forth the difference between the investment and the year end balance in the depreciation reserve accrued on a straight-line basis. Columns 4, 5 and 6 are the differences between the total investments as set forth in Column 1 and the depreciation reserve balances accrued respectively on a 3 per cent, 4¼ per cent and 6 per cent basis.

For purposes of establishing the comparative level and stability of rate bases which would result under alternative [14645] treatment of depreciation reserve balances, the figures in column 2 under the heading "Total Investment"

are accepted to reflect the rate base under a nominal dollar investment standard with sinking fund provision for the cost of depreciable assets at retirement, the figures in column 3 as a rate base determined by deducting the straight-line accrued depreciation reserve balances from the total investment, the figures in column 4 as a rate base resulting from the deduction of the depreciation reserve balances accumulated on a 3 per cent compound interest basis, similarly the totals in column 5 reflect a rate base resulting from the deduction of depreciation reserve balances accrued on a 4¼ per cent compound interest basis, and similarly the figures in column 6 reflect a rate base which would result from the deduction of depreciation reserve balances accrued on a 6 per cent compound interest basis from the total investment.

Only on the nominal dollar investment standard does the rate base remain constant. The total investment less straight-line accrued depreciation reserve balances set forth in column 3 fluctuates widely from a high of $23,545,830 in 1946 to a low of $17,405,925 in 1993, a range of $6,140,000. The total investment less the depreciation reserve balances accumulated on a 3 per cent compound interest basis set forth in column 4 fluctuates from a high of $27,895,315 in 1946 to a low of $21,095,006 in 1993, a range of $6,800,000. The [14646] total investment less the depreciation reserve balance accumulated on a 4¼ per cent compound interest basis set forth in column 5 fluctuates from a high of $29,127,407 in 1946 to a low of $22,467,037 in 1993, a range of $6,660,000. The total investment less the depreciation reserve balances accumulated on a 6 per cent compound interest basis set forth in column 6 fluctuates from a high of $30,376,471 in 1946 to a low of $24,108,754 in 1993, a range of $6,268,000.

The full range of fluctuation and comparative subsequent rate base levels can only however be appreciated when the rate bases determined by reserve balance deduction are compared with the total investment. Thus the

low of $17,405,925 in 1993 on the straight line basis which was found to be $6,140,000 below the 1946 level on the same basis, is $16,134,813 below the investment made.

Fluctuations in dollar amounts under the 3, 4¼ and 6 per cent compound interest bases increase as the interest factor used decreases thus are least on the 6 per cent compound interest basis (21 per cent), next lowest is on the 4¼ per cent interest basis (23 per cent), higher for the 3 per cent compound interest basis (24 per cent), but highest on the straight line basis (26 per cent).

After reaching their respective lows in 1993 the fluctuating straight line and compound interest rate bases again [14647] rise to secondary highs in the year 2007 with $21,756,321 for the straight line basis, $24,703,192 for the 3 per cent compound interest basis, $25,696,423 for the 4¼ per cent compound interest basis, and $26,843,517 for the 6 per cent compound interest basis. These secondary highs are exceeded only by the rate bases prior to 1950 in the case of the straight line basis, prior to 1954 in the case of the 3 per cent compound interest basis. Only back as far as 1970 would the balance on the 4¼ per cent compound interest basis fall below the secondary high of $25,696,423 in the year 2007. Similarly with respect to the 6 per cent compound interest basis, it may be observed that the secondary high of $26,843,517 in the year 2007 was last previously reached or exceeded in 1971.

In order to afford ready comparison among and between the rate base levels which would maintain under the assumed treatment of depreciation reserve balances on a sinking fund, a straight-line basis and the compound interest bases at 3, 4¼ and 6 per cent their comparative magnitudes are reduced to a percentage relationship in the tabulation on exhibit page D-2. The sinking fund rate bases being a constant amount is treated as 100 per cent. The comparative magnitudes of the presumptive rate bases under the straight line and compound interest bases are represented as percentages of the total investment.

[14648] On the basis of the life estimates of Commission Exhibit 59 a rate base determined by the deduction of straight line accrued reserve balances from the investment would give a rate base for 1946 of only 70.2 per cent of the investment. Assuming deduction of depreciation reserve balances accrued on a compound interest base at 3 per cent the rate base would be only 83.2 per cent of the actual investment, accrued on a 4¼ per cent interest basis and deducted from the investment the resulting rate base would be 86.8 per cent, and accrued on a 6 per cent compound interest basis, deduction of the depreciation reserve balance would leave a rate base of 90.6 per cent of the investment.

The maximum reserve balances are found to develop by 1993. In that year the investment less a straight accrued reserve balance would leave a rate base of only 51.9 per cent of the actual investment. A deduction of a depreciation reserve balance accrued on a 3 per cent compound interest basis would leave a rate base of only 62.9 per cent of the investment. A deduction of a depreciation reserve balance accrued on a 4¼ per cent compound interest basis would leave a rate base equal to only 67 per cent of the investment, and a deduction of a depreciation reserve balance accrued on a 6 per cent compound interest basis would leave a rate base equal to only 71.9 per cent of the investment in 1993.

[14649] On the average over the period 1946 to 2010 the deduction of the reserve accrued on a straight-line basis would result in an average rate base of only 58 per cent of the total investment. Similar average relationships to the total investments on the compound interest basis at 3 per cent would be 70 per cent, on 4¼ per cent basis would be 75 per cent, and on the 6 per cent basis would be 79 per cent.

The comparative levels and the character and extent of the fluctuations in the rate bases resulting from the alternative treatment of depreciation reserve balances ac-

crued on 3, 4¼ and 6 per cent compound interest and the straight-line bases are graphically set forth in the chart on exhibit page D-3. In contrast with the constant investment rate base associatable with use of the sinking fund provision for depreciation, the bases of rates associated with compound interest and straight-line accruals for depreciation fluctuate frequently and substantially. The rapid decline in the bases of earnings in the ten years 1946-1956 is particularly noticeable. Three general levels are clearly discernable, the sinking fund basis reflecting 100 per cent of the investment remaining constant throughout the period, the straight-line basis falling sharply to 1956 and remaining characteristically well below 60 per cent of the investment is at the low extreme. The 3, 4¼ and 6 per cent compound interest bases follow the middle ground, holding most [14650] characteristically at a level representing from 70 to 80 per cent of the investment.

Q. What conclusions would you draw from the tabulations on exhibit pages D-1, D-2 and the chart on exhibit page D-3? A. I conclude that the accrual of a depreciation reserve on a straight-line basis for long life property such as that of the Pennsylvania Water and Power Company and the treatment of such a huge reserve balance as an item deductible from the investment for rate base purposes, results in an arbitrarily deflated and highly fluctuating rate base and imposes a responsibility on the enterprise of employing the assets reflecting such depreciation reserve balances by the assumption of additional risks, hazards and uncertainties if the company is to maintain a fair rate of earning power on its investment. I conclude further that on the assumption that depreciation reserve balances are to be deducted from the nominal dollar investment in utility property that the method of accrual which results in the smaller reserve balances imposes the least in the way of an unfair burden upon the investment. In my opinion these tabulations set forth clearly the reasons why the application of any method of

accrual such as the straight-line basis operates absurdly and unfairly in a case of enterprises having a large proportion of exceedingly long lived property.

[14651] Q. Have you made a determination of the annual rates of return actually earnable on the total investment in property assuming an intended 6½ per cent fair rate of return, deduction of depreciation reserve balances accrued on a straight-line basis and retirements of property on the basis of the life estimates as indicated in Commission Exhibit 59? A. Yes, I have calculated what the annual rates of return actually earnable would be for every 10th year 1946-2005 and for the year 2010 on the total investment in the rate base. I have also calculated the average cumulative rates of return for various periods ending by selected years 1946-2010. The results of these calculations are presented in the two tabulations on exhibit page E-1.

Q. Will you briefly explain the statistical tabulations on exhibit page E-1? A. There are two tables on exhibit page E-1. The first sets forth the annual rates of return actually earnable; the second sets forth the average cumulative rates actually earnable over selected periods of years. With respect to the first tabulation which has been limited to the year 1946 and every 10th year to the year 2005 and the year 2010 for the sake of brevity, column 2 sets forth the total investment in the rate base. This total is developed on the assumption that property retirements would be followed by property replacements and that no expansion of plant took place. [14652] Consequently the total investment in the rate base remains constant throughout the period and for each year. The third column records the accumulated depreciation reserve balance which would have developed on a straight-line basis using the life estimates indicated by Commission Exhibit 59.

The 4th column records the difference between column 2 and column 3, namely the investment less the depreciation reserve.

The fifth column records the number of dollars which would constitute a 6½ per cent return on the investment.

The sixth column records the number of dollars which constitute a 6½ per cent return on the investment less the reserve, that is the sums in column 4.

The seventh column records the amount by which a 6½ per cent return on the investment less the reserve would fail to equal the intended 6½ per cent return on the amount actually invested.

Column 8 records the percentage relationship between the sums in column 6 and the investment in the rate base as indicated in column 2.

Column 9 is the difference between the rate actually earned as indicated in column 8 and the intended 6½ per cent rate of return.

Columns 10 and 12 record the rate of return which would be earned on the total investment assuming that the rate [14653] earned as indicated in column 8 were supplemented in the first instance by average earnings of 2 per cent on the assets reflected by the reserve balance, and in the second instance if supplemented by 3 per cent earnings on the assets reflecting the reserve balance.

Columns 11 and 12 indicate the deficiency in rate of return as against 6½ per cent if 2 per cent and 3 per cent respectively were earned on the assets reflecting the depreciation reserve balance.

Reference to column 7 will indicate that the deficiency in return falls between $649,669 and $1,006,972, and that these deficiencies in return reduce the rate actually earnable on the actual investment to 4.56 per cent in 1946 which is 1.94 per cent return less than the assumed intended 6½ per cent rate of return. Again for example in 1985 with a deficiency in return of more than $1,000,000, the actual rate of return earnable would be only 3½ per cent, a full 3 per cent less than the assumed intended 6½ per cent rate of return.

When it is assumed that the utility enterprise could obtain a 2 per cent or a 3 per cent return on the assets reflecting the depreciation reserve balance without the as-

sumption of additional risks, hazards and uncertainties, the deficiencies in the over-all rate of return earned would become somewhat less, thus if the return of 4.56 per cent in 1946 can be supplemented by 2 per cent earnings on assets reflecting the depreciation reserve balance the actual [14654] return would increase to 5.16 per cent, a rate of return however 1.34 per cent below the intended 6½ per cent rate of return. Similarly if it were reasonable to assume that the enterprise could earn 3 per cent on the assets reflecting the depreciation reserve balance the over-all rate of return earned on the utility rate base plus the earnings on the investment or employment of assets reflecting the depreciation reserve balance, the rate of return would rise to 5.45 per cent but still 1.05 per cent below the intended 6½ per cent rate of return.

Analyzing the results for a year such as 1985 in a similar manner we find that the rate of return earnable on the total investment of 3.50 per cent would be increased to 4.42 per cent if 2 per cent could be earned on the assets reflecting the depreciation reserve balance and to 4.89 per cent if the assets reflecting the depreciation reserve balance could be assumed to earn 3 per cent without imposing on the enterprise additional risks, hazards and uncertainties.

It may be noted also that the actual rates of return earnable in the various years sampled would fluctuate widely from year to year.

The second tabulation on exhibit page E-1 makes a similar type of comparative analysis. It differs in that the results determined are cumulative for the periods selected rather than for particular years as above. The column [14655] headings are the same, the procedure is the same. The periods selected after 1946 are a five-year period 1946-51, a ten-year period 1946-55, a fifteen-year period 1946-59, and so on at five-year progressions until the entire period 1946-2010, covering the balance of the assumed maximum 100-year cycle is cumulated. The period

over which the lowest average rate of return would be earned is 1946-1998. An intended 6½ per cent rate of return would, under the assumptions previously set forth, yield only 3.72 per cent on the average investment in the rate base. If 2 per cent could be earned on the assets reflecting the depreciation reserve balance the average rate would be increased to 4.58 per cent and if 3 per cent could be assumed earnable on the assets reflecting the depreciation reserve balance, without the imposition of additional risks, hazards and uncertainties on the enterprise, a five per cent rate of return would be earned, which five per cent is however 1½ per cent below the assumed actually intended fair rate of return.

Q. Have you made a similar determination of the annual rates of return actually earnable on the compound interest bases at three per cent, 4¼ per cent and six per cent? A. Yes, such calculation has been made on both an annual and a cumulative period basis. The results on an annual basis for every tenth year 1946-2005 and for the year 2010 are set forth on exhibit page E-2 and cumulatively on [14656] exhibit page E-3. The assumptions made in connection with the tabulations on exhibit page E-2 are the same as those made in connection with the tabulations on exhibit page E-1. The difference between E-1 and E-2 and E-3 is simply the substitution of the compound interest bases for the straight-line basis of accrual in connection with the tabulations on exhibit pages E-2 and E-3. The tabulation on exhibit page E-2 is in three parts in order to set forth results under the three alternative assumptions of compound interest at 3 per cent, 4¼ per cent and at 6 per cent.

The results indicated by columns 8, 10 and 12 under the heading "Compound Interest at 3 Per cent" disclose that the intended fair rate of return of 6½ per cent could not actually be earned under any of the assumptions and conditions set forth. The nearest approach to earning the 6½ per cent intended rate of return would be in 1946 on the

compound interest basis at 6 per cent. On the assumption that 3 per cent could be earned on the assets reflecting the depreciation reserve balance, the earning rate of 6.17 per cent is still .33 per cent below the intended fair rate of return of 6½ per cent.

It is noted as observed above that the rates of return actually earnable on the various bases and under the several assumptions vary markedly from year to year. It is also appropriately observed that the selection of compound interest [14657] bases at 3 per cent, 4¼ per cent or 6 per cent makes a significant difference in the rate of return earnable on the investment.

The tabulation on exhibit page F-3 sets forth the results as the actually earnable rate of return and the deficiency in the return under the alternative conditions and several assumptions previously enumerated for various periods of years by five-year increments from 1946-2010. Taking the period 1946-1951 as an illustration it is found that after assuming that the assets reflected by the reserve balance could earn 3 per cent without imposing additional risks, hazards and uncertainties on the enterprise, the overall rate of return earnable on the total investment would still be .69 per cent short of the intended 6½ per cent fair rate of return on a 3 per cent compound interest basis, and that similarly on a 4¼ per cent compound interest basis there would still be a deficiency of more than .54 per cent, and that on a 6 per cent compound interest basis there would be a deficiency of .4 of one per cent.

It will be observed that the results for the five-year period 1946-1951 are better than those for any other period. Looking at the longer term, 1946-2010, and assuming 3 per cent earned on the assets reflecting the depreciation reserve balance the deficiency on a 3 per cent compound interest basis is over 1 per cent and similarly on a 4¼ per cent [14658] compound interest basis is .9 of one per cent and a 6 per cent compound interest basis is .73 per cent.

It is immediately observable that when the tabulations on exhibit pages E-2 and E-3 are compared with those on exhibit page E-1 the use of the compound interest basis of accrual at 3 per cent, 4¼ per cent and 6 per cent does not impose anywhere near the penalty on the investment which is exacted by the employment of the straight-line basis of accrual and reserve balance deduction for rate base purposes.

Q. Have you also made a tabulation and calculation of rates of return actually earnable and the deficiency in the return if any on the sinking fund basis? A. Yes, I have made such calculations and prepared the tabulation set forth on exhibit page E-4 for every tenth year, 1946-2005, and the year 2010 and also a tabulation on exhibit page E-5 cumulating the results over selected periods of time.

Q. Will you briefly explain the tabulation on exhibit page E-4? A. The form and procedure that is involved in the tabulation on exhibit page E-4 is identical with that used in the upper half of the tabulation on exhibit page E-1 and the tabulation on exhibit page E-2. The differences to be noted are that the reserve accrual is assumed to take place on a sinking fund basis at 3 per cent, 4¼ per cent and [14659] 6 per cent, and that instead of deducting accumulated reserve balances from the investment for rate base purposes the interest component is made an annual credit to the depreciation reserve and a deduction from the amount which constitutes a 6½ per cent return on the investment.

It will be immediately observable that under the sinking fund basis at 3 per cent and under the assumption that the assets reflected by the depreciation reserve balance will earn 3 per cent the full intended fair rate of return of 6½ per cent is actually earnable. If less than 3 per cent is actually earnable the sinking fund basis at 3 per cent results in a deficiency in the rate of return earned as indicated in columns 9 and 11. It becomes equally apparent therefore also that the use of the sinking fund basis at 4¼ per cent can not result in an actual earning of the intended

6½ per cent fair rate of return unless it were assumed that the assets reflecting the depreciation reserve balance could earn as much as 4¼ per cent without imposing additional risks, hazards and uncertainties on the enterprise. In no case are any of these calculations or any of these assumptions carried beyond a 3 per cent earning return on the assets reflecting the depreciation reserve balance since it is a matter of common knowledge that more than 3 per cent can not be earned without the assumption of additional risks, hazards and uncertainties for which [14660] compensation must be obtained unless the investor is to be exploited.

The tabulation on exhibit page E-5 establishes the results which would develop over periods of time in five-year increments and is comparable in every other respect to the tabulations on exhibit page E-4. The sinking fund basis at 3 per cent, assuming that three per cent could be earned on the assets reflecting the depreciation reserve balance, would make it possible to earn the intended 6½ per cent fair rate of return. Any earning rate in fact less than 3 per cent would make it impossible actually to earn the intended fair rate of return either on a 3 per cent, 4¼ per cent or 6 per cent basis.

Q. Have you brought together for ready comparison results of your calculations as to the comparative rates of return actually earnable under alternative methods of reserve accrual, rate base treatment and assumed earnings rates on the assets reflecting the depreciation reserve balances? A. Yes. The actual earnings rate of returns and deficiencies in return on the assumption of no income from reserve investments and 2 per cent earned on reserve investments and 3 per cent earned on reserve investments for the straight line, compound interest and sinking fund methods and for the sinking fund and compound interest methods at 3 per cent, 4¼ per cent and 6 per cent for periods of [14661] years by five-year increments from 1946-2010 are summarized in the tabulation on exhibit page E-6.

Q. Will you explain briefly some of the relationships to be observed in the tabulation on exhibit page E-6? A. It is readily observable that the only combination of circumstances under which it is possible to earn the intended fair rate of return is found under the sinking fund method on a 3 per cent basis. All other combinations of factors and circumstances result in a greater or lesser penalty in the form of a deficiency in the rate of return. This penalty in general increases with the magnitude of the reserve balance accrued and as the rate of return on the assets reflecting the reserve balance decreases.

The application of the straight-line method imposes the largest penalty on the investor because it operates to build up the largest reserve most quickly. Even though the reserve balances under the 3 per cent, 4¼ per cent and 6 per cent compound interest methods be deducted from the investment for rate base purposes, the penalty is not comparable to that which the investment suffers under the application of the straight-line method and becomes generally less as the interest rate employed under the compound interest method increases, again obviously because of the slower accrual of a depreciation reserve balance by this method.

[14662] Q. Have you prepared additional tabulations and charts showing in detail the annual rates of return actually earnable under alternative methods of depreciation reserve accrual and treatment for rate base purposes? A. Yes, in the tabulations on exhibit pages F-1, F-3, and F-5 I have set forth the annual rates of return actually earnable under alternative methods of depreciation reserve accrual and regulatory treatment of such reserve accruals on the straight-line basis, compound interest and sinking fund bases at 3 per cent, 4¼ per cent and 6 per cent. The assumptions underlying these tabulations and determinations are the same as those previously set forth for similar tabulations.

The tabulations on exhibit pages F-1, F-3 and F-5 differ however from those previously set forth on exhibit pages E-1 to E-5 in that the columns indicating the derivation of the actually earnable rates of return have been eliminated for brevity's sake and only the results in terms of actually earnable rates of return are recorded. These tabulations differ however also from those previously offered in that the actually earnable rates of return under the several assumptions and alternative bases are reported for each year 1946-2010.

The tabulation on exhibit page F-1 compares the results under the straight-line basis with those which would maintain [14663] on the compound interest and sinking fund bases at 3 per cent. The tabulation on exhibit page F-3 similarly compares the results obtainable on the straight-line basis with the results which would be obtainable on the compound interest and sinking-fund bases at 4¼ per cent, while the tabulation on exhibit page F-5 compares the results which would be obtained on the straight-line basis with those obtainable on the compound interest and sinking fund bases at 6 per cent. Otherwise, the tabulations on exhibit pages F-1, F-3 and F-5 are similar.

The tabulation on exhibit page F-1 also proceeds to determine what the effective rate of return actually earnable on the total investment would be if 2 per cent could be earned on the assets reflecting the reserve balance and if 3 per cent were earnable on the assets reflecting the reserve balance as compared with what the rate of return on the total investment would be if no income were obtainable by employment of the assets reflecting the reserve balance.

It is immediately observable that on the sinking fund basis at 3 per cent, and assuming that 3 per cent could be earned on each and every dollar of assets reflecting the depreciation reserve balance from the end of the year in which it was accrued to the time when it would be required to pay the cost of property retired, the enterprise could actually earn the 6½ per cent intended fair rate of return.

It is also readily observable that the lowest actual [14664] rate of return to be earned yearly is under the assumption of straight-line accrual of depreciation reserve balances and their deduction from the investment for rate base purposes. When no income is assumed to be earned on the assets reflecting the reserve balance these rates of return are set forth in column 2 and are in every year the lowest actually earnable rates of return as compared with the results under other bases and methods.

It may further be observed that assuming 2 per cent and 3 per cent earnings on assets reflecting the reserve balance the actually earnable rate under the straight-line method is always lower than that obtainable under the alternative compound interest and sinking fund methods.

It is also worthy of note that the average earning rate on the straight-line basis drops rapidly from 1946 to 1959 by almost 1 per cent, reaches 3.49 per cent in 1964 and the period low of 3.37 per cent in 1993 on the assumption that there is no outside income from the investment of depreciation reserve balances. On the assumption that 2 per cent average earnings on assets reflecting the depreciation reserve balances could be earned, the actual earning rate on the straight-line basis nevertheless drops rapidly from 1946 at 5.16 per cent to 4.48 per cent in 1959 and falls as low as 4.33 per cent by 1993.

Even when reserve investments earn 3 per cent, the maximum [14665] earnable without the assumption of additional risks, hazards and uncertainties by the enterprise, the actually earnable rate of return on the straight-line basis, which in 1946 would already be 1.05 per cent below the intended fair rate of return of 6½ per cent, falls further to 4.93 per cent in 1959, and to 4.81 per cent by 1993.

The penalty on the investor is largest under the straight-line method and generally larger as lower rates of earnings on assets reflecting the depreciation reserve balances are assumed available to supplement the inadequate return on rate base investment.

All of these facts are visually presented in the 3 part chart on exhibit page F-2, from which it may be additionally observed that even under the 3 per cent sinking fund method the actually earnable rate of return falls substantially below the intended 6½ per cent when reserve assets earn no return, and that even when earnings on the assets reflecting the reserve balance earn 2 per cent the total return to the investment falls short of reaching the intended 6½ per cent.

Reference to part 3 of the chart on exhibit page F-2 indicated that even when a maximum 3 per cent rate on reserve investments is earned the actually earnable total return under the straight-line basis falls rapidly to 1956 and holds well down to and often below a 5 per cent actually [14666] achievable rate of return. For the ensuing 40 years, it is generally 1½ per cent below the intended fair rate of return.

The tabulation on exhibit page F-3 is similar to that on exhibit page F-1 except that the calculations reflect the results under the compound interest and sinking fund methods at 4¼ per cent instead of 3 per cent. The figures in columns 2, 5 and 8 for the straight-line method are the same as those found in the tabulation on exhibit page F-1 and are reintroduced here for ready comparison purposes with the changed results obtained on the compound interest and sinking fund bases at 4¼ per cent.

The general effect of a change from a 3 per cent to a 4¼ per cent basis for the compound interest and sinking fund methods is two-fold. It makes the results on the sinking fund basis disadvantageous to the investor even when 3 per cent is earnable on the assets reflecting the reserve balance and increases the disadvantage of the investor under the sinking fund method when 2 per cent and no per cent income is derived from reserve investment as compared with the results found under the same assumptions in the tabulation on exhibit page F-1.

This tendency is explained by the fact that a 4¼ per cent sinking fund basis assumes in effect that the enterprise pays 4¼ per cent for the use of consumer advanced [14667] assets reflected by the depreciation reserve balances and if the enterprise is able to earn only 3 per cent, without the assumption of additional risks, hazards and uncertainties, it loses 1¼ per cent on each dollar for which it has the responsibility of safekeeping until a time when it is needed to pay the cost of property at retirement.

On the other hand the results under the 4¼ per cent compound interest basis are less confiscatory of the intended 6½ per cent rate of return than they were on a 3 per cent basis. This follows from the fact that the compound interest method at 4¼ per cent would not accrue a punitively deductible reserve balance as rapidly as one calculated on a 3 per cent basis. The improvement in the investor's position under the 4¼ per cent compound interest basis may be observed by comparing the rate of return actually earnable in 1946 assuming 3 per cent earned on the reserve investment of 5.91 per cent with the rate of 6.04 per cent similarly earnable on a 4¼ per cent compound interest basis, or by comparing the results for 1959 when on a 3 per cent compound interest basis, and assuming 3 per cent earnable on reserve investment, the actual rate of return on the total investment would be 5.45 per cent as compared with 5.61 per cent on a 4¼ per cent compound interest basis.

All of these and other relationships are again graphically set forth in the 3 part chart on exhibit page F-4. Previously [14668] noted trends and relationships are clearly observable but also the above mentioned fact that even when 3 per cent earnings of reserve investments are assumed a 4¼ per cent sinking fund basis fails to earn the intended fair rate of return of 6½ per cent.

The tabulation of exhibit page F-5 is comparable with those presented on exhibit pages F-1 and F-3 except that

the compound interest and sinking fund bases have been made at a 6 per cent rate.

The trends previously observed with respect to the changed relationships which resulted from the substitution of a 4¼ per cent interest rate for a 3 per cent interest rate and the calculations of the actually earnable rates on the compound interest and sinking fund bases are here found to be carried further. Thus the actually earnable rate of return on the sinking fund basis at 6 per cent falls even further below the intended fair rate of return of 6½ per cent under all the circumstances found for similar calculations at 4¼ per cent and 3 per cent. Thus in 1946 the actually earnable rate of return under the sinking fund basis, assuming 3 per cent earnable on the reserve investment, which was 6½ per cent on a 3 per cent sinking fund basis, would fall to 6.34 per cent when a 4¼ per cent sinking fund method was used and falls to 6.21 per cent when a 6 per cent sinking fund method is used.

[14669] For 1964 the actual earning rate, assuming 3 per cent earned on reserve investment, falls to 5.83 per cent under the 6 per cent sinking fund method or .67 per cent below the intended fair rate of return.

The other observed trend also continues with the change from 4¼ per cent to 6 per cent compound interest and sinking fund bases, namely, that the penalty which deduction of the reserve balance accrued on a compound interest basis imposes on the investor decreases even further from that indicated in the tabulation on exhibit page F-3. Thus taking 1959 as an example it is found that the actually earnable rate of return on the 4¼ per cent compound interest basis assuming 3 per cent earned on reserve investment was 5.61 per cent whereas on a 6 per cent compound interest basis it rises to 5.77 per cent which, however, is .73 per cent below the intended fair rate of return of 6½ per cent.

All of these and other relationships are again set forth in the 3rd part of the chart on exhibit page F-6. Com-

parison of these charts with those previously presented on exhibit pages F-2 and F-4 indicates that the penalty which the use of the straight-line method imposes is unchanged by the changed assumptions as to the interest factor in the sinking fund and compound interest bases.

It follows further that the penalty effect of the use of the compound interest method at the higher interest rates [14670] of 4¼ per cent and 6 per cent tends to be reduced and that the penalty factor in a sinking fund calculated at 6 per cent increases progressively as the interest factor employed more substantially exceeds the maximum earning rate which it may be assumed could be obtained by the enterprise without the assumption of additional risks, hazards and uncertainties. In fact it may be observed from the charts on exhibit page F-6 that the decrease in the penalty which results from the use of the compound interest methods at higher rates of interest and the increase in the penalty which would result from the use of the higher rates in connection with the sinking fund method results in an approachment between the results obtained under the sinking fund and compound interest methods.

The extent to which this has developed is indicated by the closeness of the lines portraying the results under the sinking fund and compound interest methods respectively under all three assumptions of no income on reserve investments, 2 per cent earnings on reserve investment and 3 per cent earnings on reserve investments.

[14671] Q. Have you made calculations and prepared tabulations which compare the actually earnable rates of return on the basis of various depreciation reserve accruals and alternative treatment for rate base purposes with the annual rates of return which would be required under the various combinations of circumstances and regulatory treatment of reserve balances so as to actually yield an intended predetermined fair rate of return of 6½ per cent? A. Yes, I have made such calculations and pre-

pared tabulations substantially paralleling the calculations and tabulations presented on exhibit pages F-1, F-3 and F-5. They are offered in tabular form on exhibit pages G-1, G-2, G-3, G-4 and G-5.

The tabulations on exhibit page G-1 compare the annual rates of return actually earnable on the straight-line basis, assuming reserve balance deduction, with the annual rates of return which would be required to yield an intended fair rate of return of 6½ per cent after the impact of such regulatory treatment.

The first tabulation on exhibit page G-1 establishes these relationships for certain selected years at 10-year intervals and for the year 2010. Assuming that 3 per cent can be earned on the reserve investment without the imposition of additional risks, hazards and uncertainties on the enterprise, we find from column 6 for example that in 1946 [14672] the actual earnable return is 5.45 per cent instead of the intended 6½ per cent. In column 7 the gross rates of return which would have to be allowed if the actually earnable rate of return is to be 6½ per cent are set forth.

Thus, for 1946, assuming straight-line depreciation accrual, deduction of reserve balances from the investment, a rate of return of 7.75 per cent would be required so as to actually yield 6½ per cent on the total investment. In subsequent years it will be seen that even higher rates of return would be required to actually net 6½ per cent on the investment.

If less than 3 per cent is earnable on the reserve investment even higher gross rates of return must be envisioned if the result is actually to be a 6½ per cent return on the investment. Thus, in 1946 on the assumption of 2 per cent earnings on the reserve investment, a rate of return of 8.19 per cent would be required to yield 6½ per cent, and if no income were earnable from the reserve investment a gross return necessary to yield 6½ per cent on the investment would be 9.27 per cent. In later years the

gross rates of return would have to be substantially higher as the penalty of larger reserve balances operates to reduce the effective return on the investment further below the intended 6½ per cent fair rate of return.

The second tabulation on exhibit page G-1 compares the [14673] average cumulative rates of return actually earnable on a straight-line basis, assuming reserve balance deduction with the average cumulative rate of return which would be required to yield an intended fair rate of return of 6½ per cent on the investment after the impact of reserve balance deduction.

The periods are from 1946-51 and for periods increasing in five-year steps. The results over substantial periods of time indicate that the gross rate of return necessarily sought to yield an actual 6½ per cent rate of return on the investment is substantially above 6½ per cent for all periods and under all conditions.

Thus for the period 1946-55 a gross rate of return of 8.05 per cent would be required actually to yield 6½ per cent on the investment assuming 3 per cent were earnable on the reserve assets.

If only 2 per cent were earnable on the reserve assets the gross rate of return required to yield 6½ per cent would be 8.64 per cent and if no income were obtainable from the reserve investment a gross return of 10.13 per cent would be required actually to yield a 6½ per cent fair rate of return on the investment.

The average cumulative rates of return required to provide 6½ per cent on the investment are for longer periods generally higher, reaching for the period 1946-1984 as high as 8.40 per cent assuming 3 per cent earned on the investment, [14674] 9.16 per cent assuming 2 per cent were earned on the investment and 11.21 per cent assuming the reserve assets to produce no income.

The tabulation on exhibit page G-2 compares the annual rates of return actually earnable on 3 per cent, 4¼ per cent and 6 per cent compound interest bases, assuming

reserve balance deduction with the annual rates of return which would be required to yield a fair rate of return of 6½ per cent under such regulatory treatment.

The calculations are for selected periods of 10-year intervals and for the year 2010. Assuming, for purposes of illustration, that 3 per cent could be earned on the reserve assets for the year 1946 a gross rate of return of 7.15 per cent would be required to yield 6½ per cent return on the investment.

For subsequent years it will be seen by reference to column 7 that the necessary gross rate of return would be even higher. If a 4¼ per cent compound interest basis were employed the necessary rate of return to yield 6½ per cent for 1946, assuming 3 per cent to be earned on the reserve investment, would fall to 7 per cent. For later years it would be higher. If a 6 per cent compound interest basis were employed and 3 per cent is earnable on the reserve assets a gross rate of return of 6.85 per cent would be adequate to produce the intended rate of return of 6½ per cent on the [14675] total investment. If less than 3 per cent is earnable on reserve assets a gross rate of return necessary to provide an actual return of 6½ per cent increases under all circumstances and is generally higher when a 3 per cent and 4¼ per cent compound interest basis is employed than if a 6 per cent compound interest basis were used.

The tabulations on exhibit page G-3 are made on the same assumptions as those on exhibit page G-2 except they are for cumulative five-year incremental periods rather than for selected years. Again it will readily be seen that, even when it is assumed that 3 per cent can be earned on the reserve asset investment, the rate of return required actually to yield 6½ per cent on the total investment on a 3 per cent compound interest basis would be 7.27 per cent for the period 1946-51.

It would have to be 7.72 per cent for the 100-year period 1946-2010.

As lower earning rates are assumed on reserve assets, the necessary gross rate of return rises as will be observed by reference to columns 3 and 5, but if the interest factor employed in the compound interest basis is increased from 3 to 4¼ per cent and 6 per cent the necessary gross rate of return which would actually yield an intended 6½ per cent fair rate of return on the total investment falls. Thus on the 6 per cent compound interest basis for the period 1946-2010 a gross rate of return of 7.32 per cent would be adequate [14676] to yield 6½ per cent on the investment, as compared with 7.72 per cent and 7.54 per cent on the 3 per cent and 4¼ per cent compound interest bases for the same period of time.

On Exhibit page G-4 tabulations similar to those presented on exhibit pages G-1 and G-2 are presented showing a comparison of annual rates of return actually earnable on the sinking fund basis with the annual rates of return required to yield an intended fair rate of return of 6½ per cent.

It is immediately observable that, if it is assumed that reserve assets investment can earn 3 per cent without the imposition of additional risks, hazards and uncertainties on the investment, the gross rate of return required actually to yield 6½ per cent on the investment is, under a 3 per cent sinking fund procedure, also 6½ per cent.

It will be noted also by reference to column 7 that on a 4¼ per cent sinking fund basis it would take a rate of return of 6.66 per cent to 6.89 per cent for various years actually to produce a fair rate of return of 6½ per cent on the investment.

If earnings of less than 3 per cent on reserve assets are assumed and a sinking fund basis at interest rates exceeding 3 per cent is used a gross rate of return of more than 6½ per cent would be required actually to yield the intended fair rate of return of 6½ per cent. For the year 1965 on a 4¼ per cent sinking fund basis and assuming [14677] 3 per cent earnable on reserve assets a gross 6.84

per cent rate of return would be required to yield an intended fair rate of return of 6½ per cent.

Similarly for the year 1963 on a 6 per cent sinking fund basis, assuming 3 per cent earned on reserve assets, a gross 7.19 per cent rate of return would be required to yield an intended fair rate of return of 6½ per cent.

The tabulations on exhibit page G-5 are similar to those on exhibit page G-4 except that they indicate the average cumulative gross rates of return which would be required to yield an intended fair rate of return of 6½ per cent for selected periods of time 1946-51 and for 5-year increments thereafter.

The sinking fund basis at 3 per cent would actually earn the intended fair rate of return at 6½ per cent and would require no gross rate of return higher than 6½ per cent, assuming that 3 per cent can be earned on the reserve asset investment. If, however, a sinking fund basis at 4¼ per cent were employed and again assuming that 3 per cent can be earned on the reserve assets investment, the gross rate of return required would be higher than 6½ per cent actually to yield a rate of return of 6½ per cent on the total investment.

If a sinking fund basis at 6 per cent were employed even higher gross rates of return would need to be accepted actually [14678] to yield 6½ per cent on the total investment. Thus for the period 1946-1951, 6.86 per cent would be required and for the entire period 7.20 per cent would be required. As previously noted in the analysis of similar tabulations, if earnings on reserve assets investment cannot be assumed to earn 3 per cent even the sinking fund basis at 3 per cent rate would fail to yield an actual return of 6½ per cent and would therefore require a gross rate of return in excess of 6½ per cent, as much for instance as 6.81 per cent for the entire period when 2 per cent earnings on reserve assets are assumed and 7.53 per cent if no earnings from reserve assets are assumed.

The necessary gross rates of return required under 4¼ per cent and 6 per cent sinking fund basis would have to be higher than the 6½ per cent intended rate of return as may be seen by examination of the columns 3 and 5 under the headings "Sinking Fund at 4¼ per cent" and "Sinking Fund at 6 per cent."

Q. What is the purpose of the tabulation on exhibit page G-6? A. The tabulation on exhibit page G-6 brings together for quick and easy comparison cumulative rates of return actually earnable under alternative methods of depreciation reserve accrual and assumed regulatory treatment with the gross rates of return required under each set of conditions necessary [14679] to provide an intended actual 6½ per cent fair rate of return on the investment.

The left-hand column arrays the various methods of depreciation reserve accrual from that method which yields the lowest actual rate of return and therefore requires the highest gross rate of return actually to yield 6½ per cent on the investment to that method which would actually result in the intended fair rate of return of 6½ per cent.

Columns 2, 3, 4, 5, 6, 7 and 8 under the heading "Return on Assets Reflected by Depreciation Reserve Balance" further classify the bases according to the interest factor employed. Column 9 under the general heading "Intended, Actual and Required Rates of Return" sets forth the intended rate of return which is assumed to be 6½ per cent in each instance. Column 10 sets forth the rate actually earnable and Column 11 the gross rate of return required actually to yield the intended 6½ per cent.

It will be seen that the straight-line method, assuming no earnings on reserve balances, is the most punitive in that the rate earnable over the entire remaining period of the 100 year cycle is only 3.77 per cent and that 11.21 per cent gross return would have to be employed to produce an actual intended return of 6½ per cent.

The compound interest method at 3 per cent, assuming no earnings on depreciation reserve assets, is the next most

punitive with 4.58 per cent and would require a gross rate of return of 9.22 per cent actually to produce 6½ per cent rate of return on the investment.

The third most punitive method is the straight-line basis assuming two per cent earnable on reserve assets. This method would allow an actual return of only 4.61 per [14680] cent and would require a gross rate of return of 9.16 per cent if it were to produce an actual return of 6½ per cent on the total investment.

A compound interest basis at 4¼ per cent is in 4th most punitive position. This basis would allow a return of only 4.84 per cent if no earnings on reserve assets were assumed and would require a gross rate of return of 8.73 per cent to produce an actual rate of return of 6½ per cent on the investment.

Among the several methods assuming 3 per cent earnable on reserve assets the straight-line method is most punitive in that it would allow a return of only 5.03 per cent and would require a gross rate of return of 8.40 per cent to produce an actual rate of return of 6½ per cent.

It will be seen that the straight-line basis captures first, third and fifth positions as being most punitive and that even assuming 3 per cent as earnable on reserve assets it is more punitive than the compound interest basis at 6 per cent assuming no earnings on reserve assets, and also more punitive than the compound interest basis at 3 per cent assuming 2 per cent earnings on reserve assets and more punitive than the compound interest basis at 4¼ per cent assuming 2 per cent earnable on reserve assets and always and under all conditions more punitive than any sinking fund basis or any other compound interest basis.

[14681] Q. What in economic fact and effect is the provision for depreciation which is made as a charge to operating expenses? A. It is an installment payment by the consumer on account of the cost of depreciable property which it is expected will be met upon the retirement of such property. Provision for the cost of property upon retirement

by periodic charges to operating expenses by consumers is in the nature of an advance, a deposit, a bond to assure a reasonable prospect of ultimate full payment. It is in the nature of a prepayment or advance because the cost of the property does not have to be met until the time of retirement.

Q. Is this progressive payment on account or advance, ahead of the time when the company requires it, of any value or service to the utility enterprise? A. Yes. Progressive prepayment on account up to some reasonable level improves the credit of the enterprise.

Furthermore, even though a retirement is not necessarily followed by reinvestment in a replacement and the replacement may at times cost more or less than the retired asset, the fact remains that the assets reflecting the depreciation reserve resulting from the prepayment of cost at retirement, serve the purpose of being available as resources to finance the replacement of retired property. This is the practical fact of everyday utility operation and was the purpose most [14682] generally recognized and urged by state regulatory statutes and agencies. The progressive accumulation of assets reserved to pay the cost of property upon retirement thus serves the purpose of keeping in the enterprise assets with which the cost of replacements can in whole or in part be met and thus serves a useful economic purpose not only for the enterprise as such but from the regulatory point of view by substantially assuring the ability of the enterprise to make retirements, renewals and replacements when economically justified so that the public interest in the continuity of the quantity and quality of the service will be protected.

The availability of assets reflecting the anticipation of retirement cost to the utility enterprise can also normally be of some direct advantage to the utility enterprise.

It is obvious that there is a lag between the time the reservation of revenue takes place and the time the cost of a retirement has to be met. How many dollars will be

available how many years in advance depends on the expected life of the property, the accuracy with which the date of retirement can be guessed and the basis on which the prepayment is accrued, but a greater or smaller number of dollars will almost always be unavoidably waiting around for their turn to be reused and under most circumstances some temporary use of such assets can advantageously be made.

The progressive accrual of partial payments on the cost [14683] of assets assumed to be subject to eventual retirement also serves the purpose of spreading the cost which matures at retirement over all the consumers served during the period of useful life.

This useful consequence is not very important in fact as far as smaller units of shorter lives are concerned since these by their frequency and distribution tend naturally to spread themselves over time. It is also admitted that this function is not particularly important after a composite property has aged to the state of equilibrium when annual accruals and annual retirements tend to balance if not yearly then at least over relatively short terms of years.

The cost-spreading function of an accrual of advance payments against the cost at retirement is therefore primarily limited to the period in the life of an enterprise during which it is outgrowing an abnormal and temporary degree of newness.

Parodoxically however, it is this very accrual of the difference between the cost of newness and the most economical degree of newness found to obtain after a composite property reaches maturity equilibrium, which proves most functionless and unnecessary since it will under the assumption of a continuing enterprise never be called on to meet the cost of retirements.

Provision of reserves for this well understood phenomena of "theoretical accrued depreciation" is thus amortization of [14684] the investment and not an advance necessary to meet cost at retirement. Since the amortiza-

tion of the cost of newness in excess of the most economical level of composite newness serves little practical purpose, when carried beyond the point of a reserve of such proportions as might improve the credit of the enterprise, its amortization should if at all be pursued at a most reasonable and temperate rate.

The rapid and arbitrary extinguishment of the "cost of newness" beyond the level which results in enterprise credit improvement, serves no useful economic purpose and constitutes in fact under some regulatory treatment but a compulsory displacement of the investor by the customer, a compulsory substitution of customer advances for the funds provided by the investors.

Whether the reserves accrued to meet that part of the cost of 100 per cent newness which will never be used to meet cost upon retirement serve any other economic purpose for the enterprise depends on how they can be employed, how much they cost the enterprise, how much of a penalty is under regulation attached to their collection, retention or employment.

Q. In what way does the utility enterprise pay for having collected, retained and/or employed the consumer advances against the time of retirement? A. Both the manner in which the enterprise pays and how much it pays depends on the regulatory formula employed. There are several obvious ways and the amount of the payment can [14685] by various devices be adjusted to work out fairly and economically for investor and consumer.

Under one method the enterprise can charge itself an interest deduction from income and credit that amount to the depreciation reserve. This is the simplest and easiest way by which both consumer and investor equities can be recognized, reconciled and administered. This method does not require attempted prophecy as to economic life of the property with a precision beyond human ability to forecast, neither does it require the pretense of identity between reserve balance and depreciation of the property in fact.

The amount of the accrual can be varied without affectation of capacity for prophetic precision and the rate which the enterprise pays can be changed as circumstances dictate. By such a simple and unaffected method the consumer is automatically credited in the proportion to which his payments against cost at retirement prove to be advances.

With management naturally on guard not to be caught with too little and commissions in position to prevent the accrual of too much too soon the investor and consumer are protected against excess in either direction and each paid for the economic functions which they perform at a price fairly representative of what their function is worth.

The sinking fund method is also available and operates equitably when an interest rate is used which on the one [14686] hand operates to accrue an adequately protective reserve and on the other does not employ an interest factor in excess of the rate of interest which the enterprise can earn without assuming additional risks, hazards and uncertainties for which it is not otherwise compensated.

Q. How does the enterprise pay for the consumer advances under the straight-line method? A. The investor pays directly by never receiving or being allowed to receive a return on so much of his investment in rate base property as is equal to the amount of the reserve balance.

The deduction of reserve balances from the nominal dollar investment amounts to the same thing as charging the enterprise the full rate of return for such use as it may be able to make of the consumer's advance deposits.

Q. Is the consumer economically entitled to compensation for his advance payment? A. Yes, the principles of economics clearly establish that assets and the means of acquiring assets have a time value because human beings have a preference for the present over the future, for a present gratification over a future gratification.

Depreciation reserve balances reflect the extent to which consumers have under regulation prepaid. They are entitled in equity and by all the principles of economic

science to a fair price for the economic sacrifice they make and the [14687] service their sacrifice renders.

Q. What is the economic function which the consumer performs by advancing payment for the cost of assets at the time of retirement and for which the consumer is entitled to compensation? A. He is entitled to compensation for the time or interest value of his advance and in my opinion something more than pure interest or time preference payment, since he does assume a small measure of risk. The consumer's advance is often for long periods of time and it seems desirable to place some urgency or pressure on utility management to make some effective use of what might otherwise become sterile or unearning assets. A liberal loan rate of interest would accomplish this purpose.

Q. What rate of interest would in your opinion be fair and economical as a consumer credit in the case of the Pennsylvania Water & Power Company under present conditions? A. I am of the opinion that 3 per cent would meet all the requirements of equity and economy. It is more than pure interest, it affords a measure of risk compensation for such incidental risk as the consumer may be taking and is a rate which the utility enterprise will not find it easy to earn without the assumption of additional risks, hazards and uncertainties, yet it is not so high as obviously and certainly to prevent the earning of the intended rate of return on the [14688] investment.

Q. Why is the consumer not entitled to a credit, in effect equal to the intended rate of return for his advance payments on account of the cost of property at retirement as would result from the deduction of reserve balances for rate base purposes? A. Because of the sacrifice which the consumer makes does not merit such compensation.

The over-all intended fair rate of return must recognize and reward various economic functions or services. Among them are the reward for foregoing natural time preference, i.e. pure interest, a risk premium to compensate

the assumption of calculated hazards, compensation for the assumption of uncertainties—the incalculable hazards and for the assumption of otherwise uncompensated functions of management on the part of the investors.

Effective regulation would also hold out the prospect of additional return to induce and reward superior accomplishment.

Obviously, the consumer, by merely advancing a payment which he will eventually have to make anyhow does not perform these functions, he performs only the prepayment function and a minor amount of risk-taking.

[14689] A rate of interest equal to a liberal loan rate therefore compensates the consumer for what he does and sacrifices.

It does not make economic sense, or even common sense, to propose that the consumer be credited with compensation for functions which he does not perform and that the investor be denied compensation for functions which he does and must perform. To do so is disruptive and destructive of those fine relations of inducement and prospective reward which are needed to make a system of economic freedom work.

The consumer takes neither the risk of loss of principal or loss of income from the employment of assets generated by his prepayment. He assumes no responsibility for their management and when he has once paid his advance on the cost of property to be retired in the future he has met his entire obligation. When losses of income or principal on reserve assets take place management cannot in behalf of the investors ask the consumers for another contribution. It is the investor who takes the responsibility for the safekeeping of consumers' advances, takes the risks of their loss or failure to earn, for this he is entitled to compensation even as the consumer is paid for that function which he does perform by advancing payment.

Q. What are the economic factors that would limit and determine the fair rate of compensation for the consumers advance of the cost of assets at retirement? [14690] A. The fair price of such an economic sacrifice is to be determined by reference to the same principles which govern all price determination.

Merely because the consumer can be compelled to make such advances by law should be no basis for dealing unfairly with him and by the same token merely because the utility enterprise can be compelled to accept such advance payments should be no basis for dealing unfairly with them.

Although both parties to the "advance of the cost of assets upon retirement" may act under compulsion it is nevertheless possible to impute a fair price to the function performed and the benefit received. The fair price lies between two measures, what such advanced funds are worth to the utility enterprise and what the money advanced is worth to the consumers.

Certainly it is worth a long term pure interest rate to the consumer, as much as he could earn in alternative investments at no greater risk and hazard, thus at least a rate equal to what he could get on long term government bonds or high grade corporate securities.

On the other side funds advanced by consumers are worth no more than the price at which such funds could be obtained elsewhere on equally attractive terms. Whether an enterprise would want any such funds at a particular price would depend on whether it had a use for them at all or could profitably [14691] use them at the price. Certainly the maximum value and fair price for customer advances would not exceed (1) the price at which the enterprise could get such funds and (2) what return it could earn on them without the assumption of additional risks, hazards and uncertainties.

Between these limits the fair price of the consumer's advance will be found. It is obvious that whatever the exact rate is or should be, it is less, and substantially less,

than the over-all intended fair rate of return to the enterprise.

The governing economic principle is that those who take economic risk must be allowed to think they can obtain the reward for risk-taking. Any attempt to operate a free economic system in the reverse will end in drying up the willingness and disposition to assume risks.

Q. In what way and under what circumstances does the acceptance of the consumer advances by utility enterprise impose additional risks, hazards and uncertainties on the investment? A. The acceptance of the consumer advance against the day when the cost of assets has to be met in retirements imposes additional risks and responsibilities from the time the funds are received until the enterprise comes into full ownership and control upon the occasion of a retirement of assets.

[14692] The acceptance of advances even if only as liquid funds for deposit in a bank imposes such hazards. In case the bank fails the loss is not a loss to the consumers who advanced the funds but of the investors whose management accepted their custodianship. The same "advance" if lost cannot be collected again from the consumers.

In terms of the hazard to earnings the enterprise takes the chances of not being able to employ the funds received either at once, advantageously or possibly at all. There are unavoidable lags in placing the funds in full and effective earning position.

Assuming that the consumer advanced funds are to be invested in securities the alternative is to invest under conditions which impose no substantial additional risk on the enterprise such as high grade bonds yielding 2.6-3.0 per cent or to invest in securities of higher yield and thus impose a greater risk on the investors.

If the investment is made in securities which did not increase the risk to the enterprise as a whole, the return will be less than the fair rate of return and the rate of return for the utility enterprise as a whole reduced. If

the investment is made in more hazardous securities the return over and above a relatively risk free rate would be earned by those who take the risk, the over-all fair rate of return on the investment might be earned or more nearly [14693] earned but only by the assumption of additional risk and uncertainty for which no compensation would be received by those who took the risk.

In the case of an expanding utility enterprise it might be assumed that consumer advances made to meet the ultimate cost at retirement might be temporarily employed in additions to property and plant. Aside from (1) the impracticability of immediate and full utilization of consumer advances for this purpose at all times and (2) the fact that sooner or later more or less of the funds so employed will be needed to serve the purpose for which they were allegedly accrued and (3) that investment in long-lived plant does not make them readily or certainly available to meet the cost of property retired at retirement, such expansion by the use of consumer advances imposes additional risks, hazards and uncertainties on the enterprise which are not voluntarily assumed except in anticipation of compensatory return.

When the utility enterprise assumes the responsibility for the investment of the consumer's advances in additional property the hazard base is increased for the investor's investment.

There is a larger property exposure to hazard. If the volume of business is increased proportionately there is greater exposure to fluctuation and at a greater leverage factor. When for rate base purposes the reserve balance (the [14694] consumers' net advance) is deducted the plant built out of such advances is in effect totally unearning and thus results in the adverse economic phenomena for the enterprise of the "larger wash and relatively smaller hangout." The consumer by the device of full reserve deduction becomes a first priority claimant having a priority even over operating expenses and bondholder interest re-

quirements. The consumer in effect demands that the return on his "advance" be paid first by the method of not allowing it to become revenue at all. His claim becomes a checkoff, a discounted bill.

Rates based on investment less depreciation reserve take the consumer's return out in the form of lower rates. The consumer's return is not even exposed to the hazard of what can happen to revenues. Any scheme by which a special group of consumer "investors" can place themselves in priority and senior position to all other investors, not to mention employees and suppliers of materials, in fact enables them to take their return out before it is earned or even received as revenue and then claim a rate of return equal to that earned "across the board" by ordinary investors cannot but increase the proportion of the risk borne by the ordinary investor. A larger amount of property and a larger volume of service involve a larger measure of risk taking and the consumer creditor does not take this added risk and uncertainty.

[14695] The paradoxical character of the whole idea that consumer advances are entitled to special priority and position and a rate of return equal to that obtained by those investors who assume the risks and hazards of the enterprise becomes more apparent if the parties at interest are taken as represented by two groups of investors, Group A which has $10,000,000 invested in Utility A and Group B which has $5,000,000 invested in Utility B.

Group B proposes a merger under terms such as these: The new AB company will assign revenues receivable in an amount equal to 6½ per cent on the $5 million investment of Group B investors.

The Group A investors get their return of 6½ per cent after operating expenses and taxes have been paid. After the addition of the property of Group B the total property exposed to risk will be 50 per cent larger, the volume of business, sales, customers will be 50 per cent larger. Then a ten per cent drop in business will be a 15

per cent reduction for the Group A investors, the ratio of expenses to "unassigned" revenue will be higher, the "above-the-line" leverage greater, in fact the entire investment of Group A exposed in every way to greater hazards and for no greater return.

Obviously Group A investors in their right minds will never voluntarily enter such an engagement but that is [14696] substantially what is demanded in behalf of utility consumers under proposals to deduct the total reserve balances from the investment for rate base purposes.

Q. Can a utility enterprise which has no opportunity or occasion for plant expansion solve the problem of large consumer advances without prejudice to its investors by disinvestment? A. I do not believe it can without prejudice to its investors. Several forms of disinvestment are conceivable even if not practical, and possibly not legal, but all of them in practical effect constitute a substitution of consumer capital for investor capital and as long or in so far as this would involve paying more for consumer capital than for presently employed capital it would prejudice the investor's position.

I understand that depreciation reserve assets may not be paid out as dividends and obviously if they were they would have to be recalled to some extent some time when needed to serve the purpose for which they were collected. Without reference to its legality disinvestment would under most circumstances be in large part impractical.

Equally important is the fact that the remainder of the investment would have assumed the responsibility for providing substitute funds when needed and such responsibility is not voluntarily assumed without prospect of compensation for [14697] the extra risk and hazard.

In any case disinvestment would counteract and destroy the intended and desired effect of adequate depreciation reservation and retention of such assets in the enterprise so as to enable it to meet its responsibilities certainly and economically in the retirement and replacement

of property, and substitute consumer advances for capital which was willing and able to bear its share of the enterprise risk at no more than a fair return for the service it was willing and able to give.

Q. Does the accrual of a depreciation reserve balance constitute a return of the investment made by investors to the investors? A. No. Reservations of revenue to meet the cost of enterprise-owned assets at the time of retirement do not constitute a return of the investment made to the investors or to anyone else.

Q. Why? A. For several reasons. First, the reserved revenue is not returned to the investors. The investors are those who own the securities of the enterprise, the bondholders and stockholders, and in the most important final sense, the stockholders. Merely entrusting an advance or prepaying on account of the cost at retirement of assets employed by the enterprise to the enterprise is not a return of the investment [14698] or of anything else to the investors nor is the enterprise in position to make such disposition of revenue received for restricted and special purposes.

Secondly, in no real and economically meaningful sense does the reservation of revenue in the name of "depreciation reservation" return the investment to the enterprise. The funds or other assets reflecting reservation of revenue against the day when the retirement takes place are collected and retained for restricted purposes. The enterprise is not free to dispose of such assets; it has a special and restricted responsibility with respect to so much of its total assets as are reflected by the depreciation reserve balance at any time.

In effect, the enterprise does not come into a full and unencumbered ownership of such assets until its rights in them have been matured by a retirement. At such time, having come into full and complete ownership, the enterprise has the right to draw down payment for assets retired at cost. Whether formally and specially tagged or

not, assets to the amount of the depreciation reserve balance are encumbered by a consumer interest, restrictions on their disposition and the practical limitations on their employment which make their position less than identical with unencumbered property.

The practical effect of revenue reservation against the day when assets are retired at cost is obviously not a return [14699] of the investment to the investors. Moreover, it is clearly not even a return of the investment to the enterprise without strings and restrictions attached so important in their effect as to make the relationship of enterprise management to reserve assets realistically describable as a trusteeship of such assets until fully earned.

Q. Is the employment of assets, generated by depreciation reserve accrual, for the purpose of debt retirement a practical, fair and economical way of reconciling the economic interests created and involved? A. No. The use of assets generated by depreciation reserve accrual for debt retirement is a limited expedient and not an effective way to achieve economic balance except under certain limited circumstances.

Q. Why? A. In the first place, the permanent alienation of assets by debt retirement is not the purpose for which such assets were accumulated. In so far as the assets reflected by depreciation reserve balances were accumulated and are or still will be needed for retirement and replacement purposes, they can at best be only temporarily employed for debt reduction. The use of reserve generated assets for debt retirement is therefore only one among several possible temporary uses of such assets by which some income or savings can be obtained by the enterprise to reduce the cost [14700] to itself of asset retirement cost anticipation.

The effect and consequences differ little from that of any other comparable use of the assets generated by the prepayment in part of the cost of assets at retirement. A utility burdened with such prepayments could invest in

the 3 per cent bonds of some other enterprise, could invest in and keep alive some of its own 3 per cent bonds or, conceivably, so far as the law might permit, retire its 3 per cent debt.

The alternative effect would be somewhat different depending upon individual circumstances. Debt retirement might be somewhat more expensive on account of the terms and conditions under which bonds could be retired, the investment in the bonds of other enterprises could be diversified and thus, without unusually large holdings of any particular security, there might be available a better resale market for such securities after the assets invested in them were required to be made available at retirement for the purpose for which their accrual was required or permitted.

The important distinction under the assumptions made is that the burden and responsibility of providing the funds with which to make replacements which is clearly the burden and responsibility of the equity investor and his management may be much greater if the company debt is retired to save the 3 per cent interest than if an investment in a [14701] diversified group of 3 per cent marketable bonds is made. Whether new financing can be accomplished when and as needed at what cost and how economically the funds could be provided in the volume needed and when needed are financial hazards for the equity investment.

However, even more important is the fact that any such employment of assets generated by depreciation reservation would yield less than what the "trusteeship" by the enterprise for such assets would cost the investor if the reserve balance is "deducted" from the investment for rate base purposes.

Under these circumstances, the equity investor would be engaging in a negative "trade on the equity" paying on the one hand the fair rate of return for the use of such assets and on the other, receiving a bond rate of interest from their employment.

The economic effect and consequence of the use of assets generated by depreciation reserve accrual for enterprise debt retirement is to substitute consumer advanced capital at a price equal to the fair rate of return, assuming 6½ per cent, for investor-advanced debt capital at 3 per cent. Determination of the adverse effect on the earnings of the equity investment requires only a simple arithmetic calculation for extensive debt reduction would obviously destroy the quality of the capital structure and eliminate the advantage which existed in the use of debt capital and which [14702] would eventually be reflected in the requirement of a higher rate of return.

If, however, instead of deducting the balance for rate base purposes the administratively simply device of a liberal risk-free rate of interest credit to the reserve balance is used or the sinking fund method at a comparable risk-free rate of interest is employed, the alternatives mentioned above become more feasible in at least the last respect. Investment of reserve generated assets at 3 per cent in the bonds of other enterprises, its own bonds or, to some extent, even debt retirement would operate to keep a fair balance between the cost which the enterprise experiences by accepting prepayment of the cost of assets at retirement and the extent to which it can by outside or additional income reimburse itself without the assumption of additional risks, hazards and uncertainties. The difference in effect, assuming legality, would arise out of the difference in the amount of risk and responsibility the equity would take under the alternatives with respect to being able to get funds when it needed them in the amounts needed and at equally favorable costs.

* * *

[14705] CROSS-EXAMINATION.

By MR. GOLDBERG:

Q. Dr. Dorau, in the Safe Harbor case you appeared as a witness in behalf of the Respondent in that case, Safe

Harbor Water Power Corporation. Isn't that right? A. Yes.

Q. In that case you set forth and testified to your conclusions and principles about certain matters of general depreciation principles and policy. Isn't that right? A. I think that is a fair description.

Q. And the conclusions and opinions that you expressed in that case are the same ones you have expressed in your direct testimony in this case. Isn't that right? A. I don't know of any portion of the direct testimony prepared for this case that is in any way in conflict with what I may have offered in the other case.

Q. Of course, you understand that my question went only to the principles that you apply to what you call the facts of the case. You understood that? A. Oh, I assume you were not concerned about the identity of mathematics and quantities.

Q. That is right. [14706] A. I was trying to make it clear that I was not in a position to pass judgment on that alleged degree of similarity.

Q. Yes. A. I was merely wanting to go on record that so far as I know there is no conflict in principle or position in any part that may deal with the same questions.

Q. As a matter of fact, in the Safe Harbor case you testified that the principles expressed by you were applicable to any set of facts or circumstances. Isn't that so? A. No. Any set of facts that had the same area of origin and application.

Q. What do you mean by the same origin and application? A. I am sure they don't have the same application in the case of the General Electric Company or a chemical company.

Q. How about electric utilities? A. I think substantially in the case of electric utilities, except possibly those instances that are under special sliding scale franchises, or something of that character.

Q. Are Safe Harbor or Penn Water in that category, within the exception? A. No, I don't believe I would except them.

Q. I think the premises upon which you founded your testimony in the Safe Harbor case are the same premises upon which you base your testimony in this case. Isn't that so? [14707] A. Insofar as that covers economic principles, yes.

Q. Yes, economic principles of depreciation. A. Yes, sir.

* * *

[14718] DIRECT EXAMINATION (Continued).

By MR. HULL:

Q. First, Doctor, I wish to direct your attention to Mr. Dunn's testimony at transcript 13,427. I will read to you the relevant portions.

MR. GOLDBERG: May I just get that?

MR. HULL: Yes.

MR. GOLDBERG: I have them now.

MR. HULL: I propose to read to the witness the question beginning at the top of transcript page 13,427, lines 1 to 4, and the answer of the witness at lines 11 to 15, the following question appearing at lines 16 and 17, and the answer of the witness beginning at line 22 and continuing to the end of the page.

By MR. HULL:

Q. Dr. Dorau, the testimony I have referred to is as follows:

"Q. Now, when an electric utility company invests the assets reflected by the depreciation reserve balance, who assumes the hazard of the loss of that capital or failure to earn the return of that capital?"

I may say, I think there is a typographical error there. That should have read "earn a return on that capital."

The answer of the witness was:

[14719] "I cannot answer the question in the terms it is put because the assets represented by the depreciation reserve cannot be identified, so I cannot tell what risks, if any, are involved in connection with such assets.

"Q. Even though they cannot be identified they are there, are they not?

"A. Not necessarily there. To the extent they are there and the utility company receives a fair rate of return on such assets, unidentified assets, there is no particular risk involved other than the risks included in the rate of return."

Now, Doctor, my question to you is this:

Do you agree that when an electric utility company invests the assets reflected by the depreciation reserve balance, that "there is no particular risk involved other than the risks included in the rate of return"?

MR. GOLDBERG: I object to that, Mr. Examiner, because the reference has not been to all of the testimony and all of the testimony is needed. The question is based only upon a fragmentary portion of all that testimony.

TRIAL EXAMINER: Objection is overruled.

By MR. HULL:

Q. Do you have the question in mind? A. I lost the question. May I have it, please?

[14720] (Question read.)

THE WITNESS: No. It seems to me the conclusion is in error in that the investor does assume the additional risks incident to the additional investment or employment of such reserve revenues.

By MR. HULL:

Q. * * * Now, Doctor, my question to you is this: In your opinion does the fact that an electric utility company has not segregated and ear-marked specific assets as invest-

ments of [14721] cash generated through charges for depreciation, or does the fact that the specific assets cannot be identified as having originated from such charges, do either of those facts mean that the company has no assets which are reflected by the balance in the depreciation reserve?

• • •

[14722] THE WITNESS: No.

• • •

Q. At the portion of the testimony to which I last directed your attention, Mr. Dunn referred to the reserve for depreciation as a contra account to the plant account, and at a number of other places in his testimony, particularly at pages 13438 to 13440, he referred to the fact that in his opinion the reserve for depreciation was merely an account contra to plant account.

In your opinion is the reserve for depreciation simply and merely a contra account to plant account?

• • • •

[14723] THE WITNESS: No, it is not my understanding that it is primarily that or simply that. The balance in the depreciation——

• • •

[14724] —account measures the reservation of revenues accrued on account of the ultimate retirement of property at cost which has not been required to meet such retirements of cost.

By MR. HULL:

Q. Doctor, what is the purpose of the reservation of assets that are incident to the accumulation of credits to reserve?

• • •

THE WITNESS: The purpose for reserving revenues is to provide assets sufficient to meet the cost at retirement. The purpose of the depreciation reserve is to record the balance of such reservations not previously required for retirements.

By Mr. Hull:

[14725] Q. Now, Dr. Dorau, at transcript 12,809, lines 15 to 20, Mr. Dunn was asked the following question:

> "Do you agree that when the depreciation reserve balance is deducted from the original investment and a depreciated rate base is used in fixing rates the utility company must assume the risk of investing the assets reflected by the depreciation reserve in some manner in order to earn upon them the utility rate of return?"

The answer to that question is found at transcript 12,810, lines 4 to 6, as follows:

> "There are several answers to the question. They certainly don't take any additional risks without receiving a rate of return greater than the commission allowed."

Then at lines 18 to 19, after the witness had been asked concerning the investment of such assets, he was asked this question:

> "Suppose it is lost, who has to replace it?
> "A. No one has to replace it."

My question to you is this: Do you agree with Mr. Dunn that if the assets reflected by the depreciation reserve balance are invested by the utility and are lost that no one has to replace them?

* * *

[14726] The Witness: No, I do not agree.

By Mr. Hull:

[14727] Q. At transcript page 12,767, beginning at line 14, the following appears, Mr. Dunn being on cross-examination:

> "Q. When an electric utility company finds it necessary to use capital for the replacement of property what sources of capital are available to it?

"A. Its own funds are available, money borrowed by means of notes, bonds, the sale of additional capital stock are the principal sources of funds.

"Q. It is true, is it not, that the sole and undivided responsibility of an electric company to provide such necessary capital is the responsibility of the stockholders?"

That last question was not answered by the witness. I would like to have your opinion on that question.

MR. GOLDBERG: Mr. Examiner, I object to that, and particularly the statement that the last question was not answered by the witness because I had objected to that and the Examiner sustained my objection as appears on line 24 of transcript 12,768. How much of this distortion is to be permitted, Mr. Examiner?

• • •

[14728] THE WITNESS: Yes.

• • •

Q. Dr. Dorau, in your opinion are the assets reflected by the reserve for depreciation of an electric utility company assets which are devoted to public service? A. Yes.

Q. Will you give your reasons? A. Whether actually invested in property or [14729] not, whether invested in other opportunities for earning a return or not, the assets reflecting a depreciation reserve serve in the sense that they are retained in the enterprise available for reinvestment in property upon retirement of existing property.

Q. Can you give me any analogy of other temporarily idle assets that a utility company has on which it is allowed to earn a utility rate of return?

MR. GOLDBERG: May I have that question?

TRIAL EXAMINER: Yes.

(Question read.)

THE WITNESS: I think the principle that capital necessarily and unavoidably, partly or wholly unearning because of the public obligations of the utility enterprise for continuing service, are recognized, for example, in the recognition given in interest during construction, as an element of cost. That has come to be recognized on the basis that capital is unavoidably and necessarily unearning in whole or in part even before any service may be rendered to the consumers.

Similarly, working capital, for example, may not continuously and fully be employed. Nevertheless, it has to stand by and be available for the functions which it has to perform and has come to be generally recognized as an appropriate base for earnings.

[14730] Q. Do you find any analogy in utility property held for future use? A. Well, similarly property that is not actively employed in rendering service now but is construed as reasonably necessary for future requirements or for possible present requirements which actually do not materialize has come to be recognized in appropriate amounts as deserving of recognition as a basis for a return.

Q. At transcript page 12,722, lines 11 to 15, the following question was asked of Mr. Dunn on cross-examination:

> "Now, Mr. Dunn, the effect of the deduction of the reserve balance from original cost in determining a rate base is to reduce the amounts which the consumers pay in rates by the amount of the rate of return multiplied by the depreciation reserve balance, is it not?"

In attempting to secure an answer to this question, a long series of questions was asked thereafter extending over to transcript page 12,732, and an illustration was put to him of a company beginning business with a plant account of $100,000 and capital stock of $100,000.

The estimated life of the plant was ten years, and the amount of reserve for depreciation at the end of the first year was $10,000.

The last question of this series at transcript 12,732, lines 15 to 23, is as follows:

[14731] "Q. Mr. Dunn, assuming that the $10,000 which is charged as depreciation expense in the first year and paid for by the consumers is retained by the company in cash, does not the deduction of the amount of the depreciation reserve balance of $10,000 from the original investment rate base of $100,000 and the charging of rates for the succeeding year upon the rate base of $90,000 have the effect of allowing the consumers in the second year the rate of return multiplied by the assets affected by the depreciation reserve balance?"

The answer was:

"No.

"Q. Why would it not have that effect, Mr. Dunn?

"A. Because the only reduction which the rate payers are entitled to and which they receive is the reduction due to the deduction of proper balance in the depreciation reserve. Any assumed rate of return applied to a cash figure in the company is not equivalent to that determination."

Do you agree with Mr. Dunn's answer?

* * *

[14732] THE WITNESS: No, I do not agree because it seems to me to be perfectly obvious that the effect of deducting depreciation reserve balances from the property account does in effect credit the consumers with a rate equal to the earning rate.

By MR. HULL:

Q. Do you know of any regulatory commissions which have prescribed or approved the sinking-fund method of accounting for depreciation? A. Yes.

Q. Do you know of any courts that have approved that method? A. I have them of record. I don't have them in mind. Yes, there are such approvals.

Q. Does the sinking-fund method of accounting for depreciation as approved by the regulatory commissions and courts to which you refer provide for the charging of the annuity component of the sinking fund only to depreciation expense and provide for the interest component as an income deduction?

MR. GOLDBERG: I object to that as utterly immaterial and irrelevant, Mr. Examiner.

TRIAL EXAMINER: The witness may answer.

[14733] THE WITNESS: It is my understanding, and I recall no exceptions to it in regulatory procedure that I have had the opportunity to review to the method which involves charging the annuity above the line to operating expenses and the interest credit below the line as an income deduction.

By MR. HULL:

Q. When an interest method of accounting for depreciation is used, and both the annuity and the interest components are charges to depreciation expense above the line, what designation is given to that method? A. It has come to be known as the compound-interest method.

Q. At transcript page 12,519, lines 17 to 19, Mr. Dunn testified as follows:

"The use of the sinking-fund method with an interest rate lower than the rate of return would be an application of the sinking-fund method in an improper manner."

Do you agree with that? A. No.

Q. Among the cases decided by Commissions and Courts to which we referred a moment ago, do you know of cases in which the sinking fund method was prescribed or approved with an interest rate lower than the rate of return.

MR. GOLDBERG: I object. It is immaterial and irrelevant, Mr. Examiner.

[14734] TRIAL EXAMINER: The witness may answer.

THE WITNESS: Yes, I know of such instances.

By MR. HULL:

Q. Can you tell us why the rate of interest is and should be less than the rate of return? A. Well, in summary because the enterprise finds it difficult, if not impossible, to a greater or lesser extent, to give full and effective earning power to such reservations of revenue and, secondly, insofar as it employs such assets resulting from the reservation of revenue and assumes risks greater than what may be construed a fair and reasonable risk free loan rate, it takes on additional hazards, risks, and uncertainties for which it, the enterprise, is entitled to compensation.

Q. Under any method of depreciation reservation, in what manner should the balance in the reserve for depreciation be treated in the determination of a rate base?

MR. GOLDBERG: May I have that question, please?

(Question read.)

MR. GOLDBERG: I object to that, Mr. Examiner. I know of no foundation for that question.

TRIAL EXAMINER: Objection is overruled.

THE WITNESS: May I have the question again, please?

(Question read.)

THE WITNESS: The reserve balance in my opinion should [14735] always be treated as reflecting the reservation of such an amount of revenue of necessity retained in the enterprise not deducted for purposes of rate base determination but used as a basis for an appropriate interest credit to the consumers' account on account of such risk-free employment of funds as the enterprise may be able to make or may fairly be presumed to be able to make.

By Mr. Hull:

Q. In the operation of an electric utility enterprise, upon whom does the obligation rest for securing capital necessary for replacements of property?

• • •

The Witness: Ultimately upon the equity investment; practically upon the management which represents that equity investment.

• • •

[14736] Q. Doctor, assume that the assets reflected by the depreciation reserve balance had been used to retire three per cent bonds, and that subsequent retirements and replacements of property required the company to reobtain capital which can only be obtained at the rate of five per cent or higher. Who bears the burden of the additional cost, the equity holder or the consumer?

Mr. Goldberg: May I have that question, please?

Trial Examiner: Yes.

(Question read.)

[14737] The Witness: The equity holder obviously immediately bears the burden of the adverse change in the cost of money. If I may explain my answer further, I do understand the operation of the regulatory process and that it is a fair presumption that under that regulatory process when and if subsequent rate determinations take place that to some extent, at least, the five per cent cost of money would then be recognized as a factor affecting the fair rate of return.

But in between times, obviously, the equity investor bears the economic disadvantage of having traded five per cent money for three per cent money.

Mr. Hull: May I have the answer, please?

(Answer read.)

By Mr. Hull:

Q. Is that right? A. Having been traded out of five per cent money into three per cent money.

* * *

[14738] Q. What risk does the consumer of Pennsylvania Water & Power Company take with respect to the assets reflected by the depreciation reserve? A. I don't see that they take any significant additional risks. They have made an advance against the time when the cost of retirement needs to be met. They certainly don't under our ordinary conception of the regulatory process stand liable to pay again in case the enterprise loses these assets collected from them, and in contrast to that the equity investor has to assume all the responsibilities of care and management and safekeeping of these assets advanced and reflected by depreciation reserve balances.

* * *

[14743] Q. Dr. Dorau, since as you testified this morning the consumers assume no risks in connection with the assets reflected by the depreciation reserve balance, is it in your opinion equitable for the consumers to receive a credit on those assets equal to the rate of return? A. It is not.

Q. Is the allowance of so large a credit in your opinion justified by sound economic principles? A. It is not.

Q. Upon sound economic principles to how much return upon those assets, or how much credit on those assets, are the consumers entitled? A. From an economic point of view they are entitled to full compensation for the time value of the funds advanced plus, in my opinion, a modest allowance over and above that so as to equal a liberal loan rate of interest, in part to act as a stimulus to the management to make the [14744] best possible use of those assets in the meantime.

Q. Doctor, have the opinions which you have expressed today and the principles you embodied in your rebuttal tes-

timony been recognized by the regulatory commissions of any of the states?

• • •

[14745] THE WITNESS: Yes, they have been frequently recognized.

By MR. HULL:

Q. Can you tell us what states? A. Well, some years ago I provided a substantial document which recorded a large number of instances of that recognition and the employment of the sinking fund method. The states of Wisconsin——

TRIAL EXAMINER: This was some years ago, you say?

MR. HULL: Yes, I made such a careful tabulation and calculation of those.

TRIAL EXAMINER: How long ago?

THE WITNESS: By Mr. Goldberg's request.

MR. GOLDBERG: By me?

THE WITNESS: Yes, at your request.

MR. GOLDBERG: Do I have a copy?

THE WITNESS: You were provided with a copy.

TRIAL EXAMINER: How long ago was this?

THE WITNESS: Safe Harbor rate case.

MR. GOLDBERG: Before the decision, was it not?

[14746] THE WITNESS: Quite so.

MR. GOLDBERG: If it was ever provided.

TRIAL EXAMINER: Just a minute.

How long ago was that, Mr. Witness?

THE WITNESS: I suspect that is a matter of two years, at least; two and a half years maybe.

MR. GOLDBERG: Direct testimony of Dr. Dorau was December of 1944.

THE WITNESS: Then probably in February. I think it was along in February of 1945.

MR. GOLDBERG: First cross-examination was February 27th, 1945, Mr. Examiner.

TRIAL EXAMINER: This is more or less a matter of argument. You determined this from the reported decisions of the various State Commissions?

THE WITNESS: That is right.

By MR. HULL:

Q. Are you familiar, Doctor, with Order No. 38-A of the Missouri Public Service Commission?

MR. GOLDBERG: I object, Mr. Examiner. It is immaterial and irrelevant.

TRIAL EXAMINER: He may answer.

THE WITNESS: Yes, generally familiar with it.

By MR. HULL:

Q. Does that follow the principles which you have [14747] enunciated in your rebuttal testimony?

MR. GOLDBERG: Same objection, Mr. Examiner.

TRIAL EXAMINER: You may answer.

THE WITNESS: Yes, so far as I understand Order 38-A, it is in harmony with the principles which I have discussed. The Missouri Commission provides for a 3 per cent credit on depreciation reserve balance.

By MR. HULL:

Q. And an undepreciated rate base, does it not? A. Yes.

Q. If the retention in the electric utility business of the assets reflected by the depreciation reserve is required by regulatory practice, who should bear any cost or burden incident to the retention of those assets? A. The consumers should bear any extra burden over and above that

which can be reimbursed by the employment of such advances under comparatively risk-free circumstances.

• • •

CROSS-EXAMINATION (Continued).

By MR. GOLDBERG:

• • •

[14758] Q. I understood you to say that the purpose of the reserve is to meet a future cost of retirements when the retirement is made. Is that right? A. That is right.

• • •

[14779] Q. Did you begin with the year 1946 in Schedules E, F and G for the sake of brevity? A. Yes, and because my purpose was to project the results of the application of alternative methods into the future.

Q. So that at least in part you ignored 35 years of past operations for the sake of brevity but concerned yourself [14780] with 65 years of estimated future operations. Is that right? A. The effect of that is correct but it was not my intention to do a historical analysis. The purpose was to show what the results would be of alternative methods projected into the future.

Q. And you think that can be shown by ignoring the past? A. I would like to assume that the past was not totally ignored in the FPC Staff assumptions as to lives.

Q. I am talking about what you did. A. So to that extent presumably actual experience may have entered the determination, but I made no such determination.

Q. Can you reach correct conclusions as to the future for your purposes by ignoring the past? A. As correct as the FPC estimates of life expectancy.

• • •

Q. You eliminated the return earned during the 35 years of actual operations when you purport to show the [14781] cumulative rate of return in Schedule E-1. Isn't that so? A. That is correct. I was not making a post-evaluation of the return of the company in the past. I was

showing only comparatively what it would be in the future under the alternative methods.

Q. You were not making a fully cumulative return, showing you were making only a partial one. Isn't that so? A. Making it from 1945 in.

Q. Only partially, that is you were showing nothing as to the past which might be reflected in the figures? A. Never intended to.

* * *

[14786] Q. Looking at your Schedule E-1 in Exhibit 321, you have a column which is entitled "Deficiency in return." You have so entitled that column as a result of your assumption that the fair return should be computed on undepreciated investment. Is that right? [14787] A. That is correct.

Q. If, however, it is intended that the fair return be computed on depreciated or net investment, then, of course, the "deficiency in return" is the "excess in return", isn't that right? A. It could be so called, a mathematical excess.

* * *

[14795] Q. Is depreciation the amount accumulated in excess of a fair rate of return? A. Depreciation is never that. If I may correct you, does the reserve reflect——

Q. Accumulations from earnings in excess of fair return. A. Not necessarily, no.

Q. In other words, there are times when you will have reserve accumulations even though the depreciation is not [14796] earned? A. Put it this way: The necessity of giving priority to a reservation for depreciation has a claim ahead of any indicated return to the enterprise. Therefore, if there is anything over and above operating expenses, it first goes to the reserve.

Q. Is it your statement—— A. Not since about 1918 and 1920, Mr. Goldberg, has that kind of accounting been engaged in to my knowledge.

Q. Is it your statement that where the company does not earn a fair rate of return it has nevertheless received the depreciation payment from the consumer? Is that right? A. It may well have.

• • •

[14803] Q. When you refer to "a 2 per cent or 3 per cent return on the assets reflecting the depreciation reserve balance", the percentages referred to by you are hypothetical and so are the assets. Isn't that so? A. The percentages are a convenient range of percentgaes in even amounts for ease of calculation, zero, 2 and 3. The percentages were stopped at 3 because in my opinion there is no prospect under present conditions of earning as much, even, as 3 per cent without the assumption of additional risks, hazards and uncertainties, so I did not go beyond 3 per cent. I couldn't go below zero.

Q. They are hypothetical and assumed percentages, aren't they? A. I don't know about hypothetical in that sense. There is nothing hypothetical about 2. It is a very real number.

Q. Did the company earn the 2 or 3 per cent you used? A. That is a different question. No, I made no determination of what the company earned.

Q. So far as that is concerned, then, it is a hypothetical percentage, hypothetical income. Right? A. Well, it is not intended to be a picture of the income of the company which it was able to earn on the assets reflecting its depreciation reserve balance.

• • •

[14808] Q. If the assets reflecting the depreciation reserve balance had been used to retire bonds, have they been retained? A. If they had been used?

Q. Yes. A. Under your assumption if they had been used, obviously they wouldn't.

Q. Do you know whether assets reflecting the depreciation reserve balance have been so used by Penn Water?

A. No, without an analysis of this statement I could not say whether they had or had not.

[14809] Q. And you have made no such analysis? A. I made no such analysis but I wouldn't be a bit surprised if it couldn't be made with some time. I don't think I would assume the extemporaneous analysis of a balance sheet——

Q. You never made one in connection with the testimony you prepared here? A. I did not do that, no.

* * *

[14836] Q. Now, then, although you have, for the sake of brevity, depicted alleged deficiencies in return beginning with 1946, it is the fact, is it not, that in your depreciation reserve calculations you began with January 1, 1911. [14837] Right? A. That is right.

Q. Are we to understand that you propose a retroactive adjustment of the depreciation reserve? A. No, I have made no such proposal.

* * *

[14840] Q. I think you will find it is the same thing you did in the Safe Harbor case. A. Oh, no. I didn't, you did.

Q. In connection with my statement that in the Safe Harbor case you made a showing with respect to the entire past history of the company and the projected history on a cumulative basis, I show you Table 4 of Exhibit 53 in Docket [14841] Number IT-5914. Now having had an opportunity to refresh your recollection didn't you in that case show cumulative rates of return based upon the entire history of the company from 1933 to the year 2032, past and projected? A. It would appear so. I withdraw my remark and apologize for the lapse of memory.

Q. But you have not done that in this case. A. No.

* * *

[14847] Q. What additional risks, hazards and responsibilities are the common stock investors assuming by that in-

vestment in Safe Harbor common stock? A. The hazard of non-receipt of income or loss of principal.

Q. Is that reflected in any way by the rate of return on the common stock? A. Quite so. I think that is the best evidence that it is a risky undertaking.

Q. In other words, for assuming those additional risks, hazards and responsibilities they are going to receive 9.33 per cent dividends. Right? A. That is correct. Wait a minute, that is not quite correct. I am trying to be perfectly candid. For the assumption of the risks, hazards and uncertainties involved in this investment they are receiving that part of 9.33 per cent which is over and above what we have called a comparatively free, risk-free rate of return. Namely, if we may illustrate it by saying three per cent, again as I have, then 6.33 out of the 9.33 would be construed as the return to the investors here for assuming the additional risks and hazards [14848] of an investment in the Safe Harbor stock over and above employing those same assets in comparatively risk-free three per cent bonds.

* * * *

[14891] Q. You did not use the actual retirements for that period of time in connection with your computations shown in Exhibit 321; right? A. No, I did not, and I could not have to accomplish the purposes which this exhibit was intended to accomplish.

* * *

[14942] Q. So that you are to be understood as saying that though the Commission, if it wishes, may use a depreciated rate base, it may do so only if it makes an adjustment in the fair rate of return so as to equal the fair rate of return on total or undepreciated investment, right? A. Yes, all other factors being consistently handled the purpose of the "G" series here is to show that the Commission could pursue the mechanics of a deduction process for rate base purposes and make the necessary adjustments quite simply in rate of return to get the effect that it would have gotten had

it calculated its return on the total investment of the investors.

• • • • •

[14947] Q. Isn't this the fact: That in the event that assets reflecting the depreciation reserve balance could not be identified, it would follow that no income could be identified as having come from those assets? A. I think the way I understand it it is obvious. If you can't identify the assets you couldn't identify the flow of income. But that doesn't mean to say there was no income necessarily, simply because of the first statement that there is no identification.

Q. You would say that the company has the right to assume assets reflecting the depreciation reserve exists and that there is income from such assets, and that the income that it earned was attributable at least in part to those [14948] assets. Is that it? A. I think so. If you can't identify the assets you probably can't identify the income.

Q. Could a company assume that its assets reflecting the depreciation reserve balance are all in the bank? A. You couldn't stop them from assuming that, no.

Q. It has that prerogative. A. Circumstances are obviously that it could make such an assumption.

Q. It could make such an assumption? A. Yes.

Q. And having made such an assumption it could then assume there is no income. Is that right? A. If there were no income it would follow very logically that it might also as well assume there was no income, if in fact there were no income.

Q. It doesn't know if it can't identify the assets. A. You assumed they were identified.

Q. Yes, it assumes that they are in the bank. Having assumed they are in the bank it may assume there is no income. Right? A. It might. But I say if in fact there were none. It is possible to earn a little return on bank balances at times. If you put it in a time account you could get some percentage on it.

[14949] Q. How much? A. Maybe one per cent today.

• • •

[14957] Q. Now, if I understand what you just told us in these illustrations, whether the assets reflecting the depreciation reserve balance are invested inside the company or outside the company, there is an assumption of additional risks, hazards and responsibilities. Right? A. Depending on the character of the investment, Mr. Goldberg.

Q. Over and above this three per cent? A. All right, fine.

Q. With that, the answer is "Yes"? A. If it is above the three per cent.

• • •

[14958] Q. Is this the fact: Whether deposited with a trustee or not, the fund or assets reflecting the depreciation reserve balance you consider a trust fund? Right? A. I think I have in some connection or other stated in effect a trust fund.

• • •

[14982] Q. Does it take any cash to retire property except expenditures for removal or demolition? A. No. The retirement as such does not, particularly if we construe a retirement as a bookkeeping operation.

Q. I was not construing it as anything at all. A. You mean actually physically putting it out of service?

Q. Speak of it in that way first, actually physically taking it out of service, does it require any cash except expenditures for removal or demolition? A. No.

Q. As a "bookkeeping operation" does it require any [14983] cash? A. There is only the cost of the bookkeeping.

Q. Now, then, in what circumstances is there a cost of retirement which involves the utilization of cash other than cash for the bookkeeping operation or the removal or demolition of the physical property? A. The retirement as

such does not require any cash. The operation to which I referred is the replacement.

* * *

[14997] Q. There is one life assigned for the turbo generators in Exhibit 59. Is that right? A. That is right.

Q. Did you understand that that one life assignment meant that all of the turbo generators would be retired at [14998] the same time? A. I understand that such turbo generators might not be actually retired at one time. In fact, I understand very well that they may not be retired at all according to such a forecast, but they were given a specific life and it is that life I used to project the period of their existence in the account from the date of installation to the date of estimated retirement.

* * *

[15050] WM. H. EICHHORN, JR.

* * *

CROSS-EXAMINATION (Continued).

By MR. GOLDBERG:

* * *

[15062] Q. Now we come to the Schedule K series which begins on page 34. If I understand the make-up of this from what you told the Examiner the other day, you have broken down the Schedule K items into three classifications; is that right? A. That is correct.

Q. Did you make the breakdown or did Mr. Wetzel make it? A. I asked Mr. Wetzel to make the breakdown.

[15063] Q. The breakdown between betterments, additions, and replacements, then, represents his conclusions as to the appropriate segregation; is that right? A. Yes, with this understanding—that when we made the original cost determination, there was a large group of items which fell into this classification of betterments, additions, and replacements, and they were treated as one total group at that time, and what is done in Exhibit 320 in the K sched-

ules is to divide up the remaining ones which were not recommended for allowance by the staff in Exhibit 51.

Q. I understand that you concluded that these amounts shown for the three categories on page 34 were accounting errors, or, as you stated it the other day—— A. I participated in that joint determination that these were accounting errors.

Q. When you say "joint determination," I take it that means that you were in accord with the conclusions, and it also represented your own independent conclusions; right? A. I saw nothing wrong with it; that is right.

Q. You agreed with the conclusions; right? A. I think that is similar.

Q. All right, if you are using it in that sense. I would like to see if we can cover them as a whole without [15064] going into all of the details, for the sake of saving time.

Now, then, upon what standards, or what standards did you apply in reaching the conclusion that these amounts were erroneously charged either to operating expenses or to the depreciation reserve? A. First of all, these items appeared in the physical inventory, and there was no cost found for them in the plant accounts, so that since they represented physical property and were part of the plant in service, I considered, along with Mr. Gunn and counsel, the system of accounts of the Federal Power Commission instructions—electric plant accounts 2-B as permitting inclusion of those items as part of plant cost.

Q. I take it that you are referring to the last sentence, electric plant accounts, instruction 2-B, which appears on page 38 of the Commission's Uniform System of Accounts? A. Yes.

• • •

[15065] Q. If the charges, when made, were made pursuant to accounting practice then in effect, you understood instruction 2-B to forbid re-accounting for them; isn't that so? A. No, that is not what I understand instruction 2-B to mean.

Q. Will you give us your understanding of what you understood it to mean? A. Instruction 2-B, I believe, speaks clearly for itself, and I know that you left out of your question the words, in instruction 2-B, "Charged to operating expenses in accordance with the Uniform System of Accounts in effect at the time."

Q. Go on. A. That is all.

Q. What did you understand "charge to operating expenses in accordance with the Uniform System of Accounts in effect at the time" to mean? A. Well, to me it meant that if the Uniform System of [15066] Accounts in effect at the time entry was made required items to be charged to plant account, and they were not so charged, they could be corrected under instruction 2-B.

Q. What did you understand "Uniform System of Accounts" meant? A. To me this meant, in this particular instance, the Pennsylvania Commission system of accounts which was in effect during the recording of these entries by Penn Water.

Q. All of these entries, are you saying, which appear in Exhibit 320 on the K schedules were made at a time when the Pennsylvania Commission's system of accounts was in effect? A. I believe they all were. Let me look at this for a minute.

Q. Do you know when the Pennsylvania system of accounts went into effect? A. January 1, 1919, is the effective date of one uniform system of accounts of the Pennsylvania Commission, the one that I have here.

Q. Was that the one which was in effect during the time that the entries in the K schedules were made? A. I believe it was.

Q. The earliest item I find in glancing quickly through the schedules appears on page 45. Item 26 appears [15067] to have been made in several years—1912, 1913, 1914; is that right? A. Those particular ones, '12, '13, and '14, are the only ones that I know there.

Q. The only one I found which was earlier than 1923. A. That is correct.

Q. That one was made before the 1919 system of accounts was in effect, obviously? A. That is right. As to this particular one, I believe it is proper accounting to include it in capital, even though the system of accounts was not in effect at the time.

* * *

Q. Do you consider that electric plant accounts instruction 2-B does not apply where there was not in effect a "uniform system of accounts" in the sense in which you have referred to the Pennsylvania system of accounts? A. No, I think that that is one, only one of the bases for making the corrections shown in the K schedules. I believe it does not violate accounting principles to make that correction, in any event.

Q. All right. That is because, as I take it, you say properties are in the physical inventory, and there is no cost associated with that property; is that right? [15068] A. We were asked to determine original cost and we had the property.

Q. You were asked to determine original cost within the confines of the instructions of the uniform system of accounts; is that right? A. Yes.

Q. I am trying to find out from you whether you construe the phrase "uniform system of accounts" as meaning a system of accounts prescribed by some regulatory commission. A. That is what I took it to mean, yes.

Q. In other words, you did not take it to mean in accordance with the accounting practices being followed by the utility? A. No, I don't think you would normally speak of that as a uniform system of accounts.

Q. At least, you did not think that is the sense in which it was used? A. That is right. Something uniform has to be used by more than one person or more than one company to be uniform.

Q. Then, did you understand it to mean accepted practice among utilities, even though such practice was not pursuant to a system of accounts prescribed by regulatory bodies? A. No. I took this to be a prescribed system of [15069] accounts by some authority.

Q. I see. Now, we have here only one item, you say, in which entries were made when there was no system of accounts. A. That is right.

Q. What is that Item No. 26? A. As I understand it, it is construction plant buildings which remained over after the initial construction at Holtwood.

Q. You mean after construction ceased, these buildings remained in existence and were used for operating purposes; is that right? A. I don't believe they were used for operating purposes. I think that is the reason they were charged off in 1916. They were not usable.

Q. Can you describe these buildings? Were they shacks or something? A. No, I cannot. This is the residue of the construction plant buildings account which had not been charged off, so that you could not identify from the records the exact buildings.

Q. You are unable to determine what buildings are involved; is that it? A. That is correct.

Q. If I get the picture, you are saying that these [15070] construction plant buildings were charged off because they were not used after construction ceased? A. That is my understanding, yes.

Q. And you have found no information indicating their use; is that right? A. I am informed by Mr. Wetzel, who is familiar with the details of the K schedules, as I previously testified, that the buildings were used from time to time for construction activities, but for the most part remained idle.

• • •

[15072] Q. I understand that with respect to the other items in the K schedules the entries were made during the

time that the Pennsylvania system of accounts was in existence; is that right? A. I believe that is correct.

Q. Did you determine that the Pennsylvania Water and Power Company was following that 1919 system of accounts during the time these entries were made?

• • •

[15073] THE WITNESS: I believe the company considered itself subject to the system of accounts. The system of accounts had been issued effective January 1, 1919. The company was subject to the jurisdiction of the Pennsylvania Commission so far as I know.

• • •

Q. And at least you proceeded on the theory that they followed that system of accounts? A. That is one of the things that I considered, as I said before.

• • •

[15074] Q. I am not sure I follow you on that. Let me see if I can state my understanding. You have determined that the uniform system of accounts that the company was following during the time it made these Schedule K entries was the system of accounts effective January 1, 1919, prescribed by the Pennsylvania Commission; is that right? A. That is one of the things.

[15075] Q. Did you determine that the entries as made, either to the depreciation reserve or to operating expenses, by the Pennsylvania Water and Power Company were not permitted by that system of accounts prescribed by the Pennsylvania Commission which became effective January 1, 1919? A. From the Pennsylvania system of accounts and general accounting principles it appeared to me that the items in the "K" Schedules have been properly charged to Plant Account.

Q. That is not my question. I want you to confine yourself to the system of accounts prescribed by the Pennsylvania Commission. Let's leave out of our consideration

for the moment the general accounting principles you have referred to.

So confining yourself, did you determine that the entries made either to the depreciation reserve or operating expenses were erroneous under the provisions of the Pennsylvania System of Accounts?

* * *

[15076] A. As to my portion of the determination, that is what the system of accounts of the Pennsylvania Commission indicated to me.

Q. All right. Now, then, what provision in that system of accounts indicated to you that Item Number 1 was erroneously charged to the reserve for depreciation which appears on page 35 of Exhibit 320? A. Page 43 of the Uniform Classification of Accounts for Electric Companies prescribed by the Public Service Commission of the Commonwealth of Pennsylvania, effective January 1, 1919, contains this language at page 43 under the heading of "Fixed capital accounts installed since December 31, 1918—Definitions and Instructions."

Under the subdivision of fixed capital there is the following language: "Betterments are physical changes in [15077] structures or equipment, the object of which is to make the structures or equipment affected more useful or of greater capacity than they were at the time of their original installation or acquisition. The utility shall charge as a betterment to the appropriate subaccount of '101—Fixed Capital Installed Since December 31, 1918' account that portion of the cost of such changes as will, when added to the original cost of structures or equipment bettered, give the cost of the structures or equipment in their bettered condition."

Q. Now, then, you concluded that that provision made the charge to the reserve for depreciation of Item Number 1 on page 35 of Exhibit 320 an accounting error? A. That was one of the things. Of course, there was also the

present FPC system of accounts, and the fact that we were required to determine original cost at a subsequent date.

Q. I am dealing with the provisions of Electric Plant Accounts Instruction 2-B right now.

Did you understand that the management had the discretion of determining what represented a betterment? A. I don't understand what you mean by "discretion."

Q. Wasn't it up to management to decide whether it was a betterment or not? A. It was up to whoever was going to indicate the proper charge to the account.

[15078] Q. The company was to decide whether it represented a betterment. Right? A. That is right. Someone in the company.

Q. At the time this entry was made was it determined that it was a betterment? A. Apparently not, or it would have been so charged. Apparently no such determination was made at that time. What actually happened at the time of the entry I don't know. I wasn't there.

Q. This summary of betterments as you have classified them represents a present determination that they were betterments? Isn't that so? A. A determination in 1938-39 as required by the Federal Power Commission.

Q. Now, then, do I understand from your last statement that it has been determined that these items were betterments within the meaning of the Federal Power Commission System of Accounts which became effective January 1, 1937? Is that it? A. That is another one of the things we considered.

Q. Well, was that the basis for determining that they were betterments, the standards set up in the Federal Power Commission's System of Accounts which became effective January 1, 1937? A. There was no one thing, Mr. Goldberg. I think I previously said we considered all of these things. I did [15079] for my part, and then Mr. Gunn and counsel made the final decision to include the items. As far as my part in it is concerned, they appeared to be betterments to me in accordance with all of these various meas-

ures we had to make, which were the Pennsylvania System of Accounts, the Federal Power System of Accounts, and accounting principles as I understood them.

Q. Did you determine that it was a betterment under the Pennsylvania System of Accounts as it existed in 1923? A. It appeared to me that these items were betterments under the Pennsylvania System of Accounts, the Federal Power System of Accounts and Accounting Principles as I understand them.

Q. Did you determine whether the management or the company at the time the entries were made considered them betterments? A. No, I made no determination as to what took place at the time the entry was made.

Q. And that applies, does it not, to Items 2 and 3 appearing on page 34 of Schedule "K"? A. Yes, I think that applies to Items 2 and 3.

Q. Is it your testimony that under the Pennsylvania System of Accounts, which was effective January 1919 that an expenditure determined by the management at that time as representing a betterment could be accounted for only by a charge to subaccount "101—Fixed Capital Installed Since [15080] December 31, 1918"?

* * *

THE WITNESS: I believe that an item which was a betterment under the Pennsylvania System of Accounts should be charged, or should have been charged, to Utility Plant.

By MR. GOLDBERG:

Q. Otherwise it was in error? A. That is right.

Q. From 1923 to 1935, did Pennsylvania Water and Power Company have its balance sheets and income statements certified by public accountants? A. Yes, I am sure they had.

Q. Do you recall whether at any time they took exception to the accounting as not being in accordance with the principles of accounting which the company had to follow? A. No, I don't recall they ever took exception, but on the

other hand I don't recall that their analysis of the company's accounts went that far into the plant accounting.

• • •

[15087] Q. Isn't this the fact: That whether it is a betterment or a replacement under those definitions as they appear in the Pennsylvania System of Accounts, and which are now in the record, it is a matter of judgment which may vary with the individuals making the determination? A. I would say that is so.

Q. In other words, there is no clear line of demarcation as to what is a replacement and what is a betterment? Right? A. I believe it would depend in part on judgment, yes.

Q. And two people acting in entirely good faith could reach different conclusions on the same facts as to whether it was a betterment or a replacement. Right? A. I believe that would be possible.

• • •

[15088] Q. Did you determine whether these items that you have referred to as betterments, additions or replacements had been individualized on the books of the company? A. Based upon the information I had from Mr. Wetzel, it was my opinion, along with the others, that these items were properly betterments, replacements or additions in accordance with the System of Accounts.

Q. Does System of Accounts mean Pennsylvania? A. Pennsylvania, FPC System of Accounts, and also my general accounting knowledge. Everything was considered.

• • •

[15089] Q. Isn't it a fact that in connection with a reading of the accounting for betterments and replacements, as [15090] reflected on page 43 of the Pennsylvania System of Accounts, you must consider the paragraph appearing on page 37 of the System of Accounts which I read into the record?

• • •

THE WITNESS: I think it is necessary to consider the entire system of accounts in connection with any particular section.

By MR. GOLDBERG:

Q. Because, while page 43 may appear to provide no discretion in the management with respect to the accounting, the provision on page 37 may provide that discretion if there is no satisfactory individualization of the structures and equipment. Isn't that so?

* * *

THE WITNESS: I think you have to consider both in conjunction with the entire system of accounts, but I would like to point this out as long as we are talking about that in this connection. It states, on page 43 of the Pennsylvania System of Accounts, "The Utility shall charge as a betterment."

That indicates to me that it should be done.

[15091] By MR. GOLDBERG:

Q. Yes. A. It should be so charged as a betterment.

Q. When it is a betterment? A. That is right.

Q. Yes. A. And based upon the data obtained from Mr. Wetzel in my opinion these are betterments. Therefore I think they are proper.

* * *

[15094] Q. Why did you include pages 51, 52 and 53 in Exhibit 320? A. As additional explanatory material of the item of $1400 for the Holtwood Church.

Q. Did you decide to include them or did Mr. Gunn ask you to include these in the same way he asked you to include page 18? A. No, I decided to include those as being explanatory. In Mr. Gunn's testimony I believe he refers to the letter shown as page 51 at transcript 8332, and that letter was followed by the letter which appears as page 52.

Page 53, I obtained from a book entitled "The Constitution of the Presbyterian Church in the U. S. A.," and

it appeared to me that that was the section which must have been the basis for the church not accepting the offer of the company.

Q. When was that constitution adopted? A. Well, I was unable to determine the exact date because it was for the period from 1805 to 1939, and the only copy I had available was a 1939 copy.

Q. Do you know whether the company's contribution was used for the building or for the furnishings in the building? A. I don't know exactly, but I believe it was used for the building, because that was the first thing which had [15095] to be gotten. You had to have a building before you could put the furnishings in. I don't think the furnishings cost as much as $1400 originally.

Q. The $1400, however, had nothing to do with the land; is that right? A. That is right. That had nothing to do with the land. The land always has been owned by the company and the church building is located on the land which is owned by the company.

* * *

[15101] MR. KING: * * * I also would like to state that transcript page 14,577 shows Your Honor stating as follows:

"As I understand it, Respondents' counsel is not withholding any witness who is necessary to substantiate any fact appearing in Exhibit 320 for identification. Isn't that correct?

"MR. KING: That is correct, Mr. Examiner."

In view of that statement I would like to have the record show that Mr. Wetzel has been in the hearing room all during the cross-examination of Mr. Eichhorn and that we tender Mr. Wetzel and Mr. Bortner, whom we can make available [15102] in a very short while, for cross-examination if Mr. Goldberg so desires.

* * *

[15107] CARL WILLIAM WATCHORN,

was called as a witness on behalf of Pennsylvania Water and Power Company, and, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION.

By MR. SPARKS:

Q. Please state your full name, Mr. Watchorn. A. Carl William Watchorn.

Q. By whom are you employed? A. The Pennsylvania Water and Power Company.

Q. Will you state your educational qualifications, membership in technical and scientific societies, and technical experience prior to your employment with the Pennsylvania Water and Power Company?

* * *

[15113] THE WITNESS: I was graduated from the Worcester Polytechnic Institute with the degree of Bachelor of Science in Electrical Engineering in 1923 and was granted the professional degree of Electrical Engineer in 1936 by the same school.

I am a member of the Honorary Engineering and Scientific Societies of Tau Beta Pi and Sigma Xi, respectively, an Associate Member of the American Institute of Electrical Engineers, a member of a sub-committee of the Hydraulic Power Committee of the Edison Electric Institute for the purpose of collecting forced outage data of hydroelectric units, and a Registered Professional Engineer in the State of Maryland.

I was employed in the Test Department of the General Electric Company, on electrical machinery and equipment tests, for about 15 months in 1921 and 1922; and in the Test Department of the then The New York Edison Company, now the Consolidated Edison Company of New York, Inc., for about 10 months in 1923 and 1924. I accepted employment with the Pennsylvania Water & Power Com-

pany in 1924 and have been continuously employed with that company to date.

By Mr. Sparks:

Q. What has been the nature of your employment with the Pennsylvania Water & Power Company? A. I was employed in the Company's test department [15114] for about 2 to 3 years and then as a special assistant to the Superintendent of the Company's steam plant at Holtwood for about a year. During this period I was also assigned to special studies of various kinds in the Company's Baltimore Office for various lengths of time. In 1928 I was assigned to the Company's Baltimore Office as an assistant to the Efficiency Engineer and Assistant General Superintendent, the latter of whom was later promoted to General Superintendent.

Q. Was the Assistant General Superintendent and later General Superintendent, to whom you referred in your last answer, Mr. R. L. Thomas, now Vice-President of the Consolidated Gas Electric Light and Power Company of Baltimore? A. Yes.

Q. The same Mr. Thomas who has already testified in this case? A. Yes.

Q. How long did you hold the position of assistant to Mr. Thomas? A. Until 1938.

Q. What were your duties during that period from 1928 to 1938? A. My duties during that period were quite varied from time to time, depending in large measure on what problems of the Company commanded particular attention. A great deal of my time was devoted to load and capacity studies.

[15115] Q. What position do you now hold with the Company? A. My present position is that of Efficiency Engineer.

Q. How long have you held that position? A. Since 1938.

Q. Are your duties confined to the operations of Penn Water? A. No.

Q. To what other company or companies do your duties extend? A. The Safe Harbor Water Power Corporation.

Q. Are your duties with respect to Safe Harbor any different from those with respect to Penn Water, at least to the extent that the operations of these two companies are similar? A. No.

Q. What are these duties of your present position? A. Again, they are varied, but primarily they are the general supervision of the efficiency of operation of the power generating facilities at the plants of the companies in conjunction with the maximum overall economical utilization of such power generation and facilities on the interconnected systems insofar as Penn Water and Safe Harbor are concerned.

Q. Do your present duties still include the making of load and capacity studies? [15116] A. Yes, they do.

Q. Have you ever presented any technical papers? A. Yes, several.

Q. Have any of these papers ever been published? A. Yes, one, I believe, to which I was co-author with Mr. H. A. Von Eiff.

* * * *

[15118] Q. Do the Holtwood and Safe Harbor hydro plants have sufficient storage for use over periods of longer than a few hours? A. Yes.

Q. Would you say that these plants are run-of-river plants within the definition of Instruction 4 of Schedule 2, F. P. C. Form 12? A. Definitely not. The storage at the Holtwood plant, when considered by itself, is more than sufficient to operate the entire installed capacity in the peak of the interconnected system load with refill of the storage by the beginning of the following week, even with the most adverse low river flows. However, if we consider the Safe Harbor plant alone or the Holtwood and Safe Harbor plants combined, using the storage in the Safe Harbor pond alone, such storage is sufficient to limit or regulate the

system annual maximum required steam generation over periods of several weeks.

• • •

[15135] Q. It appears from your prior testimony that you have been working on various aspects of the application of the theory of probability to the problem of system generating capacity requirements for quite some years. When did you first start working on this general problem? A. I initiated the present line of investigation of this general problem in our company in the spring of 1936; that is eleven years ago now.

Q. That was during the period that you reported to Mr. R. L. Thomas, was it not? A. Yes.

Q. How long did you continue to report to Mr. Thomas after you started this work? A. Two more years, until the spring of 1938, when he accepted a position with Baltimore Company.

Q. Was he interested in this work? A. Yes. He was also very encouraging and in addition made available extra help to carry on the necessary investigations.

Q. Do you know if he ever used any of the results of [15136] your work? A. Yes.

Q. Had you been able as of that time to develop your method of making these studies to the comprehensive degree that you can make such studies as of the present time? A. No.

Q. Please explain. A. This line of investigation was in a formative stage up to about three years ago, although we were able to obtain fairly good results during that period. Our thoughts as to this matter did not really become crystallized until about three years ago. Our later work has largely been the development of specific details of application of the general method. We can now reasonably take into account all the pertinent factors in a practicable and expeditious manner.

Q. Did you have any responsibility in connection with the determination of the figures for dependable hydro

capacity appearing in the F. P. C. Form 12 Reports for the years 1944 and 1945 as filed by Penn Water on behalf of the Holtwood-Safe Harbor system? A. Yes.

Q. Were the determinations of such figures for dependable hydro capacity in those reports based upon your studies that you have outlined up to this point? [15137] A. Only with respect to the figures in the 1945 report.

Q. Do I understand that the figures in the 1944 report were not based upon such studies? A. No, they were not.

Q. Why were they not? A. Because the method of making such studies had not been sufficiently developed until about the middle or latter part of 1945.

Q. Have you examined the figures shown by Mr. Davis in his Exhibit 64 for dependable hydro capacity of the combined Holtwood-Safe Harbor hydroelectric developments and his allocation of such dependable capacities as between the two developments? A. Yes, I have.

Q. Do you agree with his conclusions with respect to the dependable hydro capacity of the combined Holtwood-Safe Harbor hydroelectric developments and his allocations of such capacity between these two developments? A. No, I do not.

Q. Have you examined the figures given by Mr. Thomas in his testimony on dependable hydro capacity of the combined Holtwood-Safe Harbor hydroelectric development? A. Yes, I have.

Q. Do you agree with his conclusions with respect to the dependable hydro capacity of the combined Holtwood-Safe [15138] Harbor hydroelectric developments? A. No, I do not.

Q. Will you now describe as briefly as possible the general method that you have developed for making such studies of the generating capacity requirements on any electric generating system and for the purpose of determining the dependable hydro capacity figures found in Schedule 16 of the 1945 F. P. C. Form 12 Report? A. I

used two basic propositions or principles of the theory of probability, (1) that the probability that two or more independent events will happen or exist as of the same time is the product of the probabilities that each of the separate events will happen or exist as of that time and (2) that when an event can happen or exist in more than one way, the probability that it will happen or exist is the sum of the separate probabilities of its happening or existing in each of these separate ways. These two simple propositions are all that we need to know, by way of basic principles, relating to the theory of probability in order to develop our process of statistically analyzing the capacity situation on any electric generating system.

• • •

[15149] Q. Are there any other reasons why steam or hydro units or capacity may be unavailable other than as a result of forced outage? A. Yes.

Q. Will you please explain? A. There are further reductions in the load carrying [15150] capability of steam capacity because of changes in condenser circulating water temperature for the various seasons of the year and reductions imposed by limitations of tie cables. There are reductions in the load carrying capability of hydro capacity because of variations in river flow and available head; and then of both hydro and steam capacity because of scheduled maintenance.

Q. Are these factors taken into account in your study in addition to the unavailability of steam capacity because of forced outages and routine maintenance previously described by you? A. Yes.

• • •

[15153] Q. How did you treat the Holtwood and Safe Harbor storage in these studies? A. I conservatively assumed that no Holtwood storage would be used other than that required for normal operation of weekly refill. The Safe Harbor storage was also conservatively used to the

extent that the available physical capacity of the hydro plants, taking the scheduled maintenance into account, was not smaller than the required hydro capacity or the drawdown was limited to a minimum elevation of 215.0, with only partial refill by the beginning of the following week.

Q. Did you mean that such use of the available Safe Harbor storage as you have just described is conservative as well as assuming no use of the Holtwood storage? A. Yes, I did. This can be shown to be a fact.

• • •

[15162] Q. Do these two curves shown on Exhibit 329 enable you to make your determination of dependable hydro capacity? A. Yes, they do.

Q. Will you tell us how you do this? A. A comparison of these two curves shows that, for all practical purposes, over the whole range of 15-minute annual peak loads for which these curves are shown from 1,025,000 kilowatts to 1,125,000 kilowatts, and also for [15163] the whole range of overall system reliability of failure to carry the load from the corresponding average rates of one day in 400 years, which is a somewhat greater degree of reliability than is reasonable or desirable, to one day in 1.5 years, which is a considerably smaller degree of reliability than is reasonable or desirable, the system hydro plants are equivalent to or replace, capacity-wise, 285,000 kilowatts of installed dependable steam capacity made up of five 57,000 kilowatt units.

• • •

[15164] Q. Does your previous answer mean that the dependable capacity of the system hydro plants on the load of the interconnected system is 285,000 kilowatts? A. Yes, it does.

Q. What, in your opinion, is a satisfactory and desirable degree of overall system reliability of generating capacity? A. A chance of failure to carry the system load at the average rate of one day in 25 to 30 years as a minimum to one day in about 100 years as a maximum. As

shown by Exhibit 329, this range of reliability permits a range of annual peak load of about 20,000 kilowatts to 25,000 kilowatts with a corresponding range in the magnitude of system reserve.

Q. Does the load that you use in your determination of dependable hydro capacity have any effect on such determination? A. Yes.

Q. Will you please explain? A. On the conservative basis that I used, low flow periods were the predominant factor in my determination of dependable hydro capacity. The result of this is that the [15165] shape of the system load, whether it is sharp, that is, whether it has a large excess of the weekly peak load over the weekly sustained load, or whether it is flat, that is, whether it has a small excess over the weekly sustained load, is an important factor in the amount determined as dependable hydro capacity.

Q. In what way do these load characteristics affect your determination of dependable hydro capacity? A. The sharper load shapes result in the determination of larger amounts for the dependable hydro capacity and the flatter load shapes result in the determination of smaller amounts.

Q. Do these changes in load shape have a direct or a proportional effect on your determination of dependable hydro capacity? A. A proportional effect.

Q. Have you made a determination of such proportional effect? A. Yes.

Q. What result did you obtain? A. That the dependable hydro capacity is affected by about 55 per cent of the change in the excess of the annual one-hour peak load or of the annual 15-minute peak load over the maximum weekly sustained load.

* * *

[15169] Q. I show you Exhibit 331 and ask you did you prepare it? A. Yes, I did.

Q. What does this exhibit show? A. This exhibit shows the probable average rate at which various amounts

of drawdowns may be required, in accordance with our assumption, for one week to prevent failures to carry some part of the system load. It shows that drawdowns of various specific amounts are very infrequent and also shows that drawdowns required to provide load carrying capability in excess of 20,000 kilowatts to 25,000 kilowatts are of very little concern from a practical [15170] point of view. In addition, I wish to call particular attention to the great infrequency of the larger amounts of drawdown, drawdowns of between 55,000 kilowatts and 59,000 kilowatts occurring at the average rate of one week in 1670 years and drawdowns of between 60,000 kilowatts and 64,000 kilowatts occurring at the average rate of one week in 8,000 years.

Q. What is the significance of these results? A. That the probability of failure to carry the load because of shortages of hydro energy available from the natural river flow is very small.

* * *

[15190] Q. Have you made a determination of the probability of failure to carry the load because of a shortage of hydro energy from the natural river flow, such that the Safe Harbor storage would be insufficient to prevent such failures to carry the load when there is sufficient steam capacity installed on the system? A. Yes.

Q. What result did you obtain? A. Such failures to carry the load because of a shortage of hydro energy coincident with such forced outages of steam capacity could be expected to occur at the average rate of one week in more than 120,000 years.

Q. Have heavy weekly sustained loads ever occurred during the first week of December? A. Yes.

[15190-A] Q. Did you also make a determination of the probability of failure to carry the load with respect to the first three weeks in December, in the same manner as you just described with respect to the second and third weeks of that month? A. Yes.

Q. What results did you determine for this situation? A. That such failures to carry the load could be expected to occur at the average rate of one week in more than 95,000 years.

Q. What conclusion do you draw from this analysis? A. That it is absurd to entertain any but the most remote apprehensions concerning failures to carry the load because of the occurrence of such improbable events.

• • •

[15193] Q. Was there any material difference, in so far as [15194] your determination of dependable hydro capacity is concerned, between the load you used in your study and the load forecasted for future conditions, with Standard Time, as reported in the combined Penn Water or Holtwood and Safe Harbor System F. P. C. Form 12 Report for 1944? A. No.

Q. Was there any difference, in this same regard, between this report and the 1944 F. P. C. Form 12 Pool Report filed by Baltimore Company for the combined Holtwood, Safe Harbor, Baltimore, Bethlehem Steel and Washington Systems? A. No.

Q. Are these the Form 12 Reports referred to by Mr. Davis beginning at line 15 of page 1188 and ending at line 3 of page 1190, with intervening questions, and also referred to beginning at line 7 to line 25 of page 1206? A. Yes.

Q. Do you agree generally with Instructions 5 and 1 (b) to Schedules 2 and 16, respectively, of F. P. C. Form 12, relating to dependable hydro capacity? A. Yes.

Q. Have you evaluated all the factors enumerated therein in your study? A. Yes, in as thorough a manner as I believe it is possible to do so from a practical point of view.

• • •

[15220] Q. I refer you to the sentence beginning at line 14 of page 1189, where Mr. Davis stated, "The excess

available by further use of Safe Harbor storage is computed at 57,000 kilowatts. This additional capacity is used only in case of emergency and obviously is of a different quality from capacity under a weekly recovery program," and ask you do you agree with this statement? A. No, I do not.

Q. Will you please explain? A. In the rare instances when Safe Harbor storage is required it serves the same purpose and use as dependable steam capacity in comparable cases of emergencies on all-steam systems, and, consequently, is nonetheless dependable hydro capacity replacing the full amount of dependable steam [15221] capacity that otherwise would perform the same service. And further, this additional capacity, which Mr. Davis says depends on drawdown, and more is actually available and used nearly all the time, thereby permitting steam capacity to be on standby for use in case of emergencies and in addition performs the useful functions of facilitating maintenance of steam units, for which purpose, additional dependable steam capacity might otherwise be required to be installed.

* * *

[15222] Q. Did you make any provisions in the load you used in your detailed study of dependable hydro capacity for the change brought about by the discontinuance of the supply to Edison Light and Power Company of York and the beginning of the supply to Metropolitan Edison Company? A. No, I did not, and I have not considered this change in any of my testimony thus far.

Q. Did you take this factor into consideration in your final determination of dependable hydro capacity? A. Yes.

[15223] Q. Will you please explain how you did this? A. As of last year, we have some recent Metropolitan Edison Company load data, which I studied and concluded that, based on such data, the dependable hydro capacity would

be increased 10,000 kw. as a result of the inclusion of this load with that of our interconnected system.

Q. What then was your final determination of the dependable hydro capacity for the year 1946? A. 295,000 kw.

Q. What was your actual experience in 1946 with respect to the effect of the supply to Metropolitan Edison Company? A. The actual experience was that the dependable hydro capacity would be increased about 20,000 kw. as the result of such supply rather than the 10,000 kw. previously estimated.

* * *

[15224] Q. Did you use any coordination with the companies in Area 5 in your determination of dependable hydro capacity? A. Only with respect to the supply to Metropolitan Edison Company in the same manner as for our supply to Baltimore Company in connection with which we coordinate our hydro operations with the steam operations of Baltimore and Washington Companies.

Q. To how much capacity benefit did this amount? A. About 5,000 kw.

Q. Is there any additional potential capacity benefit available from your using coordinated operation with the other companies in Area 5 in your determination of dependable hydro capacity? A. Yes.

Q. Can you tell us how much more? A. I don't know exactly. Our latter studies during the war showed an additional capacity benefit from coordinated operation with all the companies in Area 5 of 20,000 kw. available in Area 6 from backfeed energy alone from Area 5. I do not know to what extent changes in load shapes in Area 5 since the war, may have changed this quantity. I would, however, expect that any changes would tend to increase such benefits, and at least not adversely affect them. If [15225] this is true, then there would be additional capacity benefits available from coordinated operation with the companies

in Area 5, other than Metropolitan Edison Company, of about 15,000 kw.

Q. It is true then, is it not, that to the extent there are available such benefits, your determination of dependable hydro capacity is that much more conservative than previously stated by you? A. Yes.

Q. Are you able to state, in your opinion and to the best of your knowledge and belief, that your determination of dependable hydro capacity for "run-of-river" hydro plants is the most comprehensive and thorough that has ever been made? A. Yes, it is.

Q. Beginning at page 1190 of the record, Mr. Davis testified that dependable capacities at the two hydroelectric plants, viz: at Holtwood and at Safe Harbor, bear the same ratio as their respective installed capacities. Is such a fact? A. No, it is not.

Q. Do you normally make separate determinations of the dependable hydro capacity of the Holtwood hydro plant of Penn Water? A. No. There has never been any occasion to do so.

[15226] Q. Have you made such a determination? A. Yes.

Q. What amount did you determine as the dependable capacity of the Holtwood hydro plant? A. 100,000 kw.

Q. What is your basis for this determination? A. My intimate knowledge of the Holtwood and Safe Harbor hydro plants together with my experience as to these matters.

Q. What factors did you consider in this determination? A. There are two engineering approaches to this problem. The first is what might be called the "historical" approach, which would take into account the fact that Holtwood antedates Safe Harbor by many years and that the dependable capacity of the Safe Harbor plant would be that amount which would be used to justify its installation as of the time such determinations were made. This approach would result in a dependable hydro capacity for the

Holtwood hydro plant of slightly less than the full installed capacity and would be about 100,000 kw. The second is what might be called the "present situation" approach, on which basis the load carrying capability of each of the Holtwood and Safe Harbor plants would be based on consideration of the energy available at each of the plants for various river [15227] flow conditions. This approach would also result in a dependable hydro capacity for the Holtwood hydro plant of about 100,000 kw.

• • •

[15235] Q. Is your determination of dependable hydro capacity a mathematical and scientific determination? A. Yes, it is, on a very conservative basis.

• • •

[15322] HERBERT B. DORAU.

• • •

CROSS-EXAMINATION (Resumed).

By MR. GOLDBERG:

• • •

[15329] Q. Do you attach any significance to the fact that the depreciation reserve balance appears on the right side of the balance sheet? A. Yes, I think it is significantly indicative of the fact that it means to indicate or is taken to indicate that there was that much of a reservation of revenue against some future date when the liability to retire has matured.

Q. I see. Now, showing you the Federal Power Commission's system of accounts, and more specifically the set-up of the balance sheet which appears on pages 16 and 17, is the reserve for depreciation shown as a liability? A. Yes, it is on the liability side of the balance sheet.

Q. Isn't the balance sheet on that side called "Liabilities and Other Credits"? A. Yes, that longer form is sometimes used.

Q. Now, do you take the section of the right side of the balance sheet which is entitled "Reserves" to fall within the phrase "other credits" or the word "liabilities"? A. I have never made the distinction.

Q. You never made a distinction between liabilities and other credits when you thought about the reserve for depreciation? A. No, I also treat them as liabilities.

• • •

[15340] Q. Well, do you, or do you not agree that they can be used to retire bonds? A. No, other assets may be employed to retire bonds.

Q. In other words, you are saying that the assets reflecting the depreciation reserve balance are not available for general corporate purposes? A. Those assets to the amount of the depreciation reserve balance are retained in the business.

[15341] Q. Does that mean that you are saying that the assets reflecting the depreciation reserve balance are not available for general corporate purposes? A. Those particular assets, if tagged and identified, would not be available for that purpose.

That is not my position in this matter. That is your assumption.

Q. Are you saying that if they had not been tagged, they may be used to retire bonds? A. No, the bonds would be presumably retired out of liquid assets available to the enterprise.

Q. Let us assume that the assets reflecting the depreciation reserve balance are invested in an electro-alloys company. When so invested, are they devoted to the public service? This is an electric utility that uses the assets reflecting the depreciation reserve balance? A. Their public service consists of their being retained in the enterprise and available as a basis of credit to finance the replacement. Their particular investment as such is, of course, not a public utility investment, I presume.

Q. But you would say that the assets are to be considered, though invested in the electro-alloys company as devoted to the public service of the electric consumers? A. Assets to that amount are retained in the business to reflect the depreciation reserve balance.

[15342] Q. Your answer is yes to my question? A. Yes.

Q. Do I understand your testimony at 14,730 that electric plant held for future use is to be included in the rate base? A. Yes, I understand that electric plant necessarily held for future use is properly in the rate base. It should be.

Q. Now, you have tried to draw an analogy between the reserve assets, and working capital. Do you recall that? A. A very general comparison, yes.

Q. However, you consider it a proper analogy, don't you? A. Yes, I used it.

Q. Is working capital provided to meet some future liability? A. Yes, that is a very short-term cycle of liability to employ.

Q. Where capital is provided to meet current expenses? A. For the cycles within the year, even?

Q. Within the year or within the month? A. It might even be within the month.

* * *

[15347] Q. How about the statement that depreciation reserve is an account contra to the plant account? A. It seems to me that is a bookkeeping observation.

Q. Do you agree with it? A. I presume that is the way they state it but I do not know what it means.

Q. Well, you testified on direct that it was not merely or simply a contra account. A. Well, all right.

Q. Now, then, is it a contra account at all? A. It seems to me it might be contra to other assets.

Q. What other assets? [15348] A. Other assets reflecting the depreciation reserve balance.

Q. Are you saying that the depreciation reserve balance may be a contra account to other assets? A. Yes.

Q. Such as? A. Cash, investments in bonds or securities.

Q. In other words, you are saying you do not agree it is a contra account only to plant account? A. I do not see that it is necessarily that, no.

Q. Now, is it a contra account at all? A. In the sense of being opposite liability, contra to assets, of course.

• • •

[15350] Q. I want to direct your attention to certain questions and answers in the Safe Harbor record when you were on cross-examination in that case, referring to transcript page 4840, line 20, and I will read beginning at line 20 through line 8 on page 4841 to simplify it.

"Question: Now, is it your contention that the purpose of depreciation charges is to provide for replacements of property?

[15351] "Answer: I can't follow that.

"Question: Is it——

"Answer: Therefore—since a retirement is not necessarily accompanied by a replacement the purpose ends with the final accumulation of an amount equal to the cost of the unit of property and the clearing of those accounts by charging the retirement to the reserve.

"Question: It has nothing to do with the replacement of property?

"Answer: It does not necessarily have anything to do with it. But the fund generated may be employed as any other fund may be employed."

I have correctly read the transcript in the Safe Harbor case? A. Yes.

Q. And you so testified, did you not? A. I did.

Q. Do you still agree with those statements there made? A. Yes, I think I agree with those statements.

Q. May I refer you to transcript 4876 of the Safe Harbor case, when you were on cross-examination.

This question was asked you at 4876:

"Question: Now, these assets contributed by the ratepayers may be used to liquidate liability or retire [15352] bonds; isn't that so?"

And you answered, "Any assets which the company may have can be employed for any legal purpose."

That question and answer appear, do they not? A. Yes.

Q. And you so testified in that proceeding? A. Yes.

* * *

[15354] RE-DIRECT EXAMINATION.

By MR. HULL:

Q. Dr. Dorau, a few moments ago your attention was directed to certain of your testimony in the Safe Harbor case relating to assets generated as a result of depreciation reserve charges, and their use "for any corporate purpose". Did you intend by your answers in that case and in this case on the same subject to imply that assets generated as a result of depreciation charges can be used to pay dividends to stockholders without the substitution of other assets of equivalent value in place of the assets used in paying the dividends?

MR. GOLDBERG: I object to the question as leading. It puts the answer in the witness' mouth.

TRIAL EXAMINER: The objection is overruled.

THE WITNESS: No, I construed or I assumed by virtue of the context of the discussion that any corporate purpose referred to an employment of those assets in the enterprise. I never assumed that they could be paid out in dividends. I had in mind any appropriate employment of those assets by the enterprise.

[15355] By MR. HULL:

Q. Now, this morning or early this afternoon reference was made by Mr. Goldberg to the possibility of accounting

for depreciation reservation on the left-hand side of the balance sheet as a deduction from plant account. If that method of accounting were adopted, would that mean that the assets reflected by the depreciation reservation would not have to be retained in the business? A. Not at all.

Q. So that the retention would be necessary no matter which side of the balance sheet the reservation was recorded? A. Yes.

Q. Now, I direct your attention to transcript pages 14,992, beginning at line 15 and extending over to 14,994, line 16.

MR. GOLDBERG: Where was the beginning point, 14,982?

MR. HULL: 992, line 15.

MR. GOLDBERG: Did you end with line 17?

MR. HULL: 16.

MR. GOLDBERG: Line 16 ends with a question and that is why I wondered whether you intended to go to line 17.

MR. HULL: Yes, line 17.

THE WITNESS: I have just glanced over that.

By MR. HULL:

Q. You are now familiar with the subject that was being [15356] talked about? A. Yes.

Q. Now, prior to that portion of the transcript, and beginning at transcript page 14,968, line 21 you will recall that Mr. Goldberg asked you to assume that a transmission line were to be built at a cost of $500,000 which had a 40-year service life, and at transcript 14,990, line 22, he asked you to assume that the service life of that line had expired, that the line had been retired, and the company had $500,000 of assets reflected by the depreciation reserve balance.

Then at transcript page 14,993, line 23, he asked you this question:

"If replacement of the property is not to take place, is there any necessity in your opinion for the maintenance of the so-called fund?"

And by the "fund" he referred to the $500,000 of assets generated by charges for depreciation.

MR. GOLDBERG: Just a minute. You have not finished your question?

MR. HULL: No.

MR. GOLDBERG: I will wait until you finish.

By MR. HULL:

Q. —and corresponding reservations of revenue. To this you replied that under such circumstances it would not be necessary to retain those assets in order to provide for [15357] the replacement of the property retired.

Now, with that background, let us assume that under those circumstances, a regulatory body having jurisdiction had found that the $500,000 was not needed in the business to insure continuity of service, and assume also that the utility had no debts to pay off.

What other use could the utility make of those assets of $500,000?

MR. GOLDBERG: May I have the question from the very beginning?

TRIAL EXAMINER: Yes, read the question.

(Record read.)

THE WITNESS: They could invest then in non-utility property, presumably, under the assumptions.

By MR. HULL:

Q. Under those assumptions, the retention in the business would not be required, would it? A. Not for the purposes that we have assumed.

Q. Would it be possible under those circumstances to reduce the capital stock and pay a liquidating dividend to

the stockholders? A. If the law and regulatory authority allowed it.

Q. And assuming the regulatory body having jurisdiction found that these assets were not necessary in the business and might be paid or returned to the stockholders, then that [15358] could be done? A. Yes, that is my understanding if the law permits it, it could be done.

Q. Now, I want to refer you to transcript page 14,838. At transcript page 14,838, Mr. Goldberg had marked for identification Exhibit 322, a copy of which I hand you, and at transcript page 14,839 in the question, lines 13 to 16, he indicated that Exhibit 322 was based on actual investment, depreciation, and actual earnings for the years 1911 to 1945.

Then on the following page, transcript 14,840 at lines 19 to 20, he intimated that you had made that kind of a study in the Safe Harbor case, that is, one based upon the actual earnings from the initiation of the project to the time of the hearing, and he called your attention to Table 4 particularly of your Exhibit 53 in the Safe Harbor case.

Now, I ask you whether or not in your Exhibit 53 you did in fact make use of the actual investment, actual depreciation and actual earnings for the years 1933 to 1944, which were the years involved in the Safe Harbor case?

MR. GOLDBERG: That is based on your interpretation that I was relating my question to actual earnings and their use by the witness for that purpose.

MR. HULL: Yes.

MR. GOLDBERG: All right.

THE WITNESS: Well, if I left that impression at 14,840, [15359] I was in error, because I did not apply the actual earnings of the past period in my analysis.

I will direct your attention to line 21 of 14,840 which probably is not too clear, where I said, "Yes, I didn't, you did".

I thought that had clarified the matter, namely, that I had not done that but Mr. Goldberg's tabulation helped on that.

By Mr. Hull:

Q. Do you recall, also, Doctor, that in that case, after Exhibit 53 had gone in Mr. Goldberg presented you with Exhibits 172 and 173, which were based on actual earnings, and then subsequently Respondents prepared Exhibits 191 and 192 which were basically the same calculations that you have made in Exhibit 53, but which used a five and a half per cent rate of return instead of the 7 per cent used in Exhibit 53? A. I have a general recollection of that fact.

Mr. Goldberg: May I have that question, please? There were a lot of exhibits in there.

Trial Examiner: Yes.

(Question read.)

By Mr. Hull:

Q. Now, am I correct in this that you did not in any of your exhibits in the Safe Harbor case base your calculations partly upon actual earnings and partly upon assumed or theoretical earnings? A. I think that is correct. To the best of my [15360] recollection I was consistent both in the preparation of the exhibits in the Safe Harbor case and in this case.

Q. Now, I would like to direct your attention to your testimony on April 22, which covers a number of pages. I believe it begins about transcript 14,781 and Mr. Goldberg asked you to assume that Pennsylvania Water and Power Co. had on January 1, 1946 bought its plant with an original cost of $33,540,738 in the electric plant account; that the purchase had been made at that figure less the depreciation reserve and that it was entirely financed by capital

stock, the capital stock being $23,545,830 and the depreciation reserve being $9,994,908 so that both sides on the balance sheet showed a total of $33,540,738.

Now, am I correct that if those assumptions are made by the purchase of the property at the depreciated original cost of $23,545,830, the purchasing company assumed the liability represented by the depreciation reserve balance? A. Yes, I so assumed.

Q. And assuming that purchase to be made, and the company to proceed with its operations, as the liability represented by the $9,994,908 was realized from time to time, how would it have to be met? A. From other assets of the enterprise.

Q. And whose responsibility would it be to raise any additional capital? [15361]A. Management acting for the ownership of the enterprise.

Q. Now, I direct your attention to that portion of your testimony on April 23, in the afternoon, which begins, I believe, at transcript 14,900.

MR. HULL: Mr. Goldberg, do you have any objection to letting the witness see the figures you had him write down?

MR. GOLDBERG: No.

By MR. HULL:

Q. In that portion of the testimony, Doctor, you will recall he asked you to tabulate the results of the straight-line and 3 per cent sinking fund method as applied to Penn Water property, and he asked you to assume, subject to your check, a cumulative investment of $2,966,537,250; a depreciation reserve of $1,055,792,807, the difference being $1,910,744,443.

A return of 5 per cent on that would produce a cumulative return of $95,537,222. Depreciation expense cumulated would be $40,367,190.

The total of the return and depreciation expense, according to the straight-line method would be $135,904,412.

Now, the calculations for the 3 per cent sinking fund would be the same cumulative investment, to-wit, $2,966,537,250.

The return on that undepreciated rate base at 5 per cent he asked you to assume, subject to your check, to be $148,326,862 [15362] and the cumulative depreciation annuity would be $16,194,092.

The total of the last two amounts, that is the return and the depreciation annuity would be $164,520,954.

So, from that total of return and depreciation annuity he asked you to subtract the straight-line total of return and depreciation expense of $135,904,412, and derive a figure of $28,616,542.

Now, after presenting those figures to you, you called attention to the fact that the sinking fund calculation as made by Mr. Goldberg apparently did not take account of the three per cent credit.

Leaving that objection aside, will you tell us what other element enters into it that accounts for an apparently larger charge for return and depreciation under the sinking fund method than under the straight-line method? A. I think the balance of the difference, after appropriate adjustment for the 3 per cent interest component was made, would be accounted for by the difference between 3 per cent and the rate of return which the investor had earned on the additional assets reflected by the depreciation reserve balance and which under the deduction procedure is in effect, credited to the consumer.

* * *

[15443] WILLIAM F. UHL.

DIRECT EXAMINATION.

• • •

[15446] By MR. KING:

Q. Mr. Uhl, you have previously been sworn as a witness in this case. Is that correct? A. I have.

Q. And you have previously testified in this proceeding as to your qualifications and experience in general. Is that correct? A. That is right.

Q. What experience have you had in the valuations of water rights, riparian lands and developed waterpower for purposes of purchase or sale?

• • •

[15447] THE WITNESS: I have been connected with the purchase or sale of a number of developed and undeveloped water power properties.

In many of these transactions I fixed the price for which the property was purchased or sold. In other cases I advised either the purchaser or seller in arriving at the price at which the sale was made and in at least one case I acted for both parties.

1. Clark's Rip on the Androscoggin River about four miles above Lewiston, Maine. Assisted the purchaser, the Union Water Power Company, in the determination of the purchase [15448] price of the riparian lands suitable for the development of Clark's Rips in 1909. Purchased from the International Paper Company.

2. In 1924 the Clark's Rips water rights were sold to the Central Maine Power Company and I assisted the seller, the Union Water Power Company, in arriving at an agreement with the U. S. Treasury, Internal Revenue Department, as to the value of the riparian lands as of 1913, for the purpose of fixing the taxable profit on the 1924 sale.

3. Clarks Falls, Great Falls, and Woods Falls on the Lamoille River at and near Milton, Vermont. In 1926 I as-

sisted the purchaser, the Public Electric Light Company at St. Albans, Vermont, in the determination of the purchase price on these three undeveloped water power sites on the Lamoille River.

4. In 1936 I placed a value on the developed water powers on the Merrimack River at Manchester, New Hampshire, for the purpose of sale by the Trustees of the Amoskeag Manufacturing Company to the New Hampshire Public Service Company.

5. In 1931 I placed a value jointly for the Commonwealth of Massachusetts and the Dwight Manufacturing Company on the difference in value of the water rights owned by the latter at Chicopee, Massachusetts, before and after the diversion of water from two of the tributaries of the Chicopee [15449] River by the Commonwealth.

6. In 1932 I placed a value on the developed water power of the Industrial Buildings Corporation on the Chicopee River at Chicopee, Massachusetts (successor to the Dwight Manufacturing Company) for the purpose of sale to the Quinnetuk Company, a public utility.

7. In 1920 I assisted the American Woolen Company in arriving at a selling price for its partially developed water power on the Oswego River at Fulton, New York, which that company sold to the Oswego Pulp and Paper Company.

8. About 1922 I made a valuation for the City of Providence, Rhode Island, and assisted in the purchase of seven water power plants and privileges owned by the Scituate Light and Power Company and the Joslin Manufacturing Company in connection with the development of the Scituate Reservoir on the Pawtuxet River for water supply purposes by the City of Providence.

9. From about 1928 to 1941 I made valuations of diversion damages to water power properties located on the Ware, Swift, Chicopee and Connecticut rivers for the

Metropolitan District Water Supply Commission, in connection with the development of additional water supply for the Boston Metropolitan District. These valuations included ten properties on the Ware River, one property with four water power sites on the Swift River, twelve properties on the [15450] Chicopee River, and one property on the Connecticut River.

All but seven of these cases were settled by agreement with my assistance, and seven came to trial before the Massachusetts Superior Court. In five of these cases I testified regarding the value in dispute and in the other two cases I acted as an advisor to the assistant attorney-general of the Commonwealth.

10. In 1932 I made a valuation of 37 water power properties, 26 of which are located in New York, one in New Hampshire, and ten in Maine, and assisted the purchaser, the International Hydro-Electric Corporation, in the acquisition of these properties. Twenty-six of these properties were partially developed and eleven undeveloped.

11. From 1936 to 1942, advised the TVA on value of riparian lands and water rights on the Hiwassee River in North Carolina and Tennessee.

12. In 1936 I was a member of a Board of Engineers engaged by TVA to place a value on the Wilson Dam and appurtenant properties at Mussel Shoals, Alabama.

13. In 1941 I assisted the American Woolen Company in arriving at a selling price for its water power rights on the Winooski River near Burlington, Vermont, which the company sold to the Green Mountain Power Corporation.

14. In 1942 and again in 1945 I was engaged by Mr. Ben Lyons of Chicago to place a value on the dam site on [15451] the Grand River, Oklahoma, which was utilized by the Grand River Dam Authority in connection with its hydroelectric development.

15. In 1945 I assisted the Village of Morrisville, Vermont, in the purchase of water rights on the Green River in Vermont.

Q. Have you made a determination of the fair market value as of March 1, 1905, of the lands and water rights required to carry out the Holtwood hydroelectric development of the McCall Ferry Power Company? A. Yes, I have.

Q. Had any construction work been done on the Holtwood power site on March 1, 1905? A. No.

Q. When was the McCall Ferry Power Company organized? A. The McCall Ferry Power Company was organized in April, 1905.

Q. What was the situation with respect to financing the development of the Holtwood power site on March 1, 1905? A. One Cary T. Hutchinson and Associates had acquired the land and water rights necessary for a hydroelectric development by 1905 and in February of that year he interested Bertron, Storrs & Griscom, bankers of New York, in the financing of his project. These bankers thereupon formed a syndicate to underwrite the finances required.

[15452] Q. When did actual construction of the Holtwood power development begin? A. Actual construction began October 24, 1905.

Q. How large a power development was contemplated? A. A prospectus describing the proposed development at Holtwood was issued under date of March 1, 1905. Amongst other things it stated that:

> "It is proposed to make a first development for 50,000 horsepower at this site; 75,000 and possibly 100,000 horsepower can be developed economically."

Q. Was there a market for the power which was to be developed at Holtwood? A. A growing market for power existed in such large centers as Baltimore and Philadelphia and negotiations for sale of large blocks of power to Baltimore interests were initiated as early as 1902.

Q. Were the power potentialities of the Susquehanna River generally recognized by March 1, 1905? A. Long before 1905 it was recognized that there were large power potentialities throughout the lower reaches of the Susquehanna River, all apparently feasible of development, though not, equally feasible. At least five power sites had been selected and studied by different persons or companies.

Q. How was the Holtwood power site made possible? [15453] A. In the case of the Holtwood power site, as in many others, a feasible power site was created by the consolidation in one ownership of what were originally individual parcels separately owned, and on none of these parcels was there a complete feasible individual power site.

Q. What procedure is followed in the valuation of water power rights? A. Water power rights are appurtenances to and are of the nature of real estate and a similar method of procedure is adopted in the valuation of water power rights as in the case of other real estate. The principal difference between the valuation of ordinary real estate and the valuation of water rights arises from the fact that the latter involves certain engineering factors which are not involved in the valuation of ordinary real estate.

Q. How is fair market value of property defined? A. Fair market value is defined as the price which would be accepted by the owner if he was willing but not compelled to sell, and which would be offered by the purchaser if he was willing but not compelled to take the property, and both were intelligent and fully informed as to the property itself.

Q. What was the fair market value of the lands and water rights required for the Holtwood hydroelectric development as of March 1, 1905? [15454] A. In my opinion the fair market value was $3,300,000.

Q. What are some of the engineering factors involved in arriving at your conclusion as to the value of the Holtwood lands and water rights as of March 1, 1905? A. In arriving at my conclusion concerning the fair market value

of the lands and water rights required for the Holtwood hydroelectric development as of March 1, 1905, the following principal points were considered by me:

1. Market for power output, its extent and distance from the site of the development.

2. Competitive sources of power.

3. Extent of engineering information available regarding the site of the project.

4. Natural advantages and disadvantages of the site.

5. Probable cost of construction.

6. Pondage and storage possibilities.

7. Stream flow characteristics.

8. Time when the development may be carried out.

9. Possibility of financing.

10. Yearly cost of producing the estimated output.

* * *

[15456] CARL WILLIAM WATCHORN.

* * * *

CROSS-EXAMINATION.

* * *

[15464] By MR. GOLDBERG:

* * *

[15473] Q. Now, when did you first use this all-steam system in connection with a determination of dependable hydro capacity? A. In the latter part of 1945.

Q. What is the latter part of 1945, what does that mean—December? A. No, beginning with just a day or two prior to the first of July or the latter part of June, 1945.

Q. That is when you began making studies of dependable hydro capacity on the hypothetical all-steam system?

A. In the detail that I have testified in this case. Now, that concept didn't arise as of that time. That had extended back for quite some years.

• • •

[15493] WILLIAM F. UHL.

• • •

CROSS-EXAMINATION.

By MR. GOLDBERG:

• • •

[15495] Q. Now, in arriving at your fair market value, you considered power markets which were made over the period of time from 1896 to 1912, is not that right? A. That is correct, yes, sir.

• • •

Q. And beginning with No. 33 and running through 68, the power market reports which you considered in arriving at your conclusions are all dated subsequent to March 1, 1905? A. Yes.

Q. That would mean, would it not, that none of those reports would have been available at that date to any one reaching a conclusion as to the fair market value of the lands? Is not that so?

• • •

[15496] THE WITNESS: Not those reports, no, no reports coming after that date, that is correct.

By MR. GOLDBERG:

Q. Now, you were concerned, of course, in reaching your conclusion as to the fair market value of the land, with the prospect of earnings available from the proposed development. Right? A. Yes.

Q. And you were concerned in arriving at an appropriate capitalization rate of those prospective earnings as well, is that not right? A. I do not know what you mean by capitalization rates.

Q. At what rate the earnings were to be capitalized in arriving at a fair market value? A. No, sir.

Q. You were only concerned with the estimate in prospect of earnings as they were reflected in these reports we have referred to; is that right? [15497] A. Well, I was interested in that, and the fact that it was probable that earnings could be made which justified the investment in this water-power development.

Q. And you gave effect to whatever estimates of earnings there were in these reports? A. No, I did not.

Q. You mean you did not take into consideration the earnings available? A. Yes, the probable earnings available.

Q. Now, you were concerned, I take it, with the value or a determination of the value of the lands as water power lands? A. Yes, sir.

* * *

[15541] CARL WILLIAM WATCHORN.

* * *

CROSS-EXAMINATION.

By MR. GOLDBERG:

* * *

[15561] Q. Why did they become so important with respect to the report for 1945, and had a minor place with respect to the preparation of the report for 1944? A. Because the determination of the dependable hydro capacity as made and reported in Schedule 16 for the 1945 report was made on a much more comprehensive and thorough basis than that made as reported in 1945.

* * *

THE WITNESS: Consequently required consideration of the factors that I stated at lines 3 to 6 on page 15157.

* * *

[15562] TRIAL EXAMINER: Why more comprehensive?

* * *

THE WITNESS: Because it was the first time to my knowledge that all these factors affecting overall system reliability and the determination of dependable hydro capacity were taken into account in the proper manner.

By MR. GOLDBERG:

Q. Now, why were they suddenly in 1945 taken into account in the proper manner while they had not been taken into account in the proper manner in the years prior to that time? A. Because as I told you yesterday, Mr. Goldberg, I figured out about the end of June or beginning in July of 1945 how to do just that.

[15563] Q. In 1945, about the end of June or the beginning of July, you had figured out a more satisfactory manner of determining dependable hydro capacity; is that it? A. A more correct manner.

Q. Up to that time you had believed the reports that had been made to the Federal Power Commission had been correct, based upon the development of the art; as you put it yesterday, up to June or July, 1945? A. In so far as I knew that development.

• • •

[15577] Q. So that it is fair to state, is it not, that this more satisfactory method could have been developed even before June or July, 1945? A. Right.

Q. You mean you could have developed it just about any time you had put yourself to it? A. No.

Q. Well, how about in 1944? Could you have developed this more satisfactory method? A. The best answer I can give you there, Mr. Goldberg, is I did not.

Q. But could have. I know you did not until 1945, in June or July for some reason, but what I am after now is could it have been developed in 1944? A. Well, in the same sense that the atomic bomb could have been developed in 1930, I guess; it just was not done.

Q. So that your answer is yes, it could have been done [15578] in 1944? A. Had I known as much in 1944 as I knew in 1945.

• • •

[15580] Q. Let me see if I can break that answer down.

In 1944 you had been working at that problem, applying your mental processes to that problem steadily for how many years? A. Off and on, for about 8 years.

Q. And in those 8 years your mental processes had been such, or had fallen short of enabling you to grasp the different concepts and evaluate them in a reasonably proper and conservative manner? A. I think it would be more proper to say to apply the concepts rather than "grasp" them. I believe that was what I said in my answer.

Q. I thought you said grasp. I had written "grasp" but all right. Apply. With that substitution for "grasp," your answer is yes? A. Yes.

Q. Now then, when you speak of different concepts, I wonder if you can name them for me, that your mental processes were attempting to apply. A. Well, the concepts were the concepts or basic principles relating to the theory of probability.

Q. The what? A. The theory of probability. Namely, that the probability that two separate events will occur or exist as of the same time is the product of the probability that each will occur or exist separately, and the other one, the probability [15581] that an event will occur or exist which may occur or exist in one or more ways is the sum of the probabilities that it can occur in each of the separate ways in which it can occur.

Q. Now, those—have you finished? A. No.

Q. I am sorry. A. Now, the other factor involved is the manner of applying those two principles of probability to the problem as a whole. One of the important considerations in that problem is the method of allowing for the schedule reserve requirement—the scheduled main-

tenance requirement both as to the system steam capacity and the system hydro capacity.

Another problem is the manner of applying these concepts to the system steam generating requirement as affected by variations in river flow.

Another factor to be considered is the effect on the steam load carrying capability of the system as affected by seasonal temperature changes. I think those are the major factors involved, together with the variation in system load from day to day and week to week throughout the period of a year as we discussed this morning, I believe.

Q. Now, then the two basic principles of the theory of probability are concepts that did not originate with you? A. No, definitely not.

Q. They are concepts that have existed for a long time? [15582] A. Oh, definitely.

Q. Your problem was how to take those concepts and use them in arriving at a satisfactory method of determining dependable hydro capacity? A. That is right.

• • •

[15587] Q. As to the extent you worked on it for eight years as set forth in your testimony, it had eluded you until June or July, 1945? A. Yes.

• • •

[15590] Q. Now, do I understand also from your testimony that this theory of probability had never entered into the determinations of dependable hydro capacity until June or July, 1945? A. I think the fair answer there is yes, Mr. Goldberg.

• • •

[15606-A] Q. Mr. Watchorn, I show you Exhibits 347 and 348 for identification and ask you if they are portions of your working papers? A. Yes, they are.

Q. And they have on them data which you used in arriving at your dependable hydro capacity of 295,000 kw? A. Yes.

Q. Now, taking Exhibit 347, Table 5, will you tell us [15606-B] what data appearing on that exhibit was used by you in arriving at your results? A. It will be noted in the upper portion of that exhibit that there are two groups of columns, one labeled "A, Turbine Forced Outage," and the other one labeled "B, Boiler Emergency Outage."

There are four columns under each of these main headings.

The data I used is the next to the last item in each of these columns labeled "Days Exposed in Period," and the six items above that item labeled "Unit Days of Outage."

Q. So that there can be no doubt as to the data you have just referred to, under the group of columns that bear the letter "A" there is a subdivision "1941, 365 units Actual and Adjusted." Do you see that? A. Yes, that is right.

Q. Now, then, in the column "Actual" you used the 1,127 as the outage days in period? A. I do not see that number, Mr. Goldberg.

Q. 1,127 in the column "Actual" under 1941, 365 units? A. No, I did not use that number.

Q. Did you use any of the figures in the two columns which are labeled "Actual" and "Adjusted" under the 1941, 365 units designation? A. No.

Q. How about the columns "Actual" and "Adjusted" in [15607] the "A" group under the collective heading 1939, 1940 and 1941, 1,033 units? A. I used there the column headed "Adjusted."

Q. I see. And in the column headed "Adjusted" you used, did you, the 3,752 and the 297,787; is that right? A. Yes.

Q. Now, under the "B" group—that is the boiler emergency outage data, did you use any of the data appearing in the columns under the collective heading "1941, 289 Boilers?" A. No.

Q. Did you use any of the figures appearing under the collective column, "1940 and 1941 555 Boilers" in the B group? A. Yes.

Q. Did you use the figures in the "Actual" or the "Adjusted" column? A. Adjusted.

Q. And in that column, are the figures that you used, the 1,657 and the 167,635? A. Yes, sir.

Q. Now, did you use any data in the "C" group, the boiler maintenance outage data? A. No.

Q. So that the only data that you used in your study that appears on Exhibit 347 are the four figures we mentioned? A. That is correct.

[15608] Q. Now, let us turn to Exhibit 348, and tell us, please, which data you used in your study from that exhibit? A. On Exhibit 348, there are three groups of columns. The first group to which I have reference is headed "Turbine Forced Outage," and the second group "Boiler Emergency Outage". Under each of these two general headings there are four columns.

The data I used are shown in the second column under each of these four column groups.

Q. That is the adjusted column? A. "Under 1,000 psi," pounds per square inch, heading. The first item shown in each of these columns that I used is labeled "unit days of outage", and the second item I used is the item headed "Days Exposed in Period".

Q. Now, then, that means that with respect to turbine forced outage, you used the figure 6,597 which appears in the adjusted column with respect to "Under 1,000 psi" and 637,269. Is that right? A. Yes.

Q. The first figure being the unit days of the outage and the second days exposed in period? A. Yes.

Q. Now, then, that is the only data appearing on Exhibit 348 that you used with respect to turbine forced outage? A. That is correct.

[15609] Q. Now, then, under boiler emergency outage, did you again use the figures appearing in the adjusted column

under the collective heading "Under 1,000 psi"? A. Yes.

Q. I take it the first figure you used was 5,519, being the unit days of outage, and the other figure 446,249, being the days exposed in period? A. That is correct.

TRIAL EXAMINER: What was that again?

MR. GOLDBERG: 446,249.

By MR. GOLDBERG:

Q. And the data appearing under the third group heading "Boiler Maintenance Outage", I take it you did not use at all? A. That is correct.

Q. And it is through the use of these figures we have discussed that you determined the percentage relationships? A. Yes.

Q. These data appearing on Exhibits 347 and 348 were collected by the Edison Electric Institute; is that correct? A. A committee of the Edison Electric Institute.

Q. A committee of which you are a member? A. No.

Q. Are these data that appear in Exhibits 347 and 348 published data? [15610] A. Not in accordance with my understanding of what published means, but it is data that is pertinent and available to anyone who cares to obtain copies.

Q. Can you obtain these data only by writing to the Edison Electric Institute? Is that it? Is it available in libraries? A. It may. I do not know. It depends on whether the particular library obtains pamphlets and so on, from the Edison Electric Institute or not. I do not know.

Q. Has the Institute included these data in any publications it has gotten out? A. I do not know what you mean by "publication".

Q. Pamphlets? A. Yes.

Q. Things that it prints and disseminates to the public or to the members of the industry? A. Yes.

Q. You say these can be found in published pamphlets? A. Published being used in that sense.

Q. What is the name of the publication in which these data appear? A. That is one of our difficulties as to what we mean by publication. It is the material presented relating to this subject. It isn't any periodic publication in that sense at all.

[15611] TRIAL EXAMINER: Where did you get them?

THE WITNESS: From this material that was presented or prepared by the Edison Electric Institute.

TRIAL EXAMINER: In what form?

THE WITNESS: A group of, oh, I imagine, possibly 15 or 20 pages about this size (indicating) stapled together.

TRIAL EXAMINER: With a cover?

THE WITNESS: No, my recollection is with some of the copies we had had a letter of transmittal that was sent to members of the various committees of the Institute that were known to be interested in this subject. I obtained the copies I have because of my participation as a member of this subcommittee of the hydraulic power committee.

TRIAL EXAMINER: These have never been formally published, is that the idea?

THE WITNESS: That is what I would say, yes,—not in the sense that I understand your use of the word "Published".

By MR. GOLDBERG:

Q. When did you secure these data? Was it June or July of 1945? A. Exhibit 347 was obtained some time after 1941 and Exhibit 348 was obtained in the early part, I think, of 1946.

Q. Then I take it you did not utilize these data in June or July of 1945? A. I used the data in Exhibit 347. That was explained in [15612] my direct testimony.

Q. But not the data in 348, because you did not have it? A. As of that time that is correct. The data shown on 348 in my testimony was used in connection with Exhibits 333, 334 and 345 only.

Q. Now, you have stated that the data on Exhibits 347 and 348 relate to steam equipment? A. That is correct.

Q. What data did you use for hydro equipment? A. The data that the subcommittee, of which I am a member, collected.

Q. When did they collect that data? A. I will have to check that to be sure. I think it was some time in 1932 or 1933, possibly—I mean 1942 or 1943.

Q. You say there was a subcommittee of the Edison Electric Institute? A. Well, the hydraulic power committee of the Edison Electric Institute.

Q. What is the name of the committee that collected the steam equipment data? A. There were two committees, I believe, involved in that. One was the Prime-Movers Committee and the other the Electrical Equipment Committee, I believe.

Q. And at the time of the collection of the data, were you a member of either one of the committees? [15613] A. No.

Q. Are you a member today of either one of the committees? A. No.

Q. Now, do you have with you the hydro forced outage data that you used? A. No, sir.

Q. Where is it? A. In Baltimore.

Q. Of how many sheets does it consist? A. I think there is one sheet that has the pertinent data.

Q. Does that mean you do not have your working papers here with you? A. That is correct.

Q. Is it a sheet like Exhibits 347 and 348? A. My recollection is that the data is shown as an insert down about two-thirds of a typewritten sheet of paper.

Q. An insert where? A. On the page.

Q. Was this page an excerpt from a publication? A. No, it is material that myself and Mr. Loane of Penn Water and Safe Harbor, who are the two members comprising this subcommitteee, prepared.

Q. Let me make sure that I understand that. It was [15614] the subcommittee of the hydraulic power committee of the Edison Electric Institute that collected the forced outage data on the hydro equipment? A. Yes.

Q. And that committee consisted of yourself and Mr. Loane? A. Yes. The Hydraulic Power Committee asked us to do that for them.

Q. And you think that data was collected in 1942 or 1943? A. I think that is correct.

Q. How many electric utilities did you circulate? A. I could not recall, but a great number of utilities over the whole United States and Canada.

Q. Can you be more specific about this large number? Was it 50 or less than that? A. I never thought of it just that way, Mr. Goldberg. I would have to guess. I believe I can say that every operating utility that had hydroelectric units of 5,000 kw or greater capacity responded to this questionnaire. There were comparatively few who did not.

Q. How many responses did you get? A. I do not know. A great number.

Q. Can you ascertain that? A. I could do it in the course of time, yes.

[15615] Q. What does that mean? A. Well, a day or two after my cross-examination is finished, to give me an opportunity to make the necessary investigation.

Q. Can you ascertain that information over the evening? A. No, sir.

Q. Was a questionnaire prepared to collect this data? A. Yes.

Q. Was there a definite definition of forced outage in the questionnaire? A. Yes.

Q. Do you have a copy of the questionnaire? A. No, sir.

Q. Can you secure one? A. In the course of time I can, yes, sir.

Q. Do you have one in Baltimore? A. I am sure we do.

Q. You do not think you can secure that overnight? A. No.

Q. Do you recall the definition of forced outage that you had on that questionnaire? A. Substantially the same as I gave you. As a matter of fact, I did give you the definition when you asked about the definition regarding steam turbines and steam boilers. You asked about the definition relating to hydro units at that [15616] same time.

The general scope of the definition with respect to all three matters embraced the same considerations.

• • •

[15617] Q. Now, did the Edison Electric Institute publish the compilation of the responses that you made? A. We prepared the material relating to that investigation—I mean Penn Water and Safe Harbor prepared all the material, and our material was forwarded to the Edison Electric Institute headquarters and distributed in accordance with the request expressed for that data to be made available.

Q. In other words, when someone writes to the Edison Electric Institute for that data, that data is made available then? A. At that time. Copies may have all been distributed long since, or they still may have some; I do not know.

Q. How many years did the data cover? A. That varied. Some of the utilities reported for ten years and others for a smaller number of years.

Q. And did your compilation reflect data for all of the years? A. All the years for which data was reported. Q. Now, can you give us, or have you already told me that you cannot give me the data you used for hydro outage? A. No, all I can give you is the ratio, the 49/100ths of 1 per cent. I do not know——

Q. The figures that were involved? A. —the figures that were involved in that.

[15618] Q. Now, do you recall whether any one has submitted the data indicated who had not followed the definition of forced outages contained in the questionnaire? A. No, I am quite sure that every one did a very good job.

Q. Were there any notes on the face of the responses indicating that the definition of forced outage had not been treated as set out in the questionnaire? A. No, I cannot be sure of this, but I think some of the companies to whom we sent inquiries may have requested us for further clarification of our intended meaning, but I could not be certain of that. I think that probably was so.

Q. And then your further clarified the definition on receipt of their responses? A. We stated the same matter in another way.

Q. Now, you do not know with respect to this collection of the steam-outage data contained in Exhibits 347 and 348 whether there were any notes appended or placed on the face of the responses indicating that the definition of forced outage had not been treated in the manner requested by the directors? A. No, I would not know that. I doubt very much if any reporting company had any idea they were reporting it in a manner in any way different from that intended.

Q. Within the light of their interpretation, you mean?

[15619] A. Yes, sir.

Q. Now, then, you recall that you submitted—you said the other day—a questionnaire containing a figure with which you did not agree? A. Yes, sir.

Q. You recall, do you not, that you have appended no reservation with respect to that figure? A. Right.

Q. Now, as far as you know, some of the data submitted by companies which are included in Exhibits 347 and 348 may have been submitted with reservations which were not expressed, in the same way you submitted data with

reservations not expressed, is not that right? A. That is a possibility; yes.

Q. And that same possibility exists with respect to your hydro data? A. That is a possibility.

* * *

[15642] Q. Is the probability method of determining dependable hydro electrical capacity such as you described in your direct testimony standard practice among electrical utilities for the purpose of determining dependable hydro electric capacity? [15643] A. I think the answer to that is no. I think I should qualify that answer because, as I have stated previously, to my knowledge, my determination of dependable hydro electric capacity based on an application of the theory of probability is the first such determination, and as stated in my direct testimony, the industry is very much interested and has requested papers to be presented on that subject. As a matter of fact, the purpose of gathering this data was because the industry or members of the industry had realized there were deficiencies in determining the reserve requirements on the various systems, and they felt that a better and more scientific basis could be designed and that was the purpose for gathering this probability data.

Q. And now the industry is interested in testing whether you have improved on the deficiencies; is that it? A. Not me, no. With respect to steam capacity there are other engineers throughout the country who have made such studies at this time and this Symposium that the Power Generation Committee of the American Institute of Electrical Engineers is holding on the subject next fall or winter with the engineers from three or four other companies preparing papers on the general subject is for this purpose. However, my understanding with respect to all steam systems—Mr. Loane's and my papers are to be, as I understand it, the only papers with respect to combined hydro and steam systems.

[15644] Q. And the purpose of this symposium is to test out the developments and see how sound they are? A. I do not think there is any doubt about the soundness.

Q. Please answer my question. A. No.

Q. What is the purpose of this symposium? A. To disseminate the knowledge and information of the engineers who have been leaders in the industry in these various fields.

Q. And you are saying that the engineers undoubtedly are going to agree that your method is sound? A. No, I would be very doubtful, however, if they did not.

• • •

[15674] Q. Were the years 1942, 1943 and 1944 in terms of load shapes comparable to 1945 and 1946? A. No.

Q. Were the years 1939, 1940 and 1941 comparable to 1945 and 1946?

• • •

[15677] Q. Would you say that Mr. Spaulding's association with the work you have been doing all along on determination of dependable hydro capacity has been of such nature as to permit him to express an opinion regarding the dependability of the principles and methods? A. Very definitely. I might also add that Mr. Walls comes in that category, too, probably outside of Mr. Loane and myself, he is outstanding in these matters.

Q. Mr. Walls, you mean? [15678] A. Definitely.

Q. How about Mr. Spaulding? A. I do not think I could say that Mr. Spaulding's familiarity as to details is as great as Mr. Walls'.

Q. But with respect to the understanding of the principles and the methods involved and his ability to state their propriety, you would say he is on a par with Mr. Walls? A. Oh, I have no question whatsoever.

• • •

[15687] Q. Now, your basic data was in Exhibit 348? A. That is correct, as to probability characteristics.

Q. And the basic data of actual experience that you had was in Exhibit 348 and covered a period of five years, right? A. For turbines I think it was, yes, five years and boilers four years. Wait a minute, six years for turbines and five years for boilers.

[15688] Q. And you then, through this process you have been describing, sought to derive 100 years of experience? A. That is right.

Q. And not having a hundred years of actual experience, you went through this process you have described to establish a hundred years of experience? A. That is correct.

* * *

[15690] Q. And the experience for your analytical study, then, was based upon three years of experience for turbines, and two years for boilers, is that correct? [15691] A. Yes.

* * *

[15694] Q. Through this synthetic basis, you say that you have verified your conclusions, that dependable hydro capacity [15695] was 295,000 kw? A. It is at least that much.

* * *

[15730] Q. You have testified that the probability of [15731] unavailability of turbines is 1.26 per cent and boilers 99 per cent, based on the data you utilized, and you have also testified that subsequent data showed figures to be 1 per cent for turbines and 1.24 per cent for boilers.

Do you recall that testimony? A. That is correct.

Q. Now, that is a change of about 25 per cent on each of them? A. That is right.

Q. And you have testified that this change would result in a very little change in your final result because there was an offsetting effect; that is, one went up 25 per cent and one went down 25 per cent. Right? A. That is correct.

Q. Are we to understand that in your opinion data based on 3 years of records which can change in two years as much as 25 per cent is reliable data for a highly theoretical mathematical analysis? A. Again I can't answer that question directly without qualifications.

Q. You mean you would have to say "yes, but"? A. No, I couldn't even say "yes."

Q. You mean you would have to say "no, but"? Go ahead. A. The data relating to the curve shown on the right, [15732] both curves shown on Exhibit 336, was computed sometime in August or September of 1945 on the basis of the forced outage experience data shown on Exhibit 347. When the data shown on Exhibit 348 became available in the early part of 1946, January or February, I believe, it was originally my intention to recompute the curves shown, the data for the two curves shown on Exhibit 336. But, fortunately, the characteristic was apparent in those two sets of data that you have just mentioned, Mr. Goldberg, which meant it would not be necessary to make a recomputation of the data for the curves on 336.

Now, the fact is that each of the data just shifted by about a quarter of one per cent in the two-year period, and must be related to a five-year period in one case and a six-year period in another case, as it was the intention—I don't know whether that intention has as yet been altered—for the Edison Electric Institute as of the present time to gather no further forced outage data with respect to turbines and boilers than that shown on Exhibit 348, the opinion apparently being that the statistical basis for these data is reasonably satisfactory and presents a reasonable sample of what could be expected even though a larger number of years may be accumulated.

For example, any one particular year may show a very great divergence from the quantities of one per cent—what [15733] was it, turbines?

Q. Turbines, 1.26 to 1 per cent. A. One per cent for turbines and 1.24 per cent for boilers, but when you average the experience of one year with the accumulated experience with respect to turbines of six years or with respect to boilers of five years, the results for year-to-year changes are by increasingly insignificant amounts as the greater amount of data are collected.

Q. You have no further assurance that additional records may not change the percentage by an equal amount for turbines and boilers in the same direction.

Here you have been going in opposite directions, but you have no assurance in the future that the change won't be in the same direction. A. I am quite confident, Mr. Goldberg, that these data related to these different years specified showed an increase and decrease from year to year. They may have over the period in which the data were taken showed a general trend downward or a general trend upward.

Q. Are you telling us that you made an analysis of the data that you used to state that year by year there has been an offsetting increase or decrease? A. No. I would be very much surprised if that wasn't so. That is all I am trying to tell you.

* * *

[15743] J. RHOADS FOSTER.

* * *

DIRECT EXAMINATION.

By MR. SPARKS:

Q. Mr. Foster, your name is J. Rhoads Foster and you have previously testified in this case on the subject of fair rate of return? A. That is correct.

Q. Are you familiar with Exhibit 46 which was sponsored by Staff witness Samuel Joseph in this proceeding? A. I am.

Q. Have you read the testimony of Mr. Joseph, who presented Exhibit 46? A. I have.

Q. Are you prepared to discuss that testimony and the exhibit in relation to the determination of the fair rate of [15744] return to Penn Water? A. I am.

* * *

[15746] Q. What are your general conclusions based on this study of Exhibit 46 and the related testimony of Mr. Joseph? A. First, Exhibit 46 is the result of applying erroneous and inconsistent theories of rate regulations.

Second, Exhibit 46 is not comprehensive and fails to afford the Commission "a sound basis for the exercise of judgment in the establishment of fair rate of return" for Penn Water, but instead places an awkward and unreasonable burden on the Commission.

Third, Exhibit 46 contains numerous errors of execution; [15747] some of its parts do not reflect the standards of workmanship and technical proficiency which are necessary to give the results significance, even if valid and consistent theories had been applied in its preparation.

Q. Leaving aside for the moment any consideration of the erroneous theories of rate-making which have been recognized and applied in the preparation of Exhibit 46 have you examined that exhibit and the related testimony with regard to technical competence, and correctness of data presented? A. I have made such an examination limited to pages 38, 38 (a), 38 (b) to 38 (c) and page 40 of Exhibit 46.

Q. What principal error of method did you find with respect to page 38 (a) of Exhibit 46? A. The principal error of method is the failure of the witness to take either one or the other of two steps which might have given significance to the data. Because of that failure, the data presented on page 38 (a) are without significance for the purpose of estimating the cost of equity capital, as of March 30, 1946, or other recent date, to either Penn Water or to the other companies represented on page 38 (a).

The earnings-price ratios are stated by the witness on the basis of reported equity income for the most recent period prior to March 30, 1946, for which earnings data were available, and the number of shares outstanding at the end of that period, without either critical analysis or [15748] adjustments in recognition of changing circumstances.

The first alternative is to base earnings-price ratios on reported income, without adjustments, but at the same time to provide a collateral analysis of the manner and extent to which such earnings-price ratios fail to reflect actual investor appraisals. Such an analysis of the related circumstances should indicate generally their quantitative importance as well as the direction of their influence. An example of such related circumstances is the increase in prospective income resulting from the revision of the federal income tax laws in November, 1946.

Q. Dr. Foster, at page 10381—lines 15 and 16—of the Transcript, Mr. Joseph, speaking of the investor, said that "He buys the stock on the basis of the relationship of anticipated earnings to price," did he not? A. Yes.

Q. At page 10383 of the Transcript, with respect to recognition of what Mr. Joseph characterized as "innumerable circumstances," he said: "You would be substituting your judgment for the judgment of the market place, and you could never be sure that what you were doing came close to accomplishing what you hoped you were doing." Is that last statement in error? A. It is.

Q. In what respect? [15749] A. The recognition of changing circumstances is not a substitution of the judgment of the analyst for the judgment of the market place. The purpose of the recognition of changing circumstances is to provide a reasonably accurate and useful estimate of what the judgment of the market place actually is at the time.

Exact or precise estimates of investors' appraisals at a given time is admittedly impossible. However, reason-

ably significant and useful estimates are not impossible, and the fact that the task of analysis is difficult, is no reason for limiting the analysis, as it has been limited in connection with page 38 (a) of Exhibit 46, by use of methods that provide only grossly misleading results. Even the crudest recognition of the effect of changing circumstances would tend to avoid such absurdities as earnings-price ratios, presented as a basis for rate of return determination, which are below the yields on preferred stocks of the same companies at identical dates.

This phenomenon is observed by a comparison of the earnings-price ratios of Bangor Hydro and Southern California Edison as they appear on page 38 (a) with the preferred stocks of the same companies as they appear on page 38 (c).

However, the circumstances which have caused this phenomenon, a reversal of the usual relationship between the earnings-price ratios and yields on preferred stocks of the [15750] same companies, are not unique to these two companies but tend to be common to all companies shown on page 38 (a).

The low level which is common to the earnings-price ratios on page 38 (a) is misleading and results from employing a method limited to consideration of reported past earnings per share with no consideration of the prospective earnings which are actually reflected by the market price.

Q. Have you examined the statements of Mr. Joseph at page 10428 (lines 7-17) of the Transcript which reads as follows:

"Q. You just accepted figures from the source which you used. Is that correct?

"A. I accepted the published figures; yes, sir.

"Q. You made no adjustments of any kind. Is that correct?

"A. Because I thought it would be improper to do so.

"Q. And you accepted those figures without any question in your mind. Is that correct?

"A. That I was doing the right thing; yes, sir."

A. I have.

Q. Do those statements describe a proper use of the published data available for estimating investor appraisals? A. No.

Q. Why not? A. Mr. Joseph accepted as equity earnings, without [15751] analysis, net income as shown in the statement of income for the past accounting period, or net income less preferred dividends paid during the accounting period. All the other data contained in the reports of the companies, the letters to stockholders, footnotes to the financial statements and certifications by the public accountants, are published data. Mr. Joseph accepted the one published figure but he did not accept or consider the related and qualifying data and information.

The financial analyst must start with the published reports of actual results of operations for the accounting period. He recognizes the facts to which his attention is in part called by the published reports, changing conditions and past or prospective events, and adjusts the past earnings in order to arrive at his estimate of prospective earnings. The functions of the rate of return analyst are not to estimate future earnings of the companies subjected to analysis. It is to measure or estimate, as closely as may be possible, investor's appraisals of such investments.

Mr. Joseph thought that it would be improper to make any adjustments of the reported earnings figures, yet he recognized that the investors begin with reported earnings and make adjustments which they consider appropriate for the purpose of estimating future income.

Therefore, for the purpose of indicating investor's [15752] appraisals, it is proper and necessary either to make adjustments of reported earnings in computing earnings-price ratios or to analyze the circumstances which affect the validity and meaning of the earnings-price ratios

calculated without reflecting such adjustments. During the war or early post-war period, events and changing conditions have had unusual and substantial effects on the prospects of earnings.

Q. Have you examined the statement by Mr. Joseph at pages 10461 and 10462 of the Transcript, lines 13 to 25 and 1 to 11, which reads as follows:

"Q. Well, which is the best indication of the prospective equity income, Mr. Joseph, that remaining after you deduct the $308,000 or that which would remain after deducting the $400,000?

"A. Well, Mr. Sparks, I think that the adjustment that you are suggesting would be erroneous to make in the exhibit that I presented. Nothing is clearer in my mind than that the figures presented on page 38-A are subject to change in subsequent years. Some of the items that you have called to my attention will produce such changes, but it is by no means clear that you are pointing to all of the items, nor would the changes that you have asked about produce a more reliable showing than the one I have [15753] presented. Let's put it this way: Assume that I had made all of the changes that you have spoken to me about. I don't want to say that you have suggested, but that you have called my attention to. I would then say that if I had made those, my presentation would be subject to very grave criticism. I will say further that having had my attention called to the items that you have cross-examined me about, it is my judgment that I would not today make any change by reason of any of the items that you have asked me about, that if I made such change it would tend to impair the validity, would go further than tend to impair, it would actually impair the validity of my presentation."

A. I have.

Q. Is it a correct statement? A. No, it is wrong in several respects.

Q. What are the errors? A. Certainly in estimating prospective income and appraisals, common stock investors consider the existing requirements of bonds and preferred stock, which must be met before any equity income may be expected. They do not consider the interest and preferred dividend requirements which existed at some time in the past.

Mr. Joseph's remarks in this paragraph suggest the [15754] reason why his method failed to provide on page 38 (a) earnings-price ratios which have, without consideration of other data, significance for the purpose of rate of return determination.

He says, First, "Nothing is clearer in my mind than that the figures presented on page 38-A are subject to change in subsequent years."

I certainly agree that the earnings-price ratios change from year to year. They change from month to month, sometimes as rapidly as from an average of 12.9 per cent in March, 1942, to 7.6 per cent a year later.

At the same time Mr. Joseph asserted that if he made any change to recognize non-recurring items or changing circumstances "it would actually impair the validity of my presentation."

It may be true in a sense that a presentation of arithmetic ratios, such as those on page 38-a, between earnings as reported for past accounting periods and market prices for a single day, would be impaired by recognition of any related facts. The purpose of pages 38 and 38-A should be to present not mere arithmetic ratios but to present ratios useful in the process of rate of return determination. It is the purpose of rate regulation to fix reasonable rates for a significant period in the future. The ends of reasonable rate regulation certainly are not ill served or [15755] pertinent data impaired by a consideration of the reasons for the wide fluctuation of the earnings-price ratios.

Q. Have the earnings-price ratios for the common stocks identified on page 38-A computed by use of the

method employed by Mr. Joseph, remained at the levels shown on page 38-A? A. No, they have increased substantially. As an extreme illustration, the earnings-price ratio for the Bangor common stock was shown by Exhibit 46 as 3.83 per cent as at March 30, 1946. The earnings reported for the year 1946 were $3.06 per share and the bid quotation at the end of January, 1947, was $32; the relationship is an earnings-price ratio of 9.6 per cent.

Q. What are some other illustrations of the fluctuations in the earnings-price ratios shown on page 38-A since March 30, 1946? A. The earnings-price ratio for Consolidated Edison which appears on page 38-A and which was revised to 5.05 per cent was 8.0 per cent on the basis of the market price on March 24, 1947, and earnings per share as reported for the year 1946.

On the same basis the earnings-price ratio for Indianapolis Power and Light Company fluctuated from 6.09 per cent to 10.3 per cent.

Q. May these earnings-price ratios of the more recent dates be taken as measures of the cost of equity capital to [15756] three companies? A. They may not without consideration of their meaning and significance, and analysis of the reasons for their long term fluctuation and behavior.

Q. Have you examined the statement of Mr. Joseph at page 10420 of the transcript that it is not correct to state that the actual income of Commonwealth Edison for 1945 was $7,490,716 in excess of the $24,577,746 shown by page 38-A of Exhibit 46 and the statement:

> "Well, you are here asking me to say that the actual income of the Commonwealth Edison Company is different from what Commonwealth Edison says its actual income was and what Arthur Andersen and Company certifies its income as having been. Now, I don't think I could go along with you on that."
>
> A. I have.
>
> Q. Are those statements correct? A. No.

Q. Why? A. The financial reports of a corporation state its income for a given accounting period, subject to generally accepted accounting conventions, practices or regulatory rules. Accounting statements of income undertake to reflect but do not change the financial facts.

In 1945 Commonwealth Edison experienced a "windfall" in [15757] amount of $7,490,716 in the form of income tax reductions resulting from unusual deductions from taxable income. Income, measured by the increase of corporate assets during the period, was $7,490,716 greater than would have been the case if the unusual deductions had not been available. Income as reported by the company to its stockholders was "normalized" however, by including in the income statement charges against income totaling $7,490,716 and labeled "charges equivalent to Federal tax reductions."

Q. Were the equity earnings used on page 38-A for Commonwealth Edison and Pacific Gas appropriate for the construction of earnings-price ratios in so far as those earnings reflected the treatment of tax windfalls experienced during 1945? A. Yes, but the use of these earnings figures happened to be correct only because in the preparation of the published income statement the actual earnings happened to have been adjusted, for general accounting purposes, in a manner which gave results appropriate for the purpose of page 38-A.

Q. Are you familiar with the statement of Mr. Joseph at page 10508 of the transcript, lines 3-7, which reads as follows:

> "Q. Mr. Joseph, if public accounts—accountants prior to 1945 had abandoned the practice of making charges in lieu of taxes would you have accepted the actual reported earnings for the purpose of computations [15758] on page 38-A?
>
> "A. Yes."

A. I am.

Q. Does this statement reflect the use of appropriate methods of calculating earnings-price ratios for the purpose of pages 38 and 38-A? A. No.

Q. Why? A. That statement reflects a clerical approach which precludes the use of analytical methods. The common stock earnings of Pacific Gas and Electric Co. for 1945 are shown on page 38-A of Exhibit 46 as $13,523,200 which is after the subtraction of the tax windfall of windfall of $10,286,461 made in the income statement as published. If the subtraction, in the form of charges in lieu of taxes, had not been made in the income statement, the reported earnings would have been $13,523,200 plus $10,286,461 or $23,809,661 and undoubtedly the facts as to the tax windfall would have been set forth in a footnote. The facts would have been the same and the prospects of future income would have been no more or less because of the change in form of financial statement. Yet the earnings-price ratio resulting from the application of Mr. Joseph's method, that is, his uncritical acceptance of the published figures, would have been 75 per cent higher, merely because of the form in which the facts happen to be [15759] reported.

This undue respect for the form as distinguished from the facts and substance of published information has resulted in inconsistent treatment of similar items in the preparation of the data presented by pages 38 and 38-A.

Q. Will you illustrate what you mean by this last assertion regarding inconsistent treatment of similar items? A. Published statements of income often are not "normalized" as they were in the case of the Commonwealth Edison and Pacific Gas, to eliminate significant effects of "windfalls" or other non-recurring situations.

For instance, the income statement of Idaho Power Company for 1945 was not in a form comparable with those of the two last-named companies with respect to treatment of tax windfalls. Non-recurring income amounting to 50 cents per share, representing the effect on income

taxes of recomputation of amortization of war emergency facilities and related to previous years, was included in the earnings of $1,316,336 shown by page 38-A.

The acceptance of the published figures in the computation of earnings-price ratios shown on pages 38 and 38-A disregarded many other kinds of non-recurring effects on income, such as, the write-off of abandoned property and profit from the sale of a radio station, which had been credited to income instead of surplus.

[15760] Q. As another illustration of the uncritical acceptance of published earnings per share, have you examined the testimony of Mr. Joseph at page 10459 where he said that in stating the earnings-price ratio for Commonwealth Edison on page 38-A he should not have made an adjustment for the call of the convertible debentures of that company and the following questions and answers on pages 10459 and 10460:

"Q. Wouldn't the number of shares, Mr. Joseph, which would be issued in the conversion dilute the per-share earnings?

"A. Yes, it would.

"Q. Would that dilution affect the earnings-price ratio of the company which you have shown?

"A. Not the one that I have shown. It might have an effect upon subsequent ratios.

"Q. Wouldn't it affect the meaning and the significance of the earnings-price ratios which you have shown?

"A. No, sir."

A. I have.

Q. Is Mr. Joseph correct in stating that the call of the debentures would not affect the meaning and significance of the earnings-price ratio? A. He is not.

Q. Why? [15761] A. The debentures were called on January 23, 1946, for redemption on March 9. On March 30 the date for which Mr. Joseph determined the market price of the common stock, the number of shares

outstanding had increased by 710,864 shares, as the result of the conversion, over the number outstanding on December 31, 1945. The interest of the previously outstanding shares in income was diluted.

The earnings-price ratio shown by page 38-A was incorrectly determined, since on March 30 the additional number of shares already had been issued and Mr. Joseph's calculation did not reflect the number of shares then actually outstanding. Thus, Mr. Joseph related the market price at March 30, to the situation existing prior to the conversion and not to the changed situation which existed at the time the price was esablished.

Of course, the effect on the meaning of the earnings-price ratios is not limited by the fact that the conversion actually took place prior to March 30. The effect would have been similar if the conversion had been in prospect prior to that date and had actually occurred at a later date.

Similar inadequacies are involved in any other failure to recognize or consider the effect of significant changes in capitalization, such as refinancing of debt or preferred stock, which are experienced during the accounting period or which are definitely anticipated at the date for which [15762] market prices are used. Since 1940, such changes have been numerous in the capitalizations of the companies represented on pages 38 and 38-A.

Q. Have you examined the statement of Mr. Joseph at page 10900 of the transcript—lines 11-16, that:

> "Well, as I remember it, for one thing the elimination of the preference common would have meant the elimination of the entire Philadelphia Electric Company statistics, because the information is not available for the preference common separately. I think that was the situation then, even if it isn't now."

A. I have.

Q. What are the facts as to the nature of the security and the availability of information? A. In spite of its name, this stock is not a common stock, but a cumulative

convertible preferred. The error due to misclassifications of this stock tends to reduce the earnings-price ratios in all months prior to about October, 1945, when the one-for-one conversion ratio between the market prices of the two issues was first reached. From that date, it is not incorrectly included among the common stocks, which is equivalent to assuming conversion of all outstanding shares of the so-called preference common.

The information was at all times available separately [15763] for the $1 preference common.

At no time was non-availability of information a valid reason for including this stock among the common stock on page 38-A. The lack of error in result after October 1945 is neither because the preference common is a common stock nor because information was unavailable. The lack of error is due to the happenstance that the conversion ratio was reached for the first time about October 1945.

Q. I call your attention to the statement by Mr. Joseph at page 10934 of the transcript—lines 17-19, as to his reason for not making any adjustment for the participating right of the 5 per cent preferred stock of Southern California Edison, that: "There is no right in the preference stock until the common stock receives a dividend which vests the right, so it seems to me, in the preference stock"? Is that a correct statement? A. In my opinion it is a correct statement but not a reason for failure to recognize or consider the participating right of the preferred stock in determining the earnings-price ratios for the common stock. The right of the 5 per cent preferred stock to receive participating dividends in excess of 6 per cent, is limited by the fact that the right does not exist until the common receives a dividend (in excess of 6 per cent) which vests the right. It is equally true that the right of the common to receive higher dividends is limited [15764] by the fact that it cannot do so without vesting a corresponding right in the preferred. Thus, the value to common stockholders of the retained income is affected by the con-

tinuing participating right of the preferred. The prospective productive capacity of retained income does not have the same value to the common stockholder as it would in the absence of the right of the preferred to participate.

Therefore, it is improper to treat the $5,472,196 in entirety as earnings applicable to the common stock.

Q. Have you examined the testimony at page 10976—lines 22-25 of the transcript:

"Q. Now let me see if I understand you. For the purpose for which you have offered page 40 of Exhibit 46 should those issues, which bear note No. 1, have been excluded?

"A. Yes."

A. I have.

Q. What is the footnote No. 1? A. It identifies offerings of shares already outstanding, which were being sold by a parent company or otherwise, and which did not represent new capital to the utility.

Q. How many common stock issues are listed on page 40 of Exhibit 46 as having provided new equity capital to electric utilities during the period 1935-1945, inclusive? A. Eleven, if the issue by Florida Power Company in [15765] October 1945, which is incorrectly labeled as not representing new financing, is included.

Q. For how many of the eleven are earnings-offering-price ratios shown? A. Eight.

Q. What is the aggregate of net proceeds representing new capital realized by the eight electric utilities during this period, according to the information supplied by page 40? A. Not more than $21,000,000.

Q. What is the average dollars of new capital realized per offering over this period? A. About $2.5 million.

Q. Do the earnings-offering-price ratios for these eight instances provide a useful indication of the cost of equity capital to electric utilities in general or to Pennsylvania Water & Power in particular? A. They do not.

Q. Why? A. The number of instances and the amounts realized per issue are too small, and the diversity of risk characteristics are too great to permit significant conclusion. In any case, the significance of the earnings-offering-price ratios presented on page 40 is impaired by errors committed in their determination.

[15766] Q. Have you examined the statement by Mr. Joseph at page 11028—lines 7 to 10 of the transcript which reads as follows:

> "Q. What you really show there for Sioux City, Mr. Joseph, instead of earnings-offerings price ratio, you merely show earnings-price ratios as you show on 38-A, don't you?
>
> "A. Yes, it is very much closer to that."

A. I have.

Q. Is this a correct statement? A. No. The ratio of 9.55 per cent shown in column L for the Sioux City common stock is neither the same kind of ratio as the earnings-price ratios presented by page 38-A nor is it the same kind of ratio as those presented by page 40. It is a hybrid ratio without meaning for either purpose.

Q. Have you examined the testimony of Mr. Joseph with respect to the data presented on the last line of page 40 beginning with page 10,979? A. Yes.

Q. Will you state as concisely as possible the facts with respect to the issue of common stock by Sioux City Gas and Electric Company? A. The common stock outstanding immediately prior to the financing transactions was 118,938 shares of $25 par value stock.

[15767] The old $25 par value common stock was eliminated and two shares of new $12.50 par value common stock were exchanged for each of the 118,938 shares of old common stock outstanding. An additional 118,938 shares of $12.50 par value stock was issued. Therefore, upon completion of the common stock financing transactions, 356,814 shares of $12.50 par value were outstanding, of which 118,938

shares represented new capital and 237,876 shares represented the old capital previously represented by 118,938 shares of $25 par value.

The total number of shares offered and underwritten was 153,006. This total consisted of 34,068 shares already outstanding, after the two for one exchange, and being sold by Iowa Public Service Company and the 118,938 shares of the new issue, subject to rights of common stockholders, other than the Iowa company to subscribe to 101,904 shares. The 51,102 shown on page 40 was the number of shares not included in the subscription offer.

The bid quotations for the old $25 par stock were 38.5 at the end of September, 1945; 45.5 at the end of October and 52.5 at the end of November.

The new shares of $12.50 par value were offered to the public at 28⅞; the bid quotations on the new shares in the market were 28¼ at the end of December, 31 at the end of January, 1946 and 28.5 at the end of February.

Q. How did Mr. Joseph determine the ratio of 9.55 per cent for Sioux City shown in the last column on page 40? [15768] A. Mr. Joseph used earnings per share of $2.76, determined by dividing income of $328,351, reported for the 12 months ended October 31, 1945 by the 118,938 old, $25 par value, shares then outstanding—Moody's Supplement, P. 1642, Dec. 12, 1945. He divided these earnings of $2.76 per share by $28.88, the offering price to the public of the new $12.50 par value shares, to obtain the ratio of 9.55 per cent shown in the last column on page 40.

Q. What were the earnings per share prospectively available to the new $12.50 par value shares? A. The application of proceeds from the common stock issue was principally to redeem outstanding 4 per cent mortgage bonds and 7 per cent preferred stock. New 2¾ per cent bonds and 3.90 per cent preferred stock was issued in principal amounts less than the principal amounts redeemed.

Therefore, the prior capital requirements were reduced by the series of transactions. The prospectus dated Dec.

12, 1945, includes at page 8 "a summary of pro forma statements of income" which indicates, for the 12 months ended August 31, 1945, equity income of $580,000 on the basis of the pro forma interest and preferred dividends, and equity income of about $793,000 if the Revenue Act of 1945, enacted November 8, 1945, had been in effect for the 12 months' period.

Q. What is the earnings-offerings price ratio for the Sioux City common stock on the basis of the pro forma income? [15769] A. If determined on the basis of prospective income of $793,000 the earnings-offering price ratio is 7.7 per cent.

It should be understood that this basis reflects adjustment for the change in Federal income tax rates, but does not reflect the prospective income producing capacity of the approximately $412,626 of additional capital realized from the transactions or any other prospective change in circumstances not reflected in the pro forma statement.

Q. Have you examined the statement of Mr. Joseph at page 10989 of the Transcript—lines 3-6 that:

> "I related the earnings on the old shares, the price from the old shares determined on the price which people pay for different but similar shares."

A. I have.

Q. Were the old Sioux City $25 par value shares similar to the new $12.50 shares? A. No. They were quite dissimilar.

Q. Should the earnings per share on the old shares have been related to the offering price of the new shares for the purpose of determining ratios? A. No, the earnings per share on the old shares should have been related to the market price of the old shares.

Q. Why? A. The purpose of determining earnings-price ratios [15770] or earnings-offering price ratios is to indicate investor appraisals. The earnings per share on old shares related to the offering price of new shares indi-

cate neither appraisals of the old investors nor appraisals of the new investors, unless by accident.

Q. At page 11,609 of the Transcript—lines 17-24, referring to the earnings of 71 cents per share and the earnings offering price ratio of 4.44 presented on page 40 for the Central Vermont Public Service Corporation offering of 194,295 shares in December, 1943, Mr. Joseph said:

> "Q. Well, let me ask you this then: Shouldn't you have used the prospectus and the $1.53 which is shown in the prospectus instead of the 71 cents which is shown on page 40?
>
> "A. I will have to say that the $1.53 on the basis of my present recollection would probably result in a more accurate earnings-price ratio than that which is shown on page 40."

What should have been the earnings-offering price ratio to be shown in Column L, if the earnings shown in Column K are properly stated as $1.53 per share? A. 9.56 per cent.

Q. Do you agree that use of the $1.53 "would probably result in a more accurate" earnings-offering price ratio? A. I would say that it is more than a probability.

[15771] The 4.44% is completely erroneous and without significance.

Q. Why do you say that the 4.44 per cent is completely erroneous? A. The earnings of 71 cents per share, upon which the earnings-price ratio of 4.44 per cent is based, represents equity income of $228,003 for the 12 months ended 2/28/44, divided by the 323,000 shares outstanding as at that date.

The 323,000 shares were the number of shares outstanding after completion the previous December of transactions in connection with a plan under Section 11 (e) of the Holding Company Act filed with the SEC. The reported income for the 12 months ended 2-28-44, however, did not

reflect, except in minor part, the conditions created by the transactions incident to the Section 11 (e) plan.

Prior to the delivery of this common stock to the purchasers Twin State Gas & Elec. Co. had been merged with Central Vermont, the Vermont and New York properties of Twin State Gas and Elec. Company had been acquired by Central Vermont and $500,000 principal amount of 3¼% bonds had been sold.

The balance of income after preferred dividend requirements applicable to the property of Twin State to be merged is shown by the pro forma income account contained in the prospectus (p. 38) before adjustment, as $286,280 for the 12 [15772] months ended August 31, 1943.

The $228,003 of equity income for the 12 months ended February 28, 1944, used for the purpose of page 40 of Exhibit 46 was not reported for more than three months after the sale of the Central Vermont common stock. The use of this earnings figure was erroneous in that respect, since, even if it had been related to the property represented by the common stock, it would be information not available until after the date of offering. The $228,003 of equity earnings, however, reflected only the operations of the Central Vermont properties for the period prior to the merger in December and did not include income from operations of the acquired properties.

The facts were readily available from the prospectus and the prospectus was readily obtainable.

Q. Dr. Foster, are you familiar with the statement of Mr. Joseph at page 1000 of the transcript that in his opinion Exhibit 46 "furnishes the Commission with a comprehensive statistical background, and affords a sound basis for the exercise of judgment in the establishment of fair rate of return" for Penn Water and Susquehanna Transmission Company of Maryland? A. I am.

Q. Is that statement of Mr. Joseph's correct? A. No.

[15773] Q. Why? A. Regardless of its physical volume, Exhibit 46 does not include the information that would provide for the Commission an adequate and sound basis for the exercise of judgment in the establishment of a fair rate of return for Penn Water.

In my opinion, no regulatory commission, however expert or experienced, could establish a fair rate of return for Penn Water, or any other utility company on the basis of the information and analyses contained in Exhibit 46 and the related testimony.

Q. Have you considered in this connection the testimony of Mr. Joseph at page 9936 of the transcript that the charts and tabulations in Exhibit 46 are the same as, or are similar as to the nature of their contents, to the exhibits with respect to fair rate of return presented in other electric utility proceedings before the Federal Power Commission? A. Yes.

Q. Does this use of similar exhibits in prior proceedings influence your opinion as to the adequacy of Exhibit 46? A. No.

Q. Why not? A. Charts and tabulations which are presented in [15774] substantially unchanged form from one rate proceeding to another, aside from being brought down to date, may indicate trends in the securities markets, assuming that the data are prepared in a workmanlike manner.

Such charts and tabulations, however, are not designed either (1) to present facts as to the capital costs actually experienced by the particular utility for which the fair rate of return is to be established or (2) to present evidence of investors current appraisals of the particular utility, or (3) to disclose the risk characteristics which differentiate the particular utility from other enterprises and which must be known if the cost of its capital is to be estimated by comparison with the costs being experienced by other enterprises.

Q. In this connection, have you considered the statement by Mr. Joseph at page 9956 of the transcript—lines 18 to 23—that "returns required by investors depend upon the investors' appraisals of the risks present in the investment", and the statement by Mr. Joseph at the top of page 9958 that "the cost of capital depends upon the investor's appraisal of the risks present in the investment"? A. Yes.

Q. Does Exhibit 46 include any data as to the investor appraisals of the risks present in the Penn Water investments? A. Exhibit 46 does not by design include any indication of [15775] investors appraisals or of the costs of capital unique to Penn Water.

Q. Will you please explain that answer? A. Penn Water is not identified on any schedule or chart of the exhibit except on page 38-A. On page 38-A the earnings-price ratio for the Penn Water common stock is supplied on the basis of the market price for a single day, but apparently because the Penn Water common stock happened to be in a group used in this exhibit and in previous similar exhibits for the purpose of constructing an index of earnings-price ratios.

In the presentation of the trend series on page 38, however, the Penn Water earnings-price ratios, although readily available from the working papers, are submerged and concealed in weighted averages which are dominated by the large utilities.

Q. I call your attention to several statements by Mr. Joseph. At page 11,591 of the Transcript, lines 10-13 he stated:

> "Credit would be that element which permits the utility to proceed in its operations without financial embarrassment, and which enables it to raise the money necessary for the proper discharge of its duties."

At the bottom of page 11,591 and at the top of page 11,592, Mr. Joseph [15776] stated:

"I can gain a pretty fair idea of the credit of an enterprise by the relationship of the prices of its securities with the relationship of the prices of other similar securities.

"Q. So that it is correct to say that the measures of the credit of an enterprise are the yield rates at which creditors buy bonds as well as the earnings-price ratios, if those earnings-price ratios express the prospective return basis upon which the stock is sold in the market?

"A. I think that is a fair statement, yes, sir."

Further at page 11,594 of the transcript he stated referring to a quotation from the F. C. C. rate of return report:

"It is believed that the financial and operating characteristics of a particular utility eventually dominate the investing public's evaluation of its securities is quite true."

Are the propositions set forth in the statements which I have just read as to the determinants of investor appraisals and the credit of an enterprise reflected in Exhibit 46? A. No.

Q. In making your statement that Exhibit 46 does not provide for the Commission an adequate and sound basis for the exercise of judgment have you considered the testimony of [15777] Mr. Joseph at pages 10,954 and 10,955 as follows:

"Q. What is the significance and meaning of the earnings-price ratios shown in the last column of page 40 of Exhibit 46 for the purpose of the determination of the fair rate of return to Penn Water?

"A. Here we have a list of all of the common stocks of Electric operating utilities offered to the public during the period 1935 to 1945. The last column shows the earnings-price ratio as at the time of the offer. Looking at that column you have a view of cost

of capital on common stocks to these utilities. This, then, combined with the information shown at pages 38 and 38 (a) would give you an idea of what rate should be allowed on the equity of Pennsylvania Water and Power in a rate proceeding.

"Q. How would you get an idea of what should be allowed, Mr. Joseph, in that respect by examining the earnings-offering price ratio shown in the last column of page 40?

"A. Well, your own mental processes would determine that. You are interested in finding out what is fair to allow for Penn Water. Well, you say, in accordance with the Bluefield case and in accordance with the theory generally, 'We will allow what investors seem to be requiring.' You look at page 40 and pages 38 [15778] and 38-A, make up your mind as best you can what that requirement is."

A. I have.

Q. Do those statements correctly describe the use of pages 38, 38-A and 40 for the purpose of determining the equity capital component of a fair rate of return to Penn Water? A. No.

Q. Why not? A. I know of no "mental processes" by which it is possible from examination of pages 38, 38-A and 40 of Exhibit 46 to determine or even approximately estimate what "investors seem to be requiring" from investments in Penn Water.

The function of expert testimony is to present the facts and analyses which facilitate a considered exercise of judgment. The purpose is not to tell the Commission what to do, but it is not sufficient to present a mass of partially unrelated and wholly undigested facts and say "make up your mind as best you can."

Assuming the experience of the Commission in the particular field, its expertness and capacity for qualitative judgment, the exhibit provides no factual basis for evaluat-

ing the risk characteristics unique to Penn Water. Neither does it provide any factual basis for estimating the bias introduced by choices of method. For example, the [15779] low-earnings-price ratios shown on page 38-A are substantially the result of choice of method.

Q. Have you considered the statement by Mr. Joseph at the bottom of page 10,958 and the top of page 10,959 that Exhibit 46 meets the requirements of the Bluefield decision that: "A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties." A. I have.

Q. Is that statement of Mr. Joseph's correct? A. No.

Q. Why not? A. Neither in connection with the earnings-offering price ratios presented on page 40 or the earnings-price ratios presented on pages 38 and 38-A, nor in connection with the yields on bonds and preferred stocks shown elsewhere in Exhibit 46, is there identification or attempt at identification of enterprises which have risks and uncertainties corresponding to those of Penn Water.

Q. At page 10,960 Mr. Joseph said that all of the companies on page 40 of Exhibit 48 are companies comparable [15780] to Penn Water so far as risks and uncertainties are concerned as that latter term is used in the Bluefield case. Is that statement correct? A. No.

Q. Why not? A. The range of the differences shown on page 40 among the ratios of earnings to offering price, upon which the common stocks were purchased by investors is a sufficient demonstration of the fallacy of the assertion. Omitting the 4.44 per cent in the case of Central Vermont Public Service Corporation, which is an error, the range is from 5.37 per cent in the case of the Derby Gas

and Electric Corporation issue, with 7 instances higher and 12 instances lower than 9 per cent.

Q. At page 10,962 Mr. Joseph said that the requirements of the Bluefield decision, where it refers to investments in companies having corresponding or comparable risks and uncertainties, are satisfied by a presentation of data for companies merely of the same general class, that is, electric operating utilities having risks and uncertainties corresponding or comparable to Penn Water's risks and uncertainties? A. No.

Q. Will you please explain your answer? A. Operating electric utilities, although supplying generally the same type of service, vary widely from Penn Water as to risk and uncertainty. The latest available [15781] Directory of Electric Utilities in the United States, published by the Federal Power Commission, lists 1150 privately-owned electric utilities, not including industrial organizations furnishing energy to others as an incidental part of their operations.

This total includes enterprises of the most widely diverse investment and operating characteristics. The enterprises identified on page 40 of the exhibit as having issued common stocks from 1935 to 1945 are Class A or B electric utilities.

There were a total of 322 Class A and B electric utilities in the United States at December 31, 1945. They include widely divergent operating, market, managerial, and investment situations. The differences in credit standing among utilities supplying a given type of utility service, such as electric, are far greater than the average differences among electric, gas, telephone or water utilities as classes.

Q. Are all the bonds listed on pages 23 and 28 as having been issued by electric operating utilities during the years 1941 to 1945, inclusive, comparable as to quality with the outstanding Penn Water bonds? A. No. The bonds listed on these pages are assigned ratings varying from Aaa

to Baa and the yields at offering price varied from 2.55 per cent to 5.15 per cent. The composite listing includes bonds of diversified character [15782] and quality. The Penn Water bonds are not included. No information is supplied as to which, if any, are comparable with the Penn Water Bonds.

Q. Are all the preferred stocks listed on pages 39 and 39-A as having been issued by electric operating utilities during the years 1935 to 1945 inclusive comparable as to quality with the outstanding Penn Water preferred stock. A. No. The yields at the prices at which these preferred stocks were offered to the public varies from 3.75 to 6.67 per cent. The Penn Water preferred stock is not included. Preferred stocks which are so unlike each other cannot all be comparable with the Penn Water preferred. As to which may be comparable, no information is supplied.

Q. Are all of the fourteen common stocks which are identified on page 38-A comparable with the Penn Water common stock? A. The question is answered by the fact that the highest of the earnings-price ratios is 84 per cent higher than the lowest and that for January, 1940, the highest of the earnings-price ratios was 73 per cent higher than the lowest among the 11 common stocks included at that time. Adjustment and interpretation of the earnings-price ratios are necessary to provide any fairly exact measure of the cost of equity capital but are not required to demonstrate the existence of wide differences in investment favor. Until the level [15783] of the risks associated with Penn Water has been indicated, by reference to appropriate data, an assumption that Penn Water corresponds to the average of such a group of other utilities is as arbitrary as an assumption that it corresponds to the best or worst.

Q. Would your last statement be true if the group of fourteen common stocks had been selected because comparable with Penn Water as to risk and uncertainty? A. It would not.

Q. Are the companies or securities which are identified on the various schedules of Exhibit 46 included as the result of methods or criteria of selection which involve comparability with Penn Water? A. No. The methods or criteria of selection did not involve any consideration of comparability with Penn Water.

Q. Dr. Foster, have you examined the statement by Mr. Joseph at the bottom of page 9949 that in preparing Exhibit 46 he "had in mind the Bluefield Water Works decision and particularly this quotation from it", referring to the excerpt which is copied at pages 9947 and 9948. A. I have.

Q. In this connection have you considered the statement by Mr. Joseph at page 10,102 of the transcript that:

> "Well, I have proceeded on the theory that the Commission is going to allow this utility a fair rate of return from what investors are getting on other similar investments. They are going to treat this utility fair. They are going to allow the utility to earn about as much as is being earned on [15784] similar investments generally"?

A. I have.

Q. Does Exhibit 46 represent an application of the principle, as expressed in the quoted paragraph from the Bluefield decision, that a public utility is entitled to earn a return equal to that generally being made at the same time on investments in other business undertakings attended by corresponding risks and uncertainties? A. No.

Q. Will you please explain that answer? A. Mr. Joseph said at the bottom of page 9974 that the word "investments" was used in the Bluefield decision to mean dollars being currently committed as investments. The word could not have had any other meaning in the context of the Bluefield decision. The Supreme Court stated that a public utility is entitled to earn a return on the value of its property and that it was erroneous for the Commission not

to accord proper weight "to the greatly enhanced costs of construction in 1920 over those prevailing about 1915 and before the war". Mr. Joseph has determined yields on bonds and preferred stock at their current market values. He has determined earnings-price ratios on the basis of current market values of common stocks. Thus, he has presented evidence of the cost of capital in a manner consistent with his interpretation of the meaning of the word "investments" in the quoted paragraph.

However, Mr. Joseph has assumed that the rate of return [15785] to be determined by the Commission will be applied to an entirely different kind of "investment", past investment, made many years ago in substantial part before the first World War, at a much lower level of general prices and construction costs. Therefore, a shift takes place in the definition and meaning of the word "investments". The rates of return being realized currently on other investments, expressed at present-day values, of corresponding risks and uncertainties, applied to a rate base representing original investment could give a result consistent with the Bluefield principle only by accident.

Q. Have you examined the statement by Mr. Joseph at the top of page 11,600, in answer to a question which appears near the bottom of page 11,598 and together read as follows:

> "Q. In your opinion are different public utilities entitled to higher or lower fair returns depending upon the periods of construction of their properties and the levels of construction costs during those periods?
>
> "A. Since in my opinion the fair rate of return would be the same without regard to the time of construction, the dollars of return would vary."

A. I have.

Q. Is there an economic basis for the conclusion that the dollars of return allowed by a regulatory commission as fair and reasonable should vary substantially with the

[15786] period of construction of the property and the level of constructions costs during that period? A. There is no rational basis for such a difference in treatment.

Q. Will you please explain the reason for your answer? A. The quoted paragraph from the Bluefield decision is consistent with the valid economic principle that a utility is entitled to a "return" equal to that being made at the time on other investments of corresponding risks. The Bluefield decision is not consistent with grossly unequal annual returns resulting from application of equal rates of return to unlike rate bases. Recognition of the economic undesirability of widely varying returns because rate bases are fixed to reflect different construction cost levels, frequently has taken the form of suggestions that, where original cost or prudent investment are to be used as a rate base, the desirable flexibility may be maintained by adjusting the rate of return.

Q. Have you examined the statement by Mr. Joseph at pages 11,584 and 11,585 of the transcript which reads as follows:

> "A. I have this in mind, Mr. Sparks: Utilities that have reasonable capitalizations would obtain substantially the same fair rate of return, other things being equal. • • •
>
> "Q. Are you saying, Mr. Joseph, that those utilities [15787] having reasonable capitalizations would have the same rate of return?
>
> "A. Would command approximately the same fair rate of return, yes, sir.
>
> "Q. When you use the word 'command' there, do you mean that they should be allowed the same fair rate of return?
>
> "A. Yes, sir."

A. I have.

Q. Are these statements consistent with the quoted paragraph in the Bluefield case to the effect that a utility

is entitled to a return equal to that being made at the time on other investments of corresponding risks? A. No.

Q. Will you explain your reasons for that answer? A. The statements at page 11,584 represent a shift from the idea of a return equal to those on other investments of corresponding risks to the idea of a return equal to the average on all other electric utility investments. The averages presented by Exhibit 46 are not averages which assume equality of choice by individuals among alternative investment opportunities. They are weighted averages, which assume that each individual investment is in proportion to the ratio of the capital of each enterprise to the aggregate capital of all the utilities in the class.

[15788] Q. Have you examined the statement by Mr. Joseph at page 11,585 of the transcript which reads as follows:

> "Q. I don't think that answers my question, Mr. Joseph. It was, what are the data which may be considered in a determination of the estimating of the cost of equity capital to Penn Water as a component of the fair rate of return.
>
> "A. The cost of equity capital to Penn Water is unnecessary in a determination of the fair rate of return for Penn Water. Furthermore, I am not at all sure it can be obtained."

A. I have.

Q. Is it correct to say that an estimate of the cost of equity capital to Penn Water is unnecessary in the determination of the fair rate of return for Penn Water? A. No.

Q. Have you examined the statement by Mr. Joseph at page 9963 of the transcript which reads as follows:

> "Q. Well, would you say then that the credit of an enterprise does depend upon the composite appraisal of investors as expressed in the market place?
>
> "No."

A. I have.

Q. Is that a correct statement? A. No.

[15789] Q. Why not? A. Mr. Joseph, himself, stated at the top of page 9958 that the cost of capital depends upon the investor's appraisal of the risks present in the investment. It is obvious that the cost of capital to an enterprise is directly dependent upon its credit. In this connection Mr. Joseph said at the top of page 11,592 that it is fair to say that the measures of the credit of an enterprise are the yield rates at which creditors buy bonds as well as the earnings-price ratios, if those earnings-price ratios express the prospective return basis upon which the stock is sold in the market.

Q. Have you examined the statement by Mr. Joseph at pages 10,324 and 10,325 as follows:

> "Should the carry-over on the bonds issued in 1928 affect the cost of capital in 1944? I say no, and I think that the fact that the carry-over may be either a debit or a credit dependent upon the style or fashion of financing in 1928 is a complete answer for my question. The utility during the period from 1928 to 1944 was charging rates sufficient to recover the costs of its capital, and that without regard to whether the bonds had been issued at a discount or a premium."

A. I have.

Q. Is that a correct statement? [15790] A. No.

Q. Why not? A. It must be assumed that the utility was charging rates sufficient to recover the costs of its capital on the basis of an assumption that the capital contracts would remain undisturbed until maturity. To disallow the unamortized costs in rate of return determination is to penalize investors for inability of management to forecast trends of capital costs. It would be an application in rate regulation of a rule of hindsight rather than of foresight.

It is obvious that a discount or a premium may be experienced depending upon the selection of coupon rate which seemed most desirable at time of financing. The ex-

perience may reflect "style or fashion of financing in 1928". It does not follow that it reflects imprudent managerial decisions. Premiums payable upon redemption of outstanding bonds are an unavoidable cost of the opportunity to obtain debt or preferred stock capital at the currently low rates. Retroactive application of revised regulatory standards, which deprive utilities of the opportunity to recover unavoidable costs, or penalize investors for managerial decisions which were rational and prudent when made, increases the hazard associated with utility investments and tends to increase the returns demanded by equity investors.

• • •

[15802] CROSS-EXAMINATION.

By MR. GOLDBERG:

• • •

[15819] Q. In stating the first alternative in your prepared testimony you say it is to "adjust the earnings-price ratios in order to recognize some of the obvious circumstances considered by investors in arriving at their appraisals, and, in addition, to recognize the existing significance of circumstances for which quantitative adjustments are not feasible."

Now then, you speak of recognizing only some of the obvious circumstances. Will you tell us why in the first alternative mentioned by you recognition is to be given only to some of the obvious circumstances and others are not to be recognized? [15820] A. I believe that recognition and consideration should be given to all the obvious circumstances influencing investor-appraisals and having a bearing on the extent to which the arithmetical relationship between reported earnings and market price may be misleading as an indication of capitalization rates. The point is that in the process of giving such recognition and consideration to those circumstances some are susceptible of quantitative recognition and some are not.

I may observe further that the testimony to which you have referred relates particularly to page 38-A of Exhibit 46; that the observations there made as to procedures which would have given significance to the data are particularly in recognition of that page of exhibit independently of page 38, the preceding page.

• • •

[15887] Q. You have at transcript 15,759 stated that undue respect for form, as distinguished from fact and substance, has resulted in inconsistent treatment of similar items in the preparation of the data presented by pages 38 and 38-A.

I was interested in securing from you all of these examples of inconsistent treatment of similar items. I understand that you have not made a study which enables you to tabulate all of them, but you say you are aware of a certain number of them.

I was interested in getting from you the inconsistent treatment of similar items of which you are aware. A. That particular category, of course, refers only to non-recurring items which were of the character which might have been adjusted for in the income statement which was published.

Q. May I interpose at that point?

In your last answer I take it that the reference in lines 2 to 5 at transcript 15,759 is to the category referred to by you as non-recurring items of a character which might have been adjusted for in the income statement which was published. Is that right? A. Yes.

Q. Idaho Power Company was an illustration of one of that character? A. Idaho Power Company was an illustration. The practice [15888] of adjusting for significant non-recurring tax savings is, of course, a relatively recent development. Its development was coincidental with the war-time increase in income tax rates, and as the result during the latter part of the period reflected on page 38 the

adjustments were generally already made in the published income statements, and during that latter part of the period Idaho Power is, I believe, the only instance of that particular kind of non-recurring item for which adjustment had not already been made in income statement.

I believe during the earlier years there will be found instances where it was not made in published income statements.

Q. You say that of recent years adjustments are already reflected in the published statements. Does that begin with 1943, or what year? A. I am sure it was not a change of form which had any abrupt beginning. I will place it generally at an earlier date closer to 1941, 1941 and 1942.

Q. Now, then, can you give us these other instances of which you are aware where there has been the inconsistent treatment of similar items in the preparation of pages 38 and 38-A of the category which you have indicated your statement had reference to? A. Limited to that particular category, adjustment for federal income tax savings, I have in mind no illustration, I think it is correct to say there were such federal income [15889] tax savings in connection with refinancing of debt or other transactions which gave rise to unusual deduction from net taxable income, and if analysis were made, such illustrations could be found for the year 1940, perhaps for latter years, and certainly for earlier years.

Q. You have not made that analysis? A. I have not.

Q. Considering your illustration as respects Idaho Power Company, is it your suggestion that the 50 cents per share, or a total of approximately $225,000, should have been deducted from the reported net income available for common before determining the earnings-price ratio?

You will find that also on transcript 15,759, Dr. Foster.

A. May I have the question, please?

(Question read.)

THE WITNESS: I believe that if the amount to which you refer is deducted, the resulting net income is a better statement of earnings available to the equity or per share under the conditions existing during the year 1945.

By MR. GOLDBERG:

Q. My question is, is it your statement that that should have been done, that the deduction should have been made before determining the earnings-price ratio? A. Well, I have testified that my position is that the earnings should be so stated as to provide the best possible [15890] expression of earnings under the conditions existing during the period, or that in lieu of such arithmetic treatment, consideration should be called to the facts and their significance indicated.

Q. Either one of those, in your opinion, should be done in determining the earnings-price ratio? A. Either the one or the other as a general proposition and, of course, the reference to Idaho Power Company, the 50 cents per share, is intended as a mere illustration.

Q. Using Idaho Power Company for the sake of the question, you are saying one or the other should be done in determining the earnings-price ratio, either a deduction or calling attention to the fact. A. Either deduction and calling attention to the related circumstances, or calling attention to the particular fact among other circumstances which influenced the prospect of income.

Q. With respect to Idaho Power Company, what other circumstances do you have in mind? A. We have already reviewed a substantial number of other circumstances which were common to Idaho Power Company as well as to others of the 14.

Q. You mean the effects of the tax laws and increasing demand for service, electric service wage trends, things of that nature that we have earlier discussed. Is that it? [15891] A. That is right, although you were the one who included the atomic power.

Q. Yes.

TRIAL EXAMINER: Did you make a check calculation using earnings and prices to obtain a comparative earnings-price ratio for these 14 companies appearing on page 38-A?

THE WITNESS: As of that date, and taking into account the circumstances which we are discussing?

TRIAL EXAMINER: Yes.

THE WITNESS: No, I have not. I did do so for the smaller group of six in connection with my direct testimony.

I should amend that statement. I did so for earlier years since at the time of the direct testimony the annual reports and other information were not yet available for the year 1945.

TRIAL EXAMINER: Have you done anything on those six companies since you last appeared on the stand in connection with your rate-of-return testimony?

THE WITNESS: I have in other connections, Mr. Examiner. I have not been asked to bring the exhibit up to date and it would, in fact, contribute little or nothing to the conclusions to bring it up to date.

TRIAL EXAMINER: But in those calculations you would have a direct comparison for the corresponding earnings-price ratios that are on page 38-A for those six companies.

[15892] THE WITNESS: I would have a direct comparison with the corresponding earnings-price ratios which are on the working papers and which are reflected in the form of averages on page 38.

By MR. GOLDBERG:

Q. Dr. Foster, we have just talked about one adjustment specifically in dollars and cents; that is, the 50 cents per share adjustment. What other adjustments should be made to the reported earnings, reported net income avail-

able for common of Idaho Power Company before determining the earnings-price ratios?

In asking that question I am not merely interested in the general nature of the adjustment but I am interested in the cents or dollars of adjustment. A. I may say this, Mr. Goldberg: The awareness of the nature of adjustment, or the consequence of failure to recognize trends and existing circumstances, does not depend upon having made a precise calculation of dollar amounts, and, further, that I have not assumed the burden of making such calculations for the 14 companies represented on pages 38 and 38-A of Mr. Joseph's exhibit.

• • •

[15893] Q. Would the consideration of all the necessary adjustments materially affect the net income available for common in connection with the determination of the earnings-price ratios other than the 50 cents per share we have already discussed? A. Consideration of all of the circumstances would indicate a material difference between reported equity income and equity income prospectively available at the time for which these prices are taken.

Q. What adjustment do we make in addition to the 50 cents per share for consideration of all these other necessary adjustments? A. If you are asking me for indication of the kind and character of such adjustments, I am unable to respond.

Q. No, I am talking about the dollars and cents of the adjustments. A. I have answered that question.

Q. You mean you cannot tell us? A. I can tell you, for instance, that the excess profits tax liability of the Idaho Power Company was $665,000 for the year 1944; it was $260,000 for the year 1945, and would have been substantially more in the absence of non-recurring credits; that the federal income tax for the year 1945 is [15894] $645,000, and that the prospective effect of the rates established by the 1945 Revenue Act was a significant and substantial reduction of those federal tax liabilities and a

corresponding increase, everything else being equal, in equity income.

Q. Taking all of that into account, which you say the investor takes into account, can you tell us what dollars and cents adjustment we are to make in the net income available for common before using it to determine the earnings-price ratio? A. I have had no occasion to prepare precise dollars and cents estimate.

Q. Can you approximate it? A. Not without expenditure of time.

Q. Does the investor make a quantitative adjustment for all these matters you have discussed? A. A careful, refined investment analysis certainly would have done so.

TRIAL EXAMINER: What do you mean by "refined"; anything more than careful?

THE WITNESS: Perhaps not, Mr. Examiner. I was using the word "careful" in the sense of care and accuracy, and the word "refined" in the sense of consideration of all or substantially all, of the pertinent considerations.

By MR. GOLDBERG:

[15895] Q. Isn't it a fact that after an investor had done all that he might still end up with no more of an adjustment than 50 cents per share because of the offsetting nature of some of the adjustments you consider? A. Certainly. The investor making his adjustments and recognizing the trends and the circumstances may find them to be offsetting. It is equally true that at other times they are not offsetting but have their influence in the same direction. Therefore, it follows that if, as a matter of accident, they are offsetting, the earnings-price ratios computed as they are computed for the purpose of Exhibit 46 tend to be representative and usable.

If, as a matter of accident, they are not offsetting, then they may be wide off the mark.

[15896] Q. Do non-recurring items occur nearly every year? A. During the recent years, particularly since the high income tax rates have motivated readjustments, corporate and otherwise, non-recurring items have tended to be present continually. That is far from true in the same degree 15 or 20 years ago.

Q. Would you say that with respect to the immediate future they will tend to appear nearly every year? A. I would say that the motivation to sell surplus property, to obtain benefits from write-off of debt discount and expense, etc., will not be as strong as it has been for the past half-dozen years.

Q. Does that mean that in the immediate future you think non-recurring items won't tend to appear every year? A. I have no basis for conclusion as to that. I assume you are referring to any particular company.

Q. When the investor considers these non-recurring items and makes allowance for them, does the allowance he makes reflect in the price he pays for the stock? A. I am trying to understand the question. I may put it this way: If in the case of a given enterprise there is experience during a year of a non-recurring tax saving, so-called, which increased earnings per share by 50 per cent of what they otherwise would have been, investors would tend to disregard the additional 50 per cent of earnings in appraising [15897] the future.

Q. And pay a price accordingly? A. And pay a price accordingly, yes.

Q. Now, then, if the actual income as reported of the Idaho Power Company had been adjusted by this 50 cents per share, it is a fact, is it not, that the earnings per share would have been reduced from $2.92 to $2.42 per share? A. That would be the effect on earnings of that particular adjustment.

Q. And the earnings per share to December 31, 1946, of Idaho Power Company were $2.74 per share. Isn't that so?

MR. SPARKS: May I have the question, please?

TRIAL EXAMINER: Yes.

MR. GOLDBERG: I might be able to help you by showing you photostatic copies of pages 1592 and 1593 of the February 8, 1947, supplement to Moody's Public Utilities.

(Question read.)

THE WITNESS: $2.74 is the earnings per share as reported by Moody's Public Utilities for the 12 months ended December 31, 1946.

By MR. GOLDBERG:

Q. That is mathematically a difference of 32 cents between the $2.74 and the $2.42, is that right? The $2.42 is the earnings per share after adjustment of the 50 cents per share? [15898] A. A difference of 32 cents.

Q. The difference between the earnings as reported to December 31, 1945, which Mr. Joseph used and the actual 1946 earnings which we have just referred to of $2.74 is only 18 cents per share, namely, the difference between $2.92 and $2.74. Isn't that so? A. I am lost with these figures. May I have it read?

(Question read.)

THE WITNESS: That is right.

By MR. GOLDBERG:

Q. You have at transcript 15760 and 15762 criticized Mr. Joseph's opinion with respect to the conversion of the convertible debentures of the Commonwealth Edison Company and their relationship to the earnings-price ratios which were used by Mr. Joseph. Have you determined what effect on earnings available for common was brought about by that conversion? A. I have made the analysis for Commonwealth Edison Company for the year 1945. I do not have that analysis here and I do not recall that in that connection I made a separate determination of what

the result would have been with reference to the effect of the treatment of the convertible debentures.

Q. Does that mean that you can not tell us what the effect would be on the 5.35 per cent shown on page 38-A of [15899] Exhibit 46 for Commonwealth Edison Company? A. The effect would be the arithmetic result of increasing equity income by the requirements of the debentures and dividing that amount of income by a number of common shares increased to correspond to the number which would be outstanding after the conversion. I have not made the arithmetic computation.

Q. You would have to take into account in that computation, wouldn't you, the Federal income tax effect? A. That is correct.

Q. We have, we think, made the correct computation, and according to our computation the 5.35 per cent becomes 5.14 per cent. I would appreciate your checking that and to facilitate that check we will be glad to supply you with the method we used in arriving at that result. A. I will be glad to accept it. It appears within the range of what I would expect it to be.

Q. Yes. And of course changing the 5.35 per cent to 5.14 per cent wouldn't have any effect on the 4.99 which is the average at the bottom of the last column on page 38-A. Isn't that so? A. It would have very insignificant effect. I may comment that I believe the choice of methods should not be controlled by the direction of effect of alternative methods nor by the quantitative [15900] effect in a given situation if in other situations the quantitative effect might be substantial.

Q. You seem to have anticipated a question I had much later on, but I think I will wait until we get to that.

You have testified at page 15765 that the significance of the earnings-offerings-price ratio, at the bottom of the page, presented on page 40 of Exhibit 46 is impaired by errors committed in their determination. Isn't that right? A. That is right.

Q. To what errors do you have reference, Dr. Foster? A. I believe I have illustrated the errors by particular reference to the determination for the offering of common stock by Sioux City Gas and Electric Company and the offering of common stock by Central Vermont Public Service Corporation.

Q. I am interested in getting all these other errors on page 40. Are you in a position to tell us what they are? A. Again I have not felt myself under the burden of making determinations in each and every instance. I have made such an analysis of each of the issues represented on page 40 for my own purposes rather than for the purpose of identifying or measuring the effect of errors which in my opinion Mr. Joseph may have made.

Q. Does that mean that you can not name or specify all the errors committed in the preparation of page 40 of [15901] Exhibit 46 which impair the usefulness of that page other than the illustrations for Sioux City Gas and Central Vermont Public Service? A. Impairment is a matter of degree.

Q. Just as you have used it, Dr. Foster? A. The two issues to which you refer were the instances in which I found the most significant errors. In other instances I would not and did not reach results precisely corresponding to those reached by Mr. Joseph. It perhaps should not be expected that two analyses would do so. There are other instances where the variation is significant; there are still others where it is not. I would have to make a comparison issue by issue in order to tell you what the differences are. I would have to go further and study them in order to determine what his errors are, if there are errors in all instances.

In other words, without description by Mr. Joseph as to how he reached the statement of earnings-offering-price ratios in each instance reconstruction of his methods at times becomes guesswork?

Q. Do I understand that when you stated the significance of the earnings-offering-price ratios presented on page 40 is impaired by errors committed in their determination, you had not made the analysis that you have just stated you would have to make? [15902] A. I have made an analysis for the greater part of the instances which was an attempt, on the basis of the information available, to determine what his method was.

Q. Does that mean that you have made the necessary detailed study to enable you to say that there are other errors on page 40, other than those committed with respect to Central Vermont and Sioux City, and that these other errors impair that presentation on page 40, significance of the presentation on page 40? A. I believe there are other errors and that they do tend to impair the presentation although they are not errors of the somewhat gross character represented in these two instances.

Q. What are these other errors you have determined were made in the presentation of the material on page 40? A. I will have to review notes for a minute to answer that question.

* * *

MR. GOLDBERG: Mr. Examiner, before we proceed I wonder if we could have the reporter check several matters in the record so that we may have them before the witness Watchorn [15903] returns?

TRIAL EXAMINER: Yes.

MR. GOLDBERG: It appears to me that the answer is missing at the bottom of transcript 15552. The page ends with line 25, but I feel the answer was made and would have appeared as line 26. I would like to have the record checked on that, and what the answer is if there is an answer.

TRIAL EXAMINER: Very well.

MR. GOLDBERG: There are two other places. Unfortunately, I didn't review the record until the record

got cold. I can't figure out what the word should be. Transcript 15583, line 12, my recollection, without having the record before me right now, is that the words I have doubt about are "finance. Judge." Then it stops there. I don't think the word "finance" is right. It doesn't seem to have any meaning.

Then at transcript 15584, line 19, in the question I asked, the word "finance" again appears. It doesn't seem to make sense in the question, I can't think of what the word was, and I was probably using the word the witness suggested earlier.

If we could have those matters checked and have them before the witness Watchorn returns I think it would be helpful.

TRIAL EXAMINER: Can you make a spot check, Mr. Reporter, during the luncheon hour or during the evening?

By MR. GOLDBERG:

[15904] Q. Dr. Foster, will you now name these other errors which impaired the significance of the earnings-offering-price ratio presented on page 40? A. First a general reference to the inclusion or exclusion of offerings and the statement of number of shares offered. There are a substantial number of offerings which are not included on page 40 where the circumstance of offering is the same as the circumstance existing in the case of offerings which are included. The statement of number of shares offered is in my opinion erroneous in that it does not reflect the full number of shares exposed to appraisal in instances of exchange offers which were underwritten.

With more particular reference to the earnings-offering-price ratios as shown by page 40, I will refer to the offerings beginning with the most recent in point of time other than the Sioux City Gas and Electric Company offering in December, 1945. The immediately preceding issue was that by Montana-Dakota Utilities Company in October

of 1945. The earnings per share available to support that issue are shown by page 40 as 72 cents per share. The 72 cents represents, I believe, reported earnings per share available from a public source, probably Moody's Public Utilities. The offering prospectus dated October 26, 1945, includes a pro forma income statement for the year 1944, which shows gross income before income taxes of $2,847,332. The statement of earnings per share, [15905] on the basis of the Federal income and excess profits taxes, actually payable for the year 1945, determined by reference to the pro forma statement of income, is approximately 86 cents per share on the 900,000 shares to be outstanding.

... that connection it may be noted that the net proceeds were indirectly applied by the company toward payment of the purchase price of the outstanding securities of Dakota Public Service Company.

Q. Before you go on, Dr. Foster, the 72 cents per share shown on page 40 is related to offering of 233,351 and 4/10 shares. Your 86 cents is related to some 900,000 shares. A. The earnings available per share on the shares being offered are necessarily the earnings per share on the total number of shares to be outstanding, including the shares already outstanding and the shares being offered.

Q. And your 86 cents is on all the shares which would be outstanding, including the offering? A. That is correct.

Q. Is that right? A. Yes.

Q. And is it your statement that the 72 cents merely is related to the number of shares offered column? A. No, I did not so state.

Q. All right. A. I said that the 72 cents is, I believe, available [15906] from reported earnings per share.

Q. I understand now. I had misunderstood. A. I do desire at this time in this connection to say that I do not have with me the notes which I made reflecting my investigation of the earnings per share as stated on page 40. The offering prospectus also disclosed the amounts of the Fed-

eral tax liabilities, and it should be noted that as of the date of this offering the proposed revenue act was before Congress and it was signed on the 8th of the following month.

If adjustment is made for the effect of that legislation, assuming all other circumstances to be unchanged, the earnings per share become $1.32. It may, I believe, be reasonably concluded that the investor appraisals of that offering were on the basis of prospective earnings in excess of 86 cents per share but less than $1.32 per share.

Q. Why do you say that? A. Pardon?

Q. Why do you say that? A. Because in general, analyses were discounting the savings prospectively to be released by the elimination of the excess profits tax.

Q. Was their appraisal closer to the 86 cents or closer to the $1? A. I made, Mr. Goldberg, approximately a year ago, an [15907] analysis which consisted of a correlation, or a multiple regression analysis, of the relationship between earnings-price ratios and proportionate gross income available to the equity and the dividend pay-out ratio. The closest relationship existed on the basis of an assumption of 60 per cent of the released tax savings becoming available. The character of that statistical analysis provided a fairly satisfactory indication of the appraisals of that particular factor.

Q. Then I take it you would say that the investor's appraisal was based on about 94 cents per share? A. I have not applied the 60 per cent here, but it is approximately 86 cents plus 60 per cent of the difference between 86 cents and $1.32.

Q. I was saying the difference between 86 cents and $1. It would be higher than 94 cents, then. Then $1.13 in round figures? A. Yes, recognizing that this method of splitting earnings per share does not give precisely correct results because it is not the same as applying the 60 per cent to the difference in total equity income.

Q. If I understand what you have just told us with respect to Montana-Dakota Utilities Company, you say the representation on page 40 erred in using 72 cents as the earnings per share instead of the 86 cents or the $1.32. Is that right? [15908] A. I believe that it erred, first, in not considering the information available from the prospectus, and, secondly, in not giving consideration to the consequence of tax revision which, as it happened at that time, was currently the significant factor.

Q. And the consequence of the tax adjustment, of course, is only one of the many adjustments you say the investor would be considering in making. Is that right? A. The investors are concerned with the several trends and circumstances which affect the prospective income. I would say merely that the revision of the war tax legislation being currently under consideration, it was important in the minds of investors.

Q. Does that complete your statement with respect to Montana-Dakota Utilities Company or are you going to give us what you consider is the correct earnings-offering-price ratio in lieu of that 6.26 per cent? A. On the basis of what I have already said it is readily possible to compute an earnings-offering-price ratio.

[15909] Q. Have you computed it? A. I have not.

Q. Does that complete your statement with respect to the errors in the representation shown for the Montana-Dakota Utilities Company; and if so, I would appreciate your going on to the others? A. The next offering listed on page 40 is the offering of 142,957 shares by Florida Power Corporation in October of 1945. In that case a total of 539,240 shares were being sold, of which 396,383 were being sold by General Gas & Electric Corporation and 142,857 shares by Florida Power Corporation.

Then to complete the statement of the circumstances, 76,793 shares were reserved against subscription by certain stockholders, 21,553 shares were in fact subscribed and the balance purchased by the underwriters.

With reference to the $1.02 of earnings shown per share, my recollection is that the prospectus was consulted by Mr. Joseph and that the $1.02 reflects that examination. The recollection is only of my earlier review and Mr. Joseph's testimony.

Q. I am not so much interested in what Mr. Joseph looked at as I am interested in finding out if you agree or disagree with the $1.02, and if you disagree what you think the showing should be. In other words, you talked about number of shares offered. You feel the number of shares [15910] offered in that column on page 40 is not the proper showing?

Then I would like to have your statement as to what is the proper showing without the necessity of the analysis of it. A. You want only a direct statement of what I think the proper showing would be?

Q. That is right. A. Here, again, I believe that consideration should be given to the prospective effect of the revised tax laws, but in this instance that effect is of relatively less importance than in the case of other issues to which attention has been called. I do not believe that my examination of the offering prospectus would have indicated earnings per share significantly different from the $1.02. There is an item of amortization which has a 6-year term which might have been given some consideration.

My analysis sheet prepared at the time of the issue shows $1.07.

If you desire that I go now into the next offering, Central Arizona Light & Power Company——

Q. I desire that you go to it if there have been errors made which you feel impair the significance of the showing on page 40. A. Since I have concluded in the case of Florida Power Company that such errors as may have been made do not significantly impair the meaning of the earnings-price [15911] ratios, I might have omitted that one.

Q. I see. A. In the case of Central Arizona Power & Light Corporation, I believe that the error consists pri-

marily in the failure to recognize the effect of the excess profits tax liability which was for that company substantial.

Q. In other words, in showing 85 cents as earnings per share, you feel an adjustment should have been made for the federal tax liability. Is that right? A. I do not believe that in view of the information generally available to the purchasers of that common stock and the information presented in the prospectus that the acquisition was in fact on the basis of the prospective earnings per share of 85 cents.

Q. Have you made the adjustment that you think the investors made for taxes? A. I will give it to you in the same form as in the case of Montana-Dakota Utilities Company.

On the basis of 1945 income tax rates I have stated the earnings per share as 78 cents, and on the basis of the 1946 income tax rates at $1.29 cents. I should repeat, perhaps, that I am referring to an analysis sheet prepared at the time of issue.

Q. What is the significance of telling us you are referring to an analysis sheet prepared at the time of the [15912] issue? A. Perhaps nothing other than to tell you that we undertake as each issue comes out to obtain the prospectus and at that time to prepare an analysis sheet which we use subsequently.

TRIAL EXAMINER: May I have the answer read, please?

(Answer read.)

THE WITNESS: The next common stock is an offering of the Pacific Gas and Electric Company in September of 1945. That was a special offering of a listed stock, the sale being of the North American Company interest.

The analysis shows, again, that the tax feature was of dominant importance. The earnings per share which I have on the basis of the tax rates effective in the year 1945 are $2.13, or the same as on page 40.

The adjustment for the 1946 tax basis shows $4.07.

I will go to Central Hudson Gas & Electric Corporation offering. In September of 1945, I have no significant criticism of the 56 cents per share shown by page 40 as representing actual earnings during the 12 months ended March 31, 1945 on the basis of the tax rates then effective. I would, however, call attention to the required reservation of net income in the amount of $120,000 per year until the year 1971, a requirement by order of the New York Public Service Commission. Although deducted prior to the statement of earnings available [15913] to the equity, the $120,000 is not in fact non-available to the equity.

The recognition of the effect of the 1946 tax rates would restate the 56 cents per share as 76 cents per share.

The next offering is that of the Lake Superior District Power Company common stock in May of 1945. As of that date for the purpose of the statement of the earnings-offering-price ratios, I did not attempt a quantitative statement of the effect of income tax law revision, although then in prospect.

The analysis of earnings on the basis of information supplied in the prospectus includes two relatively minor adjustments which tended to reduce gross income and which resulted in $1.64 per share instead of the $1.68. That, of course, is an adjustment in a direction contrary to the more important consideration of tax revision.

The Central Illinois Electric & Gas Company offering appearing on the immediately preceding line in February of 1944 was sold to the underwriters by Consolidated Electric & Gas Company.

My analysis shows earnings per share of $1.92 as compared with the $2.33, and I believe it is correct to say that the use of the offerings prospectus is the explanation of the difference. The earnings-offering-price ratio becomes 10.04 instead of 12.2.

MR. SPARKS: Had you finished Central Illinois Gas Company?

[15914] THE WITNESS: Yes.

MR. SPARKS: I wonder if you might not want to recess at this point before Dr. Foster begins on another company.

TRIAL EXAMINER: I think we have just time to take up another company.

THE WITNESS: The next is Derby Gas & Electric Company, an offering by prospectus dated August 29, 1944.

MR. GOLDBERG: August of 1944? We have January.

MR. SPARKS: It shows on page 40 as January.

THE WITNESS: That is what is bothering me, then. There is another by Derby Gas & Electric Company in the same year, which is not shown on page 40. I continually confused them.

MR. GOLDBERG: I see.

THE WITNESS: I have confused the two and I do not have here a record with respect to the offering in January of 1944.

By MR. GOLDBERG:

Q. What was the earnings-offering-price ratio on the one you don't have, which is not shown on page 40? A. I have on a tabular sheet data with respect to each of the two offerings by that company in 1944. In the case of January, the offering in January of 1944, I determined earnings per share of $2.56, and in the case of the offer in August, 1944, earnings per share of $2.14 based in each case on the information contained in the prospectus.

Q. With respect to August of 1944 offering, I wonder [15915] if we could have the data which you used to derive the earnings-offering-price ratio for that issue? A. Yes. In August, 1944, Derby Gas & Electric Company issued 54,054 shares of common stock and used the proceeds, together with other cash, to acquire certain securities of Dan-

bury & Bethel Gas & Electric Light Company directly and from Cities Service Power & Light Company. The price to the public was $20; the price to the underwriters was $18.50, and the proceeds to the company, net of company expenses, was $18.024.

Q. Per share? A. Yes. There was no competitive bidding. The equity earnings have been stated at $430,314 for the 12 months ended April 30, 1944 on the basis of the analysis of the offering prospectus.

• • •

[15916] Q. Dr. Foster, I think you had finished Derby Gas & Electric Corporation. I think you have already given us Central Vermont. So that takes us to Southwestern Public Service, September, 1942 issue. A. Yes, intermediate between the Southwestern Public Service issue in September, 1942, and the Central Vermont issue in December, 1943, I would have included three issues involved in portfolio divestments by holding companies which are omitted.

Q. Which ones are those? A. Sales of Houston Lighting & Power common stock in May of 1943 at an earnings-offering-price ratio of about 9.4 per cent; sale of the Idaho Power Company common stock in September of 1943 on a basis of about 8.5 per cent, and a sale of the Public Service of Colorado common stock in November of 1943 at approximately 11.8 per cent.

The Southwestern Public Service offering in September of 1942 was to the common stockholders of Community Power & [15917] Light Company and General Public Utilities in connection with a reorganization. The total number of shares was 185,000, of which 44,519 were taken by the common stockholders and the balance of 140,481 shares was offered to the public. The offering was jointly with an offer of bonds and preferred stock.

Page 40 does not in this instance provide a statement of earnings per share or of the earnings-offering-price ratio. Such a statement might have been set up by reference to

the pro forma income statement contained in the offering prospectus. It would not, however, have had much meaning for the purpose of page 40; that is, earnings per share indicated by the offerings prospectus were about $1.90 a share which, of course, in relation to the offering price of $5.00 per share indicates an uncertain and unsettled situation which is not comparable with the other issues tabulated.

The next common stock on page 40 is the offering by San Diego Gas & Electric Company in November of 1941 of 246,750 shares for new capital. My analysis of the prospectus dated July 8, 1941, and considering additional prospective taxes and the net effect of a rate reduction indicates earnings per share of $1.18 as compared with $1.25 as shown on page 40.

On that basis the earnings-offering-price ratio would be 9.07 rather than 9.62 per cent.

The next item on the list is the offering by Black Hills Power & Light Company in October of 1941 of 100,000 shares, [15918] of which 92,650 shares had been issued to General Public Utilities, Inc. as part consideration for the Dakota profits of General Public Utilities. Analysis of the offering prospectus dated October 28, 1941 giving consideration to an expected tax increase indicates earnings of $2.53 per share and an earnings-offering-price ratio of 15.3 per cent. Here, again, there is being established something of a new situation without a record of experienced earnings and the earnings-offering-price ratio is out of line with more mature situations.

Page 40 does not show earnings per share but states that information is not available.

Q. It is very much like that Southwestern Public Service, is it? A. It is generally the same kind of situation. The fact is that information is available but the facts are such as to make the information not particularly useful or significant in connection with the purposes of page 40.

Q. Did you give us the earnings-offering-price ratio for that Southwestern situation? I don't think you did. You

said earnings per share were $1.90. A. In relation to an offering price of $5.00, earnings-offering-price ratio would be 38 per cent.

Q. Yes. A. Obviously, not significant.

Q. All right. [15919] A. The next offering is that of the Louisville Gas & Electric Company in October of 1941 which was not underwritten. This was an offering by the company to the public and any security dealer or broker at a discount of 75 cents from the price to the public. 25,690 shares out of 150,000 offered were purchased and the balance was taken up by the holding company.

There was, of course, no offering prospectus. The analysis which I have of the earnings for the year 1940, which is for a date other than that shown by page 40, indicates $1.25 as compared with $1.49. There is, of course, no comparison between the two analyses.

The next item is an offering of 28,336 shares of United Illuminating Company common stock which was sold to the underwriters by United Gas Improvement Company in September, 1941. My analysis of the earnings per share and earnings-offering-price ratio in this instance gives results which coincide with those shown on page 40.

325,000 shares of Missouri Utilities Company common stock, offered in September, 1941, were sold to the underwriters by Community Power & Light Company jointly with an offering of bonds and preferred stock by Missouri Utilities Company. In this instance also my analysis of the earnings per share and the earnings-offering-price ratio gives the results which coincide with those presented by page 40.

[15920] The next issue is a sale to the underwriters of San Diego Gas & Electric common stock by Standard Gas & Electric Company in July, 1941. The analysis of the offering prospectus indicated earnings per share of $1.07 and an earnings-offering-price ratio of 7.4 per cent as compared with the 11.3 per cent shown by page 40.

I have next an offering by Connecticut Light & Power Company in April of 1941 which is not listed on page 40.

Q. What was the basis for that offering, the earnings-offering price? A. The source of the information is the offering prospectus.

Q. I was wondering what earnings-offering-price ratio you had. A. 7.3 per cent.

Q. All right. A. I do have the offering of Michigan Public Service Company common stock by the trustee for Inland Power & Light Corporation in October, 1940 jointly with an offering of bonds and preferred stock by Michigan Public Service Company.

The analysis of the offering prospectus indicated for the Michigan Public Service Company common stock, prospective earnings of $1.88 per share, or an earnings-offering-price ratio of 13.2 per cent.

The next is the West Penn offering by the company of [15921] 160,000 shares in April of 1940 for the purpose of providing proceeds to be expended for construction purposes. The offer was jointly with an issue of 3½ million of bonds.

The statement of equity earnings per share indicates $1.70 and an earnings-offering-price ratio of 6.29.

In the case of Indianapolis Power & Light Company, the total number of shares offered was 714,835 shares, of which 68,850 represented new financing, and the balance for sale to holding company interests.

I believe the earnings per share and the earnings-offering-price ratio is appropriately stated with reference to the total number of shares being offered. So stated, I have $1.76 per share and earnings-offering-price ratio of 7.33.

In the case of the Newport Electric Company, which was a sale to the underwriters by Utilities Power & Light Corporation, jointly with the sale of bonds by the Newport Electric Company, the earnings per share were $2.53 and earnings-offering-price ratio was 8.56 per cent.

I find that I have excluded Boston-Edison, the offering of December, 1935, from this tabulation. I have no information concerning it.

TRIAL EXAMINER: $3.53 instead of the $2.85?

MR. GOLDBERG: $2.53.

THE WITNESS: Which was that, Mr. Examiner?

TRIAL EXAMINER: Newport.

[15922] THE WITNESS: Newport, earnings per share were $2.53 and the earnings-offering-price ratio 8.56 per cent.

By MR. GOLDBERG:

Q. You gave us the earnings-offering-price ratios as determined by you, about half of them, and on the other half you did not. I think maybe we had better complete the record and get them all in.

For Central Vermont Public Service Company the earnings, I think the record shows, are $1.53 per share as determined by you. That would mean an earnings-offering-price ratio of 9.5. Is that right? A. May that be read?

(Question read.)

THE WITNESS: That is right. I have 9.56.

By MR. GOLDBERG:

Q. And the earnings-offering-price ratio for Derby Gas & Electric, January, 1944 offering, works out to 14.2. Is that right? A. That is right.

Q. You gave us Central Illinois but not Lake Superior Power ratio. I have worked it out to 7.29.

TRIAL EXAMINER: Which is that?

MR. GOLDBERG: Lake Superior.

THE WITNESS: I have the same percentage.

TRIAL EXAMINER: What is that?

[15923] MR. GOLDBERG: 7.29.

TRIAL EXAMINER: You used the 2.36 for Derby?

MR. GOLDBERG: You mean earnings per share?

TRIAL EXAMINER: Yes.

MR. GOLDBERG: 2.56 as determined by Dr. Foster. 2.36 and 13.1 are related.

TRIAL EXAMINER: Yes.

By MR. GOLDBERG:

Q. With respect to the Central Hudson Gas, Electric Corporation, what earnings-offering-price ratio was it that you had, Dr. Foster, based upon your 60 per cent relationship you talked about in connection with your income tax adjustment? I have worked it out to 6.94. A. Correct.

Q. And for Pacific Gas & Electric, using the same derivation, it worked out to 8.23. A. I check that percentage, also.

Q. Central Arizona Light & Power Company came to 8.27 earnings-offering-price ratio. A. Yes.

TRIAL EXAMINER: How did you use that?

MR. GOLDBERG: We had earnings of 78 cents and $1.29 to work with. Take 60 per cent of the difference between those two and you come out to about $1.09.

TRIAL EXAMINER: I see.

[15924] THE WITNESS: Correct.

By MR. GOLDBERG:

Q. Florida Power Corporation came out to 6.59 earnings-offering-price ratio. Is that right? A. Yes.

TRIAL EXAMINER: Did you do the same thing there?

MR. GOLDBERG: Yes.

THE WITNESS: Yes.

TRIAL EXAMINER: 60 per cent, I mean.

MR. GOLDBERG: Well, there I had only a $1.00 figure, $1.07, from Dr. Foster.

THE WITNESS: May that be restated? Did you say $6.59?

By MR. GOLDBERG:

Q. 6.59, yes. A. I got 6.59 in relation to $1.13 as the earnings per share.

Q. You said $1.07. I have that down there.

What is it with respect to $1.07? A. I have 6.31, $1.07 being the unadjusted earnings for the year ended July 31, 1945.

Q. $1.13 is an unadjusted figure or is it a different period of time? A. I believe the $1.13 represents the 60 per cent adjustment.

Q. I see.

[15925] Montana-Dakota Utilities Company, the earnings-offering-price ratio works out to 9.86. Is that right? A. Correct.

TRIAL EXAMINER: What did you use there for the per-share earnings?

MR. GOLDBERG: The 60 per cent of the difference between 86 and $1.32 added to 86, I think, gives you about $1.13.

THE WITNESS: That is right.

TRIAL EXAMINER: The same figure you used above, then, the one next to the above?

MR. GOLDBERG: They happen to be the same.

THE WITNESS: Yes.

By MR. GOLDBERG:

Q. And completing it for Sioux City Gas & Electric Company, the earnings per share were $1.89 and the earnings-offering-price ratio on that basis was 6.55? A. That is right.

TRIAL EXAMINER: You didn't use the 60 per cent there, did you?

THE WITNESS: Yes.

TRIAL EXAMINER: You did?

THE WITNESS: Yes.

• • •

[15971] TRIAL EXAMINER: The hearing will be in order. I think we had better get straight on the rulings made on May 2 at transcript page 15799 to transcript page 15800 and 15833 and 15839.

Again at transcript 15799 parts of the prepared testimony that were stricken referred to the pagination of the prepared testimony before transcription by the reporter pursuant to the direction of the Examiner.

It should be stated that the rulings apply to the official transcript as follows:

The first ruling striking testimony applies to transcript 15746, line 18, continuing over to page 15747, line 4, both inclusive.

The second ruling applies to transcript page 15751, lines 10 to 24, both inclusive.

Next, transcript page 15758, beginning with line 9 and continuing over to 15759, line 1.

Next, to transcript 15774, the phrase "By design" in line 25.

The next applies to 15775, lines 8 to 11.

MR. GOLDBERG: Line 8 beginning with the word "but"?

TRIAL EXAMINER: Yes, but not including the word "the", and the phrase "concealed" at line 15.

Next, 15783, lines 14 and 15; next 15789, lines 2, 3 and [15972] 4, through the word "investment" and line 6, beginning with the phrase "in this connection" and continuing through line 11.

The ruling at transcript page 15833 strikes the testimony on page 15773, lines 2 to 11, inclusive, and the ruling at transcript page 15839 strikes the testi-

mony beginning with line 25 on page 15773 through line 14 on page 15774.

MR. GOLDBERG: Didn't that ruling strike out the answers appearing at lines 19 and 23 of page 15773?

TRIAL EXAMINER: No.

MR. SPARKS: May the record show that I renew my objection to Your Honor's rulings?

* * *

[15974] J. RHOADS FOSTER

* * *

CROSS-EXAMINATION (Resumed).

By MR. GOLDBERG:

* * *

[15990] THE WITNESS: It does not appear. I have here a computation for each of the fourteen companies as at March 31, 1947 made in the manner which Mr. Joseph used for the purpose of page 38-A.

TRIAL EXAMINER: You have not put those in?

THE WITNESS: I have not put those in.

TRIAL EXAMINER: Do you have them available there and could you read them in the record?

THE WITNESS: If the Examiner desires, I would be glad to do so.

By MR. GOLDBERG:

Q. You say you are going to read into the record the March 30, 1947 earnings-price ratios? [15991] A. If the Examiner desires that I do so.

TRIAL EXAMINER: March 30, 1947?

THE WITNESS: March 31.

TRIAL EXAMINER: And this will be what the witness Joseph has called the "Earnings-Price Relation"?

THE WITNESS: As I understand the method used by Mr. Joseph.

By MR. GOLDBERG:

Q. These that you are going to read into the record are supposed to be determined on the same basis that Mr. Joseph determined his, or are these adjusted earnings-price ratios? A. No, as I just said, on the same basis that Mr. Joseph used as I understand their basis.

TRIAL EXAMINER: And your latest earnings, will they be in every case for December, 1946?

THE WITNESS: I believe so.

TRIAL EXAMINER: And if they are not, would you indicate it?

MR. SPARKS: It will be for the year 1946.

TRIAL EXAMINER: The calendar year 1946?

THE WITNESS: That is right, the year ended December 31, 1946.

Does the Examiner desire that I read the earnings per share and the ratio, or shall I also include the market price?

TRIAL EXAMINER: You may include all three.

THE WITNESS: For Bangor Hydro Electric Company, a market price of $31; earnings per share of $3.06 and a ratio of [15992] 9.87 per cent.

For Boston Edison Company, a market price of $44, earnings per share of $2.53, and a ratio of 5.75 per cent.

For Cleveland Electric Illuminating Company, a market price of 38¾, earnings per share of $2.55, and a ratio of 6.58 per cent.

For Commonwealth Edison Company, a market price of 29¾, earnings per share of $1.91 and a ratio of 6.42 per cent.

For Consolidated Edison Company of New York, a market price of 27¼, earnings per share of $2.20 and a ratio of 8.07 per cent.

For Consolidated of Baltimore, a market price of 75¾, earnings per share of $5.46 and a ratio of 7.21 per cent.

For Detroit Edison Company, a market price of 27.18, earnings per share of $1.67, and a ratio of 6.16 per cent.

For Houston Light and Power Company, a market price of 87¾, earnings per share of $5.48, and a ratio of 6.25 per cent.

For Idaho Power Company, a market price of $35, earnings per share of $2.74, and a ratio of 7.83 per cent.

For Indianapolis Power and Light Company, a market price of 26¾; earnings per share of $3.23 and a ratio of 12.07 per cent.

For Pacific Gas and Electric Company, a market price of 39⅝ths, earnings per share of $2.72 and a ratio of 6.86 [15993] per cent.

For Pennsylvania Water and Power Company, a market price of 63⅜ths; earnings per share of $4.73, and a ratio of 7.46 per cent.

For Philadelphia Electric Company, a market price of 24¾; earnings per share of $1.72 and a ratio of 6.95 per cent.

For Southern California Edison Company, a market price of 33⅛, earnings per share of $1.94, and a ratio of 5.86 per cent.

I have determined the simple average, Mr. Examiner. I have not determined a weighted average.

TRIAL EXAMINER: What is the simple average?

THE WITNESS: The simple average is 7.38 per cent.

* * *

[15996] Q. Now, without concerning ourselves with what Mr. Joseph did, the fact is that you are not in a position to tell us whether Bangor Hydro Electric Company or any of the other companies listed on page 38-A are companies of corresponding or comparable risks and uncertainties to Penn Water, is not that right? A. I have had no occasion to make studies for the purpose of establishing the

degree of comparability between the Penn Water equity investment and the others identified on page 38-A. I do know that there is substantial variation between those opportunities for investment with respect to character and quality of risk, that they are not comparable with each other, that probably some are comparable with Penn Water and some are not. I have had no occasion to make an explicit determination.

• • •

[16004] Q. Several years ago did you conclude that it was sufficiently comparable to New Jersey Power and Light Company to be used as a measure of determining the rate of return for New Jersey Power and Light Company? A. The formula for a determination of the rate of equity return to New Jersey Power and Light Company, which is embodied in the so-called New Jersey plan which has a continuing application to New Jersey Power and Light Company, includes Boston Edison common stock as one among ten common stocks which are used for the purpose of establishing an average earnings-price ratio which averaged over a period of time and subjected to the addition of a multiplier fixes the annually determined return on equity capital for New Jersey Power and Light Company.

I would like to add in further answer to your question that that selection of Boston Edison among the ten was not based upon comparability with New Jersey Power and Light Company but upon considerations of representativeness of the market prices of the common stocks and the reliability of such evidences of investor appraisals and changing appraisals.

Q. The selection was based upon meeting the criteria in the Bluefield case including correspondence of risks and uncertainties; is not that so? A. That is an incorrect statement. I do not want to quibble, Mr. Goldberg.

[16005] The selection was not based upon the consideration that Boston Edison, among others, was comparable with

New Jersey Power and Light equity as an investment opportunity.

The formula provided for a multiplier which results in an upward adjustment of the average earnings-price ratios to recognize what we have believed to be a difference in investment quality and risk.

Q. The companies used in developing the rate adjustment plan for New Jersey Power and Light Company appear on page 10 of a report issued by the Board of Public Utility Commissioners for the State of New Jersey on the New Jersey rate adjustment plan; is not that so? A. That is right.

Q. And you are familiar with this report, which is dated March 28, 1944, are you not? A. With the assistance of Major Flagg, I wrote the report.

Q. Yes, that saves me another question.

The ten companies are Boston Edison Company, Central Hudson Gas and Electric Company, Cleveland Electric Illuminating Company, Commonwealth Edison Company and subsidiaries, Connecticut Light and Power Company, Consolidated Edison Company and subsidiaries, Consolidated Gas Electric Light and Power Company of Baltimore, Detroit Edison Company, Philadelphia Electric Company and Pennsylvania Water and Power Company; is not that so? A. Yes, sir; • • •

• • •

[16008] Q. But I am asking you whether it is your statement that when the ten companies were used in developing this New Jersey rate adjustment plan, it was considered that they were not reasonably comparable to New Jersey Power and Light Company? A. I have answered that it was considered that they were sufficiently non-comparable that that non-comparability was recognized by a quantitative adjustment in the formula.

• • •

[16010] Q. Are you referring to the selection of the barometer group which heading appears on page 79? A.

The barometer group is a short identification of the ten companies.

Q. Now, with respect to those ten companies in the selection of the barometer group, this statement appears, "The rate of return (expressed as earnings, not dividends) expected by equity investors in other enterprises 'attended by corresponding risks and uncertainties' is the measure of the fair return to the equity investors in the Electric Department, but the problem is to find enterprises of this class for which representative market quotations are available."

That statement appears there, does it not? A. It does. May I read it further?

Q. Yes, I am going to. This statement appears, does it not, "A total of only about thirty-five publicly owned common stocks are in the list from which the selections must be made. Since the function of the barometer group is to make available an index of the movement (not necessarily the level) of the cost of equity capital, the following criteria are of first importance in the selection: 1. The common stock should be traded in the market in sufficient volume and regularity that the established prices are representative of investor appraisals.

"2. The common stock should have been publicly owned [16011] for a sufficient time that knowledge of its income experience is generally available and it is 'seasoned'.

"The group of ten utility capital stocks has been selected primarily with reference to these criteria."

I have correctly read, have I not, from that report? A. Yes.

Q. And the group of 10 referred to are the ten companies we read into the record. Is not that right? A. Selected by reference to these criteria, and recognizing as was stated in a sentence which you read, that the level of cost of equity capital is not necessarily the same for the average of the group of 10 as it was for New Jersey Power and Light Company and since we conceded that it was not

the same, as I have explained, that difference was recognized and reflected in the formula by an adjustment factor.

Q. And one of the criteria you were attempting to meet in establishing the rate of return were the phrases in the Bluefield case we have heretofore referred to? A. We were attempting to meet that criteria by the adjustment which I have referred to which in our opinion would meet it but the average of investor appraisals for the group of ten, including Boston Edison, would not have done so.

Q. Now, with respect to comparability, this is stated on page 81, is it not, "Since the first criteria in selection of [16012] the barometer group are the considerations of representativeness, further attention must be given to means of obtaining comparability with New Jersey Power & Light Company." I have correctly read that, have I not? A. That is right.

Q. And it goes on to say, does it not: "A large measure of comparability is obtained by limitation of the group to electric or electric-gas combination companies"? A. That is right.

Q. And it says further, does it not, "Second, the ten include only utilities operating in the Northeast, since there are regional differences in the cost of capital." Is not that right? A. That is right.

Q. Stopping for a moment, all of those ten do not operate in the northeast; is not that so? Commonwealth Edison you would not say operates in the northeast? A. Well, it might have been a liberal definition of northeast.

Q. Detroit Edison Company is another one. Now, that certainly is being pretty liberal in saying that is in the northeast, is not that so?

MR. SPARKS: That depends on where you are.

By MR. GOLDBERG:

Q. Well, right where we are or were when we wrote that [16013] report in Jersey City? A. As one who came from Missouri, it is perhaps a handicap as a consequence.

Q. You would say that is a rather liberal use of the term to say that Detroit Edison operates in the northeast. A. Not from the point of view of a Missourian.

• • •

Q. It states "Third, operating companies which are also functional holding companies are excluded." Is that right? A. That is right.

Q. Then it does go on to say what I think you have been insisting: (1) "The barometer group is generally comparable, but the average earnings-price ratio requires three adjustments before it may reasonably be used as the equity capital [16014] return rate." Is not that so? A. That is right.

Q. And am I correct in my understanding that these three adjustments were accomplished simultaneously by application of the appropriate "capital structure factor." A. That is right. The word "Capital structure factor" should be in quotes as a name given to an adjustment factor which accomplished more than adjustment for the differences in capital structure.

Q. And you say it accomplished also consideration of the size of the company? A. Size of company was one of the characteristics which caused the risk quality of the average of the ten barometer stocks to vary from New Jersey Power and Light Company.

Q. Now, then, at page 72 the opinion is expressed, is it not, in that report, that the rate of return provisions of the New Jersey plan are consistent with the standard expressed by the Supreme Court in the Bluefield case? A. That is right.

Q. Now, then, at page 74 this appears, does it not, "The Electric Department of New Jersey Power & Light Company obviously has no security market experience available as direct evidence in establishing the historical cost of debt or preferred capital stock (although such experience is available on a Company basis) or the current cost of equity capital.

[16015] "Direct evidence of the current cost of equity capital is not available for the further reason that the company is a subsidiary of a holding company. Its common stock is not outstanding in the hands of the public and is not bought and sold so as to permit expression of investor appraisals of its value. Therefore, the equity capital component of the basic rate of return is determined by reference to earnings-price ratios representing returns 'on investments and other business undertakings which are attended by corresponding risks, and uncertainties.' (Bluefield Company v. Public Service Commission.)" That appears there, does it not? A. It does.

• • •

[16017] Q. Now, in connection with determining the basic rate of return for that plan in the paragraph numbered 12 at page 10 of the report, this appears, does it not?

"If the required information is not available for any of the above listed common stocks"—and that refers to the barometer group of stocks, does it not?
A. It does.

Q. —"at the time of determination of the basic rate of return for any test year, the number of such common stocks shall be maintained at ten by substituting, for such test year only, the common stocks of other electric or electric gas combination operating utilities. Such substitution shall be made in accordance with the following order of preference: (a) electric utilities with annual gross operating revenues of from five to fifty million dollars and located in the New England, Atlantic and East North Central States; (b) electric-gas combination utilities of the said size and located in the said areas; (c) electric utilities located anywhere within the United States, and (d) electric-gas combination utilities located anywhere within the

United States. When more than one utility is [16018] available in accordance with this order of preference, the utility with the largest annual operating revenue shall be substituted."

I have correctly read from that paragraph, have I not? A. You have.

* * *

[16032] Q. Now, Dr. Foster, with respect to transcript page 15765 at the bottom of the page the last answer, are we to understand from that answer that the issues which are represented on page 40 of Exhibit 46 are too small to be significant with respect to conclusions on Penn Water? A. The statement at lines 20 to 25 at the bottom of page 15765 refers to the instances listed on page 40 which represent offerings of common stock for the purposes of providing new capital.

Therefore the statement does not refer to all of the instances listed on that page but only those not excluded by use of footnote No. 1 on that page.

It was with reference to the 8 earnings-price ratios——

MR. SPARKS: Earnings-offering-price ratios?

THE WITNESS: Earnings-offering-price ratios representing net proceeds of not more than 21 million dollars that this [16033] statement was made.

By MR. GOLDBERG:

Q. In other words, the statement was addressed to the issues on page 40 that are not included in footnote 1. Is that it? Those that are not affected by footnote 1? For example, Boston Edison Company, West Penn Power Company and Louisville Gas and Electric Company, and so on? A. The statement was so limited because of Mr. Joseph's testimony that for the purpose for which page 40 was offered, the other instances should have been excluded.

Q. You mean as you understood Mr. Joseph's testimony, the purpose for which page 40 of Exhibit 46 was included requires reference only to the issues that do not have the footnote 1 reference? A. Yes, the testimony to which I refer is that quoted at lines 12 to 16 of page 15764.

Q. What did you understand was the purpose for which page 40 had been offered? A. I understood that the purpose for which the page was offered was to provide evidence or an indication of the cost of equity capital to enterprises comparable with Penn Water.

Q. Now, then, you say that the group of eight to which the footnote 1 is not appended is insufficient in number and amounts, and their diversity of risk characteristics are too great to permit significant conclusions as to Penn Water; is [16034] that right? A. That is right.

Q. Now, then, do I understand from your testimony that for the purposes for which you understood page 40 of Exhibit 46 was offered, it is appropriate to include the issues which have footnote 1 appended?

• • •

THE WITNESS: I will be compelled to give you a qualified answer to that question.

In recognition of the capitalization rate associated with the sale of common stock already outstanding, it requires that consideration be given to the difference in circumstances between the sale of such common stock and the offering of common stock for the purpose of providing new capital.

• • •

[16040] Q. In other words, your objection did not so much run to the number of instances and their amounts, and even their diversity of risk characteristics, but to the fact that there had been no showing on page 40 of Exhibit 46 which would enable one to give consideration to this diversity of

risk characteristics and the effect of the size of the issue in arriving at significant conclusions; is that right? A. I believe you are saying, that since there is that [16040-A] diversity of risk characteristics, there has been no showing upon the basis of which it would be possible to reach a conclusion as to which one, if any, is comparable with the Penn Water common stock.

Q. That is what I understand you are saying. Is that right? A. Yes.

* * *

[16042] Q. Now, you appeared as a witness for the Consolidated Edison Company before the New York Public Service Commission on January 17, 1947; is not that right? A. As of approximately that date. I am not sure as to the exact date.

* * *

[16050] TRIAL EXAMINER: Where in Exhibit 46 have you criticized any tabulations for not showing adjustments where those [16051] tabulations relate to other than spot earnings-price ratios?

You began by instancing page 38-A, and you decided there you had spot ratios only.

THE WITNESS: The criticism was directed specifically to page 38-A.

TRIAL EXAMINER: What other page?

THE WITNESS: The cross-examination yesterday however brought out the application of that criticism to page 38, the preceding page.

* * *

[16053] Q. It is a fact, is it not, Dr. Foster, that in your exhibit in the New York case, schedule 3 of that exhibit, you did not adjust the earnings-price ratios for the period 1942 to 1946, inclusive? A. What do you mean by "adjustment of earnings-price ratios"?

Q. You did not adjust the earnings.

* * *

THE WITNESS: The method used in the preparation of the schedule to which you refer in the exhibit of which it was a part was the same as that which has been described here.

So far as the adjustments, the statements of earnings-price ratios are concerned, I believe it is correct that the work had already beeen done, and as presented there, was the same as had been presented here.

With more specific reference to your question, the adjustment for the year 1944 was one, which was for reduction of Federal income taxes by extraordinary deductions charged to surplus, for the purpose of stating adjusted gross income.

With respect to the statement of income deductions, there [16054] was a corresponding adjustment for charges equivalent to the reduction in Federal income taxes in the amount of $2,100,000.

For the year 1945, in the analysis of gross income there was an adjustment in the amount of $6,270,000 representing a reduction of Federal income taxes by extraordinary deductions charged to surplus.

Also in that year there was an adjustment of the income deductions in a corresponding amount.

For the 12 months ended Sept. 30, 1946 there was an adjustment of the same character, and for the same purpose, in the amount of $5,120,000.

Q. Is it not a fact, Dr. Foster, that on Schedule 3, columns 12 and 13 of Exhibit 126 in the New York case, your earnings-price ratios are based upon earnings as reported by the companies? A. The earnings-price ratios are based upon the earnings per share as shown by Schedule 3. There was no acceptance of earnings as reported because they were reported. The adjustments which I have described are reflected on Schedule 3, and it happens that they are adjustments which affect the amount of gross income and the income deductions rather than the net income.

Q. Now, does your answer mean that on schedule

3 of Exhibit 126, columns 12 and 13 for the period 1942 to 1946, that the earnings employed were the earnings as reported by [16055] the Consolidated Edison Company? A. It means that the period which you have identified the earnings employed for the purpose of the construction of the earnings-price ratios after consideration of pertinent circumstances would be earnings represented by equity income as reported.

* * *

Q. In connection with your appearance before the New York Public Service Commission, when you presented Exhibit 126 there was included in that exhibit, schedule 16, which bears this title, "Electric and Electric Combination Utility Common Stocks offered to the Public (a) During the period January, 1939 to November, 1946, inclusive, with Earnings Offering Price Ratios"; is not that right? A. Yes.

Q. And you have, I think as you have already stated included among the issues shown in that schedule 16, 20 of the 22 issues shown on page 40 of Exhibit 46. I think you can accept my statement for that, because I have checked it.

* * *

[16057] Q. With the exception of the Boston Edison Company issue on page 40 of Exhibit 46, all of the issues shown on that page are reflected in your schedule 16 to Exhibit 126 in the New York case? A. I believe that is a correct statement.

Q. Now, then, your schedule 16, all of the column shown on schedule 16 with the exception of column 14 correspond with the columns shown on page 40 of Exhibit 46; is not that so? A. You mean as to the general character of the data?

Q. Right. A. —being set out?

Q. Right. A. I believe that is correct.

* * *

[16072] REDIRECT EXAMINATION

By MR. SPARKS:

Q. Page 15891 of the transcript, lines 16 to 22, you were asked by the Examiner whether you have done anything toward bringing the earnings-price ratios for the six common stocks up to date since your last appearance on the stand. You answered that you have not brought the earnings-price ratios to a recent date, and that to do so, would contribute little or nothing to the conclusion.

Please explain why in your opinion more recent price ratios would contribute little or nothing to the conclusion.

A. Exhibit 167 provides for the months September, 1944 to December, 1945, inclusive earnings-price ratios for the Penn Water common stock, and averages for the six other common stocks in which are reflected data becoming available after the preparation of Exhibit 29.

The earnings-price ratios representing the six common stocks have increased steadily and sharply since November, 1945. These earnings-price ratios are not adjusted for the effect of the [16073] revision of the Federal income tax rates, or other influences which caused the end of the downward movement and the beginning of the upward movement of the earnings-price ratios.

The upward movement is continuing. One cycle of earnings-price ratio movement ended in November, 1945, and a new cycle is under way.

No indication is now available to the length of the new cycle or as to the earnings-price ratio levels which will be established under such a new cycle. Therefore the earnings-price ratios established in most recent months would not modify the conclusion as to the cost of equity capital to Penn Water.

Q. At page 15994 of the transcript the Examiner and you referred to summarized earnings-price ratios for 80 electric utility common stocks determined by relating reported earnings per share for the year 1946 without adjustments to market prices or quotations as of March 31, 1947.

Do you have a statement which shows the number of these earnings-price ratios within each 1 per cent interval in the range from 4 per cent to 17 per cent? A. Yes.

Q. Does the 80 include the earnings-price ratios for the 14 common stocks identified on page 38-A of Exhibit 46? A. It does.

Q. Is the distribution of the 14 earnings-price ratios [16074] shown separately? A. It is.

MR. SPARKS: Mr. Examiner, I have the tabulation which has just been referred to by Dr. Foster, and I ask that it be copied into the record at this point.

MR. GOLDBERG: May we see that before that is done?

MR. SPARKS: Yes.

MR. GOLDBERG: Are you going to have the whole thing copied into the record?

MR. SPARKS: Yes, we planned to have the whole memorandum copied.

TRIAL EXAMINER: The reporter may copy in the record at this point the tabulation referred to.

(The tabulation referred to is as follows:)

Earnings—Price Ratios for 80 Electric Utility Common Stocks* Distributed by Percentage Intervals.

Based on Earnings for 1946 (as reported) and March 31, 1947 Prices.

Earnings-Price Ratio Range	Distribution of 80	Distribution of 14 Identified on P. 38(a)
4.00–4.99	1	—
5.00–5.99	8	2
6.00–6.99	13	6
7.00–7.99	8	3
8.00–8.99	11	1

*All electric utility common stocks for which market prices are reported in the Bank and Quotation Record dated April 7, 1947 and for which per share earnings were available.

[16075] Earnings-Price Ratio Range	Distribution of 80	Distribution of 14 Identified on P. 38(a)
9.00– 9.99	11	1
10.00–10.99	14	—
11.00–11.99	2	—
12.00–12.99	3	1
13.00–13.99	5	—
14.00–14.99	2	—
15.00–15.99	—	—
16.00–16.99	2	—

By MR. SPARKS:

Q. What is the significance of this distribution of the 80 earnings-price ratios, Doctor? A. First, it indicates the approximate number of electric utility common stocks available at that date for a study of investor appraisals.

Second, it indicates that wide differences exist among the common stocks with respect to the risk characteristics of these opportunities for investment, and with respect to investor-appraisals of such risks, the variation is from 4.97 per cent which is the earnings-price ratio for the Hartford Electric [16076] Light Common stock to 16.8 per cent for the Puget Sound Power and Light Company common stock, and 16.1 per cent for the Illinois Power Company common stock.

Third, a group of fourteen common stocks selected from among the 80 common stocks by application of the criteria of superior marketability and availability of prices could not be expected to be comparable with the Penn Water common stock.

The average for the group of 80 common stocks is 9.17 per cent.

MR. GOLDBERG: Is that a simple arithmetic average?

THE WITNESS: That is a simple arithmetic average. Only two of the fourteen are above this average. The two

are relatively small companies which, on the basis of the earnings shown by page 38-A, would have a weight of about 1.5 per cent in a weighted average.

By Mr. Sparks:

Q. At page 16018 of the transcript, Mr. Goldberg asked whether the rate of return ascertained under the New Jersey plan is applied to a rate base which fluctuates with changes in price levels. You replied that it is not. Will you please outline the circumstances which differentiate the results which follow from the operation of the New Jersey plan from those which would follow from applying a current cost of capital rate of return to an original cost rate base. A. First, the rate of return provided by the New Jersey [16077] plan is applied to the prudent investment and not an original cost rate base.

Second, the basic rate of return provided by the New Jersey plan includes full recognition of the prudent actual cost of capital represented by debt, and preferred stock capital.

Third, the effect of the adoption of prudent investment as the rate base under the New Jersey plan is influenced by availability to the company of returns in excess of the basic return.

The fair return available to the company is the basic return resulting from application of the basic rate of return to the rate base, plus such amounts of additional return as may be available for corporate purposes under the provisions affecting the stabilizing reserve and adjustments of charges for service.

Fourth, the stabilizing reserve and other provisions of the plan provide a stability of return to the common stockholders which otherwise would not be available.

The gain in certainty of return tends to compensate for what would otherwise tend to be an inadequacy of return under conditions of rising price levels.

Fifth, the formula for determination of the basic rate of return reflects in the basic rate of return earnings-price ratios averaged over a period of years, and avoids the inequities likely to result from use of spot earnings-price ratios.

Q. Doctor, at page 16058 of the transcript, Mr. Gold-
[16078] berg questioned you with reference to Schedule 16 of Exhibit 126 which you submitted in the Consolidated Edison proceeding before the New York Commission.

MR. GOLDBERG: That is what transcript page?

MR. SPARKS: 16058.

By MR. SPARKS:

Q. Did you use the data contained in Schedule 16 of that exhibit in reaching a conclusion as to the representative capitalization rate for the Consolidated Edison common stock?

A. No, the capitalization rate for Consolidated Edison was estimated by analysis of investor's appraisals of the Consolidated Edison common stock over a period of years.

The data appearing on schedule 16 were used in the preparation of charts 9 and 10 in that exhibit, having to do with cost of financing.

The purpose of schedule 16 was to make available these cost of financing data.

* * *

[16081] RECROSS EXAMINATION

By MR. GOLDBERG:

* * *

[16087] Q. We may be able to shorten this, then: Yesterday you read into the record the earnings-price ratios set forth on page 38-A of exhibit 46, using market prices at March 31, 1947 earnings as reported for 1946, and gave us the earnings-price ratios as well as the market price. Do you recall that? A. I do.

Q. Well, these earnings-price ratios that you read in yesterday have been distributed on this tabulation that was read into the record this morning? A. Yes; they are the same earnings-price ratios.

Q. Can you name the eight companies in the group of 80 whose earnings-price ratios fell within the 5 to 5.99 per cent, and before you do that, am I correct in my understanding that of that eight, two of them are part of the fourteen, namely, Boston Edison and Southern California Edison?

MR. SPARKS: Three, I think.

THE WITNESS: Two; you are correct.

By MR. GOLDBERG:

Q. So that the 80 really consist of an additional 66 [16088] companies; is that right, considering that we have already got fourteen. A. Perhaps I should say that the calculation or procedure was the other way around. I made the calculations for all that I could find, which of course, included the fourteen.

Q. In other words, the column showing distribution of the 80 includes the 14 that are under the column "Distribution of fourteen identified on page 38-A"; is that right? A. That is correct.

Q. Now, then, will you identify the additional six companies as having earnings-price ratios between 5 and 5.99 per cent? A. I will. Concord Electric Company, 5.40 per cent; Connecticut Power Company, 5.96 per cent.

New Bedford Gas and Electric Light Company, 5.99 per cent.

Central Hudson Gas and Electric Company, 5.90 per cent.

San Diego Gas and Electric Company, 5.58 per cent.

United Illuminating Company, 5.28 per cent.

Q. Now, will you give us the seven additional companies in the distribution of the eighty whose earnings-price ratios fall within the range of six to six point ninety-

nine per cent? A. The majority of these at low range are small New England electric companies; there is a geographical element there.

Answering your question concerning the seven additional common stocks in the range from 6.0 to 6.99 per cent, they [16089] are as follows:

Dallas Power and Light Company, 6.21 per cent.

Lynn Gas and Electric Company, 6.69 per cent.

Malden Electric Company, 6.59 per cent.

Central Maine Power, 6.78 per cent.

Cincinnati Gas and Electric Company, 6.79 per cent.

Connecticut Light and Power Company, 6.74 per cent.

West Pennsylvania Power Company, 6.07 per cent.

Q. Now, will you give me the companies and the earnings-price ratios for the additional five within the range from 7 to 7.99 per cent? A. Duke Power Company, 7.84 per cent.

Haverhill Electric Company, 7.29 per cent.

Consumers Power Company, 7.81 per cent.

Scranton Electric Company, 7.33 per cent.

Sierra Pacific Power Company, 7.73 per cent.

Q. Now, then, will you identify the ten additional companies falling in the range from 8 to 8.99 and give us the earnings-price ratios? A. California Electric Power Company, 8.11 per cent.

Newport Electric Corporation, 8.98 per cent.

Central Arizona Light and Power Company, 8.51 per cent.

Central Ohio Light and Power Company, 8.62 per cent.

Dayton Power and Light Company, 8.19 per cent.

Delaware Power and Light Company, 8.67 per cent.

[16090] Ohio Edison Company, 8.43 per cent.

Sioux City Gas and Electric Company, 8.44 per cent.

Tampa Electric Company, 8.53 per cent.

I have come out with nine instead of ten. I have overlooked one. If you would like me to find it I will do so.

Q. Let us pass it for the moment and go to the fourteen which range from 10 to 10.99. A. As I came out with 9, if I have a correct tally—

Q. I got 9, too.

MR. SPARKS: I have nine, also

TRIAL EXAMINER: Nine for the 9 to 9.99?

MR. GOLDBERG: Yes, 9 in the 9 to 9.99.

By MR. GOLDBERG:

Q. It should be 10 based on the distribution you show?

A. The distribution that I have been referring to is that within the range of 8 to 8.99 per cent.

Q. I am sorry. I skipped one. The last group you read was the range of 8 to 8.99 and we should have had 10, but so far we have only got 9. Apparently one has been overlooked. The next range is 9 to 9.99, which is again 10. A. Correct.

MR. SPARKS: I understand you are asking for fourteen, right?

MR. GOLDBERG: No, I had missed the fact that I had not gotten the 9 to 9.99.

[16091] THE WITNESS: Arizona Edison Company, 9.69 per cent; El Paso Electric Company, 9.00.

Holyoke Water Power Company, 9.32.

Iowa Southern Utilities Company, 9.81.

Carolina Power and Light Company, 9.65.

Central Vermont Public Service Company, 9.24.

Columbus and Southern Ohio Electric Company, 9.86.

Florida Power Company, 9.86.

Public Service of Indiana, 9.36.

Again I come out one short. It will show up somewhere because the totals check.

By MR. GOLDBERG:

Q. Let us go to the fourteen in the range from 10 per cent to 10.99 per cent. A. Black Hills Power and Light Company, 10.58 per cent.

Community Public Service Company, 10.60 per cent.
Frontier Power Company, 10.59 per cent.
Mountain States Power Company, 10.50 per cent.
Northwestern Public Service Company, 10.83 per cent.
Oklahoma Gas and Electric Company, 10.09 per cent.
Southwestern Electric Service Company, 10.10 per cent.
Virginia Electric and Power Company, 10.94 per cent.
Western Light and Telephone Company, 10.55 per cent.
It may be observed that some of these are not strictly electric utilities although I believe that they are in major part [16092] electric.
Central Illinois Electric and Gas Company, 10.08 per cent.
Northern Indiana Public Service Company, 10.50 per cent.
Southern Carolina Electric and Gas Company, 10.85 per cent.
Southwestern Public Service Company, 10.61 per cent.
Utah Power and Light Company, 10.09 per cent.
I do check fourteen this time.
Q. Will you give us the companies in the range from 11 per cent to 11.99? A. Southern Colorado Power Company, 11.81 per cent.
Iowa Public Service Company, 11.68 per cent.
Q. Now, there are two additional companies in the 12 to 12.99 per cent in addition to the one included in the fourteen. Will you give us those? A. They are Missouri Public Service Corporation, 12.27 per cent, and Tucson Gas Electric Light and Power Company, 12.96 per cent.
Q. Now, will you give us the five companies in the range 13 to 13.99? A. Missouri Utility Company, 13.95 per cent.
Tidewater Power Company, 13.53 per cent.
Birmingham Electric Co., 13.71 per cent.
Empire District Elec. Co., 13.61 per cent.
Public Service Co. of Colo. 13.92 per cent.

Q. Now how about the two companies within the range 14 to [16093] 14.99 per cent? A. The Arkansas-Missouri Power Co., 14.81%.

Lake Superior District Power Co. 14.09%.

Q. And you already have identified the two in the 16 to 16.99 per cent so we need not go into those? A. That is right.

* * *

[16106] EDWARD S. LOANE

was called as a witness and, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

By MR. SPARKS:

Q. What is your full name, Mr. Loane? A. Edward S. Loane.

Q. What is your present position? A. I am assistant to the vice president of Pennsylvania Water & Power Company.

* * *

[16109] Q. Will you outline briefly your education and experience? A. I studied civil engineering at The Johns Hopkins University, School of Engineering, and received the degree of Bachelor of Engineering in 1928.

I stayed at the University for one year as a graduate student in mathematics, during which time I was also an instructor.

During two summers while I was at the Hopkins, I was employed by Penn Water, one summer in Baltimore and one in Holtwood.

For a little less than a year in 1929 and 1930, I was employed by a consulting engineer then engaged in bridge [16110] design.

Since March, 1930, I have been employed by Penn Water.

I am a Registered Professional Engineer in Maryland, an Associate Member of the American Society of Civil Engineers, and for a number of years have been a member of the Hydraulic Power Committee of the Edison Electric Institute.

Q. What have been your duties since you were employed by Penn Water in 1930? A. I have been a member of the staff of the administrative department which has been successively under the direction of Mr. R. L. Thomas, Mr. F. A. Allner, and Mr. G. W. Spaulding.

My early work related largely to hydraulic and hydrologic studies, including analysis of rainfall and run-off records of the Susquehanna area and studies of flood probability, stage relations, etc. The hydraulic work included analysis of turbine tests of various kinds, conduct of and reports upon other tests relating to turbine discharge and the benefits resulting from various methods of hydraulic operation.

During the past 10 years this work has been more directly concerned with the relationship of hydrology and hydraulic tests and computations to the results of operating experience. Analyses made of storage and river stage relations, of turbine performance, of the results of operation during drawdowns, floods, and other special situations have led to [16111] improvements in operating practices, in efficiency or in capacity. I have collaborated with Mr. Watchorn in studies relating to economic operation of the Holtwood and Safe Harbor hydro plants in conjunction with the interconnected steam system, and in studies of coordinated operation of the several power systems in F. P. C. Areas 5 and 6 and the benefits obtained from such operations.

Over a period of years, I have also worked with Mr. Watchorn in the development of methods of analysis of the capacity requirements of a hydro-steam system, the application of which methods has been discussed at length in the testimony of Mr. Watchorn.

I have made from time to time studies relating to the energy and capacity benefits resulting from additions to or modifications of the Holtwood and Safe Harbor plants and from other possible hydro developments.

Q. Mr. Davis showed in Exhibit 64, Table I, Line 1, all of the Hydro Production Plant of Penn Water as assigned to the "Pool." His testimony at pages 10816 and 11104 of the transcript and at other places in the record was that he intended to allocate all property on the basis of use. Is all of the Hydro Production Plant of Penn Water used for services to all of the companies listed in columns 1 to 5 of Table I of Exhibit 64, and considered in Exhibit 64 as customers of Penn Water? [16112] A. No, all of the plant is not used for all customers.

Q. Is the 25 cycle portion of Holtwood used for service to all customers? A. No, the 25 cycle service is provided to only two customers, Baltimore and Pennsylvania Power & Light. In addition, a very small amount of the 25 cycle generation is converted for use in the 60 cycle system.

Q. What part of the 25 cycle generation is converted at Holtwood? A. During recent years an average of about 4 percent, and this conversion is as high as 4 percent only because of the exceptional situation existing in these recent years. Furthermore, the conversion from 25 cycle to 60 cycle is offset in part by conversion from 60 cycle to 25 cycle. The net annual amount of conversion from 25 cycle to 60 cycle has recently averaged only 2 percent of the 25 cycle generation.

Q. For what purpose is 25 cycle generation converted to 60 cycle at Holtwood? A. To increase the amount of 60 cycle service available from Holtwood; but since a large part of such conversion takes place at times when Penn Water has an ample supply of 60 cycle generation for use in supply of the firm Pennsylvania loads, conversion at such times is only for the purpose of supplying additional interchange services.

Q. Is the 60 cycle portion of the Hydro Production [16113] Plant and the Holtwood Steam Station used for service to all customers? A. No. Except for almost negligible amounts of generation it is used only for service to Metropolitan Edison Company at York, Pennsylvania Power & Light Company's Lancaster Division, and Philadelphia Electric Company's Coatesville Division.

Q. What are the almost negligible exceptions that you noted in your last answer? A. A small part of the 60 cycle generation at Holtwood may be converted at Holtwood and the resulting services delivered at Highlandtown. A small part may reach Baltimore or Washington over the 220 kv system. A small part of the Holtwood 60 cycle generation may be converted at Safe Harbor to provide service to the Pennsylvania Railroad.

Q. What part of the total Holtwood 60 cycle generation is involved in these minor exceptions? A. About 2 percent of the total Holtwood 60 cycle generation may be used for service to Baltimore and the Pennsylvania Railroad.

Q. Have you prepared a tabulation showing certain data for the years 1941 to 1946 with respect to the 25 cycle and 60 cycle hydro generation at Holtwood, the send-out to the two 25 cycle customers, and the use of the Holtwood frequency changers? [16114] A. Yes, I have.

Q. Is this tabulation, marked Exhibit 349, the tabulation you have prepared and which I have just described? A. It is.

Q. Beginning on page 11455 Mr. Sturtevant asked Mr. Davis a series of questions relating to the use of the 25 cycle generation at Holtwood. He divided this use into six separate categories. The first two classifications of use of the 25 cycle generation concerned the deliveries to Lancaster and to the Holtwood frequency changers. Does the tabulation, identified as Exhibit 349 show the amount of 25 cycle generation delivered to Lancaster and to the frequency changers? A. Yes, it does.

Q. Is the balance of the 25 cycle generation sent to Baltimore? A. Yes, it is.

Q. What is the ratio of the 25 cycle net sendout to Baltimore to the total 25 cycle hydro generation at Holtwood? A. For the average of the five years, 1941 to 1945, the ratio was 90.5 percent and for 1946, 91.5 percent. Either of these figures might be considered to be typical of average flow conditions, but not of average load conditions.

Q. Why do you say these figures are not typical of average load conditions? [16115] A. The conversion from 25 cycle to 60 cycle has been higher in recent years than we expect it to be in the near future. Reduced conversion would increase the percentage of 25 cycle sendout to Baltimore.

Q. What factors did you consider in your statement that the conversion from 25 cycle to 60 cycle at Holtwood will be decreased in the near future? A. The large installations now under construction and the planned capacity additions by the utilities in FPC Area 5 are expected to reduce the interchange deliveries in Pennsylvania. The capacity additions planned in Area 6 and the retirement of 25 cycle steam generators in Baltimore will both increase Baltimore's need for 25 cycle hydro. Both these facts will tend to reduce the conversion from 25 cycle to 60 cycle at Holtwood.

Q. The third and fourth classifications of use that Mr. Sturtevant assumed in his questions, depended on the fact that at certain hours there are deliveries by Penn Water at Highlandtown at the same time there are backfeed deliveries to Penn Water on the 220 kv circuits in Maryland. Assuming this to be the fact, does it change your previous answer relating to the use of the 25 cycle generation not sent to Lancaster or not converted to 60 cycles at Holtwood? A. No, that answer is not changed. All the 25 cycle services supplied at Highlandtown are consumed on the Baltimore system.

[16116] Q. The third classification involved the assumption that 25 cycle energy, delivered by Penn Water at Highlandtown, was converted by Baltimore to 60 cycles and delivered to Penn Water as backfeed. Is any energy from Highlandtown so converted and delivered? A. It is very unlikely. There may be very small amounts of energy from Highlandtown used in Baltimore Company's frequency changers. Such amounts must be small, for this operation would take place only when the delivery at Highlandtown is greater than the 25 cycle load in Baltimore; and this could happen only on Saturdays, Sundays or holidays and a few off-peak hours of week days in high flow. But then, because of high flow, it is most unlikely that any of the resulting 60 cycle energy would be delivered by Baltimore as backfeed to Penn Water.

Q. Did you furnish to Mr. Zinder the figures appearing in column 1 of Table 1 and of Table 2, both of Schedule B and appearing at pages 24 and 25 of Exhibit 319? A. Yes.

Q. Where were those figures obtained? A. They were obtained from the records of the company and the testimony and exhibits in this case.

Q. Do you agree generally with all the statements of fact contained in Exhibit 319, with respect to the use of the facilities of Penn Water & Power Company and S. T. Company? [16117] A. Yes.

Q. Were you directed by the officers of Penn Water to prepare a report showing corrections that should be made to Mr. Davis' Exhibit 64? A. I was.

Q. Is the document which has been identified as Exhibit 350 the report showing the corrections to Mr. Davis' Exhibit 64 that you have just referred to? A. It is.

* * *

[16123] CARL WILLIAM WATCHORN

• • •

CROSS-EXAMINATION

By MR. GOLDBERG:

Q. Mr. Watchorn, there are a number of matters on which you were to make investigation and report. One of them [16124] was with respect to the conference on June 25, 1946, between yourself, Mr. Spaulding, Mr. Von Eiff, Mr. Roland and Mr. Davis. Have you made any investigation to ascertain whether there is a memorandum covering that conference? A. I have.

Q. And what have you found? A. I found that there was such a conference and that Mr. Loane, in addition to the parties you mentioned, was also present at that conference.

Q. Were you able to ascertain whether there is a memorandum covering that conference? A. Oh, yes, there is a memdrandum.

Q. So that you have now refreshed your recollection with respect to the subject matter at that conference, is that right? A. That is right.

Q. And having refreshed your recollection you are now aware, are you not, that in that conference Messrs. Roland and Davis were advised that the 295,000 KW dependable hydro capacity was made up of several components? A. I am not in a position to state from my refreshed recollection of that memo that that statement is so.

Q. You mean your memo does not enable you to state what was discussed with respect to the makeup of the 295,000 KW dependable hydro capacity, is that right? [16125] A. If you ask me what was discussed I can tell you, but I can't answer that question without giving a tremendous amount of qualifications relating to it.

Q. Well, let's see if we can avoid qualifications and get to the heart of what was discussed. You are aware, are you not, that the makeup of the 295,000 KW reported as

dependable hydro capacity was discussed in that conference? A. That is correct. One of the subjects of that conference and one of the two subjects discussed related to the amount of 295,000 KW.

Q. Now then, in that discussion, having refreshed your recollection about the discussion, you know, do you not, that Messrs. Roland and Davis were advised that the base component of the 295,000 KW was 161,000 KW, which was determined by applying the energy available from the hydro generation during the week of the most adverse river flow to the actual 1945 load curve for the week of the maximum load on the interconnected system, using a weekly recovery cycle? A. I am not so aware.

Q. It is your statement that they were not so advised? A. Categorically the answer is that they were not so advised.

Q. I take that to mean if you were limited to a yes or no answer, you would have to say no, is that right? A. That is correct.

[16126] And that if you were permitted to explain your answer you could say yes with an explanation, is that right? A. No, I wouldn't say yes with an explanation, I would give the explanation.

Q. Let us have your explanation, then we will see whether you can say yes. A. My recollection of that meeting now with respect to the discussion relating to dependable hydro capacity, is that either Mr. Davis or Mr. Roland stated they were interested in determining a comparison between the 161,000 KW reported by Baltimore Company for the pool in the pool Form 12 report for the year 1945, with the 295,000 KW—in Schedule 16—the 295,000 KW filed by Penn Water for the Holtwood-Safe Harbor System.

Q. In Schedule 16? A. In Schedule 16, that is correct. One or the other started the discussion and led it for a considerable way through. It was quite apparent that they had made their own conclusion that the substance of

the question that you have asked me was the manner in which the 295,000 was derived, without asking whether that was so. The conference then went on with reference to Schedule 2 and instead of going to Schedule 2 itself the conference went to the notes to Schedule 2 in the Penn Water-Safe Harbor System report—I mean the Holtwood-Safe Harbor System report—filed by Penn Water, [16127] in which my recollection is there was a number shown for the month of December for weekly use of pondage, with refill as of the beginning of the following Monday morning, of 207,000 KW, whereas the pool report filed by Baltimore Company showed an amount of 161,000 KW.

The question was as to how we could reconcile those two figures. Mr. Davis and Mr. Roland were informed in substance—

Q. Were what? A. Were informed in substance; I don't know the exact words—that the Baltimore Company's determination of 161,000 KW as shown in Schedule 2 was based on the actual experienced loads for 1945 with weekly refill, and that the 207,000 KW shown in the note for the corresponding condition by Penn Water was based on estimated 1946 loads.

In other words, there was no implication or intention in our answer in any manner whatsoever that the 207,000 was derived from the 161,000 as a component.

They then asked how the difference could be explained. It was explained that a part of the difference related to the treatment of the supply of Penn Water and Safe Harbor to Metropolitan Edison in 1946, which supply did not exist in 1945. The balance of the difference was a result of the difference in the load basis used by Penn Water and Safe Harbor, as contrasted with that used by Baltimore Company, Penn Water's estimate being based on estimated 1946 load with [16128] Baltimore Company's determination being based on actual load, actual load for 1945.

I would have to check as to whether the difference in the treatment with respect to M. E. was 10,000 KW or 6,000 KW. It is one or the other of those two numbers but the difference is quite inconsequential. The correct number is that 10,000 KW was the difference as to the treatment of M. E. and 36,000 KW was the difference resulting from the treatment of the load.

No reference, in my recollection, was made with respect to Schedule 2 itself. However, this same note showed for complete refill of the Safe Harbor pond, in the table in which the number of 207,000 KW was shown, for complete refill of the Safe Harbor pond at the beginning of the following week for the month of December, 207,000 KW, and showed an additional amount of 59,000 KW which would be the result of the use of the Safe Harbor pond for the stated specified conditions over the period of the week without complete refill at the beginning of the following Monday morning, with the result that the total amount shown using Safe Harbor pondage was 266,000 KW; and I think the memo states that Mr. Davis asked if the 88,000 KW difference between the 295,000 KW shown on Schedule 16 and the 207,000 KW shown in the note to Schedule 2, was that amount, or whether the 59,000 KW was the result of the use of Safe Harbor's pondage.

[16129] He was told that at times that was so and that at other times it would be the result of flows in excess of the most adverse flow.

The question was then asked if the remaining 29,000 KW was not the result of the use of flows higher than the most adverse, and there was a statement to the effect that it could be considered in that light.

In addition it was pointed out—my recollection with respect to this matter is that Mr. Spaulding made this statement, and further my recollection of my impression of that time is that Mr. Spaulding had in mind not Schedule 16 of Form 12, but rather his cost of service study, which is Exhibit 35 in this case.

Q. Did he express that or is that something you are assuming? A. If I may go on in my own way we will straighten that out a little later. It was my recollection of my impression, and on further check with Mr. Spaulding he assures me that that was his intention as of that time.

In that connection he stated that the 295,000 KW was a judgment figure and pointed out that on the basis of seasonal use of Safe Harbor storage we would obtain an assured capacity of the Holtwood and Safe Harbor plants of 260,000 KW and, making an allowance of 15 percent reserve, there would be the equivalent of 39,000 additional reserve value, resulting in a [16130] total dependable capacity of 299,000 KW.

There is a further note in the memorandum to the effect that Mr. Spaulding pointed out that if the study in Exhibit 35 had been made on an assured basis, that substantially the same result would have been obtained as if made on the basis of using a judgment figure of 295,000 KW.

There is a further statement in that memo that the basis for Penn Water's estimates of 1946 loads for the interconnected system, were based on prewar experience relating to loads, and there is a further statement that a suggestion was made to both Messrs. Davis and Roland that they confer with their fellow workers in the Federal Power Commission who, we understood, were working with the Army Engineers investigating the feasibility of new hydro-electric developments, pointing out it was our understanding that they were making studies on the basis of seasonal use of pondage and that their load shapes were based on the 1940 loads.

I think that covers that memo relating to the conference with Messrs Davis and Roland as of June 25, 1946.

* * *

[16135] Q. Is it your testimony, Mr. Watchorn, that the 295,000 KW reported as dependable hydro capacity in

the 1945 FPC No. 12 report, filed by Penn Water, was merely a judgment figure? A. No, that is not m testimony.

Q. Your testimony was that the 295,000 KW as shown in Exhibit 35 was merely a judgment figure? A. That is correct.

Q. And it is just happenstance that the two come out together? A. Yes, I think that is fair.

* * *

[16141] Q. Now then, isn't it the fact from your review of the memorandum that it appears that at no time during the conference was it suggested that the determination either by Mr. Spaulding in Exhibit 35 or the determination in FPC Form 12 for 1945 of 295,000 KW, was based upon the probability method as testified to in this case? A. That is not correct, Mr. Goldberg.

Q. You state that in that conference they were advised that the probability method was followed in determining the 295,000 KW in reporting that amount in FPC Form 12 for 1945? A. No, I did not say that, Mr. Goldberg.

Q. Was it suggested to them—that is, Roland and Davis—that the probability method had been followed in arriving at the 295,000 KW for Form 12? A. The second complete paragraph on page 5 reads as [16142] follows:

> "Mention was also made of probability as another approach to determination of the 295,000 KW dependable hydro capacity. The purpose of this study was to show that the same reliability of service could be provided with the Holtwood-Safe Harbor hydro capacity replaced by at least 295,000 KW of steam capacity."

And further referring to the note to Item 1(b) of Schedule 16 of the Form 12 report for the Holtwood-Safe Harbor system filed by Penn Water for the year 1945, which was available to Messrs. Davis and Roland prior to the meeting or the conference of June 25 and with respect

to which they stated they were interested, relative to the calling of this meeting, note Item 1(b) is as follows:

> "The dependable capacity available from the system hydro plants was determined in accordance with the instructions for Schedules 2 and 16. This determination is based on estimated loads for the year 1946. It takes into account seasonal variations in the firm power load of the interconnected system, peaking capabilities of system steam capacity, scheduled steam maintenance requirements, frequency of occurrence, duration and magnitude of low flows in the various seasons throughout the year and frequency of occurrence and magnitude of high flows, together with the requirements for emergency [16143] use of stored energy to carry the system load during periods of forced outages of large amounts of system steam capacity."

That, although not using the word "probability" in that paragraph, spells it out so clearly that anyone should have no question but that the theory of probability was the sole and only basis for the determination of the 295,000 KW reported in the schedule thereto.

Q. Was that what Messrs. Roland and Davis were advised in the conference on June 25, 1946, that the sole and only basis— A. They didn't ask that question.

Q. —was the probability method? A. They didn't ask that question and they had the report with them and nobody stopped them from reading it. It was assumed they had read it and they raised no question as to what the meaning of that note was.

Q. You say they were not told that because they didn't ask that question, is that right? A. Well, I don't know as to that particularly. All I am stating is that they didn't ask the question.

Q. And therefore nothing was said about it, is that your point? A. There was something said. I just

quoted here the second paragraph on page 5 where it was stated that, "Mention [16144] was also made of probability as another approach to the determination of the 295,000 KW dependable hydro capacity." So, Mr. Goldberg, I have to say that mention was made of probability as being a basis for the determination of the 295,000.

Q. Not as the sole basis for the determination but only as another approach in determining dependable hydro capacity, isn't that so? A. Talking about—

Q. Let's talk about what you said in the memorandum, isn't that so?

• • •

THE WITNESS: That is what the memo states, yes.

By MR. GOLDBERG:

Q. And that is what they were advised that it was merely another approach that could be used? A. The memo so states but as I have stated previously the 295 dependable hydro capacity was discussed at that conference in two different lights.

• • •

[16151] Q. Did I understand you to say during your cross-examination that you had first determined that outage for scheduled maintenance could be treated as an additional load, that you had first determined that in June or July, 1945? A. That was one of the factors determined as of that time. Another factor I overlooked the other day when you were asking that general line of questions, is a very important consideration as to the treatment of the load carrying capabilities of the hydro plant and the reductions in such load carrying capabilities of the hydro plants were also treated as an addition to the load.

• • •

[16171] Q. What is the maximum in terms of feet for the 6 million kilowatt hours? Is it 12 feet? A. That is about 12.2 feet for Safe Harbor, and I don't know, I cannot recall

at this moment just what elevation we used for Holtwood in that matter.

• • •

[16185] Q. I want to show you an article written by Mr. Spaulding on "The Coordinated Operation of Hydro and Steam Capacity in Electric Power Systems," which appears in Volume 66 of the 1944 American Society of Mechanical Engineers Transactions. The article begins at page 545 and I see that you apparently have a copy of your own; is that right? A. That is a copy of one of my coworkers.

Q. Well, let me just call your attention, then, to the part that I was interested in. On page 548 of the volume referred to, this paragraph appears and runs over to page 549:

[16186] "It is necessary to emphasize that the amount of hydro capacity which may be available from drawdown cannot be considered as replacing the entire system reserve requirements. Obviously, it is impossible for pondage to be used as protection against all outages of steam capacity, for these are almost continuously existent; in low flow the available pondage would soon be exhausted, as opportunities for refill would be inadequate. Neither could pondage provide protection against errors in load estimates, which must be made several years in advance, nor could it provide capacity to cover scheduled maintenance, where required during the peak load period of the year. However, under normal conditions, pondage might be considered for about one-third of the total required system reserve."

I have correctly read that paragraph, have I not? A. That is correct.

• • •

[16187] Q. I see. Well, I will let you read it, I assure you, but right now let me ask you if you agree with the state-

ments made in the paragraph I have just read. A. I think that, in the absence of the portion of the paragraph to which I have just made reference, that the statement in the paragraph that you have just read is a conservative treatment of that problem and as of that time, I was in perfect accord with it.

TRIAL EXAMINER: What year was that?

THE WITNESS: That paper was presented at a meeting April 3 to 5, 1944.

MR. GOLDBERG: Now, may I have the last answer read?

TRIAL EXAMINER: Yes.

(Answer read by the reporter.)

By MR. GOLDBERG:

Q. Now, do I understand that though you were in accord with the statements contained in that paragraph at the time it was presented, you are not today in accord [16188] with those statements? A. Not to the same extent as of then, for the reason that since that time I have found it impossible to make an evaluation of all the relevant factors.

Q. And these relevant factors to which you refer are those that came to you in the latter part of June and beginning of July, 1945? A. Oh, no, the factors I am speaking of there, most of which are mentioned in Mr. Spaulding's paper.

Q. You mean today you are better able to evaluate the factors referred to in that paragraph, or in the paper, than you were at that time? A. Oh, I have since evaluated them. My testimony is related to that evaluation, whereas of that time I couldn't make that evaluation.

Q. But now you don't agree with that paragraph any more, because you have been able to make an evaluation? A. Not in its entirety, that is correct.

* * *

[16191] Q. You don't know today whether you can agree with the statement that "However, under normal conditions, pondage might be considered for about one-third of the total required system reserve;" is that right?

• • •

[16192] THE WITNESS: Yes, sir. My answer is that I do know whether or not I agree with that statement.

By MR. GOLDBERG:

Q. Do you? A. No, I do not agree with the statement.

• • •

[16194] Q. You had expressed a desire to read a paragraph into the record, and I would like to give you that opportunity now. And just so the reference can be to the copy as it appears in the official transactions, will you tell us on what page of said transactions it appears? A. It appears on page 547, and is contained in two paragraphs at the top of the column to the right on that page, and reads as follows:

[16195] "In the foregoing procedure, there are certain hydro resources which have not been fully evaluated. Additional hydro capacity is available for something less than 93 percent of the time, resulting from river flows in excess of those used in capacity computations. Such capacity is available for the release of steam units, for maintenance work, in addition to that scheduled in advance, and much maintenance of this nature has recently been necessary."

Parenthetically, this last condition refers to the conditions that existed during the war.

"Additional hydro capacity is also available from the short-time use of pondage when required by the simultaneous forced outage of a large number of steam units, even with stream flows lower than those used in capacity computations. The extent to which a system

would be willing to rely on such capacity as firm would be influenced by the forced outage record of its own or similar steam generating equipment, and upon the amount of other reserve capacity then available on the system.

"Perhaps someone will eventually evaluate and properly combine all the pertinent factors by the application of a probability theory. As this theoretical solution now seems impractical, an attempt has been made to approximate the possible use of pondage in the light of the forced outage experience of steam generating equipment, [16196] the ideal objective still being that a combined hydro and steam system should have substantially the same degree of reliability as an all-steam system."

• • •

Q. And in an earlier answer you have indicated that those two paragraphs should be taken into account in connection with the paragraph that I read into the record from the article: is that right?

• • •

A. Yes. What I meant there was that since I have now been able to make the evaluation, expressed in particularly the last paragraph I have just quoted, I no [16197] longer agree with the last sentence of the paragraph in Mr. Spaulding's paper that you had quoted.

• • •

[16251] Q. Let's see if I can inspire you, as I did yesterday. Do you remember, on June 16, 1941, you and Mr. Loane jointly prepared a discussion of a paper by H. C. Forbes and K. F. Bellows of the Consolidated Edison Company of New York relating to generating system capacity reserves in connection with probability? A. I have so testified.

• • •

[16252] Q. Now, then, this was stated by you and Mr. Loane:

> "We have found no easy way of reducing the variations in magnitude of stream flow to a probability basis and at the same time retain the essential variations in flow with respect to time."

That appears there, does it not? A. That is correct.

Q. What did you mean when you said that? A. What I had stated before that the previous work I had done in this matter involved a tremendous amount of calculations to get a result, which even then did not take into account all the pertinent factors involved.

Q. Do you mean today you have found an easy way of doing what is there referred to? A. Oh, yes, I testified to that on cross examination by you.

Q. So that today you have found a way of reducing the variations of magnitude of stream flow to a probability basis and at the same time retain the essential variations [16253] in flow with respect to time; is that right? A. That is correct, and that was the point of the passage in Mr. Spaulding's paper that I desired to read into the record yesterday, which you so kindly permitted me to do.

* * *

[16254] Q. In that same paper, you and Mr. Loane stated, did you not, as follows:

> "The particular generating system in which we are interested is a coordinated combined hydro and steam system. The hydro plants are low head, approximately 50 feet, and operate run of river, as distinguished from seasonal storage."

Is that right? A. That is correct.

Q. You were there referring to Safe Harbor and Holtwood? A. That is correct.

* * *

Q. I have no subsequent questions. A. Oh, then, it so states on that page.

Q. In that same paper, you said this, did you not:

"The valleys in the steam generation requirements either in the case of an all-steam system or combined hydro and steam system should be utilized for maintenance of the steam units. We have found it convenient in our probability studies to treat the scheduled outage of steam equipment as an addition to the load and to consider that [16255] all the steam units are available at all times except for possible forced outages. The procedure is conservative—" that has a familiar ring? "—although slightly inaccurate and results in a considerable simplification of our computations."

You so stated, did you not? A. That is correct.

Q. What was the date of that paper? A. I want to give a qualification respecting this.

Q. Before you do that, will you tell us the date of the paper? A. The date of this paper is June 16, 1941.

Q. Now, will you go ahead with your qualification? A. And in preparing my testimony with respect to this matter, I merely checked the title of the discussion and the paper to which it referred, without reading its text, and apparently, between the time that this paper was prepared and subsequent work, that I had forgotten that we had done on this and rediscovered this process at a later date. In fact, there would be no point with respect to this particular matter had I recalled that this was the fact, to have not so stated, in my direct testimony and cross examination.

• • •

[16256] A. I would like to correct that and say, in fact, there would be no point, had I been aware of this matter, to have not so stated in my direct testimony, in contrast to which there would have been no point with respect to this particular matter.

• • •

Q. Let me see if I can unravel that in my own mind. I understand that what you are trying to do is reconcile the statement with respect to the time of discovery of the addition of scheduled outages of steam equipment to the load, and your statement on cross examination that you first discovered it in June of 1945. That is what you are trying to do, reconcile the two? A. That is correct.

* * *

[16332] REDIRECT EXAMINATION

* * *

[16344] By MR. SPARKS:

Q. In Mr. Reiblich's question at the top of page 16261, he referred to Baltimore Company's interpretation of the instructions of Form 12, relating to dependable hydro capacity, stating that Baltimore Company [16345] considered "the difference between the highest annual one-hour peak and the maximum base steam load requirements for the minimum seven-day river flow reported on for that period of the year." In that interpretation was Baltimore Company assuming the coincidence of minimum flows with maximum loads? A. They were, and that is one of the objections to using that rule of thumb method without proper consideration of probability, for we know that we do not frequently get such a coincidence. My criticism has gone largely to the fact that they used the most adverse flow on record "for that period of the year" together with an estimate of an "annual one-hour peak" that was not as large as past experience had indicated must be expected for future peak loads.

* * *

[16392] H. ZINDER

* * *

CROSS EXAMINATION (Resumed)

By MR. GOLDBERG:

Q. On page 2 of Exhibit 319, Mr. Zinder, you speak of the operations of the system. That is the paragraph immediately preceding the caption "Summary of Results." Do you see that? A. Yes.

Q. The system you there referred to consists of what? A. The system of Penn Water.

Q. So that when you speak of the operations of the system, I take it you mean only the operations of Penn Water? A. Essentially so.

Q. So that when you stated that the determination of what would be a reasonable and feasible method of assigning property and costs is based on a study, among other things, of the operations of the system, you were speaking essentially of a study of the operations of Pennsylvania Water and Power Company? [16393] A. That is right.

Q. Did you study the operations at all or any of the other companies comprising the interconnected system? Namely, Safe Harbor, the Washington Company, and the Consolidated Company? A. I didn't study the operations of those systems as complete systems. Certain transactions between those systems and Penn Water, which appeared in the study of the Penn Water System.

Q. Did you study the operations of the Consolidated, Washington and Safe Harbor Companies in so far as they had a bearing on the transactions with which you were concerned? A. I think so.

Q. What transactions were those? A. The transactions that I was concerned with are those between Penn Water and Baltimore Company, the service rendered by Penn Water and Baltimore Company.

Q. Were you concerned, in your study, with the services rendered by Baltimore to Penn Water? A. No, not directly.

Q. What do you mean by "not directly"? A. Well, it was necessary, in determining the services rendered by Penn Water to Baltimore, to determine the use of certain facilities. And over some of those facilities, [16394] some services were rendered by Baltimore to Penn Water. To the extent that that entered into my studies, or were necessary in connection with my studies, they were considered.

Q. Did you consider that there were services rendered by Penn Water to its Pennsylvania customers in Pennsylvania? A. No, not as far as determining any costs of such services was concerned.

Q. To what extent, then, did you concern yourself with the services rendered by Penn Water to the Pennsylvania customers? A. Only to the extent of determining that any of the facilities used in connection with those services or any of the costs involved in connection with those services also involved facilities or costs in connection with service by Penn Water to Baltimore.

Q. I understand, from that last answer, that you studied the services rendered by Penn Water to the Pennsylvania customers in Pennsylvania for the purpose of ascertaining whether the facilities involved in rendering those services had a bearing on the costs you were allocating to Baltimore; is that right? A. That is right. In other words, whether any of those facilities were also facilities involved in service to Baltimore.

[16395] Q. From your studies, are you able to describe the physical operations of the interconnected system? A. In a general way, yes.

Q. Will you do so? A. First of all, Penn Water has a hydro plant and steam plant. The hydro plant has both 25 and 60-cycle units installed. The steam plant has only 60 cycle units. From the Holtwood hydro plant, there is the Highlandtown line, which carries 25-cycle energy from the Holtwood plant to Baltimore. I might say that, also, at the Holtwood plant, there is the Holtwood substation. Also, out of Holtwood, there is a line to Lancaster, for the

purpose of delivering 25-cycle energy and services to Lancaster.

There are lines from Holtwood to Lancaster and to Coatesville for 60-cycle service.

From the Safe Harbor plant, there are two major 220 kv lines for the transmission of 60-cycle energy and services to Baltimore. One is known as the Westport line and the other is the Riverside line. From a point on the Westport line, there is a connection to Potomac Electric Power Company. Also from the Safe Harbor plant there is a 25-cycle single phase line known as the Perryville line, used primarily for service to the Pennsylvania Railroad.

There is also a line from the Holtwood plant for [16396] service to Metropolitan Edison.

I think that that is both a brief description of the facilities and the operations. The Safe Harbor plant generates both 25-cycle single phase service and 60-cycle three-phase service.

Q. For the most part you have described the physical facilities of the system, isn't that so, rather than the operations of it? A. Well, I have tried to describe the physical facilities and the use made of those facilities, which, in turn, represents an operation.

Q. How does the interconnected system operate with respect to the rendering of service to Pennsylvania Power and Light Company at Lancaster, for example?

* * *

A. With respect to the 25-cycle service to Lancaster, that is service rendered by Penn Water alone. As far as the operation of the interconnected system, of what you call the interconnected system, is concerned, for service to Lancaster, I can't describe it in detail, except to say that my determination found that none of the facilities used for that service, as far as Penn Water was concerned, were involved in rendering service to Baltimore, on the part of Penn Water.

[16397] By Mr. Goldberg:

Q. How did you determine that? How did you go about finding that out? A. Well, there is no major and direct connection between the transmission line to Lancaster and Baltimore, and that is also based on discussions with the company people.

Q. Who? A. Mr. Loane.

Q. Is there any major connection between Baltimore and the railroad for service through the Conestoga Substation, through the Safe Harbor plant?

* * *

The Witness: I can't answer that.

By Mr. Goldberg:

Q. Why can't you answer it? Do you mean you have not made any studies that would enable you to answer it? A. I did go into some of these other operations at the time of my study, but my study was concerned with the service rendered by Penn Water to Baltimore. Your question, as I understand it, deals with a connection between Baltimore and the railroad.

Q. As I understood your earlier answer with respect to service at Lancaster, one of the elements you considered was the lack of a major connection between Baltimore and the service of Lancaster; is that right? [16398] A. Yes.

Q. And you derived that information, you say, in part, from a discussion with Mr. Loane? A. Yes.

Q. Now, since that formed one of your bases for concluding that service to Lancaster had no bearing on your allocations to Baltimore, why didn't you concern yourself with the existence or lack of existence of major connections between Baltimore and other services involved on the interconnected system? A. Well, I can answer that this way: I did, to the same extent as I described in the case of Lancaster. I think I stated in my exhibit that the costs shown were not less than the amount determined in here. That statement was made because, to some small extent, it

is possible that other facilities were involved, and I did not include those other facilities and other costs.

Q. At the moment I am concerned with your understanding of the operations, because I think you will agree with me that you must have an understanding of the operations to arrive at a reasonable cost allocation. Is that a fair statement? A. Not entirely in this case.

Q. Why not? A. The study which I have presented here is confined [16399] to the service rendered by Penn Water to Baltimore. It is not concerned with all the services rendered by the company or by Penn Water. It was necessary, therefore, for me to concern myself only with those facilities and costs involved in that service.

Q. Now, when you said it isn't necessarily so, in this case, in response to my question, I take it you were relating that to the very narrow function you were performing in presenting your testimony in this case; is that right?

* * *

A. Maybe my objection, or not objection but difference, has to do with a function I am performing. I considered the single problem, namely, service by Penn Water to Baltimore, and my studies were related to that.

By Mr. Goldberg:

Q. Are you saying that you can arrive at a reasonable allocation with respect to Baltimore Company, considering the operations of the interconnected system and the other services that Penn Water renders, by only concerning yourself with the services rendered by Penn Water to Baltimore Company? A. Let me try to put it in my words. I am not sure I have your words clear.

[16400] Q. All right. A. I believe I have arrived at a reasonable cost of those services, or at a proper cost of those services rendered by Penn Water to Baltimore.

Q. And you say that you can arrive at that without considering other services rendered by Penn Water to

other customers in their relationship to the service rendered to Baltimore?

* * * *

A. I say that I can arrive, and have arrived, at such a cost by considering the Penn Water system and those facilities and costs incurred in connection with its service to Baltimore.

By MR. GOLDBERG:

Q. And you have done that without regard to the relationship of the services rendered by Penn Water to Baltimore and other services rendered by Penn Water to other customers? A. No, I wouldn't say that.

Q. Why not? A. I have gone sufficiently far, I believe, in my review of the operations of the system, to determine those costs which I believe are properly allocable to Baltimore. [16401] In connection with that determination, no part of the costs, for example—or no portion of the payments made to Safe Harbor are included, and no portion of the costs of such purchases as Penn Water makes from its other customers has been assigned to Baltimore. To the extent that some of those purchases, or some of those services purchased, are used to render service to Baltimore, to that extent—and their costs have not been included here—I would say that the cost that I have shown is understated to that extent.

Q. Have you concluded, in your studies, that the payments made to Safe Harbor by Penn Water had no bearing on the cost of service to Baltimore by Penn Water? A. I would prefer to go to the statement I have made in that respect in the exhibit in answer to that question.

Q. Are you looking for the statement you make at the bottom of page 4 and at the top of page 5 of your exhibit? A. Yes, that is right. At that point I state that—let me read that statement—

"In addition to the costs associated with its own investments, Penn Water has other costs. It receives

services from Safe Harbor Water Power Corporation, hereinafter referred to as Safe Harbor, and it engages in interchange transactions with its customers [16402] resulting in the receipt as well as delivery of energy and services. The costs associated with these transactions must also be allocated to the use made of these services. Consideration was given to the character of these services. It was found that some of the costs associated with these services might properly be allocable to Baltimore but that the amount involved would be relatively small. Accordingly, no part of the payments associated with these services has been assigned to Baltimore. Thus it may be stated that the cost to serve Baltimore is no less than the amount determined herein."

* * *

[16518] Q. Sources that are available only on an as-if-and-when basis are not considered by you as firm power commitments; right? A. That is right.

* * *

[16581] G. W. SPAULDING

* * *

DIRECT EXAMINATION

* * *

[16584] By MR. SPARKS:

Q. Beginning at line 15 of page 906 of the transcript, Mr. Roland testified with respect to the companies from whom Penn Water receives electric energy. What are the facts as respect the receipt of electric energy from Safe Harbor Water Power Corporation by Penn Water? A. Penn Water receives all of the electric services including electric energy available from the Safe Harbor Hydroelectric Development, owned and operated by the Safe Harbor Water Power Corporation. Such services are sup-

plied to the transmission facilities of Penn Water by Safe Harbor within the latter's project boundary, in part for delivery by Penn Water and its wholly owned subsidiary, S.T.Co., from Safe Harbor to Baltimore Company at points in Maryland; in part are delivered by Penn Water to the joint customers of Penn Water and Safe Harbor in Pennsylvania; in part are delivered by Penn Water and S.T.Co. to the Pennsylvania Railroad Company in Pennsylvania and Maryland; and in part are delivered by Penn Water to Metropolitan Edison Company.

Q. For what purpose does Penn Water receive such electric service from Safe Harbor Water Power Corporation? A. All of such electric services are used in public service either by Penn Water or by the public utilities' customers of Penn Water or the joint customers of Penn Water and Safe Harbor, except for such amounts as may be consumed [16585] in transmission and other system losses.

Q. At line 5 of page 909 of the record, Mr. Roland testified that the 110 Kv. line extending from Baltimore Company's Philadelphia Road Substation in Baltimore, to its Gunpowder Substation in Maryland, was owned by the Susquehanna Transmission Company of Maryland, but was leased to Baltimore Company. Is this line in fact leased to the Baltimore Company? A. No, it is not. This 110 Kv., 60 cycle transmission line, approximately 9.6 miles in length, is one of the several special facilities provided by Penn Water and S.T.Co. for the sole use of Baltimore Company under the contract identified as Items H and I.

Prior to the Supplemental Agreement of June 1, 1931, certain special facilities, including this transmission line, were furnished at a specified contract rate, which rate was considered as a rental charge. Under the Supplemental Agreement of June 1, 1931, there is no itemized charge relating to these special facilities. The compensation for the use of this line is included in the lump sum payments under that contract.

Q. Beginning at line 11 of page 912 of the record, Mr. Roland testified with respect to the receipt of payments by Penn Water from its customers, including Pennsylvania Power & Light Company and Philadelphia Electric Company. For what [16586] purpose does Penn Water receive such payments? A. Penn Water receives payments from the Pennsylvania Power and Light Company and the Philadelphia Electric Company for all of the services, including electric services rendered to those companies. The payments received for these services were received by Penn Water, acting for itself and as agent for Safe Harbor. The electric services so rendered are rendered jointly by Penn Water and Safe Harbor.

——— Mr. Sparks: I would like to offer this document for identification.

Trial Examiner: The document may be marked for identification as Exhibit Number 352.

(The document referred to was marked for Identification as Exhibit Number 352.)

By Mr. Sparks:

Q. Does this exhibit show the demand, energy and special facilities charges included in the revenue received by Penn Water from all of the Pennsylvania customers? A. Yes.

Q. And they were all revenues received for services rendered jointly by Penn Water and Safe Harbor except to Metropolitan Edison Company for the year 1946? A. That is right.

Q. At the top of page 913, Mr. Roland testified with respect to the use of the services by Baltimore Company, [16587] Pennsylvania Power & Light Company, Philadelphia Electric Company and Metropolitan Edison Company, which Penn Water delivered to such companies. Is it a fact that all of the services, including electric energy, which are furnished to those customers, are resold by them?

A. No, not all of such services. Certain amounts of electric energy delivered to such companies are consumed in their respective power systems as losses. Of the other electric services supplied, such as power factor cooperation, voltage regulation, frequency control, spinning reserve or capacity service, I am not aware that such services are all resold; rather, it is my opinion that such services are used by the receiving companies in part to augment their own services and in part are consumed within the respective electric systems in the same manner that energy losses are consumed.

Q. Beginning at line 4 of page 914 of the record, Mr. Roland testified with respect to the deliveries of energy by Penn Water to the Pennsylvania Railroad Company at Conowingo and Perryville, Maryland, for the account of Baltimore Company, and also with respect to the deliveries to the Potomac Electric Power Company near Takoma Park, Maryland, for the account of Baltimore Company. Mr. Roland referred in this connection to his Exhibit 37 and certain of the symbols designated thereon. Was Exhibit 37 a map prepared by the [16588] Company? A. It was.

Q. Do similar maps, now prepared and published by the Company, contain the symbol designations referred to as respects Perryville, Maryland; Conowingo, Maryland; and Takoma Park, Maryland, as were shown on Exhibit 37? A. No, they do not.

MR. SPARKS: I would like to offer this map for identification.

TRIAL EXAMINER: It may be marked for identification as Exhibit No. 353.

(The document referred to was marked for Identification as Exhibit Number 353.)

By MR. SPARKS:

Q. Why was the designation of such delivery points changed? A. Because of possible misinterpretation as to the meaning of the phrase "for the account of Baltimore

Company" and specifically because of such misinterpretation by Commission witnesses in the present proceedings.

Q. Was such designation as shown on Exhibit 37 a misstatement of the facts? A. Not in all instances, but it was an over-simplified representation.

Q. What are the facts as respects the interconnection [16589] points at Conowingo and Perryville, Maryland? A. At Perryville, Maryland, and Conowingo, Maryland, there are interconnections between the transmission facilities of Penn Water's wholly owned subsidiary, S.T.Co., and the electrification facilities of the Pennsylvania Railroad. At both points of interconnection, S.T.Co.'s transmission lines connect with the Railroad's distribution substations supplying its electrified division and electric services are supplied from the facilities of S.T.Co. to the facilities of the Railroad. Although these points of interconnection are referred to as delivery points in the Railroad Power Supply Contract, identified as Exhibit 10, there is no reference in the contract as to which one of the several supplying companies will make such deliveries.

The phrase "for the account of Baltimore Company," shown on Exhibit 37, was intended to refer to the Operating Committee's Memorandum, identified as Exhibit 11 in this proceeding, which provides that for the purpose of computing a division of the total revenues received by Baltimore Company from the Pennsylvania Railroad, the deliveries of electric services, including energy, in the State of Maryland and the District of Columbia shall be considered as deliveries by Baltimore Company, while deliveries of electric services to the Railroad in Pennsylvania shall be considered as deliveries [16589-A] by Penn Water.

Q. On page 9336 of the record, Mr. Roland referred to Schedule 13 of the Holtwood-Safe Harbor Power System Statement to the Federal Power Commission on its Form 12 report for the year 1944, and referred specifically to a note thereto relating to the hourly load supplied to the Pennsylvania Railroad in Maryland by Penn Water and

Safe Harbor for the account of Consolidated Gas Electric Light and Power Company of Baltimore. Was this note, attached to Schedule 13 of the 1944 FPC Form 12 Report, intended in any way to indicate that the energy supplied to the Railroad in Maryland was not a joint supply of Baltimore, Penn Water and Safe Harbor? A. No, on the contrary. The notes attached to Schedules 13 and 14 of the Holtwood-Safe Harbor Power System Statement (FPC Form 12) for the year 1944 were intended to make it perfectly clear that the supply to the Railroad, both in the State of Pennsylvania and the State of Maryland, was a joint supply of Baltimore Company, Penn Water and Safe Harbor.

Q. What are the facts as respects the interconnection point near Takoma Park, Maryland? A. At a point northeast of Takoma Park, Maryland, there is an interconnection between the transmission facilities of S.T.Co. and the transmission facilities of the Potomac Electric Power Company, such interconnection point being merely the division of ownership of a single continuous 220 kv. [16589-B] transmission line extending from Ellicott Substation near Baltimore to the Takoma Park distribution substation of Potomac Electric Power Company, adjacent to the District of Columbia line. Through this point of interconnection, electric services are supplied from the transmission facilities of S.T.Co. to the system of Potomac Electric Power Company and these same facilities are also used for the interchange of electric services.

[16590] However, neither Penn Water nor S.T.Co. has any contract for the supply of electric services to, or the receipt of such services from, the Potomac Electric Power Company. Provisions for such transactions, including interchange, are part of an agreement between Baltimore Company and Potomac Electric Power Company to which Penn Water is not a party. The contract, identified in this proceeding as Item D, between Baltimore Company, Penn Water and S.T.Co., provides that S.T.Co. will provide the

necessary facilities and will transmit over these facilities such electrical power and energy as may be delivered to it at the terminals of its transmission lines for such purposes. Under the contract, identified as Item F, Penn Water, through its subsidiary, agrees to construct and operate the facilities above referred to and to perform at all times the obligations undertaken by Baltimore Company under its agreement with Washington Company.

Q. At pages 929 and 930, Mr. Roland referred to energy supplied by Philadelphia Electric Company to Penn Water at Perryville through the facilities of the Pennsylvania Railroad, stating that such deliveries were considered as interchange delivery by Philadelphia Electric Company to Penn Water and that such energy as is used by the Railroad south of Perryville is considered a delivery by Penn Water to the Railroad for the account of Baltimore Company.

Will you please explain the use of the expression "for [16591] the account of Baltimore Company"? A. Any use by Penn Water of the expression "for the account of Baltimore Company" in this connection is the result of arrangements provided for under a contract between the Pennsylvania Railroad on the one hand and Philadelphia Electric, Penn Water, Safe Harbor and Baltimore Company on the other hand. Such contract, identified as Exhibit 135, is known as the Railroad Parallel Operation Agreement. Under such operations as provided therein, Philadelphia Electric Company frequently supplies amounts of electric services greater than its contractual obligations and some of these electric services, including electric energy, are used by the Pennsylvania Railroad in the sections of its electrification south of Perryville.

Such energy so used south of Perryville is metered within the Railroad system at that point and such supply so metered is accounted for under the contract identified as Exhibit 134 as an interchange transaction by Philadelphia

Electric Co. to Penn Water and a delivery by Penn Water, Safe Harbor and Baltimore Company to the Railroad under contract identified as Exhibit 10.

Q. Are all deliveries to the Pennsylvania Railroad in Maryland, including the District of Columbia, in fact an operating responsibility of Baltimore Company alone? A. They are not. They are merely a part of the joint [16592] operating responsibilities of Baltimore Company, Penn Water and Safe Harbor.

Q. At line 8 of page 934, Mr. Roland testified with respect to the division of the output of the Safe Harbor plant to Baltimore and Penn Water. Is it a fact that Baltimore Company received in 1944 two-thirds of the output of the Safe Harbor Development? A. It is not.

Q. What happens to the output of the Safe Harbor Hydro-electric Development? A. All of the electric services of the Safe Harbor Plant are delivered within the project boundary of the Safe Harbor Development to the transmission facilities of Penn Water. Penn Water transmits the major portion of such output for delivery to the joint customers of Penn Water and Safe Harbor or to the customers of Penn Water and such output is not transmitted from the State of Pennsylvania. Penn Water also transmits a portion of such output for delivery to the Pennsylvania Railroad at Fishing Creek, Pa., and at Conowingo and Perryville, Md.

The balance of the Safe Harbor output which is very substantially less than two-thirds of the output is transmitted by Penn Water over its 220 kv. transmission lines to Baltimore and Washington.

Q. Can you give the actual proportion of the electric energy generated at Safe Harbor which was delivered over the [16593] transmission facilities of Penn Water by Penn Water to Baltimore Company at or near Baltimore and Takoma Park, Maryland, in the years 1945 and 1946? A. In 1945, 41 per cent of the energy generated at Safe

Harbor was so delivered and in the year 1946, 33 per cent was so delivered.

Q. Are the facts with respect to such operations for 1946 presently on file with the Federal Power Commission? A. Such facts are reported in the 1946 Annual Report recently filed by Safe Harbor with the Federal Power Commission in its Form 1 Report and specifically shown on pages 512 and 513 thereof. Related facts are also reported by Penn Water in its Form 1 Report recently filed with the Federal Power Commission for the year 1946 and more specifically shown on pages 508, 512, 513, 514, 522, 523, 524 and 531 thereof with notes relating thereto.

• • •

[16595] Q. On Exhibit 355, being the graphical presentation of power flow across such State line, could you indicate the relative amount of the backfeed from Maryland that is used for the requirements of the Pennsylvania Railroad? A. The proportion of backfeed transmitted from Baltimore Company or Washington Company to Safe Harbor and used in connection with the requirements of the Pennsylvania Railroad varies from month to month. The percentage of the total backfeed so used was at least 35 per cent in 1946.

Q. Does this latter exhibit indicate by comparison [16596] with Exhibit 40, the abnormalities of the year 1944 resulting from low river flow? A. Yes, and it shows the large amount of backfeed energy received from Baltimore Company in 1944 as compared with 1946 which was very close to an average flow year.

Q. Beginning at line 3, page 935, and extending through line 8, page 941 of the record, Mr. Roland was questioned with respect to the use of electric energy received by Penn Water from Maryland and the District of Columbia for purposes of resale to other electric utility companies in Pennsylvania.

Is all of the electric energy received as backfeed from Maryland and the District of Columbia by Penn Water

used in connection with the firm power obligations of either Penn Water or of Penn Water and Safe Harbor jointly in the State of Pennsylvania? A. No, it is not.

Q. What use was made of the electric energy received as backfeed from Maryland and the District of Columbia by Penn Water which was not used in connection with the firm power obligations of either Penn Water or of Penn Water and Safe Harbor jointly in the State of Pennsylvania? A. Most of such amounts of electric energy were used in connection with the supply to the Pennsylvania Railroad Company, both at Perryville and Conowingo, Maryland, and at Safe Harbor, Pennsylvania, being a part of the joint obligations [16597] of Baltimore Company, Penn Water and Safe Harbor to that customer, while a small amount of such energy was used in connection with interchange transactions involving the delivery of such electric energy by Penn Water or Penn Water and Safe Harbor jointly to their electric utility customers in the State of Pennsylvania.

Q. Was all of such backfeed energy received by Penn Water from Maryland and referred to by Mr. Roland at pages 935 to 941, and which may have been used in connection with services to the Pennsylvania customers of Penn Water or Penn Water and Safe Harbor, used by such customers in public service? A. No, it was not, because a part of such energy was consumed in the transmission from Maryland to Safe Harbor and from Safe Harbor to these customers and a portion was consumed within the power systems of these customers as transmission and system losses.

Q. Was such backfeed energy from Maryland and the District of Columbia delivered to Penn Water continuously at all times throughout the year? A. No.

Q. When is such backfeed energy received by Penn Water and transmitted from Maryland to Pennsylvania? A. Backfeed is transmitted from Maryland to Pennsylvania generally during the low flow months of the year, but

[16598] at other times of the year backfeed may also be received during the off-peak hours of the week.

Q. Is this backfeed energy used directly by Penn Water or Safe Harbor in supplying their Pennsylvania customers? A. No.

Q. What happens to this electric energy received by Penn Water in Maryland and transmitted to Pennsylvania as backfeed? A. Such electric energy is in all cases co-mingled with electric energy or other electric services generated or supplied at either the Safe Harbor or Holtwood Power Developments before being used in connection with either their firm power obligations or interchange transactions with their Pennsylvania customers.

Q. Do the deliveries of electric services, including electric energy, which were made to the Pennsylvania customers and to the Pennsylvania Railroad Company by Penn Water and Safe Harbor always include an amount of co-mingled backfeed energy received from Maryland? A. They do not.

Q. At page 947 of the record, Mr. Roland testified with respect to the operation of house units at Safe Harbor during low flow operation. Is it a fact that at all times there is a generator operating, providing capacity and producing energy or reactive kva. at Safe Harbor? [16599] A. That is a fact.

Q. Is it a fact that at all times there is a generator operating and producing energy or reactive kva. at Holtwood? A. Except for a total of 135 hours in the last three years (1944-1945-1946) and then only on Sundays, there was a generator operating and producing energy or reactive kva. at Holtwood, and for each of those 135 hours there were frequency converters operating in the Holtwood plant supplying reactive, voltage regulation and other electric services.

Q. If at all times there is a generator operating at Safe Harbor, is it a fact that, as testified to, for example, by Mr. Roland at page 955, beginning at line 13, all of the energy

supplied to the Pennsylvania Power & Light Company at Donegal and Lehman Farm and to the Holtwood bus via Lehman Farm comes from Maryland? A. No. At all times such energy supplied at Donegal and Lehman Farm and to the Holtwood bus is energy transmitted from the Safe Harbor plant at 66 kv. and at times such energy is co-mingled with energy that might be from Maryland. At no time does all of the energy supplied at those points originate in Maryland without first being co-mingled with other electric services, including capacity, energy or reactive kva. originating at Safe Harbor.

Q. Have you prepared a tabulation showing the amounts of energy supplied by Penn Water, or Penn Water and Safe Harbor [16600] to their Pennsylvania firm customers (other than the Pennsylvania Railroad) for the years of 1944, 1945 and 1946, for those hours when there was no net backfeed from Baltimore Company received by Penn Water and transmitted from Maryland to Pennsylvania, and also for those hours when there was net backfeed received by Penn Water from Baltimore Company? A. I have.

MR. SPARKS: I would like to have this document marked for identification, Mr. Examiner.

TRIAL EXAMINER: It may be marked as Exhibit Number 356 for identification.

(The document referred to was marked for Identification as Exhibit Number 356.)

By MR. SPARKS:

Q. Will you please explain this exhibit? A. Exhibit 356 shows the total kilowatt hours supplied to the Pennsylvania firm customers in each of the three years, divided into the kwh. supplied during those hours when there was no net Baltimore backfeed and that supplied during those hours when there was such backfeed. The percentage that each is of the total energy deliveries is also shown. Also shown on Exhibit 356 are the total revenues received for

all firm electric services to these Pennsylvania customers, segregated to show the revenues billed and received for energy services [16601] alone during hours of Baltimore backfeed.

Q. Have you prepared a tabulation showing the kilowatt hours received by Penn Water in Maryland and transmitted to Pennsylvania during the years 1944, 1945 and 1946 that were used in connection with supply to Penn Water's, or Penn Water and Safe Harbor's Pennsylvania firm customers other than the Pennsylvania Railroad? A. I have.

MR. SPARKS: Mr. Examiner, I would like to have this document marked for identification.

TRIAL EXAMINER: It may be marked as Exhibit Number 357 for identification.

(The document referred to was marked for Identification as Exhibit Number 357.)

By MR. SPARKS:

Q. Will you please explain this Exhibit? A. Exhibit 357 shows in Column 1, the kilowatt hours of net Baltimore backfeed used in connection with electric services supplied to Penn Water's or Penn Water and Safe Harbor's firm power customers in Pennsylvania (excluding the Pennsylvania Railroad) for the years 1944, 1945 and 1946.

There is shown in Column 2 of this exhibit an amount of dollars received from these customers for an amount of energy equal to the amounts shown in Column 1. These dollars were computed by using the average energy rates actually billed to [16602] these customers.

Column 3 shows, as a percentage, that portion of the kilowatt hours of net Baltimore backfeed used in connection with electric services for firm supply, shown in Column 1, in relation to the total firm kilowatt hours supplied to the Pennsylvania customers.

Column 4 shows, as a percentage, the dollars computed and shown in Column 2 in relation to the total revenues received from these Pennsylvania customers for all firm power services under their respective contracts.

Q. Have you prepared a tabulation showing the amounts of interchange energy supplied to the Pennsylvania customers during those hours when there was no net Baltimore backfeed received by Penn Water from Maryland, and also during the hours when there was such backfeed received by Penn Water and transmitted from Maryland to Pennsylvania? A. I have.

MR. SPARKS: Mr. Examiner, I would like to have this document marked for identification.

TRIAL EXAMINER: It may be marked as Exhibit Number 358 for identification.

(The document referred to was marked for Identification as Exhibit Number 358.)

By MR. SPARKS:

Q. Will you please explain this exhibit? [16603]
A. Exhibit 358 is a tabulation showing for the years 1944, 1945 and 1946 the amounts of interchange energy supplied to the Pennsylvania interchange customers during hours of no net Baltimore backfeed and also during those hours when there was such backfeed received by Penn Water and transmitted from Maryland to Pennsylvania. There is also shown the percentage each of these is of the total interchange services supplied.

Also shown on this Exhibit 358 are the total revenues received for all interchange services to these customers segregated into the revenues received for the energies supplied during such hours and the percentage each of these is of the total interchange revenues received.

Q. Have you prepared a tabulation showing the kilowatt hours of net Baltimore backfeed transmitted from Maryland to Pennsylvania by Penn Water and used in

connection with the supply of interchange services to these Pennsylvania customers? A. I have.

MR. SPARKS: I would like to have this document marked for identification.

TRIAL EXAMINER: It may be marked as Exhibit Number 359 for identification.

(The document referred to was marked for Identification as Exhibit Number 359.)

By MR. SPARKS:

Q. Will you please explain this exhibit? [16604] A. Exhibit 359 shows in Column 1, the kilowatt hours of net Baltimore backfeed used by Penn Water and by Penn Water and Safe Harbor in connection with the supply of interchange services to their Pennsylvania customers during the years 1944, 1945 and 1946. There is shown in Column 2 of this exhibit an amount of dollars received from these customers for an amount of energy equal to the amounts shown in Column 1. These dollars were computed by applying the average hourly rates used in connection with the interchange billing to these customers during such periods.

Column 3 shows, as a percentage, that portion of the kilowatt hours of net Baltimore backfeed used in connection with interchange services supplied, shown in Column 1, in relation to the total interchange kilowatt hours supplied to the Pennsylvania customers.

Column 4 shows, as a percentage, the dollars shown in Column 2 in relation to the total revenues for interchange services received from these Pennsylvania customers.

Q. Was the year 1946 a typical or normal year as respects the amount of interchange transactions? A. No.

Q. What was the nature of such abnormalities? A. During the year 1946 the utility companies in Eastern Pennsylvania experienced material growth in load. To meet such requirements and still complete required [16605] maintenance of equipment, much of which had been

deferred during the war period, they arranged with us, under existing contracts, for an unusually large amount of interchange services which is reflected in the data shown on Exhibits 358 and 359 for the year 1946.

Q. Were the 1944 operating conditions as respects the amount of backfeed received from Maryland representative of the operating conditions in 1945 and 1946 or for average river flow conditions? A. They were not. River flow conditions experienced during the year 1944 were substantially lower than average and the amount of backfeed energy received was greater than normal due in part to low river flows and in part to war conditions.

Q. Beginning at page 979, Mr. Roland testified concerning the ownership of facilities for the transmission of electric energy which is transmitted from one or more states and consumed at points outside thereof, the amounts of electric energy so transmitted, and the sale of such electric energy for resale.

Does Penn Water own and operate facilities for the transmission of electric energy which is not transmitted from one or more states and consumed at points outside thereof? A. Yes, they do.

Q. What are some of these facilities? [16606] A. With the exception of the 220 kv. transmission system extending from Safe Harbor to Baltimore and Washington and the 66 kv. transmission system extending from Holtwood to Baltimore and a portion of the 132 kv. transmission system extending from Safe Harbor to Perryville for the supply of electric service to the Pennsylvania Railroad, all of the facilities of Penn Water and Safe Harbor are used either in whole or in large part for the generation or transmission of electric energy which is not transmitted from a state but which is consumed at points within the state where such energy and other electric services are generated.

Q. Are the amounts of electric energy generated at either the Safe Harbor or Holtwood plants and consumed

in Pennsylvania substantial in amount? A. Yes, they are substantial both in amount and in proportion to the total amounts so generated and in proportion to the amounts so transmitted.

Q. Can you state what proportion of the total amounts of energy generated at Holtwood and Safe Harbor is consumed within the state of Pennsylvania and which was not transmitted from one or more states and consumed at points outside thereof? A. Such proportion of the total amounts of energy generated at Safe Harbor and at Holtwood for the year 1945 was at least 44 per cent and for the year 1946 was at least [16607] 51 per cent.

Q. Beginning at line 18 of page 979 of the record, Mr. Roland attempted to use the amounts of energy transmitted to the city of Coatesville, Pennsylvania, during the year 1944 as evidence of the substantial amount of energy transmitted from a state and consumed at points outside thereof. Was the total amount of 152,292,000 kilowatt hours in fact all transmitted from a state and consumed at points outside thereof? A. Absolutely not. Mr. Roland used the total requirements of the Philadelphia Electric Company in its Coatesville Division on page 979. Only a very small percentage, if any, of such energy was in fact transmitted from a state and consumed at a point outside thereof.

Mr. Roland, in Exhibit 42, claimed to have found that during his twenty hand-picked days there were only 59 per cent of the hours when he could find that there was any co-mingling of backfeed electric services available at Holtwood for delivery to the customers supplied from Holtwood, including Philadelphia Electric Company's Coatesville Division, but during such hours there was only supplied 13 per cent of the energy during such twenty days. Mr. Roland's assumption was that if a single kilowatt hour of backfeed was received at Safe Harbor, regardless of the amount of energy generated by or available to Safe Harbor from sources within the state, [16608] then all of the energy supplied by Safe Harbor, both backfeed and

that produced within the State of Pennsylvania, was interstate energy (or became interstate energy).

He then went on to assume that because some of the energy sent out from Safe Harbor was energy contaminated with backfeed and a single kilowatt hour of such energy was received at Holtwood as 60 cycle, then all of the energy sent out from Holtwood at 60 cycle was interstate energy. It was only on this assumption that he could find any such number of hours in his hand-picked twenty days that showed any backfeed energy that could possibly have been used in connection with the supply to Coatesville.

After studying Exhibit 42, it is my opinion that a very small percentage of any backfeed energy was actually used in connection with the supply of the electric services to the Philadelphia Electric Company at Coatesville and in any such use it was largely submerged in the electric services supplied from the Holtwood and Safe Harbor developments themselves. In this explanation I want to be sure it is understood that I do not agree with the assumption used by Mr. Roland in his preparation of Exhibit 42, nor in his conclusions drawn therefrom.

Q. Do Penn Water and S.T.Co. operate facilities which are used in local distribution? A. Yes, they do.

[16609] Q. Please describe such facilities? A. Facilities at Holtwood used in connection with the supply of electric services to the Pioneer Electric Division of the Pennsylvania Power & Light Company and also certain facilities at Highlandtown Substation in Baltimore are distribution facilities.

Q. Do Penn Water and S.T.Co. own and operate facilities used only for the transmission of electric energy not transmitted from a state and consumed at any point outside thereof? A. They do.

Q. Please describe such facilities? A. The 110 kv. transmission line extending from Philadelphia Road Substation in Baltimore to the Gunpowder Substation in Maryland is a transmission facility used exclusively by Balti-

more Company as a part of that Company's transmission network supplying the area contiguous to Baltimore City and which load area does not extend outside of the State of Maryland.

Q. In Exhibit 42 and the testimony supporting that exhibit, Mr. Roland testified as to the flow of energy to the York, Pennsylvania area. Beginning at page 8797, Mr. Roland was questioned in that connection with respect to the flow of energy under the new Metropolitan Edison contract, identified as Exhibit 72.

Is it a fact that under the new M.E. contract, Exhibit 72, the flow of energy to the York area for firm power purposes [16610] is materially different, both in quantity and time, as compared with the flow of energy under the superseded Edison Light and Power Company contract, identified in these proceedings as Exhibit 71? A. It is quite different.

Q. What are the major differences as respects energy flow? A. Under the superseded Exhibit 71, Penn Water and Safe Harbor had an operating responsibility for 40 per cent of the electric service requirements, including energy of the Edison Light and Power Company at all times during the day and week. To fulfill these obligations, definite amounts of electric services were supplied to the York area, not only during the peak periods of the week, but also during all other hours including Saturday and Sunday.

Under the present Metropolitan Edison Company Contract, Exhibit 72, the operating responsibilities of Penn Water were limited to two conditions. The first, to supply all of the electric service requirements of M. E. Co. above its steam line. No electric services are required to meet this condition except during the peak hours of the week and during such hours Penn Water and Safe Harbor are always operating substantial amounts of hydro capacity in addition to the Holtwood steam capacity.

The second provides that Penn Water shall supply a [16611] specified amount of electric services below the M.E. steam line, but only when the actual generation at Holtwood and Safe Harbor exceeds 50,000 kw. The obligation for such supply is less than ten per cent of such generation.

Therefore, Penn Water's obligation for services to Metropolitan Edison Company is, from a practical operating viewpoint, limited to those hours when there are substantial amounts of generation at Holtwood and Safe Harbor.

Q. Is it a fact that under the contract, Exhibit 72, no supplemental electric services from other sources are required by Penn Water to meet its firm power obligations to Metropolitan Edison Company? A. That is a fact. Penn Water requires no supplemental services either from its Pennsylvania customers or Baltimore Company to meet its firm power obligations to Metropolitan Edison Company.

Q. Is it a fact that under contract, Exhibit 72, that no backfeed energy generated in Maryland is used to supply Penn Water's firm power obligations to Metropolitan Edison Company? A. That is a fact. However, I found one hour in 1946 when any backfeed energy from Baltimore might be said to have been so used and that was during a period when one of the Holtwood 60 cycle hydro units was out for maintenance.

Q. As a result of the contract changes and the operations [16612] resulting therefrom with respect to the delivery of firm power energy in the York area, do the results in the year 1944 have any relation to the actual facts as they exist today? A. They are not.

Q. Beginning at line 17 of page 8834 of the record, Mr. Roland testified that you advised him that the sales to the Pennsylvania Railroad in the State of Maryland are the obligations of Baltimore Company and the sales in the State of Pennsylvania are the obligations of Penn Water.

Did you so advise Mr. Roland? A. I did not.

I was very specific in discussing these transactions with the Pennsylvania Railroad to point out that only one bill was rendered to the Railroad by Baltimore Company and that for the purposes of computing the division of the revenues as between Penn Water and Baltimore in accord with an Operating Committee Memorandum, which has subsequently been identified as Exhibit 11, the deliveries to the Pennsylvania Railroad in Pennsylvania "were considered as deliveries by Penn Water" and that deliveries to the Railroad in Maryland were, for such purpose, "considered as deliveries by Baltimore."

At no time in my discussions with Mr. Roland did I refer to the obligations or operating responsibilities of the respective parties to the Pennsylvania Railroad contract. [16613] Q. At the bottom of page 8837 of the record Mr. Roland testified that Baltimore Company supplied part of the power requirements of the Pennsylvania Railroad in Pennsylvania. Does Baltimore Company in fact supply any of the Railroad's power requirements in Pennsylvania? A. Baltimore Company does not directly supply any of the requirements of the Pennsylvania Railroad. Baltimore Company has no facilities for so doing. All electric services supplied to the Pennsylvania Railroad are in fact supplied through the facilities of Safe Harbor and Penn Water in Pennsylvania and Maryland, and through the facilities of Potomac Electric Power Company in Washington. Baltimore Company has a joint operating responsibility for all of the electric services supplied to the Railroad.

Actually, of the electric services supplied by Baltimore Company to the Potomac Electric Power Company and by that Company to the Railroad at Benning, only a very small amount, perhaps of the order of one per cent of such supply, can be traced over the Railroad's own facilities from Maryland into Pennsylvania, but such transmission is carried out by the Railroad for its own purposes.

As to the supply to the Pennsylvania Railroad at Conestoga Substation and from the Perryville line, such serv-

ices are supplied to the Railroad through the facilities of Penn Water. A large part of such electric services may from time [16614] to time be co-mingled with energy originating in Maryland from Baltimore Company.

Q. Beginning at line 13 of page 8845 of the record, Mr. Roland testified that for billing purposes that portion of the energy sold in Maryland is considered a sale by Baltimore and the billing and the split-up of the money paid by the Railroad is paid accordingly.

Is it a fact that for billing purposes to the Pennsylvania Railroad, under the power contract identified as Exhibit 10, that portion of the services sold in Maryland is considered as sold by Baltimore Company? A. No, that is not correct.

Q. Will you please state the facts? A. The billing to the Pennsylvania Railroad for the services rendered under the contract identified as Exhibit 10 is prepared jointly by Penn Water, Safe Harbor and Baltimore Company, largely from the records of Penn Water and Safe Harbor. The necessary billing records are transmitted by Penn Water to Baltimore Company and such bill is rendered by Baltimore Company to the Pennsylvania Railroad.

In the computation of this bill there are no records included, nor is the Pennsylvania Railroad interested in the portion of the services delivered to the Railroad in the states of Pennsylvania and Maryland, respectively, nor is the Railroad concerned how the amounts of such revenues [16615] received by Baltimore Company are split up between the parties to the contract. However, in connection with the intercompany billing as between Baltimore Company and Penn Water, Penn Water does advise Baltimore Company as to the amounts of energy delivered to the Railroad in Pennsylvania and Maryland, respectively, in order that a division of such Pennsylvania Railroad revenues may be made. In the determination of this division, an arbitrary method had been agreed upon by the

parties in accordance with the provisions of Exhibit 11 of this record.

Q. Beginning at page 8894, Mr. Roland testified concerning his understanding of the difference between the gross meter readings of energy in connection with interchange transactions and the billing figures for energy in connection with interchange transactions between Philadelphia Electric Company and Penn Water at Perryville and Thorndale.

Will you please describe the difference between gross meter reading figures and billing figures in that connection? A. When two electric utilities each have power generating facilities which are operated in parallel and which are used to interchange energy, capacity, reactive power, etc., in varying amounts through different hours of the day or the week, meters are provided to measure and integrate such interchange transactions. Due to the inability of operating personnel to regulate the flow of power and energy between [16616] the systems as their respective loads may vary, power and energy may flow in one direction and then in the opposite direction during a portion of such hours. It is customary to provide, and in the present instance there are provided at both Perryville and Thorndale, ratcheted KWH meters and RVAH meters with associated printometers to record the hourly integrations of the several ratcheted meters which record the gross flow in each direction for each clock-hour. The printometers provide a record of gross transfers in each direction for each hour.

When two systems are interconnected by more than one transmission path as is the case between Penn Water and Philadelphia Electric over the Railroad facilities via Thorndale and via Perryville, not only may there be a reversal of flow at each interchange point during an hour, but there may unintentionally be flow in one direction through Perryville with a reversal of flow at Thorndale. The net of such hourly integration at Perryville and Thorn-

dale, respectively, is the effective energy transferred between the systems in any hour.

It is obvious then that the net hourly interchange at two points is the only record of interest for any billing period. It is impracticable to consider operating costs for a billing period less than a clock-hour and, therefore, the net hourly integration at Perryville and Thorndale in any [16617] clock-hour is the basis for interchange accounting between Penn Water and Philadelphia Electric.

* * *

[16618] Q. Beginning at line 14 of page 9063, Mr. Roland testified that he was interested in knowing what kind of deliveries were being made at the various points and among other things whether the energy so delivered was paid for. In determining the kind of deliveries being made, is it necessary to know whether or not the deliveries are on a net or gross meter reading basis? A. It is.

Q. In determining whether the energy delivered was paid for, is it necessary to know whether the billing basis was upon a net or gross meter reading? A. It is.

Q. Why do you say that it is necessary to know the character of the meter readings, in order to determine the kind of delivery and whether such energy delivered was paid for? A. The billing and payments for energy and other services specified in the contract are determined by the [16619] services themselves as specified in the contract. Obviously, if charges, rates or payments specified in a contract are based upon a net meter reading basis, rather than a gross meter reading basis, the amount of charges calculated on each of those bases would be different. In all instances, the net meter reading basis is used for interchange accounting and billing purposes for the reasons just described.

Q. Beginning at page 9066 of the record, Mr. Roland was questioned concerning the circulation of energy from or between the Westport and Riverside Substations at Bal-

timore via the 220 kv. transmission system between Baltimore and Safe Harbor.

Is it a fact that at times these 220 kv. transmission lines are used for the transfer of energy between that portion of Baltimore Company's system near Riverside and that portion of its system near Westport? A. Frequently. That is one of the recognized uses of the 220 kv. transmission line. It frequently happens that the generation at Riverside is in excess of the local requirements of Baltimore Company in the Riverside area and such excess flows from Riverside to Safe Harbor and back from Safe Harbor to Westport and to Takoma Park. Such a 220 kv. loop being in parallel with Baltimore Company's 110 kv. ring circuit and also in parallel with that Company's 33 kv. cable system connecting Riverside and Westport, the proportions of [16620] power and reactive flows in each parallel circuit will depend largely on the electrical characteristics of each path.

Q. What was the principal purpose of providing the Riverside line in addition to the Westport-Safe Harbor circuit between Safe Harbor and Baltimore? A. It was originally contemplated that two high voltage lines would be required between Safe Harbor and Baltimore, not for their circuit capacity but to provide reliability, including electrical stability in the event of trip-outs on one line due to lightning or other electrical phenomena, and the Baltimore system depended on a large amount of capacity from Safe Harbor both then and now.

This second circuit to Riverside, initially planned for operation in 1932, was delayed until 1937 largely due to depression conditions.

Q. Were there any special circumstances which culminated in a decision to provide the second circuit in 1937? [16621] A. Yes, there were. Baltimore had just made a contract providing for a large supply of 60-cycle power to the Sparrows Point plant of the Bethlehem Steel Company in the Riverside area. Baltimore at first contemplated

supplying this new load by 33 kv. cable circuits from its Gould Street plant, but three factors persuaded them to have Penn Water provide this line in 1937. The first was the desirability of higher reliability for service than could be provided by a single supply source; second, the recognition that this steel plant load would have tremendous load swings or fluctuations in its power requirements, amounting to from 15,000 to 20,000 Kw. many times an hour, which if superimposed on the cable system would result in serious voltage difficulties throughout the 60-cycle city system; and, third, the anticipation of additional industrial loads in the Riverside area in excess of the cable system then planned.

Q. Beginning at page 9164 of the record, Mr. Roland was questioned with respect to the 25-cycle capacity available to Baltimore prior to and after 1931. By reference to the contract of December 31, 1927, can you state how much capacity was considered as being available to Baltimore under that contract? A. Under the 1927 contract, 48,778 Kw. was considered as the one-hour integrated assured peak supply to Baltimore Company under minimum flow conditions, and an additional [16622] 13,333 Kw. was considered as available for carrying the swings in excess of the one-hour integration. Baltimore Company paid for both the one-hour capacity and swing capacity at the same rate.

Q. Has there been any change in the conditions governing the availability of 25-cycle capacity from the Holtwood plant to Baltimore Company since 1927? A. Yes, there has.

Q. What changes have taken place? A. The construction of the Safe Harbor dam and the operation of the Safe Harbor pond have increased the 25-cycle capacity available to Baltimore from the Holtwood development. Furthermore, the falling off of the 25-cycle load requirements in the Lancaster area has made more 25-cycle capacity available to Baltimore.

Q. What is the magnitude of the present 25-cycle peak supply at Highlandtown from Holtwood for the use of Baltimore Company? A. The monthly peaks delivered at Highlandtown during the last three years have varied with one exception from 60 Mw. to 77 Mw., generally being in excess of 70 Mw.

Q. Are these maximum deliveries greater or less than those experienced between 1927 and 1931? A. They average greater today.

Q. Have you prepared a chart showing the monthly [16623] 25-cycle peak deliveries of energy to Highlandtown Substation for Baltimore Company's use for the period 1927 to date, together with Baltimore Company's own monthly 25-cycle system peaks for the period 1930 to date? A. I have.

MR. SPARKS: I offer it for identification, Your Honor.

TRIAL EXAMINER: It will be marked Exhibit 361.

(The document above referred to was received and marked Exhibit 361 for Identification.)

By MR. SPARKS:

Q. At line 9 of page 9341 of the record, Mr. Roland testified that it was his understanding that the peak transfer energy under the Railroad contract is billed by Penn Water to the Pennsylvania Railroad. Is his understanding in accord with the facts? A. No, it is not. The only bill rendered to the Pennsylvania Railroad for all services provided in connection with the contract, identified as Exhibit 10, is the bill rendered by Baltimore Company on behalf of itself and as agent for the other companies supplying services. This bill as rendered by Baltimore Company specifically includes payments for this "peak transfer energy."

Q. Beginning at page 9456 of the record, Mr. Roland was questioned with respect to the metering points in the York area, used for purposes of determining energy sold

to [16624] the Lancaster and Harrisburg areas of Pennsylvania Power & Light Company and also with respect to the metering points at Lancaster and Harrisburg, used for the purpose of determining the energy sold to the Metropolitan Edison Company. In connection with these transactions with M.E. and P.P.&L., will you explain the situation with respect to these several metering points? A. The actual meter readings of the electric services delivered at York and at Harrisburg do not indicate individually the amounts of energy and other interchange services carried out with the Metropolitan Edison Company or with the Pennsylvania Power & Light Company. Such meters at York and Harrisburg must first be netted to obtain a record of the net deliveries at these two points. Such netting at these two points balances out the large amount of circulating energy that is frequently experienced, and there are days when such circulating energy amounts to 75% of the total gross metering at Harrisburg.

Q. Will you please illustrate this by using certain specific figures? A. The interchange meters at Harrisburg for the year 1944 recorded a gross flow from Penn Water to Pennsylvania Power & Light Company of 41,000,000 Kwh., and a gross flow from Pennsylvania Power & Light Company to Penn Water of 34,000,000 kwh. During many of these hours there was a reversal of power [16625] at this metering point at Harrisburg. The net power flow at Harrisburg correcting for such reversal was 38,000,000 Kwh. from Penn Water to P.L. and 31,000,000 Kwh. from P.L. to Penn Water. There was also a large amount of circulating energy which normally flowed from Holtwood toward York and from M.E. toward P.L. and from Harrisburg back toward Safe Harbor. In the year 1944 this amounted to 16,000,000 Kwh. The net south meters at P.L. must, therefore, be corrected for this circulating energy, reducing such net flow south from 31,000,000 kwh. to 15,000,000 Kwh. There was also a certain amount of unintentional flow from M.E. to Penn Water, some of

which was transmitted by the way of Harrisburg toward Safe Harbor. In the year 1944 this amounted to 4,000,000 Kwh. so that the actual billing of interchange purchased by Penn Water from P.L. in 1944 was only 11,000,000 Kwh. although the gross meter reading at Harrisburg was 34,000,000 Kwh. The billed energy, therefore, was less than one-third of the gross metered energy. Similarly, in connection with interchange transactions between Penn Water and M.E., 4,000,000 Kwh. also flowed to M.E. via Harrisburg so that the net metered delivery at Harrisburg of 38,000,000 Kwh. was reduced by this 4,000,000 kwh. and the actual interchange energy billed by Penn Water to P.L. was 34,000,000 Kwh. compared with the gross meter reading at Harrisburg of 41,000,000 Kwh. Similar corrections have to be made to the gross meter readings at York in order to determine the amount [16626] of energy to be accounted for and billed between Penn Water and M.E. in connection with their interchange transactions.

Q. Mr. Spaulding, as a result of your analysis of the gross meter readings, can you conclude that the assumptions made by Mr. Roland in connection with his Exhibit 42 are applicable to the actual conditions and are related to the energy accounting used in connection with the billing for interchange transactions? A. No, I cannot. It should be obvious that Mr. Roland's Exhibit 42 does not give any consideration to the several factors I have just mentioned.

Q. Beginning at page 9506 of the record, Mr. Roland testified with respect to the effects of oil shortages on the Eastern Seaboard during the war on the amounts of backfeed transmitted from Maryland to Pennsylvania over the facilities of Penn Water. Will you explain what effect such oil shortage did have on the amount of backfeed during 1944? A. During the summer and fall of 1944 there was a critical oil shortage for use by the Public Utilities in the New Jersey and Eastern Pennsylvania areas. Efforts were made by these companies to convert their oil-burning

boilers for the use of coal as fuel, although this was not in all instances practicable. During this period of conversion and afterwards, there was a capacity and energy shortage in these areas due in part to a lack of oil and in part to the national [16627] effort to conserve oil resources. The interconnected companies including Penn Water, Safe Harbor, Baltimore and Washington, used every effort to assist these companies during this oil shortage. As a result there was an abnormal amount of backfeed from Baltimore and Washington in the year 1944 over and above what might have been necessary as a result of lower-than-average river flow. Furthermore, there was more interchange energy furnished by Penn Water to its northern interconnections which might otherwise have gone to Baltimore Company except for this oil shortage. It is impossible to estimate exactly the amounts of such additional backfeed received from Baltimore Company or the amounts of interchange sales to these companies at those times because our operating records do not indicate the specific purpose for each interchange transaction. One measurement is the amount of emergency interchange energy transactions by Penn Water and in part by Safe Harbor which in the year 1944 amounted to 23,676,000 Kwh. By no means did all such emergency interchange involve backfeed supply from Baltimore, but the larger part of such emergency interchange resulted from such oil shortage.

Q. Beginning at page 9511 of the record, Mr. Roland testified with respect to the comparability of load shapes in the years of 1944 and 1946. Were there any appreciable differences in the load shapes for the interconnected system load, that is, the load requirements of the companies in F.P.C. [16628] area 6, together with load requirements of Penn Water's and Safe Harbor's Pennsylvania customers? A. There were.

* * *

[16629] Q. Beginning at page 9512 of the record, Mr. Roland was questioned with respect to the War Production

Board Order L-94. Did this War Production Board Order L-94 have an effect on the flow of energy on your Safe Harbor and Penn Water system during the year 1944? A. It did.

Q. What effect did it have? A. Section b-1 of Order L-94 made it incumbent upon each utility "to operate its reservoirs, generating plants, substations, transmission lines and other facilities" and to "interchange electric power with other utilities so as to achieve the maximum coordination of power supply for war production and essential civilian uses, and for relief of [16630] power shortages." Penn Water and Safe Harbor, as well as all of the other utility companies on the Eastern Seaboard between the Potomac and Hudson Rivers, made every effort to assist each other in the many instances that arose during the war, and specifically during the year of 1944, not only during fuel shortages but during those periods when it was essential to take certain equipment out for maintenance or where abnormal loads were encountered in one system or the other in excess of their readily available capacity. The effect of this War Production Board Order L-94 resulted in abnormalities of energy flow on the system of Penn Water and Safe Harbor in the year 1944.

Q. Is the Exhibit which was offered for identification in the record as Exhibit 228, the Order of the War Production Board L-94, dated May 1, 1942, which you have just referred to, and which your Company recognized as a basis for certain obligations in its operations? A. It is.

Q. Is Exhibit 229, being an Administrative Letter dated August 20, 1945, the effective revocation of Order L-94? A. It is.

Q. On page 9548, Mr. Roland testified that the Railroad Company in sending a check to Baltimore Company for service rendered to the Railroad Company under contract identified as Exhibit 10, did so with the understanding that [16631] Holtwood Company should receive a part of it. Is it a fact that the Railroad Company in paying Baltimore

Company does so with the understanding that each of the parties to the contract will receive a portion of such payment in proportion to the services rendered? A. There is no such understanding on the part of the Railroad Company. The Railroad Company merely considers that it has met its obligation to the contract when its check is made to Baltimore Company and there is no other arrangement to which the Railroad Company is a party that provides for any division for such payment. Furthermore, it was and always has been recognized that the division of such payment between Penn Water and Baltimore Company, in accord with the Operating Committee's memo, identified as Exhibit 11, did not make an equitable division of the payments, but was merely an arbitrary division and that any further debits or credits for service could be covered by payments made to Penn Water and Safe Harbor under contracts identified as E, F, G, H and I.

Q. On page 9479 of the transcript, Mr. Roland was asked about the load swings of the customers served by the Penn Water and Safe Harbor system and indicated that he had not examined any information that would indicate the magnitude of such swings. Had Mr. Roland ever discussed this matter with you? A. Yes, he had, and spent nearly an hour in the Load [16632] Dispatcher's office of Penn Water and Safe Harbor examining the several graphic load and power flow charts, with specific reference to the load swings encountered. There was at that time considerable discussion about the load swings of the Bethlehem Steel Company, a customer of Baltimore, which swings are frequently in excess of 30,000 Kw., and we discussed the effect of these swings both on the frequency and voltage and their effect on the general services of the Companies. Mr. Roland also expressed considerable interest in how these load swings of the Bethlehem Steel Company and those of the Pennsylvania Railroad were directly reflected on our charts of power flow over our Northern interconnections, which indicated that Baltimore Company

was leaning heavily on these ties to carry these sharp load fluctuations that would otherwise be an operating and economic burden to Baltimore Company. These matters appeared to interest Mr. Roland at that time.

Q. Beginning at page 10176, Mr. Howell testified that his Exhibit 47 had been taken to Baltimore for the purpose of having it checked by Company officials. Was Exhibit 47 checked for accuracy by any persons associated with your Company? A. Several of my associates endeavored to check certain of the data Mr. Howell had recorded and so far as the limited time permitted, to review his factual statements. Mr. Howell had advised us that he was in a hurry to turn his Exhibit over for printing. We found many inaccuracies which we called to [16633] Mr. Howell's attention but we were unable to complete our review of this Exhibit.

Q. Did you tell him you thought it needed certain revisions? A. Yes, and made several notes on his copy of the early draft of that Exhibit. I specifically cautioned him that we did not attempt to check all of his statements and that we could not agree with certain of the statements that we had reviewed.

Q. At page 10179, Mr. Howell testified with respect to the 25-cycle loads of Baltimore Company. Has that Company recently indicated their intentions of abandoning and replacing a portion of this 25-cycle capacity on their own system? A. It has.

Q. What is the nature of that information? A. Baltimore Company has released statements to the press and to their stockholders that they intend to provide additional capacity at Westport to replace certain old equipment to be retired. They have further advised our Company that they intend to provide a 60,000 Kw., 60-cycle unit at their Westport Plant in about 1950 to replace an equal amount of old 25-cycle capacity there.

Q. What effect will such change have upon the 25-cycle demands of Baltimore Company upon Penn Water? A.

Baltimore Company's estimate of their 25-cycle [16634] requirements in 1955 is in excess of 120,000 Kw. and they are planning to depend very largely on the Holtwood 25-cycle supply supplemented by their own frequency changer capacity in Baltimore, for by that time they are planning to retire all of their 25-cycle generating capacity in Baltimore.

Q. In the light of such announced plans of Baltimore Company, do you anticipate that your present 25-cycle supply to Baltimore Company at Highlandtown will be changed from 25 to 60 cycles within the next decade? A. No, I do not.

Q. At page 10211 in connection with Mr. Howell's testimony with respect to Exhibit 47, he stated his understanding of the use made of the 25-cycle transformers at Holtwood. Is it a fact that two of the nine transformers are used for the 25-cycle service to Lancaster and the other seven transformers used for service to Baltimore Company? A. No. Seven of the nine 25-cycle transformers at Holtwood are used exclusively for service to Baltimore Company, and one transformer is required for service to Pennsylvania Power & Light Company at Lancaster. The ninth transformer serves as a reserve for either the Lancaster supply or the Baltimore supply, but is regularly used in supplying Baltimore Company.

Q. At page 10521 Mr. Davis stated that Metropolitan Edison Company does not supply any energy to Pennsylvania Power [16635] & Light Company. As he used the term "supply", he meant delivery. Is it a fact that Metropolitan Edison Company does not supply any energy to Pennsylvania Power & Light Company, as Mr. Davis used the word "supply"? A. No, it is not a fact. Metropolitan Edison Company does supply energy to Pennsylvania Power & Light Company for Penn Water, and for the following reason: The inter-connections with Pennsylvania Power & Light Company and with Metropolitan Edison

Company operate as two parallel paths between Penn Water and Safe Harbor on one hand and their Northern customers on the other. It is impossible to control the flow of power on each of these two parallel paths. Therefore, when power is being interchanged between Penn Water and Safe Harbor on the one hand and these Northern companies on the other, some of this power may flow over each circuit although the interchange transaction may have been arranged with only one of these two customers. In the event arrangements are made to supply Pennsylvania Power & Light Company with a specified amount of interchange energy, it frequently happens that a portion of this energy will flow through Violet Hill into the Metropolitan system, in which case Metropolitan Edison Company does supply such energy to Pennsylvania Power & Light Company.

Q. At page 10522 Mr. Davis was questioned with respect to the source of the supply by Penn Water to Pennsylvania Power & Light Company. What is the major source of the [16636] energy so supplied? A. Most of the 60-cycle service is generated at the Safe Harbor plant, and substantially all of the 25-cycle service is generated at the Holtwood hydro plant.

Q. Beginning at line 15, page 10537 Mr. Davis testified with respect to an option on the part of Penn Water and Safe Harbor to reduce their demand obligations to Pennsylvania Power & Light Company under their contract during periods of low flow. Is this option now in effect? A. It is.

Q. When did it go into effect? A. As of February 15, 1947.

Q. Under the provisions of this contract does Penn Water and Safe Harbor have the option of reducing their obligations to Pennsylvania Power & Light Company during periods of low flow to 80% of the Lancaster load requirements? A. Yes.

Q. Since February 15, 1947 have Penn Water and Safe Harbor exercised their option to reduce their obligations to less than 100% of the Lancaster load requirements?
A. No, we have not.
[16637] Q. Are they in a position to do so in the event you experience extreme low flows comparable to the lowest flow on record such as was used by Mr. Davis as his assumption for the determination of dependable hydro capacity in connection with Exhibit 64? A. Yes.

Q. At line 13, page 10548 of the record Mr. Davis testified "As an engineering and operating matter, Safe Harbor has no physical ability to do anything under" the Coatesville power supply contract. Is it a fact that Safe Harbor has no such physical ability? A. It is not. As an engineering and operating matter, Safe Harbor has the same, if not greater physical ability to generate energy, capacity, spinning reserve, etc., as Penn Water. There are ample transmission facilities between Safe Harbor and Penn Water where connection is made with the transmission facilities between Holtwood and Coatesville. Safe Harbor has the same ability from an engineering and operating point of view to supply Coatesville as it has to supply Baltimore or the Pennsylvania Railroad Company. It has the same ability to supply Coatesville that Baltimore Company has to supply service under its contract with Potomac Electric Power Co.

Q. Since 1933 has Safe Harbor physically provided electric service for supply to Coatesville or to its other customers at a time when Penn Water was unable to do so?
[16638] A. Yes, during the 1936 flood when Penn Water's hydro and steam plants were forced to shut down completely and were unable to supply any electric service to its customers, Safe Harbor provided all of these services to the full extent of the requirements of these several joint customers, not only because Safe Harbor had the operating responsibility to perform this obligation, but because as an

engineering and operating matter Safe Harbor had the physical ability to do so.

Q. Does Safe Harbor as an engineering and operating matter also have the physical ability to supply Pennsylvania Power & Light Co. and the Pennsylvania Railroad Co.? A. Yes, it does, and during my cross-examination I specifically indicated how Safe Harbor controls to a large extent both the facilities used and the amount of supply furnished to Pennsylvania Power & Light Company and to the Pennsylvania Railroad Company.

Q. Has the Federal Power Commission ever specifically recognized that Safe Harbor Water Power Corporation and Penn Water jointly "sells electric power and energy" to the Coatesville Division of the Philadelphia Electric Co.? A. Yes, it has.

Q. In what connection? A. It so stated in its Order dated June 30, 1939. "In the matter of Safe Harbor Water Power Corporation", Order allowing a supplemental rate schedule to take effect prior to [16639] date of filing.

MR. SPARKS: I ask to have this identified as Exhibit No. 364.

(Exhibit No. 364 is marked for Identification.)

By MR. SPARKS:

Q. Is this exhibit the Order of the Commission just referred to? A. It is.

Q. Beginning at line 14, page 10552 of the record, Mr. Davis testified that Penn Water is the only Company that has any ability to perform the obligations under the Coatesville Power Supply Contract. In the light of your last several answers do you agree with Mr. Davis' statement? A. Certainly not. Penn Water and Safe Harbor have the joint operating responsibility and they each have the ability to perform the obligations under the contract with the Philadelphia Electric Company for firm power supply to its Coatesville Division.

Q. Beginning at page 10560 Mr. Davis testified that it was his understanding that the difference under the present Metropolitan Edison Co. contract, identified as Exhibit 72, and the contract with the Edison Light & Power Co., which it superseded, being Exhibit 71, was that Exhibit 72 provides for a firm power capacity considerably larger than heretofore furnished to Edison Light & Power Company. Have you prepared a chart to indicate the [16640] difference in the amounts of firm power service rendered under these two contracts? A. Yes, I have.

MR. SPARKS: I will ask the reporter to mark this with the next exhibit number.

(Exhibit No. 365 is marked for Identification.)

By MR. SPARKS:

Q. Will you please explain this exhibit? A. The chart is generally self-explanatory. Prior to 1946 Penn Water and Safe Harbor had an operating responsibility for a more or less uniform and constant amount of energy and capacity. Under the present Metropolitan Edison Co. contract the amount of services fluctuate widely with river flow. This exhibit does not attempt to show the other services furnished, such as reactive power, spinning reserve, etc., which also is of importance and specifically provided for under the existing contract identified as Exhibit 72. To the right of the chart is shown a comparison of the daily load requirements under the earlier Edison Light & Power Co. contract, at which time Penn Water and Safe Harbor were responsible for 40 per cent of Edison's requirements. Under the present Metropolitan Edison Co. contract Penn Water's obligations vary with river flow.

Q. At page 10568 of the record Mr. Davis testified as to the special facilities shown on Table 9, Exhibit 47, [16641] furnished by Safe Harbor, used in providing services to the Pennsylvania Railroad Co. Are all of the special facilities so provided contained in this table? A. I believe they are all referred to generally, but the costs

which the Companies used as a basis for the specified annual charges were limited to the additional out-of-pocket costs to Safe Harbor or Penn Water in furnishing such facilities.

Q. Will you give an example of what you refer to? A. Table 9 of Exhibit 47 refers to certain annual charges related to the initial frequency converter and single phase generator at Safe Harbor. The contract identified as Exhibit 10 provided that two of the generators at Safe Harbor would be designed for 25 cycle single phase generation. The specified annual charge for the initial generator was related only to the increased costs of providing a 25 cycle single phase generator as compared to the cost of providing a 60 cycle generator. The specified facilities charges therefore do not include any annual costs related to the water wheel turbine, to the structures, or to the associated equipment.

Q. Has the Federal Power Commission ever specifically recognized that the Safe Harbor Corporation provided facilities for the purpose of supplying energy to the Pennsylvania Railroad Company and for the purpose of selling such energy to the Pennsylvania Railroad Co.? A. It has.

[16642] Q. In what connection? A. In connection with its Order of September 22, 1939. "In the matter of Safe Harbor Water Power Project No. 1025", Order authorizing installation of additional generating unit.

MR. SPARKS: I ask that this be marked Exhibit No. 366.

(Exhibit No. 336 is marked for Identification.)

By MR. SPARKS:

Q. Is this the document you refer to? A. Yes, it is.

Q. Beginning at page 10581 of the record, Mr. Davis testified with respect to Table 11 of Commission's Exhibit 47. Do the amounts of kilowatthours shown in column 3 of Table 11 as sales to the Railroad by Baltimore and Holt-

wood Companies, respectively, indicate the actual deliveries to the Railroad for the various years shown by each of those companies? A. They do not. The only deliveries to the Railroad for each of the years shown on Table 11 are the "Total" sales of kilowatthours shown. The kilowatthours shown in column 3 opposite Baltimore and Holtwood, respectively, are merely the amounts of the kilowatthours delivered to the facilities of the Railroad in the States of Maryland and Pennsylvania, respectively.

Q. Are the amounts of revenues shown in column 4 the actual amounts paid for the kilowatthours shown in column 3 respectively? A. They are not. The dollars shown in column 4 opposite the "Total" kilowatt-hours have no relation to the total kilowatt- [16643] hours. They are the total dollars paid by the Railroad for all of the services rendered under the contract identified as Exhibit 10, which total dollars are made up of specified charges for capacity, energy, and for special facilities. The revenues in column 4, opposite Baltimore and Holtwood, respectively, in column 2, are merely the division of the total revenues for each year computed upon the relative proportion of the energies shown in column 3.

Q. What proportion of the total revenues received from the Railroad was for energy charges? A. Approximately 55 per cent in the year 1944.

Q. What proportion of the total revenues so received from the Railroad was for special facilities' charges? A. Approximately 15 per cent in the year 1944.

Q. What percentage of the total revenues so received from the Railroad was for demand charges? A. Approximately 30 per cent in the year 1944.

Q. Does the average revenue received per kilowatthour shown in column 5 have any significance? A. It does not.

Q. Why not? A. The average revenue per kwh, shown in column 5 for the total sales to the Railroad is not an indication of the amount charged for energy services,

but is an indication of the [16644] amount charged for energy, capacity, and special facilities. Had an analysis been made of the use made of special facilities and of capacity by the Railroad in Pennsylvania and Maryland, respectively, the so-called average revenue per kilowatt-hour in column 5 would not be the same for the supply in Maryland and in Pennsylvania.

Q. Beginning at page 10589 of the record, Mr. Davis testified with respect to table 10 of Exhibit 47. Are the figures shown in the last column of table 10 taken from any bill rendered by Penn Water to the Railroad? A. No.

Q. What do such figures represent? A. They merely represent the division which Penn Water receives from Baltimore Company as the result of the arbitrary division of the total revenues made in accord with Exhibit 11 in these proceedings.

Q. What do the figures in the second from the last column in the exhibit represent which are headed "PW-KWH"? A. They are merely the amounts of Kwh. delivered to the facilities of the Railroad in the State of Pennsylvania and which are used by Penn Water and Baltimore Company as a basis for the arbitrary division of the total revenues received by Baltimore Company from the Railroad.

Q. At page 10595 of the record, Mr. Davis testified with respect to the $6,000 annual credit to the Railroad [16645] Company for the use of a 110 Kv. circuit that extends from Benning over to Westport. Is this 110 Kv. circuit used by Baltimore Company for its own benefit? A. It is.

Q. Did the Railroad build a circuit from Benning to Westport? A. No, it did not.

Q. What are the facilities for which the Railroad receives this credit? A. The Pennsylvania Railroad overbuilt on its electrification structures a three-wire circuit insulated for 110 Kv. operation, from a point adjacent to

the Railroad's own step-up transformer substation at Benning to a point near the Patapsco River, just south of Baltimore, where interconnection is made with the ring circuit facilities of Baltimore Company.

Q. Why were these facilities provided in connection with the Railroad power supply contract? A. Under the power supply contract, identified as Exhibit 10, Potomac Electric Power Company has no operating responsibility to provide capacity or other electric services to the Railroad and only provides the frequency changer facilities at Benning. The Railroad desired assurances of what was then referred to as a "firm back-up" for this Benning supply. Baltimore, Penn Water and Safe Harbor could not give the Railroad such assurances, in part because of limited cable capacity in Potomac Electric [16646] Power Company system between the terminal substation of the 220 Kv. transmission line near Takoma Park and Potomac Electric Power Company's Benning frequency changer. The Railroad, therefore, agreed to provide this transmission facility in order that Baltimore, Penn Water and Safe Harbor could assure the Railroad of a firm supply from Benning at a point on the southern end of the Railroad's electrification. In recognition of the fact that these facilities would also be used by Baltimore Company for other purposes, the Railroad provided these facilities but received a credit of $6,000 for their use.

Q. Why do you say then that this 110 Kv. circuit is used by Baltimore Company for its own benefit? A. This 110 Kv. circuit is regularly used by Baltimore Company for interchange of electric services with Potomac Electric Power Company under their power supply contract. If it did not exist, Baltimore would not be able to obtain as much interchange service from Washington, although it would be in a position to provide its contractual obligations to Washington. The operating records for the last five years indicate that more than one-third of all the services to Washington from Baltimore and over 25 per cent of all

electric services transmitted from Washington to Baltimore were transmitted over these 110 Kv. 60 cycle line facilities.

Q. At line 23 of page 10605, Mr. Davis testified that the [16647] amount which Baltimore paid Penn Water shown in the last column on Table 10 of Exhibit 47 compensated Penn Water for all special facilities provided for service to the Railroad. Is this a factual statement? A. It is not. The amount so computed is an arbitrary determination of the division of the total revenues. It does not relate either to the amount of special facilities provided or to the other services actually rendered by Penn Water and does not compensate Penn Water in full for the special facilities provided by it in connection with services to the Railroad.

Q. Beginning at page 10730, Mr. Davis testified with respect to Table 2 of Exhibit 47 and the kilowatthours shown in column 3 thereof, which he stated were sold by Safe Harbor to Baltimore, and Penn Water, respectively, for the years shown. Are the kilowatthours shown in column 3 for Baltimore and Holtwood, respectively, the actual kilowatthours delivered to those companies for the years shown? A. They are not. They are merely the mathematical equivalent of the two-thirds and one-third, respectively, of the total output of the Safe Harbor plant, after a minor adjustment for losses. The actual deliveries by Safe Harbor for Baltimore Company and Penn Water during these years were quite different and especially during the last five years when Baltimore received nowhere near the two-thirds of Safe Harbor's total [16648] output, as I testified to in my redirect testimony.

Q. Are there any records in the Federal Power Commission's files showing for the year 1946, the actual amounts of Safe Harbor energy supplied by Safe Harbor for delivery to Baltimore Company? A. Yes.

Q. Where are such data to be found? A. Such data are shown in the Form 1 Report for 1946, recently filed by Safe Harbor Company.

Q. Does this Safe Harbor Form 1 report also show the amounts of energy delivered by Safe Harbor Company to Penn Water for their joint supply to their Pennsylvania customers? A. Yes.

Q. Does the Penn Water Form 1 Report show the amounts of Safe Harbor energy delivered to the joint customers of Penn Water and Safe Harbor, namely, Pennsylvania Power & Light Company and Philadelphia Electric Company for its Coatesville Division? A. There are shown on Schedules 530 and 552 of Penn Water's Form 1 Report, the amounts of energy delivered to such customers and the revenues received for all services supplied to these customers by Penn Water and Safe Harbor jointly. Such revenues are collected by Penn Water acting for itself and as agent for Safe Harbor.

Q. Does this Penn Water Form 1 report also show the [16649] amount of energy from Safe Harbor delivered to the Pennsylvania Railroad Company? A. Yes. Schedule 532 shows the deliveries made by Penn Water and Safe Harbor jointly to the Pennsylvania Railroad, in part being deliveries in the State of Pennsylvania and in part being deliveries at Perryville and Conowingo to the Railroad. The revenues shown on that same schedule are not related to the services rendered but are merely the amounts which Penn Water is entitled to receive as a division of the total revenues received by Baltimore Company from the Railroad for 1946.

Q. Did Penn Water actually receive from Baltimore such a division, to which it is entitled, of the Railroad revenues in 1946? A. No.

Q. At page 10745, Mr. Davis was questioned about the bills rendered to Penn Water by Baltimore Company for backfeed. Have there been times since the effective date of the 1931 Supplemental Agreement, identified as Items H and I, when Baltimore did actually render a bill to Penn Water for the amount of backfeed energy furnished during any period? A. Yes, there have been.

Q. How were the amounts of such bills computed? A. Such bills were computed generally in accord with Article 6 of the 1927 contract which is a part of Item H in [16650] these proceedings. The daily net backfeed was computed from the actual meter readings of energy flow between Baltimore on the one hand and Penn Water and Safe Harbor on the other. The energy rate applied to such daily net backfeed was the total average unit production cost at Baltimore's Westport Station for the month, such cost including all operation and maintenance expenses. Such average rate is shown on the face of the bills rendered by Baltimore to Penn Water for such backfeed energy.

MR. SPARKS: I would like to have marked for identification this copy of the backfeed bill, as Exhibit 367.

(Exhibit No. 367 is marked for Identification.)

By MR. SPARKS:

Q. Is this document a copy of one of the bills you have just referred to? A. It is.

Q. How were the amounts paid by Penn Water to Baltimore Company for backfeed services treated in the determination of the power bill for services to be rendered under the 1931 Supplemental Agreement identified as Items H and I? A. Such payments were treated as a payment by Penn Water for power purchased.

MR. SPARKS: I wish to have marked as Exhibit 368 the Holtwood Company's bill to Baltimore Company for December, 1931.

(Exhibit No. 368 is marked for Identification.)

[16651] By MR. SPARKS:

Q. I show you Exhibit 368 and ask you if this is a copy of Penn Water's bill to Baltimore Company for the year 1931 for services rendered under the contract identified as Items H and I? A. It is.

Q. Will you indicate the treatment in this bill of Holtwood Company's payments for power purchased as back-

feed? A. Item (d)2 records the payments made by Penn Water to Baltimore Company for backfeed in 1931 in the amount of $14,452.47, such amount being included in the item entitled "Sum of (a), (b), (c), and (d)."

Q. Has there been an appreciable amount of daily net backfeed recorded within the past four or five years? A. Yes, there has.

Q. Has there been any billing for such backfeed since 1931? A. Yes, there was billing for backfeed in 1932.

Q. Has Baltimore Company billed Penn Water for such backfeed in recent years? A. No.

Q. Why not? A. The matter was discussed by the Operating Committee and with Baltimore Company's counsel in 1941 and it was [16652] recommended that Baltimore Company need not bill Penn Water for such backfeed because there would be no net effect on the income of either party and no outside parties would be affected.

Q. Will you please explain why? A. Had Baltimore Co. billed Penn Water for such backfeed, the operating revenues and the operating expenses of both companies would have been increased alike to the extent of the amount billed for such backfeed, but the operating income and the net income of both companies would have been unaffected.

Q. Have you prepared a tabulation showing the backfeed energy received by Penn Water from Baltimore Company in the years 1944, 1945 and 1946 showing the annual amounts of net hourly backfeed, the annual amounts of daily net backfeed for each year, and the applicable contract rates of Baltimore Company for such daily net backfeed? A. I have.

MR. SPARKS: I will ask the reporter to mark for identification as Exhibit No. 369 this tabulation "Backfeed Energy Received from Baltimore Company."

(Exhibit No. 369 is marked for Identification.)

By MR. SPARKS:

Q. Is this the tabulation you just referred to? A. It is.

[16653] Q. Beginning at page 10759, Mr. Davis testified with respect to the effect of the M. E. contract, identified as Exhibit 72, and was questioned as to whether such contract resulted in an increased use of the natural resources of the Susquehanna River as contrasted with operations under the old Edison Light and Power Company contract, Exhibit 71. Is it a fact that the operations under Exhibit 72 have resulted in an increased use of the natural resources of the Susquehanna River? A. Yes.

Q. Why? A. Without attempting to go into all of the operating details, I can give two specific reasons: First, because of the change in the form of contract, Penn Water and Safe Harbor are enabled to operate their hydro capacity and to utilize the available energy from the river flow during a smaller number of hours and thereby get a greater capacity utilization as is generally shown from an examination of my Exhibit 8 in these proceedings. Secondly, whenever hydro developments, such as those at Holtwood and Safe Harbor are utilized and operated to provide the requirements of the peaks of several systems, rather than required to supply a more or less uniform twenty-four hour load, a greater utilization of the natural resources can be obtained.

Q. Do you mean, Mr. Spaulding, that the greater the number of systems on which the hydro is operating, the greater [16654] is the opportunity for utilizing the natural resources? A. Yes.

Q. Do you agree with the designation used by Mr. Thomas at page 1236 of the record, referring to the Holtwood and Safe Harbor plants as "run-of-river" type developments? A. No, I do not.

Q. In what respect do you disagree with this designation? A. First, he related the water stored behind the dams to the annual energy output and such relationship is not controlling either at these plants or anywhere else. Second, he related the amount of storage to the maximum usable flow at Safe Harbor which is likewise not a con-

trolling consideration. Third, his statement that the river flow cannot be stored in any appreciable quantity and to a large extent water must be used as it runs down the river, is not a correct statement because it does not conform with the facts.

Q. Will you please state what in your opinion are the essential factors to be considered in connection with the utilization of stored water in relation to a "run-of-river" type development or a "storage" type development? A. The essential consideration of a storage development is the amount of stored water available to supplement the normal flow of the river during periods of minimum flow or maximum loads, or a coincidence of those two factors. While the usable storage behind both dams is only equivalent to the [16655] full power house draft of Safe Harbor during a twenty-four hour period, the essential and important facts are that the usable storage behind both dams is greater than the minimum flow of the river for a seven-day period. When such usable storage is used to supplement the minimum flow of the river, it greatly enhances the capacity value of these hydro plants.

Q. Do you insist that Holtwood and Safe Harbor are not run-of-river plants? A. I have frequently referred to them as such, but in connection with the capacity value of the hydro plants at Holtwood and Safe Harbor in this case, it is important to recognize the distinction between a run-of-river plant without storage and a run-of-river plant with storage. The Federal Power Commission, itself, properly recognized that distinction in its printed instructions relating to Schedules 2 and 16 of its F.P.C. Form 12 Report for electric power systems. Under F.P.C.'s definition, neither Holtwood nor Safe Harbor would be classified as run-of-river developments.

* * *

[16656] Q. At page 1238 Mr. Thomas stated that "for economic development such plants as Holtwood and Safe Harbor must be operated in conjunction with an adequate

supply of steam electric power which is used to firm up the hydro supply." Do you agree with that statement? A. I do not.

Q. Why do you disagree? A. His statement that steam electric power is used to firm up a hydro supply is erroneous. Supplemental steam power does not firm up a hydro supply. Rather, when such steam power is used in conjunction with or supplemental to a hydro supply, the maximum utilization can be made of the natural resources. Steam energy is necessary to supplement a hydro supply such as that at Holtwood and Safe Harbor under certain flow conditions, but I would disagree that such supplemental energy firms up the hydro resources. The load shape alone determines the capacity value of a hydro development.

Q. Then, in your opinion, Baltimore Company has not [16657] installed steam capacity to firm up the hydro resources of the Susquehanna River? A. No, neither Baltimore Company nor anyone else has installed steam capacity to firm up these hydro plants; rather, they have been firmed up by the growth of the peak portion of the system load on which they were operating in part or in whole.

Q. Has Penn Water ever considered providing additional steam capacity itself at Holtwood to provide such supplemental supply? A. Yes, it has on several occasions within the last ten years.

Q. Would such additional steam capacity, if provided by Penn Water at Holtwood, be a duplication of existing steam electric plants operated by Penn Water's customers? A. Not necessarily. It could have and may now provide additional steam capacity to meet the growing needs of its customer companies.

Q. Would the location of additional steam capacity at Holtwood be at an economic disadvantage because of its distance from the load centers? A. No, as a matter of fact, additional steam capacity, if provided at Holtwood,

would be as close or closer to the load centers of its Pennsylvania customers than the presently-existing steam plants installed on the system of these [16658] customers.

Q. Has Penn Water relied almost entirely on the steam plants of Consolidated Gas Electric Light and Power Company of Baltimore to firm up its hydro capacity? A. No, for the reason just given, these steam plants have not firmed up Penn Water's hydro capacity. The Penn Water and Safe Harbor capacity has been firmed up and is being firmed up on the system loads themselves. However, for the reasons given in my re-direct testimony, Penn Water has been obtaining a large part of its supplemental supply from Baltimore Company merely because the incremental cost of such supplemental steam supply was slightly lower than the cost of procuring such supplemental supply from its northern customers. However, this situation may have been temporary and is very likely to reverse in the near future with the completion of additional highly-efficient and economical generating capacity on the systems of the northern companies.

* * *

[16660] Q. Could Penn Water depend on interchange energy arrangements for obtaining the necessary supplemental steam energy to meet its firm power obligations in conjunction with the hydro supply from the Holtwood and Safe Harbor developments? A. Yes, its present contracts covering interchange energy and other interchange services are sufficiently [16661] flexible, yet comprehensive, and its operations under those contracts are so well understood by all parties, that Penn Water could depend on such interchange energy arrangements to provide for the necessary supplemental energy even though Baltimore, for any reason at all, was unable or unwilling to provide such supplemental supply during those times when it was more economical to obtain such supply from Baltimore.

Q. At page 1252, line 22, Mr. Thomas testified as follows: "I am confident that Holtwood Company could not

and would not depend on interchange energy for firming up its hydro supply. Putting it in another way, Holtwood Company would not and could not purchase interchange energy on a when, as and if basis and resell it as firm power." Does Holtwood Company purchase interchange on a when, as and if basis and resell it as firm power? A. Yes, it does.

Q. In your opinion is there anything unusual or improper in such procedure? A. No. Penn Water is always in a position to supply its firm power commitments from its own resources in any emergency created by a temporary failure of the supply which Mr. Thomas characterizes as "when, as and if."

Q. Has the Federal Power Commission ever given recognition to such use of supplemental energy? A. Yes. F.P.C. in its instructions relating to Schedule [16662] 2 of its Form 12 Annual Power System Statement provides that "Contracts for purchase or interchange of off-peak energy also may be taken into account" in presenting "a realistic picture of the potential energy and capacity of system hydroelectric plants."

Q. From where does Penn Water obtain most of the supplementary supply which is needed and which we might speak of as available on a "when, as and if basis"? A. From Baltimore Company, but only because under present conditions it is the most economical source.

Q. Is Baltimore Company obligated to furnish this service? A. Only up to the limit of its available generating capacity located in plants in operation at the time.

Q. That is in accordance with Article 6, Item H, is it not? A. Yes.

Q. Does Baltimore Company at times obtain energy from others for supply to Penn Water and Safe Harbor? A. Yes, from Potomac Electric Power Company.

Q. Is such energy received by Baltimore Company from Washington Company as firm or as interchange energy? A. Interchange energy.

Q. So Baltimore, itself, is then using interchange energy from Potomac Electric Power Company to supply what Mr. [16663] Thomas would have you consider as a firm service from Baltimore to Holtwood Company. Is that right? A. Yes, except that I do not agree with Mr. Thomas that backfeed services under Article 6 are or should be considered in the nature of a firm service.

Q. Do other utilities make use of interchange purchases on a "when, as and if" basis to supply their "firm service obligations"? A. Yes, frequently. Where a utility is in a position to reduce its operating expense by interchange purchases, it follows this practice.

Q. Is it always economy that dictates the use of interchange for such purpose? A. No, it is sometimes necessity which dictates such use of interchange to supplement deficiencies in the resources available to the purchaser of the interchange. Such interchange transactions are made under the emergency provisions of the interchange agreements.

Q. Does Baltimore Company purchase large amounts of interchange energy on a "when, as and if" basis from Washington Company? A. Yes, it does.

Q. And, is such supplemental energy at times used to supply its own system load requirements? A. Yes.

[16664] Q. Are the hydro companies taking any unusual risks when they depend on "when, as and if" available energy to meet their firm obligations? A. No. It is inconceivable that the interconnected companies would be deficient in energy during the off-peak hours and that is the only time when the hydro companies are interested in purchasing economy interchange as supplemental energy.

Q. Are the hydro companies contributing to the overall system economy when they use "when, as and if" available energy to meet their firm obligations? A. Yes, they are. Optimum use of the hydro capacity and energy requires peaked operation in low-flow periods as was shown in Exhibit 8. There is certainly no need or justification for

making a firm arrangement for a service that can satisfactorily and economically be obtained as interchange. Such arrangement would simply increase the cost of the firm power services and such increased costs would then have to be passed on to the customers of Penn Water and Safe Harbor.

Q. Is it necessary for any of Penn Water's and Safe Harbor's customers, including Baltimore Company, to install capacity in addition to that required for their own purposes, to enable them to supply the backfeed required by Penn Water and Safe Harbor? A. No, it is not.

* * *

[16665] Q. Is it necessary that any one of your customers be in a position to provide you all the backfeed you may from time to time require? A. No, it is not. It is only necessary that we obtain such backfeed from all our customers collectively.

Q. Are there wide variations in the annual amounts of hydro energy obtainable from the Susquehanna River from the [16666] Holtwood and Safe Harbor hydro plants? A. Yes, the river flow varies quite widely, and the energy obtainable is generally in direct proportion. We recently experienced in the year 1945 an excess generation of about 500 million kilowatt hours, which is approximately 30% in excess of the expected generation for an average flow year. On the other hand during the year 1941 there was a deficiency in generation, that is, generation less than expected on an average flow year of about 400 million kilowatt hours, which is about 25% less than normal generation. The river flow experienced in 1946 was very near to the expected average flow.

Q. When the 1931 Power Agreements between Penn Water, Safe Harbor and Baltimore were negotiated, and I am referring to the contracts identified as Items E, F & G and H and I, was it then recognized that there would be fluctuations in the annual amount of energy obtainable from

these hydro plants from year to year? A. Yes, it was.

Q. And was it expected that the full effect of these energy variations would affect Baltimore Company only? A. Yes.

Q. Does Baltimore Company now experience the full effect of such fluctuations in electric services? A. No, not entirely, because the M.E. contract, [16667] Exhibit 72, provides that M.E.Co. shall receive under that contract amounts of energy varying to a large extent with river flow. So that to the extent that M.E.Co.'s supply fluctuates with river flow, Baltimore Company's supply is less affected by such fluctuations.

Q. Did Baltimore Company appreciate and recognize that its operating expenses would similarly fluctuate with river flow because of the varying amounts of steam generation necessary? A. Yes, it did.

Q. Were the payments to be made by Baltimore Company under the contracts identified as E, F & G and H and I established in recognition that there would be such fluctuations? A. Yes, they were so established and in particular Exhibit A of Item H clearly shows that an adjustment was made to correct 1930 revenues for average flow conditions as a basis for future payments.

Q. Mr. Spaulding, is it your opinion that the usable capacity from the Holtwood and Safe Harbor hydro plants varies from year to year as widely as the variation in energy generation you have just referred to? A. No, indeed, there is nowhere near the variation in usable capacity. In fact, the variations in river flow from year to year have a very small effect on the use made of [16668] the hydro capacity available to Baltimore Company. Certainly, the availability of capacity on a twenty-four hour basis would vary, but this is not a measure of use or availability of capacity for system operations. When looked at from the viewpoint of use made of capacity, I find the variation from year to year only a fraction of the variation in hydro energy.

[16669] Q. At page 1255, Mr. Thomas testified that "Baltimore Company assumes definite risks and obligations which are not undertaken by the Pennsylvania customers of the Holtwood Company." Is that statement correct? A. Baltimore Company may have assumed certain obligations under our contract, identified as Items H and I, not undertaken by the Pennsylvania customers, but any risks and obligations there may have been are not a burden on Baltimore Company today. It must also be recognized that Baltimore Company then obtained and today still has available to it very definite advantages and benefits not available to the other customers of Penn Water.

Q. At the same page, Mr. Thomas also stated that "as the residual receiver, the contractual supplier of backfeed steam electric energy, the underwriter of the system operations, the risktaker and the contractual guarantor of Holtwood Company's earnings, Baltimore Company is not comparable to the Pennsylvania customers." Do you agree with that statement? A. Baltimore Company is the residual receiver—both companies understood that at the time the contract was made. There are advantages to Baltimore Company in such a position. Baltimore Company is one of several suppliers of supplemental energy, but I do not agree that as a supplier it is in any different position, in fact, than any of the other several [16670] interchange customers of Penn Water; and there is no actual burden to Baltimore Company in so doing. Rather, Baltimore Company, in addition to obtaining the savings resulting from such interchange transactions, obtains all of the economic advantages of the coordinated operations of the Penn Water-Safe Harbor and Baltimore systems; advantages that are not available to the other customers of Penn Water. I do not agree that Baltimore Company is the risktaker and the contractual guarantor of Penn Water's earnings.

Q. Why do you state that you do not agree that Baltimore Company is the risktaker and the contractual guarantor of Penn Water's earnings? A. First, because

Article VII of the 1931 Supplemental Agreement, identified as Item H, largely relieves Baltimore Company of such risks. Second, because through the several other terms of this contract, certain other protections are available to Baltimore and which it has exercised. Third, because Baltimore Company has recourse to regulatory authority as to the reasonableness of the charges for the services received.

Q. Has Baltimore Company ever been relieved of a portion of the payments provided for under the 1931 Agreement? A. Yes, it has.

Q. In what connection? A. As the result of the 1936 flood, Baltimore Company [16671] was relieved of certain payments and other obligations.

Q. By how much was Baltimore Company's payments reduced in 1936? A. Baltimore Company received a credit of $29,873 as compensation for its own cost of producing or purchasing the replacement of electric services lost. Penn Water incurred maintenance expenses, directly or indirectly related to the flood, of $125,493 which were credited to the charges otherwise payable by Baltimore Company. Penn Water also made net additions to its plant, based on its experience during the flood as a precautionary measure to protect future services, amounting to approximately $483,000 which were subsequently excluded from the "cost of net additions" used in the computation of annual payments thereafter.

Q. You stated that any risks and obligations there may have been, are not a burden to Baltimore Company today. Will you explain this statement? A. In my opinion a risk or an obligation is only of significance when there is a direct cost or a hazard of cost or loss relating thereto. Penn Water's stockholders alone are affected by the hazards as respects property loss, loss in revenue, reduction in return, and the hazards of extraordinary or unusual costs incurred.

Q. Will you explain? A. Penn Water's stockholders, for example, assumed [16672] the costs and losses in

revenue resulting from the 1936 flood. Penn Water's stockholders alone have the risks and hazards to property and loss in revenue resulting from war, strikes, major catastrophes and any other causes of like nature beyond the control of either party, and I am here referring to Article VII of the contract identified as Item H. Penn Water's stockholders alone have the risks and hazards from competition including Government hydro developments on the Susquehanna River or in the general geographic area and from any other forms of government subsidized power developments. Penn Water's stockholders have the risks and hazards of costs or loss in revenue that may result from damage to the transmission lines between Safe Harbor and Baltimore, and I am here referring to the first paragraph of Article VII of the contract identified as Items E, F and G.

Q. What burdens does Baltimore Company have under these power contracts? A. Any burden that Baltimore Company may have, results from fluctuations in river flow. However, such additional costs in the low flow years are substantially averaged out over a period of years with the additional benefits obtained in high flow years so that any detrimental effect there may be is limited to the disturbances caused in the regularity of Baltimore Company's operating expenses and resultant earnings from year to year, and this fluctuation of earnings could [16673] be eliminated through the use of an equalization reserve. From a long range point of view, even without such equalization reserve, the resultant effect is negligible. Furthermore, the effects of any such fluctuations are in large part mitigated through Federal and State income taxes whereby the governments assume a portion of the burden of equalizing operating expense fluctuations through income taxes.

Q. Have any early risks and obligations that Baltimore may have had, disappeared? A. Yes. Whatever may have been the risks or burdens in the past affecting Baltimore Company as a special customer through the present form

of contract, the economic changes in the past decade have made Penn Water's hydroelectric services more valuable in relation to the steam sources of supply available to Baltimore Company. Baltimore Company has already taken steps in an attempt to limit the present hydro supply to the Pennsylvania customers, in order that such hydro supply may be profitably available for Baltimore Company's own use. The effects of a further increase in the level of labor costs and coal prices will affect steam production costs relatively more than hydro production costs because of the relatively small amount of labor required for the hydro service. The trend of taxes appears to be downward. All of these factors tend to make the hydro service more attractive and desirable to Baltimore Company.

[16674] Q. What steps has Baltimore Company taken to limit the present hydro supply to the Pennsylvania customers? A. During the past six months, Baltimore Company has presented requests to Penn Water at conferences and in writing to terminate or limit the services supplied Metropolitan Edison Company, Pennsylvania Power & Light Company and the Coatesville Division of Philadelphia Electric Company, under the respective firm power contracts with such companies.

MR. SPARKS: I would like to have a group of letters between Penn Water and Baltimore Company marked for identification.

(The letters referred to were marked Exhibit No. 370 for Identification.)

By MR. SPARKS:

Q. Are these the letters you referred to with certain related correspondence? A. Yes.

Q. In the event that the firm power contracts with Metropolitan Edison Company, Pennsylvania Power & Light Company and Philadelphia Electric Company, are terminated, for any reason, would the transmission facilities now being used to supply these Pennsylvania cus-

tomers cease to be of use? A. No. None of such transmission facilities would cease to be used. Even in such eventuality as you mentioned, all of these transmission facilities would continue to be used [16675] and useful for interchange services between the several interconnected companies.

Q. Can you now foresee the possibility of these facilities being superseded by other higher voltage facilities? A. No. Even though a 220 Kv. interconnection were provided between Safe Harbor and the existing 220 Kv. network of these northern companies, such new interconnection facilities would not materially reduce the usefulness of the existing facilities.

* * *

[16676] Q. In considering the costs of service from a steam electric generating plant, what general classifications of those costs can usually be made? A. One can and does usually class certain of the plant costs as fixed costs and the balance as variable costs.

Q. Is this classification of costs as between fixed and variable a rigid one? A. No, to a certain extent it must be a matter of informed judgment.

Q. What is the purpose of making a separation of variable and fixed costs? A. Generally for use in economic studies necessary for system planning and for operations accounting. The fixed costs may or may not all be considered to be capacity costs and certain variable costs may not all be considered to be energy costs.

Q. You have referred to certain costs being related to capacity and certain costs being related to energy. Would you make any allocation for costs relating to other attributes of electric service, such as spinning reserve, power factor cooperation, voltage and frequency? A. It is not generally necessary to make a specific allocation of the costs for those other attributes, although there are very definite costs incurred in supplying them. However, if the [16677] costs of such special services were to be considered

in determining a rate for such services, it would then be necessary to segregate them.

Q. Can an analogous treatment be applied in the determination of hydroelectric plant costs? A. Yes. It is similarly necessary to consider the various services furnished from a hydroelectric development, the relative amounts thereof, and to consider the investment costs, as well as the operating costs incurred in providing those services. Not the least consideration is the purpose for which the hydro plant was constructed, the relative demands for use and uses made of these several services today. A hydro plant may be used to provide peaking capacity with a very small amount of annual energy, yet this plant may be continually used for spinning reserve, voltage and frequency regulation, and power factor regulation. For such a plant most of the fixed costs incurred should properly be considered as capacity costs. On the other hand, hydroelectric plants such as those at Niagara Falls and at Beauharnois on the St. Lawrence River, near Montreal, have almost a 100 percent use factor, i. e., generators are fully loaded throughout the year, and it would, in my opinion, not be proper to consider all of the fixed costs of those plants as capacity costs. If, however, a hydro plant was economically provided in conjunction with a flood storage project where the plant was only operative at times of flood, the fixed [16678] charges would all be allocable as energy costs.

Q. In addition to the purpose for which a hydro plant is built, or is being used, are there any other considerations which make it improper to use all fixed costs as capacity costs? A. Yes. Generally I have in mind that certain fixed costs are incurred specifically in connection with the production of energy and contribute nothing to the amount of capacity available.

Q. Can you illustrate this situation? A. There are many hydro projects in the United States with dams several hundred feet in height built for the purpose of creating large storage reservoirs which are used for sea-

sonal drawdown. The maximum drawdown of the reservoir level at such a plant may be as much as 100 feet which occurs at the end of the low water season of the year which may also be the peak load season. This fact, and perhaps other considerations, frequently lead to installation of generator capacities sufficient to utilize the full turbine output at operating heads experienced under such drawdown conditions. In other words, the full electric capacity of the plant is actually used when the reservoir is at or near minimum drawdown elevation. For such projects the fixed costs chargeable to capacity might properly be the approximate costs necessary for a dam much smaller than that provided for maintaining [16679] adequate storage capacity, and the difference in the cost of the two dams together with differences in costs for flowage basin property, highways, and bridge relocations may be a substantial part of the total project cost incurred not for the use to be made of capacity but for the use to be made of the energy services.

Q. Can you give a similar analogy for medium or low head plants, such as those at Holtwood and Safe Harbor? A. Yes. When the Safe Harbor plant was under consideration and economic studies were being made to support its justification, no serious thought was given to the installation of the same amount of capacity at an extended power house at Holtwood, although capacity could have been provided there equal to that installed at the Safe Harbor plant for a fraction of the cost of the Safe Harbor project. The same amount of spinning reserve, voltage regulation and power factor regulation could also have been so obtained, but the amount of energy available from such capacity installation at Holtwood would have been less than one-half of that obtainable from the Safe Harbor development.

Q. Would the difference in cost between the Safe Harbor project and installation of the same amount of capacity at Holtwood be any measure of the cost incurred for energy at the present Safe Harbor plant? A. I think it might properly be so considered, but I [16680] did not approach

it from this point of view. I did, however, recognize the fact that the amount of capacity provided at Safe Harbor was not provided for capacity alone, rather it was provided to obtain the relative amounts of capacity, energy and the other attributes of electric service as were then expected to be needed by and useful to its several customers. To ignore these factors in any cost allocation is not being realistic.

Q. On page 11182 of the record, Mr. Davis testified that all of the investment costs associated with the steam plant are costs which have a function of providing capacity. Is it a fact that all of the investment costs associated with the Holtwood steam plant have the function of providing capacity? A. Certainly not. I have in mind particularly the investment in boiler plant, coal preparation plant and coal recovery facilities, and possibly also the investment in circulating water tunnels, pumping capacity and condenser capacity, where a very much smaller cost would have been necessary had it not been desired that the Holtwood plant operate for long continuous periods at maximum plant output, i e., on base load. Many steam plants in the country today are designed and built with undersized boiler plants because it was recognized that the boilers would only be loaded to full capacity, or overloaded, for a relatively few hours each month. Certainly [16681] it is not a fact that all of Holtwood steam plant investment was made to provide capacity.

Q. Mr. Davis showed in his Exhibit 64, Table 5, line 26, a figure of $19.22 per kilowatt and a figure of 1.43 mills per kilowatt hour. In your opinion are these figures representative of a realistic cost per kilowatt and per kilowatt hour of the services supplied by Penn Water? A. Without agreeing with his method of computing capacity for the purpose of deriving a cost per kilowatt, and after adjustment for the errors in his determination of energy used in deriving his cost per kilowatt hour, in my opinion his cost per kilowatt and cost per kilowatt hour are entirely unrealistic.

Q. Are all of the costs of Safe Harbor incurred in connection with the rendering of electric services to the Pennsylvania customers, including the services rendered to the Pennsylvania Railroad by Safe Harbor, included by Mr. Davis in his Exhibit 64? A. No, they are not.

Q. What costs, if any, of Safe Harbor were included by Mr. Davis in his Exhibit 64? A. Only those costs of Safe Harbor represented by an assumed bill rendered to Penn Water were included by Mr. Davis in line 2 of Table IV of Exhibit 64. Mr. Davis did not use the actual total costs of Safe Harbor in computing [16682] such assumed bill, but rather a much reduced cost based on a lower rate of return than provided under that contract.

Q. Were the costs used by Mr. Davis in his Table IV of Exhibit 64 related to the services actually rendered? A. No, they were not. The costs used by Mr. Davis were taken to be only one-third of such total assumed costs of Safe Harbor, but the services rendered by Safe Harbor to the Pennsylvania customers jointly with Penn Water and to the Railroad jointly with Penn Water and Baltimore were greatly in excess of one-third of the total electric services rendered by Safe Harbor in that year. As a result the costs incurred by Safe Harbor in rendering services to Penn Water and to its Pennsylvania customers were greatly in excess of the one-third of Safe Harbor's assumed costs.

Q. At page 10847, Mr. Davis testified that Baltimore Company is standing back of the peaks of the firm power obligations of Penn Water and Safe Harbor to others. Is this an accurate statement of the facts? A. It is not. Baltimore Company has no obligation in connection with any of the firm power obligations of Penn Water and Safe Harbor to their Pennsylvania customers. Baltimore Company does have an obligation to the Pennsylvania Railroad jointly with Penn Water and Safe Harbor. Baltimore Company stands back of nothing with respect to Penn Water and Safe Harbor's obligations to their Pennsylvania customers, [16683] except its agreement to provide back-

feed energy as supplemental energy to Penn Water during the hours when Baltimore Company can do so from generating units in plants that are otherwise operating, that is, that are otherwise required by Baltimore for its own uses.

Q. At page 11100 of the record, Mr. Davis testified with respect to the use of energy generated at Safe Harbor and Holtwood by the installed capacity available in excess of what he determined to be the dependable capacity of the Holtwood and Safe Harbor plants, and further stated that such energy was used by all of the customers just as any other energy. Who in fact uses such energy? A. Assuming first that there is energy generated from capacity installed in excess of the dependable capacity of these plants, such energy is, in fact, used either for delivery to Baltimore Company or for delivery in connection with interchange transactions.

Q. Then, none of such excess energy is used in connection with the firm power obligations of Penn Water and Safe Harbor to their Pennsylvania customers? A. That is correct.

Q. Is there any justification for eliminating the costs associated with construction work in progress and plant held for future use in connection with any cost allocation of the services rendered by Penn Water? [16684] A. No, there is not.

Q. Why not? A. Most of the properties and facilities, the costs of which are included in construction work in progress, are or shortly will be in use. Any cost allocation made should relate to the actual costs for service now and in the near future. Certain investments now being accumulated in connection with contemplated projects are classified as property held for future use. We are acquiring, as opportunity presents, the necessary right-of-way for transmission lines under a definite plan of use. Investments are also being made for future use in connection with an additional hydroelectric development. By the very nature of such latter plans, it is necessary for this company

to acquire lands and other property over a period of many years. To do otherwise would naturally increase the purchase price of such properties.

Q. In Table III-a of Exhibit 64, Mr. Davis eliminated for cost allocation purposes certain expenses incurred by Penn Water for administration and general expense. What are the facts in respect to this expense for the year 1944? A. Referring to Exhibit 18, being Penn Water's bill to Baltimore Company for services rendered under contract identified as Items H and I for the year 1944, there is an item (x) entitled "Miscellaneous Credits" in an amount of $9,703.62. This amount was treated as a deduction in the [16685] determination of the annual charges to Baltimore Company. This is the amount that Mr. Davis used as a reduction to Penn Water's expense in his Table III-a of Exhibit 64. The amount so treated in the 1944 bill as rendered, was made up of three items: a portion of the directors' fees, a portion of the costs incurred for use and occupancy insurance, and the salary of one employee.

These items of general expense were excluded from the power bill by agreement between the parties and for the following reasons:

Penn Water's directors' fees were in that year greater than those paid by Baltimore Company to its own directors, and Baltimore Company urged us to deduct that portion of such expenses in excess of the amounts Baltimore Company paid to each of its directors. Penn Water agreed in such connection to deduct from the bill an amount of $4,065 for the year 1944, but without agreeing that its fees paid to its directors were unreasonable or were not proper operating expenses. Certain use and occupancy insurance relating to loss of revenue from fire and sabotage, was carried by Safe Harbor and Penn Water during the war years. Such expenses were recognized by Baltimore Company as proper operating expenses, but Baltimore Company felt that such insurance was in part a protection to Penn Water against loss of revenue under the general catastrophe

clauses of the respective contracts E, [16686] F and G and H and I. Penn Water agreed to deduct from the annual bill for the year 1944 an amount of $3,211.87, being one-half of the costs of such U. and O. fire and sabotage insurance carried by Safe Harbor Company plus one-half of only the U. and O. sabotage insurance carried by Penn Water, but Penn Water did not agree that such insurance costs were not proper operating expenses. Penn Water further agreed to deduct from the annual bill an amount of $2,426.75, relating to the salary and expenses of one of its employees, but did not agree that such expenses were not proper operating expenses.

Q. What were the amounts included in the item entitled "Miscellaneous Credits" being Item (x) of the power bills for years 1945 and 1946? A. In the year 1945 the amount in Item (x) which was treated as a deduction in the determination of the annual charges to Baltimore Company was $11,238.38 and in the year 1946 the amount was $15,283.28. The differences in the three years, 1944, 1945 and 1946, were largely the result of an increase in amount of expenses for directors' fees so deducted and a decrease in the cost of use and occupancy insurance for 1946 due to the cancellation of certain wartime insurance.

Q. In Exhibit 64, Table IV at line 2, Mr. Davis shows as Penn Water's payment to Safe Harbor Company an amount of [16687] $992,535. By reference to Exhibit 17 it would appear that Safe Harbor's bill to Penn Water for the year 1944 was $1,214,553.53. What was the actual amount billed by Safe Harbor to Penn Water and paid by Penn Water under Items E, F and G in 1944? A. $1,214,553.53.

Q. Were such charges, made by Safe Harbor to Penn Water, provided for in a contract on file with the Pennsylvania Public Utility Commission? A. Yes. The contracts identified as E, F and G in these proceedings have been filed with Pennsylvania Public Utility Commission by Safe Harbor Company and designated by that Commis-

sion as Safe Harbor Tariff No. 1, including Supplement No. 1 thereto. This same contract has also been filed with the Pennsylvania Public Utility Commission by Penn Water and designated by that Commission as Pennsylvania Water & Power Company Tariff No. 5, including Supplement No. 1.

Q. Has the Pennsylvania Public Utility Commission ordered Safe Harbor Water Power Corporation to reduce its charges to Penn Water for the year 1944 or for any subsequent year? A. It has not.

Q. Beginning at page 11233 of the record, Mr. Davis testified with respect to the actual capacity available from the Safe Harbor-Holtwood system at the times of various system peaks.

[16688] Have you prepared a tabulation showing the actual capacity available and in use for the Safe Harbor and Holtwood power developments for the years 1944, 1945 and 1946, at the time of the Area 6 annual system peak, and at the time of Safe Harbor-Penn Water system peak? A. Yes, I have.

MR. SPARKS: I ask that this tabulation be identified as Exhibit No. 371.

(The document was marked Exhibit No. 371 for Identification.)

By MR. SPARKS:

Q. Is this the tabulation you have prepared? A. Yes.

Q. What other information is shown on this exhibit? A. I have also shown the amount of capacity available and in use at the Holtwood hydro plant, at the Holtwood steam plant, and at the Safe Harbor hydro plant at the time of the various system peaks shown. There is also shown on the lower portion of the exhibit the maximum annual capacity available and in use at the Holtwood power development and at the Safe Harbor development for each year,

for comparison with the amounts of capacity available at the time of the system peaks.

Q. Have you also prepared a tabulation showing the actual firm power demands of the Pennsylvania customers on [16689] Penn Water-Safe Harbor system for the years 1944, 1945 and 1946, at the time of the Area 6 annual system peak, at the time of the Safe Harbor-Penn Water system peak, and at the time of maximum output from the Holtwood power development, together with the maximum requirement of each Pennsylvania customer including the Pennsylvania Railroad requirements on the Divisions of the Railroad's electrification normally supplied by Penn Water, Safe Harbor and Baltimore Company? A. Yes, I have.

MR. SPARKS: I ask that this tabulation be identified as Exhibit 372.

(The document was marked Exhibit No. 372 for Identification.)

By MR. SPARKS:

Q. Beginning at page 11236, Mr. Davis testified with respect to statements in the FPC Form No. 12 "Power System Statement" for 1945, filed by Consolidated Gas, Electric Light and Power Company of Baltimore as the "Pool" report which purports to include data obtained by them respecting the operations of the power systems of Potomac Electric Power Company, Penn Water and Safe Harbor, and the power facilities of the Bethlehem Steel Company in Baltimore. Is all of the data relating to the operations of the Safe Harbor-Penn Water system shown by them in this 1945 Pool Report, shown in the manner supplied to Baltimore Company by Penn Water and Safe [16690] Harbor? A. No, it is not.

Q. In what respect does this "Pool" report filed by Baltimore Company include data different from the information reported or supplied by Penn Water and Safe Harbor to Baltimore Company for the purpose of prepar-

ing such "Pool" report? A. The amounts shown in Baltimore Company's "Pool" report to the Federal Power Commission, Form 12, for the dependable capacity of the Holtwood and Safe Harbor plants are different from the information supplied to Baltimore Company. The dependable hydro capacity of the Safe Harbor and Holtwood plants reported in this "Pool" report by Baltimore Company is not the information supplied to them in writing for such purpose, is incorrect in my opinion, and this fact was called to Baltimore Company's attention in writing at the time.

MR. SPARKS: I ask that the copies of letters of May 28, June 3 and June 5, 1946, be marked as Exhibit 373.

(The letters were marked Exhibit No. 373 for Identification.)

By MR. SPARKS:

Q. Are the copies of the letters in Exhibit 373 the correspondence you have just referred to? A. They are.

Q. Beginning at line 15 of page 1192 of the record, [16691] Mr. Davis testified that the capacity available for Baltimore Company from Penn Water and Safe Harbor is not a measured quantity. Is it possible to measure and determine the maximum demands by Baltimore Company on the Holtwood-Safe Harbor system? A. Yes.

Q. When generally do the maximum demands occur? A. During those higher river flow periods of the year when the hydro capacity is fully loaded and the load demands of Penn Water's and Safe Harbor's other customers are off peak. While such occasions may occur during the early morning hours, the demands of Baltimore Company on the Penn Water-Safe Harbor system during many other periods of the same days and at other times during the year are only a few thousand Kw. less.

Q. Is it more difficult to determine Baltimore Company's maximum demands than it is to determine the maximum demands of the Pennsylvania firm power customers?

A. It is no more difficult to determine such demands because they are measurable quantities.

Q. Are such metered maximum demands the all measure of the capacity services rendered to Baltimore Company? A. No.

Q. What other factual data must be considered? A. It is necessary to determine from operating records, [16692] the additional amounts of capacity and spinning reserve that was available. Such additional capacity services are only available to the other customers of Penn Water and Safe Harbor on an interchange basis.

Q. Will you explain the use made by Baltimore of such maximum demands and of the other capacity services in meeting its own system load requirements? A. First, Baltimore Company uses such maximum demands of power and energy to carry its own peak load requirements in the manner described, both in my Exhibit No. 8 and by Mr. Thomas in his Exhibit No. 69; secondly, the dependence generally on the Penn Water-Safe Harbor capacity for reserve capacity in part as spinning reserve and in part as cold reserve, and third, during those periods of average river flow when Baltimore's steam capacity is taken out of service for inspection and maintenance.

Q. Does Baltimore regularly depend on Penn Water and Safe Harbor for capacity services, when it is necessary to remove its steam generating equipment from service for maintenance work? A. Yes, that has always been a recognized use of Penn Water and Safe Harbor capacity both in the system planning and in preparing advance schedules of the capacity requirements of Baltimore Company.

Q. In what manner does Baltimore plan in advance to [16693] make use of Penn Water and Safe Harbor capacity in connection with its steam plant maintenance? A. The operating departments of Baltimore Company, Potomac Electric Power Company, Penn Water and Safe Harbor each year collaborate in preparing a maintenance

schedule covering all outages of major steam generating plant equipment that may need be scheduled for routine overhaul, inspection or repair. This schedule is first prepared in the third quarter of the year for the following year and is revised from time to time, as necessary, due to changing river flow conditions or to adjust for interruptions caused by changes in operation or in equipment conditions that occur throughout the year.

MR. SPARKS: I ask that these three steam plant maintenance schedules be identified as Exhibit 374.

(The documents referred to were marked Exhibit No. 374 for Identification.)

By MR. SPARKS:

Q. Are the sheets which have just been identified as Exhibit 374 several of the recent maintenance schedules prepared by Baltimore Company just referred to by you? A. Yes, they are the steam maintenance schedules as originally prepared by Baltimore Company in collaboration with the other operating people mentioned. The heavy dark line on each chart is the original prearranged outage schedule [16694] of steam plant facilities affecting capacity. There is included in Exhibit 374 such charts for the years 1944, 1945 and 1946. The original schedules were revised from time to time during the year and the hatched areas are the resultant changes in the original outage schedules. However, it should be pointed out that the actual capacities shown as scheduled out of service are exclusive of forced outages occurring during the same periods which at times were as much as 100,000 Kw. greater than the amounts shown on this exhibit. I desire to point out that in the preparation of the original maintenance schedules and the revisions made thereto, it was necessary to arrange for such scheduled outages at times when there would be the necessary capacity margins available on these systems. The capacity margin available for such outages in turn is related to expected river flow conditions. Con-

sideration was and is given, not only to the load carrying capacity of the hydro plants with most adverse river flows, but to the capacity margins available on the system with river flows for each month that can be expected to occur at least 90 percent and 75 percent of the time.

Q. Can the river flows be predicted sufficiently far in advance for the operating people to arrange for the outages of steam capacity for a two-week period? A. Yes. It is the regular practice of the hydro companies' hydrographic observer to maintain a running estimate [16695] of river flow for a seven-day period and, in collaboration with the weather bureau, to predict river flows for a two weeks' period. We are also able to predict, based on ground water observations, the assured flow that can be experienced in the absence of any rainfall for periods of four to six weeks in advance. However, we are concerned in scheduling steam capacity outages, only with possible reductions in river flow during the time a large sized steam unit will be out of service for maintenance and it is most infrequent that we experience any very sudden drop in river flow that cannot be forecast with reasonable accuracy two weeks in advance.

Q. Is the two weeks' estimate of river flow sufficient for scheduling the outage of steam generating capacity? A. Yes, it is. The maximum outages of steam generating equipment shown on Exhibit 374 are the result of scheduling outages of several generating units or boilers at the same time. One of such units may be scheduled out of service for overhaul for a period of from four to six weeks, but certain of the other equipment scheduled for outage during the same period can always be returned to service on one week's or shorter notice if required due to forced outage of other steam capacity. This is the reason that it is continuously possible to take advantage of river flows in excess of the most adverse conditions for a large portion of the scheduled outages of steam capacity on this interconnected [16696] system.

MR. SPARKS: I ask that this be identified as Exhibit 375.

(The document was thereupon marked Exhibit No. 375 for Identification.)

By MR. SPARKS:

Q. Are the diagrams shown in Exhibit 375 the underlying data used by the companies in the preparation of the schedules incorporated in Exhibit 374? A. They are.

Q. And, it is this background information which supported your statement that the maximum outages of steam generating equipment are the result of scheduling outages of several generating units or boilers at the same time? A. That is correct.

Q. Will you indicate two examples from Exhibit 374 when actual outage of steam generating capacity was considerably greater than would have been possible had most adverse river flows been experienced? A. During January, 1944, there was actually 82,000 kw. of steam generating capacity out for maintenance. With most adverse river flow the desired capacity margin would not have permitted any outage of steam capacity during this period. Again during the first part of January, 1945, there was actually 96,000 kw. capacity out for maintenance while, [16697] had minimum river flows been experienced, the capacity margin as shown would indicate that such outages would have been limited to 39,000 kw., assuming no forced outages of steam capacity.

Q. Is there also similar coordination between the utility companies operating in FPC Area 6 and the northern customers of Penn Water and Safe Harbor in their scheduling of steam generating equipment outages? A. Yes, all of the companies on the interconnected system along the eastern seaboard between the Hudson and Potomac Rivers coordinate their steam plant maintenance schedules to a very large extent. It was largely because of this fact that the unprecedented war loads were carried and still

permit all essential maintenance work to be carried on. This coordination of maintenance schedules is only one of the several advantages of coordinated operation and each of such interconnected companies is continually kept informed as to the actual conditions and to the forecast of the Susquehanna River flow, because it is with the regularly experienced flows in excess of most adverse conditions that have made it possible for these companies to maintain their equipment with the growth in loads experienced.

Q. Has Mr. Davis ignored these factors in his allocation of capacity? A. Yes, he has, and I want to point out that altogether [16698] too much emphasis has been laid by Mr. Davis and at times by Baltimore Company on the amounts of hydro capacity available on the system with most adverse river flows.

Q. Is the hydro dependable capacity determined for most adverse flow conditions any measure of the actual use made of the available capacity of Safe Harbor and Penn Water? A. No. The use made of the capacity of Penn Water and Safe Harbor has been greatly in excess of these so-called "most adverse flow conditions" and in my opinion such minimum value of hydro capacity is no basis for a capacity allocation or a cost allocation related thereto. It is the use made of this capacity that should be considered in this connection and not what might have been available under some abnormal condition that occurs once in fifty years. To do otherwise is to ignore the realities of the situation. Anyone looking at a graphical picture of the use made of Safe Harbor and Holtwood hydro capacity during the last three years or even of the use made of such capacity in 1941, which was one of the lowest flow years on record, can scarcely avoid the recognition of these facts.

Q. Have you prepared such a graphical picture for the years 1941, 1944, 1945 and 1946? A. Yes, I have.

MR. SPARKS: I ask that this document showing combined Holtwood-Safe Harbor daily peaks for 1941,

1944, 1945 and [16699] 1946 be marked for identification as Exhibit 376.

(The document was marked Exhibit No. 376 for Identification.)

By Mr. Sparks:

Q. Will you explain these graphs? A. The heavy dark line generally below the hatched area has been drawn to record the maximum one-hour hydro generation for each day of the year, as shown by the scale at the left, at the Safe Harbor and Holtwood plants. The hatched area shows the generation of the Holtwood steam plant on the same hour of the day. The top of the hatched area, therefore, shows the actual maximum one-hour generation used on the interconnected system either by Baltimore and Washington or by Penn Water's and Safe Harbor's Pennsylvania customers for each day of the year. Such data alone shows the extent to which Penn Water and Safe Harbor's capacity was used in carrying the load requirements of their customers.

Q. Is that the only consideration of the use made of capacity services? A. No. There is also shown on each of these charts a black dot for each day of the year which shows the total amount of capacity actually operating and used in providing capacity services at the Holtwood and Safe Harbor plants. The difference between the capacity operating and the amounts of generation is generally the amount of spinning reserve [16700] used and useful on the system as operating reserve for load swings, protection against forced outages of capacity and load estimating errors, for voltage regulation and power factor cooperation, and for frequency and tie line regulation. In addition to the amounts of operating capacity shown, there were at times certain amounts of idle capacity not running but which were counted upon as reserve capacity by Baltimore and Washington companies, thus making it unnecessary for these companies to operate banked boilers and extra generating units for reserve.

Q. Why can Baltimore, for example, count on units not operating at the hydro plants as reserve, whereas they must have steam units spinning to provide alternative reserve capacity? A. Because the hydro units can be brought up to speed, synchronized with the load and loaded to capacity, all in a fraction of a minute, whereas the more modern steam generating units require from two to four hours to bring from standstill to full load and even the older generating units require at least an hour to make available for carrying load. In fact, if a modern unit were operating at minimum load and there was a sudden demand for its use, it would be necessary to pick up such new demand very slowly, i. e., over a period of approximately one-half hour, in contrast to the ten second time in which the same service can be obtained from a hydro [16701] unit. This operating factor is most important in the event of a forced outage of equipment.

Q. Are there any specific points which you wish to make with respect to these charts? A. Yes, the peak load on Baltimore-Washington system and on the systems of our northern companies have been and still are experienced in November and December. The charts for each year show to what extent utilization was or could have been made of the hydro capacity installed at the Holtwood and Safe Harbor plants during these system peak periods. I also desire to emphasize that during a larger part of each year Holtwood and Safe Harbor capacity in excess of 300,000 Kw. was being utilized on the interconnected system. In 1944, such capacity was utilized on two-thirds of the week days in the year (i. e. exclusive of Saturdays, Sundays and major holidays); in 1945 on over 90 percent of such days; and in 1946 on about 85 per cent of the week-days.

Q. Is the daily use of capacity a significant factor in your consideration of the capacity value of the Holtwood and Safe Harbor developments? A. Yes, it was one of the several significant factors I considered. I believe, how-

ever, a much more important consideration is the weekly use, which perhaps can best be expressed as an average of the maximum weekly use of such hydro capacity. It is a well known fact that the system [16702] load requirements vary from day to day due to temperature, cloudiness, thunderstorms, habits of the people, such as Thursday night shopping, ironing day on Tuesday, etc. It is the weekly peak system requirements which largely determine the use made of the hydro capacity. I have, therefore, had determined from the companies' operating records both the actual amount of hydro one-hour generation and the actual amount of hydro capacity operated at the Holtwood and Safe Harbor power developments on the hour of the Area 6 system peak for each week of each year. From these records, I find that the average weekly use of such hydro generation was 250,000 Kw. in 1944, 290,000 Kw. in 1945 and 272,000 Kw. in 1946, to which must be added the load carrying capacity operating at the Holtwood steam plant. From these same records, I find that the use made of the hydro capacity actually operating in part for system reserve, at the time of these weekly peaks, was 295,000 Kw. in 1944, 316,000 Kw. in 1945 and 298,000 Kw. in 1946, and which again does not include approximately 28,000 Kw. of steam capacity available at the Holtwood steam station. No one can well ignore these facts as to use of these hydro and steam capacity services by Penn Water and Safe Harbor's customers.

Q. Did these facts influence your use of the figures of 295,000 Kw. for hydro capacity and 28,000 Kw. for steam capacity in connection with the capacity values in Exhibit [16703] No. 35? A. Yes.

Q. Beginning at line 2 of page 1195, Mr. Davis testified that the 10,820 Kw. shown by him on Table VI-A of Exhibit 64, and which was later adjusted upwards as a result of errors admitted on cross-examination, should be taken to be the maximum capacity furnished during the year 1944 to Baltimore Company by Holtwood Company. Was more

than this 10,820 Kw., as later adjusted, used by Baltimore Company in the year 1944? A. There certainly was.

Q. What was the actual amount of capacity service furnished by Penn Water and Safe Harbor to Baltimore Company at the time of the interconnected system peak in the year 1944 and by interconnected system peak I mean the peak requirements of Baltimore, Washington and of the Pennsylvania customers of Penn Water and Safe Harbor and including the total requirements of the Pennsylvania Railroad supplied by these companies? A. It was 181,000 Kw. at the time of the peak load requirements of such system in 1944, which occurred at 6:00 P. M. on December 11, being the capacity service actually supplied by Penn Water and Safe Harbor to Baltimore Company at Highlandtown, Westport, Riverside and Takoma Park, Maryland.

[16704] Q. Do you make a distinction between capacity service furnished and the maximum hourly Kwh. delivered at these points? A. Yes, I do.

Q. In arriving at such amounts of capacity service, did you make an adjustment for the actual interchange transactions on those hours between Penn Water and Safe Harbor on the one hand and their Pennsylvania customers on the other? A. Yes, I did. Any interchange deliveries by Penn Water and Safe Harbor at those times could have been made available to Baltimore Company, had such capacity service been required by Baltimore Company. Such adjustment was made by adding to the actual deliveries to Baltimore Company the amounts of interchange delivery to others at that time.

Q. Have you prepared a tabulation showing the years 1944, 1945 and 1946, the actual deliveries to Baltimore at the times of those annual system peaks? A. I have.

MR. SHARKS: I ask that this document be marked for identification as Exhibit 377.

(The document was marked Exhibit No. 377 for Identification.)

By Mr. Sparks:

Q. Does this exhibit also show the actual deliveries of power and energy to Baltimore at the time of the annual [16705] system peaks adjusted for interchange transactions, in the manner you have just referred to? A. Yes, it does.

Q. And does the last column in the upper portions of this exhibit show the capacity service available to Baltimore Company at the time of such annual system peaks? A. Yes, it does.

Q. Have you also shown at the bottom of this exhibit similar amounts of actual delivery and maximum amounts of capacity service to Baltimore in the years 1944, 1945 and 1946, irrespective of the time of the year and irrespective of the system loads at the time? A. I have.

Q. When you refer to the capacity service available to Baltimore Company by Penn Water and Safe Harbor at the time of such annual system peaks, are you including only the capacity available from the Holtwood and Safe Harbor power developments? A. I am.

Q. Are there other capacity services available to Baltimore from Penn Water and Safe Harbor? A. Yes, there are.

Q. What is the nature of such additional capacity service available to Baltimore from Penn Water and Safe Harbor? [16706] A. Penn Water and Safe Harbor might have been able to obtain additional energy and capacity and to have made such additional energy and capacity available to Baltimore as a result of arrangements between Penn Water and its northern customers, Metropolitan Edison, Pennsylvania Power & Light and Philadelphia Electric. However, there were no such services actually being received by Penn Water in the hours shown on Exhibit 377.

Q. Under what conditions would such additional capacity service be available from these northern customers of Penn Water, which Penn Water and Safe Harbor might have made available to Baltimore Company? A. First,

to the extent that these companies may have had additional capacity available at the time of the system peaks shown on Exhibit 377, and, second, as a result of coordinated operations between Penn Water and Safe Harbor on the one hand and these northern companies on the other.

Q. Will you please indicate what you mean by such coordinated operations? A. When greater amounts of hydro capacity can be utilized by operating the capacity and available energy at Holtwood and Safe Harbor on the combined system loads of the utilities operating in FPC Areas 5 and 6, Penn Water and Safe Harbor supply additional interchange energy to their northern customers at the time of such combined system peak and receive [16707] interchange energy from these northern customers in the early forenoon hours and during the evening hours. Any resultant gain in the utilization of hydro capacity without any net use of available energy from such operations is available in part to Baltimore Company as a result of such coordinated operations.

Q. At line 19 of page 1195 of the record, Mr. Davis testified that the 10,820 Kw., which he later adjusted upwards on cross-examination, is comparable to the maximum annual demands of the Pennsylvania customers. Is this correct? A. No, it is not. It is nothing but a hybrid figure that has no comparability whatsoever with the maximum annual demands of these Pennsylvania customers.

Q. Beginning at page 11350 of the record, Mr. Davis testified that he used 40 percent of the York billing demands for the year 1944 in arriving at the 9,000 Kw. firm demand on Holtwood Company, shown in line 18 of Table V-A of Exhibit 64. He described this part of the Edison Light and Power Company as the demand which Holtwood was contractually responsible for. Was Penn Water alone responsible for 9,000 Kw. demand of Edison Light and Power Company in 1944? A. No. Penn Water and Safe Harbor acting jointly as generating companies had the operating responsibility for 40 percent of demand of

Edison Light and Power Company. That was a joint responsibility of both companies and not of Penn [16708] Water alone.

Q. Were any of the firm demands shown on lines 16, 17, 18 and 23 of Table V-A of Exhibit 64 the sole operating responsibility of Penn Water? A. No. Safe Harbor also had an operating responsibility for such demands.

Q. Were any of the firm deliveries shown on lines 8 and 9 of Table V-B of Exhibit 64 the sole operating responsibility of Penn Water? A. No. Safe Harbor also had an operating responsibility for such deliveries.

Q. At Table VI-A of Exhibit 64, Mr. Davis added as a revenue from Baltimore Company to Penn Water, the "Conowingo Backwater Payment" of $133,750. Was this amount of revenue actually received from Baltimore Company? A. It was not.

Q. From whom did Penn Water receive this revenue? A. From the Susquehanna Electric Company, the operating company of the Conowingo Hydroelectric Development.

Q. Are these payments made under the terms of the contract between Penn Water and the Susquehanna Electric Company, identified as Exhibit 235? A. Yes.

Q. What is the date of this agreement? A. The contract was executed on February 20, 1926.

[16709] Q. Was a certificate of public convenience and necessity issued in connection with this contract by the Public Service Commission of Pennsylvania? A. Yes, that Commission issued a certificate of public convenience after investigation in re: Application Docket 15250-1926, and "found and determined that the granting of said application is necessary and proper for the service, accommodation, convenience and safety of the public and that this Certificate is issued, evidencing its approval of said application as set forth in said report and order." This certificate of public convenience was dated by the Commission November 22, 1926.

Q. What revenues did Penn Water receive from the Susquehanna Electric Company in the year 1930? A. $124,500.

Q. Did this agreement between Penn Water and Susquehanna Electric Company specifically provide for increased payments in the years 1931, 1932 and 1933? A. It did.

Q. What payments were provided in that agreement for the year 1933? A. $133,750.

Q. And is that the amount currently being billed to the Susquehanna Electric Company in accord with the terms thereof? [16710] A. It is.

* * *

[16712] Q. What is the present likelihood of Government hydroelectric developments on the Susquehanna watershed or other nearby watersheds that might compete for the present load markets served by Penn Water? [16713] A. So far as I know, there are no such projects now authorized by Congress. However, there are strong proponents, both within and without the Halls of Congress, for the development of the St. Lawrence River for power in tremendous quantities under Federal subsidies and in addition, the Army Engineers have been, within the past six months, actively engaged in resurveying several potential power sites on the Susquehanna River in cooperation with the Federal Power Commission. There are in existence today several comprehensive reports prepared jointly by the Federal Power Commission and the Army Engineers covering hydroelectric power developments on the Susquehanna, Potomac and Delaware Rivers which could be submitted to Congress on relatively short notice should there be a need for major public works. It is an announced policy of our Government to use such public works as an aid to the national economy in periods of business recession.

Q. In your opinion is the threat of Government subsidized competition one of the existing risks of Penn Water? A. Yes. I believe it is a risk and concern to Penn Water.

The fact that the completion date of a Government subsidized hydroelectric development has not been established, is no assurance that such competition will not be encountered or that the risk of such competition is not currently present.

[16714] Q. Mr. Spaulding, have you recently made a determination of the actual costs of Penn Water's and Safe Harbor's firm power services rendered to Baltimore Company for the year 1946? A. Yes, I have.

MR. SPARKS: I ask that this document entitled "Costs of Firm Power Services" be marked Exhibit 378 for identification.

(The document was marked Exhibit No. 378 for Identification.)

By MR. SPARKS:

Q. I show you this document identified as Exhibit 378 and ask you if it is your determination of Penn Water's and Safe Harbor's costs for firm power services rendered to Baltimore Company in 1946? A. It is.

Q. Will you please explain the distinction between the actual 1946 costs and the adjusted 1946 costs of firm power services rendered to Baltimore Company as shown in this Exhibit 378? A. The actual costs of firm power services rendered to Baltimore in 1946 are related to the actual operating expenses and to the average investment in electric plant for the year 1946, while the adjusted costs of firm power services rendered to Baltimore Company for 1946 reflect certain authorized [16715] increases in plant investment; increases in operating expenses as estimated for current conditions, largely the result of salary adjustments made in 1946 but only in small part reflected in the expenses of that year; and an adjustment of Safe Harbor's State and Federal income taxes to eliminate the abnormalities of its actual 1946 income taxes resulting from the refunding of Safe Harbor's bonds in that year.

Q. The summary of the results of this cost of service study is shown on the second page of this exhibit, is it not? A. Yes.

Q. Did you generally follow the same methods of cost allocation in this exhibit as you used in connection with Exhibit 35? A. I did.

Q. Did you make any segregation of the investment in the property of Penn Water and S. T. Co. of Md. as between the four general groups shown on Schedule 1a of Exhibit 378 different from that used in Exhibit 35? A. The only change made was with respect to the allocation of the present investment in Manor Substation. This investment was all classified as "General Production Plant" in Exhibit 35, but upon further consideration has been classified with the 220 Kv. transmission lines in Exhibit 378 as "Special Facilities for Baltimore Company."

Q. Did you make any segregation of the investment in the [16716] property of Safe Harbor as between the two general groups shown on Schedule 2a of Exhibit 378 different from that used in Exhibit 35? A. No.

Q. Referring to Schedule 1a of Exhibit 378, is the amount shown in Item 6, "Excess of Book Cost over Revised Original Cost" different from that used in connection with Exhibit 35? A. Yes. It is slightly greater in Exhibit 378, reflecting the adjustments subsequently admitted by the company. The amounts shown in Item 5 on Schedule 1a of Exhibit 378 are consistent with Mr. Eichhorn's reconciliation exhibit, identified as Exhibit 320.

Q. Have you made any other changes in your methods of allocations in Exhibit 378 as compared with those used in Exhibit 35? A. Yes, there are a few minor changes, relating to the allocations of working capital, general expenses and general taxes, but none of such changes in method of allocation are of material significance.

Q. In your determination of the adjusted 1946 costs of firm power services rendered to Baltimore Company,

what additional electric plant investments have you included? A. In addition to the costs which have been incurred on construction work in progress, and which I have included [16717] in both the actual and adjusted costs of service, as I did in Exhibit 35, I have here included in the adjusted 1946 costs of service, the estimated costs to complete certain plant additions which have been authorized by the board of directors and the management, and work on which is now in progress. The major item so included and which accounts for two-thirds of the total additional costs, was the 66 Kv. switching yard at Manor Substation, together with related additions to transmission plant, the estimated net increase in electric plant being approximately $550,000; of which $30,000 will be net increase in Safe Harbor's electric plant.

The other items of investment included were Penn Water's costs of providing additional cooling equipment for power transformers; the enclosure and modernization of the Holtwood Hydro control room; the installation of additional ground wires for the Philadelphia Road-Gunpowder transmission line to increase the reliability of this line for Baltimore's sole use; additional hydraulic concentrator equipment for river coal recovery; additions to the steam station boiler ash disposal system; and certain other items which for Penn Water amounted to a total net increase in electric plant of $750,000, as shown on Schedule 1b and for Safe Harbor a net increase of $120,000, as shown on Schedule 2b of Exhibit 378. It should be mentioned that the net additions reflected in the adjusted 1946 costs of service do not include all of the [16718] construction budget items contemplated for 1947.

Q. What was your basis for adjusting the operating expenses which you earlier referred to in connection with your adjusted 1946 costs of service in Exhibit 378? A. There were definite increases in wages and salaries made throughout the companies, effective 1946, and which were not fully reflected in the operating expenses for 1946. There

was also certain maintenance work which was scheduled for 1946, but which due to lack of manpower and materials had to be deferred. Such maintenance work is of a routine nature such as must be planned each year and, therefore, an adjustment has been made to the 1946 actual operating expenses in such connection. However, I have not attempted in these adjustments to reflect my present estimates of further increases in operating expenses for the immediate future, resulting from the present trends in labor rates and costs of materials.

MR. SPARKS: I ask that this document headed "Comparison of Bills for and Costs of Firm Power Services" be identified as Exhibit 379.

(The document was marked Exhibit No. 379 for Identification.)

By MR. SPARKS:

Q. Mr. Spaulding, I show you Exhibit 379. Does Schedule A of Exhibit 379 show your comparison of the costs of [16719] Penn Water's and Safe Harbor's firm power services rendered to Baltimore Company, shown in Exhibit 378, with the bills applicable to firm power services rendered to Baltimore Company for the year 1946? A. It does.

Q. Will you please explain the derivation of the amounts shown in Schedule A of Exhibit 379 from the bills applicable to firm power services rendered to Baltimore Company for the year 1946? A. Schedule B of Exhibit 379 is a copy of Safe Harbor Company's actual net bill to Baltimore Company and Holtwood Company for the year 1946. Item (g) of Schedule B shows the amount of this bill to Baltimore Company for 1946 to have been $2,033,001.59. This is the amount shown on Schedule A of Exhibit 379.

Schedule C of Exhibit 379 is Penn Water's net bill to Baltimore Company for the year 1946, item (i) thereof showing this amount to have been $1,399,331.10.

Schedule D of Exhibit 379 is Penn Water's firm power bill to Baltimore Company for the year 1946, computed in the same manner as the firm power bills to Baltimore Company, incorporated in Exhibit 19, except that this Schedule D is based on actual 1946 results rather than the earlier estimates for the year 1946. Penn Water's firm power bill to Baltimore Company shown on Schedule D is $2,824,420.03. This is the [16720] amount shown on Schedule A of Exhibit 379.

Q. What difference did you find between the total costs incurred by Penn Water and Safe Harbor in rendering firm power services to Baltimore Company and the amounts of their firm power bills to Baltimore Company in 1946? A. The sum of the combined bills applicable to firm power services rendered to Baltimore Company in 1946 was less than the combined costs for firm power services rendered to Baltimore Company by $266,578.

Q. On Schedule A of Exhibit 379, there is shown as the "Adjusted" cost of firm power services rendered to Baltimore for 1946 an amount of $5,663,000. Is such adjusted combined costs comparable to the actual combined bills for firm power services shown in the first column of this exhibit? A. No, it is not.

Q. Why not? A. Should any regulatory authority having jurisdiction, direct the continuance of the present forms of contracts between Safe Harbor, Penn Water and Baltimore Companies (Items E, F & G and Items H & I), the bills to Baltimore Company applicable to firm power services would increase with actual increases in operating expenses, taxes and increases in electric plant. The combined bills applicable to firm power services to Baltimore Company would, therefore, on an adjusted basis, be different from the billing amounts [16721] shown on Schedule A of Exhibit 379. However, should any regulatory authority having jurisdiction, direct that the charges to Baltimore Company by Penn Water and Safe Harbor in the future be directly related to the services rendered, then the

adjusted 1946 costs, shown on Schedule A of Exhibit 379, should be considered in connection with the actual 1946 firm power services rendered to Baltimore Company.

* * *

[16787] CROSS EXAMINATION

By MR. WAHRENBROCK:

* * *

[16796] Q. Can you point out a single hour of these I have referred to in Exhibit 42 in which a substantial amount of energy was supplied from the station service bus to the main bus at Safe Harbor? A. No, I cannot.

[16797] Q. It would be necessary to find such hours in order to show Mr. Roland's' conclusions were inaccurate, would it not?

* * *

THE WITNESS: If he made such a conclusion, yes.

* * *

[16814] Q. All right. I am trying to get the effect of your limitation. As I understood it, you said that when the Safe Harbor was not supplying electric energy then its only contribution in the nature of a power factor cooperation and in the nature of a voltage regulation was through the supply of RKVA. A. That is correct.

Q. I want to understand what its contribution in the way of power factor cooperation or voltage regulation is during those hours when it supplies electric energy. A. I am sorry I didn't understand your question. Generally it is the same. There may be also a change in the supply of energy which results from the power factor cooperation and voltage control.

Q. But that change would be a change in the supply of the electric energy and reflected in the logging of the energy? A. That is correct.

Q. So that whether or not Safe Harbor is supplying [16815] electric energy, its services of voltage regulation and power factor cooperation consist in the supply of RKVA? A. Generally that is correct.

Q. Is the measurement of RKVA the measurement of the power factor cooperation which Safe Harbor supplies, or do you mean something else by power factor cooperation than the supply of kilovars?

THE WITNESS: May I have the question again, please?

(Question read.)

THE WITNESS: The answer to the last part of your question is that the degree or the amount of power factor cooperation can be measured in terms of the amount of RKVA provided.

By MR. WAHRENBROCK:

Q. And is a kilovar a measure of RKVA? A. Yes.

Q. Do you have meters which so measure the RKVA supplied from Safe Harbor? Does Safe Harbor have meters which measure the RKVA which it supplies? A. They do.

Q. Are those meters logged? A. They are.

Q. Hourly? A. They are.

Q. Do its contracts with Penn Water provide for a charge [16816] per kilovar or thousand kilovars? A. No, the charges are independent of the services rendered.

Q. There is no relationship between any payment or charge between those companies and the supply of RKVA? A. You are referring now still to Safe Harbor and Penn Water?

Q. Yes. A. There is no component of the charges that are related to the amount of RKVA provided.

* * *

[16862] Q. And those services so supplied by Safe Harbor are, as you have said, the obligation of Safe Harbor to supply?

* * *

[16863] THE WITNESS: Any obligation of Safe Harbor to provide these services is part of the joint obligation of Penn Water and Safe Harbor to these Pennsylvania customers, to their Pennsylvania customers, together with the

obligation or operating responsibility which Safe Harbor may have to provide those services to Penn Water and Baltimore.

• • •

Q. When you speak of any obligation, is there any obligation to furnish such services by Safe Harbor? A. There is a joint obligation to furnish such services on behalf of Penn Water and Safe Harbor.

[16864] Q. Does that place any obligation on Safe Harbor? A. I don't know.

Q. Can you refer to any provision in the items E, F and G in which there is a joint obligation for the supply of those services by Safe Harbor in any part?

• • •

THE WITNESS: I could not find and would not expect to find in E, F and G any designation of joint obligation on behalf of Penn Water and Safe Harbor to their Pennsylvania customers as an operating matter.

By MR. WAHRENBROCK:

Q. Are you able to refer to any other contract under which Safe Harbor, either alone or with any other company, is obligated to supply these services to which I have just referred? A. Yes.

• • •

[16865] Q. What contracts?

• • •

THE WITNESS: I have in mind the power supply contract with the Philadelphia Electric Company for their Coatesville division, the power supply contract with the Pennsylvania Power & Light Company for their Lancaster Division, the power supply contract of the Pennsylvania Railroad.

• • •

[16866] Q. I think we can close this now.

Is there any obligation to render such service by Safe Harbor either to Penn Water or to Baltimore under items E, F and G?

• • •

THE WITNESS: I think there are operating responsibilities for Safe Harbor to provide such services under E, F and G, under contract identified as items E, F and G.

• • •

Q. By that do you mean that there are provisions in items E, F and G which so provide?

• • •

THE WITNESS: No, I think I stated that I considered that under the provisions of E, F and G there are operating responsibilities for Safe Harbor to provide such services [16867] at times.

• • •

[16905] Q. How do the other services affect the meter readings of energy flows in which Maryland energy is comingled?

• • •

[16907] THE WITNESS: The other electric services, and I am referring to voltage regulation, power factor cooperation, materially change the amount of energy recorded on the meters and shown on certain columns of Exhibit 42 from what would have been recorded on those same meters had such services not been rendered by Safe Harbor.

In addition, these services rendered by Safe Harbor affect the other metered readings, and I refer to the KVA metered readings, which are part of the services being rendered and about which we are talking.

• • •

Q. Do I understand you to say that these meter readings which are reflected in Exhibit 42, those columns which are based on meter readings which you previously identi-

fied, that such meter readings do reflect energy flows which are the [16908] result of all of these other electric services supplied, as you say, at that time?

* * *

THE WITNESS: They do.

* * *

[16945] WILLIAM F. UHL

* * *

CROSS EXAMINATION

By MR. HALL:

Q. Mr. Uhl, by whom were you requested to make a valuation of the land and water rights of Holtwood project? A. By Mr. Spaulding and Mr. Gunn of the Pennsylvania Water and Power Company.

Q. When did they request you to make that valuation? A. Some time in 1945. I wouldn't be able to say exactly.

Q. Over what period of time were you engaged in making this study and determination? A. Well, I studied the matter off and on as time became available to me. Just how long, I really couldn't tell you. That is a matter of three or four months, perhaps six months.

Q. During 1946? [16946] A. Yes, the latter part of 1945 and the early part of 1946.

Q. What material furnished by the representatives of Penn Water did you review in connection with your fair value determination? A. Principally the historical data which is contained in one of the exhibits which I think is in the record here. I don't recall the number of it.

Q. Do you mean Exhibits 26 and 27? A. I would have to see them to be sure.

MR. KING: Excuse me, Mr. Hall, you said fair value determination. I think that was inadvertent, but I don't think that is the witness' statement.

MR. HALL: Do you mean to say fair market value determination would be more accurate?

MR. KING: Yes.

By MR. HALL:

Q. If I substituted that term, I assume your answer would be the same? A. I assumed you meant fair market value, yes.

Q. When I referred to Exhibit 26, I referred to a document which is in evidence and is entitled "History of the Holtwood Development to the Beginning of Commercial Operation, October 1, 1911." Is that one of the documents to which you referred? [16947] A. Yes, that is one of the documents which was furnished to me.

• • •

[16948] Q. Did you not also review data furnished by Penn Water, and which was referred to by Mr. Goldberg in his preliminary questions a few days ago, which data consisted of power market surveys and the document which he referred to was made up of 68 separate documents? A. I thought that was the one we were just looking at.

Q. The one you were referring to a minute ago, Mr. Uhl, was Exhibit No. 27. The document that Mr. Goldberg referred you to a few days ago, in the preliminary examination, was the one which I now place before you. [16949] A. This is the one that I had. I never had this one.

Q. You never had Exhibit 27? A. They look so much alike that I thought it was the same one.

Q. You never had Exhibit 27; is that right? A. No, sir, I don't recall ever having that. I never saw it. I thought that was the same one. I am sorry.

Q. Did you study any material in connection with making your determination, not furnished by Penn Water? A. No, sir. I did recall my own experience in connection with Penn Water in the early days.

Q. In other words, if you considered additional material, it was limited to your own experience? A. The

knowledge of the situation back in the beginning of 1905 and 1906 with which I was familiar.

Q. What situation are you referring to? A. The water power situation there at McCall's Ferry.

Q. Is it not a fact that you considered information relating to water power in the New England States? A. Everywhere that I had knowledge of. I considered all the knowledge that I had of water power, everywhere, sir.

Q. Did the documents which you reviewed for the purposes of your study cover the whole history of the project [16950] from approximately 1900 to the date of your determination?

MR. KING: You mean of the Holtwood project?

MR. HALL: Yes.

A. From what date did you say?

By MR. HALL:

Q. From approximately 1900 to the date of your determination? A. Yes; some of the history went further back than that, even, during the nineties.

Q. Did you ever visit the Holtwood project for the purpose of determining the fair market value of the lands and water rights? A. Well, that was incidental to my visits. I visited the property a number of times, and I visited the property back in 1905 and 1906, but that wasn't the only thing that I had in mind. There are other things I had in mind as far as that goes. I think I visited the property again in 1910 and 1911, around there.

Q. When you—if you did—visited the project in connection with this case, did you do anything which had a connection with the determination of the fair market value of the lands and water rights? A. No.

TRIAL EXAMINER: What was the purpose of your visits in 1905 and 1906 and 1910?

[16951] THE WITNESS: I was at that time employed by the Allis Chalmers Manufacturing Company, and I tried

to sell them the hydraulic and electrical equipment for the project.

By Mr. Hall:

Q. But in 1905 and 1906 you did nothing in connection with placing a fair market value on the lands and water rights which would be required for the Holtwood project? A. No, sir.

Q. How about 1910 and 1911? A. No.

Q. Were you, at the outset of your fair market value study, aware of the purpose for which you were to make your fair market value determination? A. No, I don't think I recall that I was.

Q. When did you first become aware of the purpose for which you were to make your determination? A. Well, the purpose for which I made my examination was to determine the market value of the water rights.

Q. And in what connection was that determination to be made? A. I didn't know in the beginning in what connection it was made for. Just in connection with this rate case.

• • •

[16952] Q. Well, what phase of this rate case do you have reference to? A. The value of it, the value of the property.

Q. How about the cash value of the securities involved in this case? A. No, I didn't hear anything about that in the beginning. I heard about that later.

Q. But you were aware of the fact that this determination was being made in connection with this particular hearing? A. This rate case, yes, sir.

Q. When did you become aware that your valuation was to be related to the cash value of the securities issued by McCall Ferry? A. Well, I overheard conversations from time to time.

Q. When? A. I can't tell you that.

Q. What do you mean you overheard? Do you mean by that that you were in any conference at which that sub-

ject was discussed? A. I was in a good many conferences, yes, sir, in which that was discussed. I don't mean many conferences where that particular thing was discussed, but I was present at a good many conferences.

Q. Both before and after your study? [16953] A. No, I don't think that—I wasn't interested in what it was for, Mr. Hall. I took a purely professional attitude towards it. I was asked to determine the market value. What they wanted to use it for, I really was not interested in.

Q. Well, you knew what it was, but you weren't interested in it? A. Well, I later found out why it was. As far as I knew, it was just to determine the value of this property.

Q. When did you reach your conclusion as to the fair market value of the property? A. Early in 1946.

Q. How early in 1946? A. That, I couldn't say. Some time before writing this memorandum, which I think is one of the exhibits in this case, the date of which is March 18, 1946.

MR. KING: It is not an exhibit, Mr. Uhl, but it has been furnished to Mr. Goldberg.

A. It was furnished with my working papers; that is right.

By MR. HALL:

Q. For the purpose of your determination, did you consider that the value of Holtwood site was represented by its value for the best available use to which it could be put? [16954] A. No, I was only interested in its market value as water rights. Whether another—

Q. Water rights for what purpose? A. For power purpose. Whether another use could have been made of it, I wasn't interested in it.

Q. Did you, for the purpose of your determination, consider that the power development was the most valuable use to which the lands forming the Holtwood site could be put? A. Usually a combination of parcels of land, in a

situation of that kind, is found to have its most valuable use for that purpose.

Q. Wasn't that the situation here? A. Yes, as far as I was concerned, that was the value I was trying to determine; for that use. Now, whether or not some other use could have been made of it, I wasn't interested in it.

Q. What made the land and water rights more valuable for water power development than for any other purpose?

MR. KING: I object to that question. The witness hasn't testified to that, Mr. Examiner.

MR. HALL: He said that was the situation here, Mr. Examiner.

TRIAL EXAMINER: Well, I don't think it is necessary to go back to check the record too carefully. I think the [16955] witness has implied that. The objection is overruled.

* * *

A. I didn't say it was, and I don't know that it was. I said usually combinations of parcels of land of that kind find their most valuable use in that, but whether that was the most valuable use, I don't know, and I wasn't interested in it because all I was interested in was the market value for that particular use.

By MR. HALL:

Q. But did you have any reason to believe that that was not the situation in so far as the Holtwood site was concerned? A. I made no investigation of it, and I have already said that usually a combination of parcels of land in a situation of that kind find their most valuable use for that purpose, but I did not investigate to see whether there was a more valuable use of it, whether a more valuable use could be made of it.

Q. Do you have any reason to believe that what you just stated is not the situation with reference to the Holtwood site? A. Pardon me, Mr. Hall, I don't quite understand your question.

Q. Well, you have testified that the value for water [16956] power purposes is $3,300,000. Does that land have a greater value for any other purpose? A. You mean did it have, in March, 1905? I don't know.

Q. Is it reasonable to assume that it did have a greater value for any other purpose? A. I don't know. I made no investigation, so I am not in a position to answer that question.

Q. Mr. Uhl, in the third complete paragraph on page 3 of your report, which you referred to a few minutes ago, did you not state "These lands, unconsolidated, could not be put to use for power development, and this is a more valuable use than any to which they could otherwise have been put." A. That is right. I did say that in my working papers.

Q. And you still believe what you said in your report, do you not? A. As far as my investigations went, yes, but only so far. Whether there was "gold in them there hills" or not, I didn't look into it—oil or coal or any other thing—Mr. Hall.

Q. Mr. Uhl, just exactly what was the character of the lands which you valued? Were they farm lands or what? A. Partly. Partly farm lands, partly hillsides, [16957] partly river bottom—all the lands necessary to flow the water to an elevation of 155.

Q. Was the farm land under cultivation in 1905? A. In part. I will have to admit that I didn't investigate it in 1905 to see whether it was or not.

Q. Well, do you know whether or not the farm lands were cultivated? A. No, I don't.

Q. Is your valuation limited to the lands which Hutchinson transferred or caused to be transferred to McCall Ferry for a consideration of $750,000 and certain securities? A. The land I valued was only the land necessary to make a water power development at that site to elevation 155, with a dam with crest elevation 155.

* * *

[16958] Q. Mr. Uhl, do you know whether your valuation covers property in addition to that which Hutchinson transferred or caused to be transferred to McCall Ferry for a consideration of $750,000 and certain securities? A. My valuation covers only the lands and rights necessary to make a development as it was contemplated on March 1, 1905, that is, with a dam cresting elevation 155.

TRIAL EXAMINER: And in connection with that limitation of the area which you valued, you made no check to determine whether it corresponded with any transfers made to McCall Ferry by Hutchinson?

[16959] THE WITNESS: That is right; you are right. I did not.

By MR. HALL:

Q. That was March, 1905? A. That is correct. I did not make any check to see whether more or less land was involved.

Q. In other words, I take it you were not concerned from whom the land was obtained but what land was required for the total development; is that right? A. That is correct.

Q. Mr. Uhl, could the parcels of land forming the Holtwood site, in an unconsolidated state, be put to use for power development? A. No, sir.

Q. Am I correct in stating that you have testified that the Holtwood site was made possible by the consolidation, in one ownership, of what were originally individual parcels, separately owned, and on none of those parcels was there a complete feasible individual power site? A. That is right.

Q. On what date was the consolidation of individual parcels complete? A. That, I cannot tell you. I assumed that it was all assembled on March 1, 1905.

Q. If we assume that they had not all been assembled on that date, what effect would it have on your $3,300,000

[16960] determination? A. That I couldn't say unless you were to tell me how much was lacking.

Q. Well, you don't know that; is that right? A. Oh, no, I assumed that it was all assembled, all that was necessary for making the development, as of that date.

Q. Using your approach, does this consolidation create added value for those lands? A. Added to what?

Q. Over and above the bare cost of the individual parcels. A. It may and it may not.

Q. You made no determination of that fact? A. No, I didn't.

Q. You were not concerned with what they actually paid for them? A. No, sir, not at all.

MR. KING: What who actually paid for it?

MR. HALL: He answered the question, Mr. King. I think the witness understood it.

MR. KING: Well, I would like to find out.

TRIAL EXAMINER: You may read the question and answer, Mr. Reporter.

(Question and answer read.)

[16961] MR. KING: I want to know who you mean by "they".

MR. HALL: Anybody.

MR. KING: That clarifies it.

By MR. HALL:

Q. That is what I had in mind. A. I understand: anybody is what I had in mind.

Q. Including McCall Ferry. A. Anybody who might be interested in buying it.

Q. Using your approach, Mr. Uhl, you assumed that collectively the individual parcels had a greater value than those parcels would have had individually? A. That is usually true, but I made no study to determine if that was so in this particular case.

Q. Well, you said that, under single control, they made power development feasible? A. That is right.

Q. Doesn't that mean that, according to your approach, they had a greater value collectively than the tracts would have had individually for power purposes? A. For power purposes, they had no value except as an assembled body of individual parcels.

Q. Isn't it also true that the value for water power purposes resulting from consolidation cost the purchaser of the individual tracts nothing?

MR. KING: What do you mean by "purchaser of the [16962] individual tracts", Mr. Hall?

MR. HALL: Anyone who would be willing to purchase the land.

MR. KING: Are you talking about McCall Ferry power land now?

MR. HALL: I am talking about the person who would effect the consolidation.

THE WITNESS: It cost them a great deal, I would say.

By MR. HALL:

Q. What did it cost over and above the bare consideration of the individual purchases? A. To begin with, I assume the gentleman thought his time was worth something and the risks he was taking in connection with assembling the land. Then, there are such things as the cost of surveys, title searches, options, legal and court expense, in clearing titles, cost of deeds and recording deeds, cost of plans and estimates, cost of surveys of available market, and the negotiations to secure contracts for power, to eliminate competition, and especially taxes and carrying charges from the date when the first money is expended on the project until the date of sale of a complete and feasible power site. But on top of all that, the kind of people who do that sort of thing usually consider their own time very valuable, and they should, by right, do so.

[16963] Q. Now, Mr. Uhl, is there reflected in your $3,300,000 valuation the elements of cost which you just mentioned? A. Yes, sir.

TRIAL EXAMINER: Will you read that list of costs, Mr. Reporter?

(Record read by the reporter.)

By MR. HALL:

Q. Now, Mr. Uhl, how much of the $3,300,000 represents risks of assembling the land? A. I don't know. I have made no attempt to segregate the various things.

Q. Were all the risks that you have in mind incurred prior to March 1, 1905? A. Yes.

Q. What were those risks that you have in mind? A. The risks that I have in mind particularly are that in buying a number of parcels of land with the idea of combining a certain area, you may find that after buying certain ones, you cannot get the rest of them.

Q. Is that involved here? A. Of course, it is involved here, unless you had the right of eminent domain to condemn the rest of the parcels. You wouldn't be sure whether you could get them all or not, and perhaps you might be able to get them at an exorbitant cost. Those are the principal risks, as I see [16964] them, in connection with assembling a series of parcels of land for that purpose.

Q. Were those risks that you have referred to involved in this case, as of March 1, 1905? A. Well, they had previously been.

Q. In connection with what purchases? A. The various parcels of land.

Q. Which ones? A. Any parcels of land. It is always true.

Q. What parcels of land did they have? A. Oh, I didn't investigate how many parcels there were. It is just the general condition that I am talking about.

Q. And I take it you made no detailed investigation to ascertain whether or not these difficulties were actually experienced? A. Well, they must have been if a person—

Q. That is merely speculation on your part, is it not? A. Oh, of course, it is the common occurrence, that is all, and to that extent it is speculation. I didn't investigate this particular case.

Q. Now, do I understand that you cannot give us the amount, included in the $3,300,000 valuation, as cost of surveys? [16965] A. No, sir. I cannot give you anything except the market value of the whole assembled property. And I wasn't interested in the cost of those various things.

Q. Now, if I understand what you are saying, it is you cannot give us a breakdown for any of the items mentioned previously? A. That is correct.

Q. Have you assumed, for the purposes of your valuation, Mr. Uhl, that all of the elements to which you referred, such as cost of surveys, title searches, options, and so forth, existed in this case as of March 1, 1905?

MR. KING: As of March 1, 1905?

MR. HALL: Yes.

A. No, sir. I assumed that the property was all assembled at that time.

By MR. HALL:

Q. Well, had any legal or court expenses been involved as of that date? A. I don't know, and I didn't care, for the purpose of my valuation.

Q. What contract negotiations had been carried on prior to March 1, 1905?

MR. KING: By whom? Anybody?

MR. HALL: For purchase of power in connection with the water power development at Holtwood.

MR. KING: By anybody?

[16966] MR. HALL: Yes.

A. I can't tell you the details, but the history shows that various people negotiated for the sale of power, and various people were interested in it.

By Mr. Hall:

Q. Can you identify those people? A. No, I don't see why I should, for the purpose that I had in mind.

Q. What companies or purchasers were involved in the negotiations for the purchase of power? A. I imagine everybody in the countryside was interested.

Q. You say you imagine they were? A. Yes.

Trial Examiner: Why did you refer to these various categories of costs in your answer some time previously?

The Witness: Just simply to show, in answer to his question, whether there are any other costs besides the bare cost of land involved.

Trial Examiner: Well, apparently you had them listed in your notes and working papers.

The Witness: Yes.

Trial Examiner: Why do they appear in your notes and working papers if, as I understand it, you were not interested in whether they actually existed?

[16967] The Witness: Because I have to talk with other people, I have to put these things clear in my own mind and I write a memorandum to myself. I don't think there is any particular—I say a lot of things which have no particular bearing, except to remind myself when I talk to others about it.

Trial Examiner: How did you use them in arriving at your $3,300,000, if at all?

The Witness: Only to this extent: that I knew from experience that they are always to be met with in the combining of a number of parcels of land, a great number of parcels of land, and that there are a good many costs in-

volved besides the bare land cost, and we know that that adds to the value.

TRIAL EXAMINER: If you know that, why did you note it? There is an implication that—

THE WITNESS: Well, I have sometimes to educate counsel, you know, and other people in connection with these matters.

TRIAL EXAMINER: What did you do with those notes as to the other categories of costs, beyond the bare cost of land?

THE WITNESS: Well, they are in this memorandum which I consider part of my working papers.

TRIAL EXAMINER: What is the nature of that memorandum?

[16968] THE WITNESS: Simply a relation of facts and things that have to do with the valuation of water rights.

TRIAL EXAMINER: What is the title of it?

THE WITNESS: The title is "Estimate of Fair Market Value as of March 1, 1905, of the Lands and Water Rights Acquired to Carry Out the Holtwood Hydroelectric Development of the McCall Ferry Power Company, and now owned by the Pennsylvania Water and Power Company."

TRIAL EXAMINER: Do you have a heading under which these categories of costs, other than bare land costs, appear?

THE WITNESS: No, sir, it is just simply a statement, a paragraph saying, "In addition to the bare cost of land, which is used and useful—" then I mention these.

TRIAL EXAMINER: How do you mention them? Let me have your language.

THE WITNESS: "Used and useful in the development of water power, other factors are involved." Then I go on to say "Cost of surveys, title searches, options," and these

other things that I mentioned previously in the record. It is just a fact, that is all. Just simply a statement of fact, that is all that was involved.

TRIAL EXAMINER: Is that memorandum applied in any detail as to the contents of that passage, to the Holtwood development?

[16969] THE WITNESS: No, sir, not at all. There are no calculations in this. It is simply factual data.

TRIAL EXAMINER: What I am trying to discover is whether that is a general statement, applicable to any project, or whether that statement came as a result of a conference that you had with the officers of the Respondent, in which you determined that that generality applied in this case.

THE WITNESS: It is a general statement. It is true in connection with all similar situations.

TRIAL EXAMINER: Did you ascertain as to whether it applied specifically to Holtwood?

THE WITNESS: No, but I don't see how it could be otherwise. How can anyone assemble parcels of land without surveys, and so forth? I have done it myself, as far as that is concerned. I have done the same thing, I have assembled parcels of land myself, and from my own personal experience, I know it is necessary to do all these things. I have done it personally.

MR. KING: Does your Honor understand that the document to which Mr. Uhl is referring has been furnished to Mr. Goldberg and Mr. Hall as the working papers?

TRIAL EXAMINER: No, I do not.

MR. KING: It has.

TRIAL EXAMINER: Just a minute. You did have some general knowledge of the assembly of these parcels?

[16970] MR. HALL: He stated that he didn't, Mr. Examiner.

MR. SPARKS: What was Mr. Hall's statement?

TRIAL EXAMINER: Did you?

THE WITNESS: No, I said repeatedly that I assumed, on the date of my valuation, which was March 1, 1905, all these things had been done, and this was a property all assembled. How it was assembled, I wasn't interested.

TRIAL EXAMINER: Suppose it wasn't done; suppose this was the one exception? How did you know it was?

THE WITNESS: I just assumed. My valuation is based on the assumption that this was done, that the property was available and could be used for water power purposes. I assumed that. If my assumption is correct, my valuation must be correct.

MR. KING: Your Honor understands that all the facts which the witness stated he assumed, it is Respondent's position, are in the record.

TRIAL EXAMINER: I understand that. I am trying to get at his processes in connection with these other categories of cost.

THE WITNESS: I simply make the statement in my working papers that these are the other costs besides the cost of land and naturally those costs, added to the cost of land itself, are a greater amount than the bare cost of land. That is all I am saying. And these things, the time they take [16971] and the risk they take, are what adds value. Otherwise, why would they do it? Why would assemblies of parcels like that be purchased and sold, as they are?

By MR. HALL:

Q. Mr. Uhl, isn't this a fact: the report which you have been discussing and which the Examiner has asked you about is the report which you prepared as a result of your study and submitted to the company to show the

elements that you considered in arriving at your determination? A. No, sir, it is a report—

Q. Well, now, you give me your description of it.

MR. KING: Let him answer, Mr. Hall.

MR. HALL: He said "No, sir."

MR. KING: He didn't finish.

A. I said no, sir, it is a memorandum that I wrote to myself.

By MR. HALL:

Q. Didn't you submit it to the company? A. I did afterwards. I gave them copies, but the purpose of it was to clarify the situation in my own mind, not in anybody else's mind.

Q. And in your own mind you were stating in that report elements to be considered and which you did consider? A. No, I didn't consider them. I considered they had [16972] been done, but in arriving at my valuation, as of March 1, 1905, I assumed that there was a combination of property in sufficient amount, no matter what it had cost, or how it had been acquired, to make a water power development at that site, with a dam at crest elevation 155. I tried to get at the market value, that a willing purchaser and a willing seller might arrive at, as to the value of it. Somebody would be interested to pay that much money for that assembled property. Somebody might be willing to sell it for that amount of money. Not necessarily even for development, immediate development, it might be somebody who bought it for speculation, which is often done. Complete properties. I have taken part myself in negotiations of that kind.

TRIAL EXAMINER: How did you arrive at your figure of $3,300,000?

THE WITNESS: By comparing it with actual sales and purchases of other water power rights.

MR. HALL: Would you give us that arithmetic that you used in arriving at that figure?

THE WITNESS: No arithmetic except the multiplication of a certain number of horsepower by a certain figure. I multiplied 165,000 horsepower by $20 a horsepower, and got $3,300,000.

By MR. HALL:

[16973] Q. 165,000 horsepower times what? A. $20 per horsepower.

Q. How did you arrive at that $20? A. I arrived at that by comparing this property with actual sales and purchases of other water power properties.

Q. What actual sales and purchases are you referring to? A. Those sales mentioned in my direct examination.

MR. KING: And they appear, Mr. Uhl, do they not, beginning on transcript 15447?

THE WITNESS: Yes, 15447, line 23.

By MR. HALL:

Q. When did the actual sales involved in the Clark's Rip on the Androscoggin River take place? A. The first sale of that property was made in 1909. It was again sold in 1924.

Q. What was the price involved in the Clark's Rip on the Androscoggin River? A. $325,000.

Q. And that was in 1909? A. 1909.

Q. What kind of land was involved? A. Pardon me?

Q. What kind of land was involved? A. River bottom and marginal lands.

[16974] Q. How much was river bottom? A. I couldn't tell you that.

Q. Do you know how much was marginal land? A. I couldn't tell you that.

Q. How much river bottom was involved in the land in the Holtwood project? A. I couldn't tell you that.

Q. Is there any involved? A. Yes, of course.

Q. That was transferred or held at March 1, 1905? A. Yes.

Q. What parcels? A. I don't know.

Q. How do you know that there were any involved? A. River bottom?

Q. Yes. A. There had to be. I don't see that it was bought or sold as river bottom, but the area was involved.

Q. Do you mean it had to be involved in the land which was held in 1905 or which you considered? A. Which I considered that they had a right to use.

Q. Was there any consideration involved in the use of the river bottom lands? A. I don't think I understand your question, Mr. Hall.

Q. Was there any cost incurred in connection with [16975] the river bottom lands that you have in mind? A. I don't know.

TRIAL EXAMINER: What was the price of $325,000 based upon, and who were the parties involved in the sale?

THE WITNESS: The parties involved, Mr. Examiner, the seller was the International Paper Company, and the purchaser was the Union Water Power Company of Lewiston, Maine.

TRIAL EXAMINER: What was the corporate relationship between those two, if any?

THE WITNESS: There was none whatsoever.

TRIAL EXAMINER: What was the basis of the determination of the $325,000, do you know?

THE WITNESS: Yes. I arrived at that myself in connection with the purchaser. The basis of that is that the possible development of 17,000 horsepower would be made at that river at that time, everything taken into consideration, storage, pondage, and possible use, which amounted to $19 per horsepower.

TRIAL EXAMINER: I am not sure that this isn't going too far, but how did you arrive at your $19 per horsepower?

THE WITNESS: By reference to other purchases and sales.

TRIAL EXAMINER: Contemporaneous?

THE WITNESS: Yes, contemporaneous and past—quite a few of these water power rights are sold from time to time, [16976] and that is the yardstick on the basis of which they are purchased and sold.

TRIAL EXAMINER: When you say you assisted the purchaser in that sale, what do you mean?

THE WITNESS: I mean that he engaged me to go up there and look over the property and talk it over with him and consider why he might want to buy it, because he happened to have some money that he would like to put into that property which is a water power four miles above where he already owned one, one of the oldest water powers in New England, owned by the Union Water Power Company in Lewiston, Maine. It is a canalized project, one of the earliest canalized water power developments, and they felt that the market for power was growing, and they should put themselves in the position to own some additional rights which they might develop if they desired to. Actually, they did not develop it, and in 1924 they sold it, and sold it at a very substantial profit, and at that time again I was engaged to determine—

TRIAL EXAMINER: Well, before we get to 1924, did you make the determination of the $325,000 as a valuation?

THE WITNESS: No, that isn't exactly what I did. In all these cases they are mostly, you might say, horse-trading propositions. You determine about the maximum that you would pay for the property, and then, by trading [16977] back and forth, you buy it for as much less as you can. That is really what it amounts to.

TRIAL EXAMINER: What valuation did you put on it, for the purchaser?

THE WITNESS: I don't recall now, but more than that. I didn't make any memorandum of the actual valuation.

TRIAL EXAMINER: You mean $325,000 was the actual purchase price?

THE WITNESS: That was the actual purchase price which was finally arrived at by trading. The International Paper Company owned a great many water power properties on that river, some of them developed for paper mill purposes. At that time they decided they were not going to build any more paper mills on the river and they would just as soon get rid of the property. The other fellow thought he would like to own the property, because he thought he might be willing to use it. It was a trade which was certainly made between people who knew what they wanted to do, and knew about that kind of property. That is, they were well informed about the property.

TRIAL EXAMINER: Was that property owned directly by the International Paper Company or a subsidiary?

THE WITNESS: No, sir, directly by the International Paper Company.

By MR. HALL:

[16978] Q. Mr. Uhl, I believe you have stated that, for the purposes of your determination, you assumed that all the land required for the project, as contemplated as of March 1, 1905, were under single control? A. Yes, sir.

Q. Now, is it a fact that all the lands and rights required for the project were under single control as of March 1, 1905? A. I do not know.

Q. Well, isn't it a fact that additional parcels of land, other than that under the control of Hutchinson, McCall Ferry, as of March 1, 1905, were employed for the Holtwood project? A. To the best of my knowledge and be-

lief, they actually owned enough to raise the dam later to 165, and did build a dam to elevation 165, Crest Elevation 165.

Q. You are saying that to the best of your knowledge and belief, as of March 1, 1905, McCall Ferry had under single control all the land actually acquired for the ultimate development of a project with an output of 165,000 horsepower? A. Yes, and other lands besides, to the best of my knowledge and belief, which were later released.

Q. Now, if that were not the case, your valuation [16979] would be affected, would it not? A. If they did not have sufficient, you mean, to make a development to Elevation 155? Yes, sir.

Q. Under single control. A. Yes, sir.

Q. It would affect your determination? A. Yes, indeed.

Q. Do you know when the properties which had not been acquired as of March 1, 1905, were actually acquired?

* * *

A. I didn't know there were any properties that had not been acquired as of March 1, 1905.

By Mr. Hall:

Q. Then, I take it from what you have said, that you do not know whether your determination of $3,300,000 includes lands acquired after March 1, 1905? A. I have no knowledge.

Q. For the purpose of your study, were you furnished data showing the actual consideration paid for land and water rights involved in the project, or for any portion thereof? A. No, sir.

Q. Do you know the actual consideration paid for each [16980] tract of land that was acquired for the project?

Mr. King: By whom, Mr. Hall? By anybody?

Mr. Hall: By anybody, or in particular by McCall Ferry.

A. I have no knowledge of that.

By Mr. Hall:

Q. Mr. Uhl, did you investigate the prices at which Susquehanna River properties were being sold in the early part of 1905? A. Do you mean complete properties or parcels of land?

Q. Well, did you make an investigation for a complete project? A. Yes.

Q. At the actual cash price at which they were sold? A. No. Oh, no, I thought you said whether there were any others.

Q. Well, were there? A. No, sir, as far as I could determine, there were not.

Trial Examiner: No other what?

The Witness: Any other complete water power properties.

Mr. King: You mean on the Susquehanna River?

The Witness: On the Susquehanna River. The lower Susquehanna River.

[16981] By Mr. Hall:

Q. Were there any individual parcels of land sold prior to March 1, 1905, leading to the development of a water power site? A. Yes, the record shows a great many transactions had taken place.

Q. What was the actual consideration? A. I didn't look into that.

Q. Were you furnished with a tabulation showing the lands and water rights involved in the Holtwood project?

Mr. King: As of what time, Mr. Hall? Any time?

Mr. Hall: As of March 1, 1905, or any time.

A. The best of my recollection is that I did see some tabulations. Whether it was for all the parcels or—

By Mr. Hall:

Q. How many acres were involved in that project? A. I don't know.

Q. Did you ever know? A. In the Holtwood development?

Q. Yes. A. Yes, I think I do know.

Q. You can tell us how many acres of land was involved in the project itself? A. Yes.

Q. How many? [16982] A. I don't know whether I can for Elevation 155. I can for Elevation 165.

Q. As I understand it, your valuations related to Elevation 165? A. No, sir, it is based on Elevation 155.

Q. But you do not know the acreage involved in the development of project at Elevation 155? A. No.

Q. Did you ever have that information? A. I may have had. I don't recall.

TRIAL EXAMINER: Did you use it in any way in connection with your $3,300,000 figure?

THE WITNESS: No, sir, I did not.

By MR. HALL:

Q. Using your approach to a fair market value determination, Mr. Uhl, would the number of acres required affect your fair market value determination? A. Only very indirectly.

Q. Incidentally? A. Very incidentally. The only effect it would have would be to give me information with regard to the pondage involved.

Q. Is your determination of fair market value affected in any way by the nature of the interest held, that is, whether the land was owned in fee or whether only a flowage [16983] right was had? A. Well, if the flowage rights were perpetual, it wouldn't make any difference.

Q. Did you determine the facts in that respect? A. No, sir.

Q. Does it cost as much to acquire a limited flowage and right over land as it does to acquire the fee? A. That I couldn't tell you. That might be different for every case. I couldn't tell you that.

Q. From your last answer, I take it that you do not know whether you would place the same market value on a limited flowage right over a tract of land as on the actual fee or title to the tract? A. Well, I would have to know what you mean by "limited flowage rights," Mr. Hall.

Q. I am talking about a flowage right as distinguished from fee type.

MR. KING: What do you mean: an easement?

MR. HALL: Just exactly what I said.

MR. KING: Well, the witness said he didn't know what you meant by "limited flowage rights."

MR. HALL: Less than a fee title.

MR. KING: Would that cover a permanent easement? Would you consider that a fee title?

TRIAL EXAMINER: The witness may consider all those [16984] matters. He is capable of doing so.

A. I have already said that if the easements were perpetual, it wouldn't make any difference.

By MR. HALL:

Q. Mr. Uhl, does your estimate of fair market value of lands and water rights required for the project include the lands required for the relocation of the Columbia and Port Deposit Railroad tracks? A. No, sir.

Q. Do you know from whom the lands used for that purpose were acquired? A. Yes, I know that a contract was made with the railroad to—

Q. That wasn't my question. Do you know from whom the lands used in connection with the railroad were acquired? A. No, sir.

MR. KING: You mean from whom the railroad acquired the land?

MR. HALL: The witness understood, I think, Mr. King.

MR. KING: I don't think it is clear in the record, Mr. Examiner.

TRIAL EXAMINER: What did you understand by the question, Mr. Witness?

THE WITNESS: Well, I didn't quite understand it, [16985] because, to the best of my knowledge and belief, the railroad owned the land, and had owned the land. But if there was any additional land required to raise the railroad, I didn't take that into consideration.

By MR. HALL:

Q. Did your valuation for land include the land required for the Holtwood Village? A. No, sir.

Q. Do you know from whom and when that land was purchased? A. No, sir.

Q. Mr. Uhl, did you, during the course of your study, locate any records indicating the total investment of the project, including land and transmission lines, as of September 30, 1911?

MR. KING: By Penn Water, you mean?

MR. HALL: I mean the total investment in the project as of that date.

MR. KING: By whom, though?

MR. HALL: The total investment that had been incurred in connection with the project up to that date. Does that make it clear?

MR. KING: By anybody?

MR. HALL: Yes.

A. I have a figure of $13,609,191.

[16986] By MR. HALL:

Q. Where did you get that figure? A. Well, I don't recall, but—

Q. Well, you got it from the records of the company, did you not? A. The records of the company, somewhere.

Q. Did those records show as of the same date, September 30, 1911, the total investment in the power plant alone, exclusive of the lands and transmission lines? A. Yes.

Q. What did they show as the cost, exclusive of the lands and transmission lines? A. $10,670,000.

Q. Now, the difference between the 13 million and the 10 million dollars is $2,939,000, approximately; is that right? A. That is approximately right.

MR. KING: Mr. Examiner, might I suggest this time for the mid-morning recess if it is agreeable to Mr. Hall and Mr. Goldberg?

MR. HALL: May I just finish this?

MR. KING: Certainly.

TRIAL EXAMINER: Very well.

By MR. HALL:

Q. How much of the $2,939,000 represents investment in [16987] transmission lines? A. I don't think I have that information, Mr. Hall.

Q. Do you have any way of determining at this time approximately what part of the $2,939,000 represented investment in transmission line? A. Well, the previous year, December 13, 1910, the item I have for transmission lines is $1,128,381.

Q. Will you repeat that figure, please? A. $1,128,-381.

* * *

By MR. HALL:

Q. Does that figure of $1,128,000 include the cost of substation and related equipment for the line? A. I think it does, but I would have to check on that to be certain.

* * *

Q. Mr. Uhl, before the recess, we had under consideration the investment of the project as of September 30, 1911, and you had mentioned the fact that the records [16988]

indicated that $2,939,000 represented the cost of lands and transmission lines, and you had also stated that your information indicated that of the $2,939,000, $1,128,381 represented cost of transmission lines. How much of the $2,939,000 represents value assigned to securities issued in part payment for property? A. I don't know.

Q. Did you make any investigation to determine that fact? A. No, sir.

Q. How much of the $2,939,000 represents cash paid for land? A. I do not know.

Q. Did you make any investigation to determine that fact? A. No, sir.

Q. This $2,939,000 included not only the property upon which you placed a value of $3,300,000 as of March 1, 1905, but all additional land acquired by McCall Ferry up to September 30, 1911; isn't that so? A. I think I would like to have that question read.

TRIAL EXAMINER: Read the question.

(Question read.)

MR. KING: Mr. Examiner, may we have it understood, to save time, that when Mr. Hall refers to value, that he [16989] means market value?

MR. HALL: I mean fair market value.

MR. KING: Thank you.

MR. HALL: That is, when I am referring to $3,300,000, I am referring to the fair market value as used by the witness?

MR. KING: Thank you. I had assumed you were.

A. Well, if that figure includes all the land, what you say must be so.

By MR. HALL:

Q. Do you have any reason to believe that it does not include it? A. No, I have no reason to believe that it doesn't.

Q. Now, instead of approaching the valuation of lands and water rights as you have done, for only a part of the property on which you place a valuation of $3,300,000, why did you not break down the figure of $2,939,000 to determine the portion thereof which was paid for all the lands and water rights acquired as of September 30, 1911? A. Well, I was asked to determine the market value of the lands and water rights.

Q. Not the cost? A. That is right.

Q. Mr. Uhl, did you confer with any individuals responsible for the acquisition of lands and water rights by McCall Ferry Power Company for the Holtwood project, in [16990] making your determination of $3,300,000? A. No, I didn't confer with them.

Q. During the course of your study, did you find any documentary evidence reflecting an engineering valuation as of March 1, 1905, of $3,300,000, for the Holtwood land and water rights? A. No.

Q. Did you find an engineering valuation made on or before March 1, 1905, which placed any valuation upon the Holtwood lands and water rights? A. No.

Q. On page 15453 of the transcript, lines 17 through 22, you have defined the fair market value of property as follows:

> "Fair market value is defined as the price which would be accepted by the owner if he was willing but not compelled to sell, and which would be offered by the purchaser if he was willing but not compelled to take the property, and both were intelligent and fully informed as to the property itself."

Can you state it to be a fact that those representatives of McCall Ferry responsible for the acquisition of the property on which you placed a valuation of $3,300,000, were willing to pay that much cash for the property? A. I am not in a position to state that, no, sir.

Q. In other words, the $3,300,000 is a valuation which [16991] you today think McCall Ferry would have been

justified in paying for the property? A. Either McCall Ferry or someone else.

MR. KING: In 1905, you mean, Mr. Hall?

MR. HALL: In 1905, yes.

[16992] By MR. HALL:

Q. And as I understand it you think now you would have given that advice to McCall Ferry in view of what you considered to be the value of the property to the company or anyone else for power purposes? A. I believe I would have so informed them.

Q. Did you discover that any person actually offered $3,300,000 in cash for the Holtwood land and water rights, in 1905 or earlier? A. No, sir.

Q. Do you know of any cash offer for the Holtwood water power rights in 1905 or earlier? A. No, sir.

Q. In your opinion, Mr. Uhl, would not a prudent investor, before spending $3,300,000 for the property on which you placed your valuation, assure himself that his proposed development would result in reasonable earnings on his total investment in the project?

* * *

THE WITNESS: If he bought it for the purpose of making a development, yes. However, he might of course purchase it for re-sale.

[16993] By MR. HALL:

Q. Well, the re-sale feature was not involved in connection with the Holtwood site; isn't that so? A. Well, it didn't turn out to be that way. But as far as I am concerned I wasn't interested in arriving at that value, whether they did or not.

Q. Assuming that there were no prospects that the project would ever show any earnings after operating expenses, would a prospective investor, in your opinion, be willing to pay more than a nominal amount for the lands and water rights which you valued?

MR. KING: What is a "nominal amount?"

MR. HALL: Well, he wouldn't be willing to pay more than real estate value or farm land value.

* * * * *

THE WITNESS: Well, he probably wouldn't pay anything for it. I wouldn't think he would pay anything for it.

By MR. HALL:

Q. In your opinion, wouldn't an investor be willing to pay more for the property if the estimated earnings from its use were greater than operating expenses? A. Yes, it all depends upon what he thought he could make out of it, or what he could do with the property.

[16994] Q. Isn't it a fact that, using your approach, no determination of fair market value of property could be made without a consideration of the probable revenue and operating expenses of the project in their relation to the plant investment required and the cost of competing power? A. Consideration of those elements certainly would have to be given.

Q. And considerable weight would have to be given to those elements? A. Yes, it is one of the elements which is important.

Q. Am I correct in stating that you have previously testified that your valuation of the Holtwood lands and water rights involved the application of certain engineering factors? A. Yes, sir.

Q. You have testified that there were 10 principal engineering factors considered by you in arriving at your determination, the first of which was "market for power output, its extent and distance from the site of the development."

Why did you consider that an important engineering factor to be considered in making your determination? A. Well, if there was no market for the power output naturally there would be no value to the property.

Q. For power purposes? A. For power purposes.

Q. Now, the fact is did you consider it in connection [16995] with market for power output?

* * *

MR. KING: I object to the question as being unintelligible.

THE WITNESS: I don't understand it, Mr. Examiner. If I might have it once more.

TRIAL EXAMINER: Never mind.

By MR. HALL:

Q. Mr. Uhl, I simply mean this: What did you consider, in connection with market for power output? What elements? A. I considered the fact that a great deal of power was being developed by steam power in the surrounding territory and at great cost at that time, and that if water power could be developed at a reasonable cost the output from it could be sold in that market, not only the existing market but a rapidly growing market. The facts show that the power market was developing very rapidly at that time, and ever since.

* * *

Q. I take it, Mr. Uhl, from your last statement, that that consideration contributed to your determination of fair market value of $3,300,000? [16996] A. Yes, very largely—that there was a market for the power output.

Q. Now, precisely what effect did the market available for the output of the project have upon your determination of $3,300,000? A. It was one of the principal considerations in determining that there was market value to the property.

Q. Could you tell me, in terms of dollars, how much your $3,300,000 figure was affected? A. No, I couldn't tell you that.

Q. Mr. Uhl, assuming that there is an available market, what difference does it make, in so far as your determination of fair market value of lands and water

rights is concerned, whether the market is adjacent to the site or is located 60 miles away? A. It doesn't make any difference.

Q. You have stated that your first element was "market for power output, its extent and distance from the site of the development." Now, how did the last part, "its extent and distance from the site of development," enter into your determination? A. Simply that it would cost less to deliver the power where it was wanted if the distance was short than if it was a long distance, generally speaking. That might not always be true.

[16997] Q. And that all enters into the economic feasibility of the project? A. That is right.

Q. And of the delivery to the market? A. That is correct.

Q. In other words, the difference involved in "its extent and distance from the site of the development," among other things, is the cost involved? A. Yes, it makes a project more desirable if the conditions are favorable.

Q. Mr. Uhl, what amount of power output did you have in mind for the Holtwood project when you made your determination? A. The amount of power which I had in mind was that ultimately 165,000 HP would be economically developed at that site.

Q. What power surveys, contract negotiations or power contracts were given weight in your determination of the fair market value of the Holtwood water rights? A. None.

Q. Do you mean by that that you were not concerned at all with whether or not any contract negotiations— A. Yes, I was concerned with the fact that contracts could be made for the output.

Q. You were concerned with it, but not to the extent of what actually happened; is that right? [16998] A. Yes, if I had information of anything that actually happened to a purchaser, but at that time there wasn't any

development there, as of March 1, 1905. All there was there was the land and water rights. Now, whether or not the prospective purchaser had a contract or not didn't interest me particularly.

Q. Well, were you interested in whether or not there was a prospective purchaser available? A. Yes, of course.

Q. Were you interested in whether or not there was a prospective purchaser actually negotiating for power? A. Well, I knew that that was a fact. Not only a prospective purchaser of this site but of various water-power sites, on the lower Susquehanna. Historical records show that various people were trying to make contracts for output from possible developments on the lower Susquehanna River.

Q. Who were they? A. Well, there was a gentleman by the name of Harlow.

Q. Was he interested in developing power or in buying it? A. He was interested in both.

Q. What would he have done? A. He was the gentleman who tried to promote a water-power project on the lower Susquehanna River.

Q. To what use would he have put the power which you [16999] say he was interested in purchasing?

* * *

MR. KING: The witness hasn't said Harlow was interested in purchasing the power.

TRIAL EXAMINER: Let the witness answer.

THE WITNESS: He was interested in marketing the power in the surrounding territory.

By MR. HALL:

Q. But was Mr. Harlow interested in buying power developed by someone else? A. No, sir. He was interested in combining water-power sites and purchasing lands, and making contracts for possible sale of power which he might develop.

Q. Now let me get back to my original question. Who were the prospective purchasers actually negotiating for the power to be developed at the Holtwood site? A. Purchasers of power?

Q. Yes. A. I think the records show that the public utility interests in Baltimore particularly were interested in purchasing power developed at some site on the Susquehanna River, not necessarily the Holtwood site.

Q. Well, what was the nature of their negotiations for the acquisition of that power? How far had they gone? [17000] A. They had made tentative contracts, I believe.

Q. Well, now, are you sure of that fact? A. Yes. I have seen some.

Q. And those contracts were entered into prior to March 1, 1905, for power to be developed at the Holtwood site? A. That is correct. Yes, sir.

Q. What information did you have as to the probable quantities and prices at which the power output could be sold? A. The records again show that discussion had taken place for sales to be made at $20 to $30 per HP.

Q. What quantities of power are you now referring to? A. Well, some of them were say—one that I recall was 4,000 kw.; one for 10,000 kw.; one for 20,000 kw. They were various amounts.

* * *

Q. Does your last answer relate to the negotiations between McCall Ferry and Consolidated and the railroad? A. Yes, that particular answer did, but there were also, as evidenced in the history, other interests besides the McCall Ferry Power Company who were negotiating for the sale of power from possible developments on the Susquehanna.

Q. So that you considered it reasonable to assume that the [17001] Holtwood power could be disposed of on terms similar to the arrangements finally agreed to in the initial contracts which were carried out with Consolidated of Baltimore and the united railway interests? A. Yes, I

assumed that satisfactory contracts could be made for the output from a development that might be carried out at Holtwood.

Q. The second engineering factor which you have testified you considered was "competitive sources of power." Just how did this factor enter into your determination of the fair market value of the Holtwood lands and water rights? A. It entered in this way: That there was other water power available on the Susquehanna River, and also the fact that the power at that time was largely made by steam. Naturally, if there was another power site available in the same territory which showed better prospects of development that would be a very competitive situation. Or, if there was some immediate prospect of a cheapening of steam power that would be something to be taken into consideration. In other words, what would be the chances of having someone else take the market, the prospective market, away from the possible development of a site.

Q. In other words, Mr. Uhl, in arriving at your determination of $3,300,000 you compared the cost of producing power at the Holtwood project with the cost of producing the [17002] same amount of power by steam? A. I made no direct comparison, but I knew that power could be made at less cost at that time by water-power development at that or some other site on the Susquehanna River than could be made by steam power in the adjacent territory.

Q. And although you did not make any direct comparison, in reaching your conclusion you did consider the cost of developing steam power as related to the cost of the Holtwood project? A. Yes. I knew it would cost more to make power by steam, at that time, than it would cost at the Holtwood, or than I believed it would cost at Holtwood.

Q. How did the cost of producing competitive steam power compare with the probable cost of producing hydro power at Holtwood? A. I didn't make any calculations

of that kind. My general knowledge of the situation at that time didn't make it necessary to make such a calculation.

Q. Didn't you make estimates of the cost of producing steam power? A. I did not. No, sir. I mean in this particular case, in this situation.

Q. But you gave consideration to the cost— A. Oh, yes. I knew what the cost was to make steam [17003] power in those days.

Q. What did you consider to be the probable cost of producing hydro power at Holtwood? A. I know that the development could be made for about $100 a HP, at least, which was a low cost for water power; that during those days any water power which you could make at between $100 and $200 a HP was a good development.

Q. Now will you tell us what the comparable figure was for producing steam power? A. That varied very greatly, of course, with the size of the—

Q. What was the maximum and minimum amount?

A. The cost of steam power plant, in those days, was about $40 to $50 a HP. But the cost of producing power was very high. It took from three to four pounds of coal per kilowatt-hour, and the operating costs were very high because the units were very small. The steam turbine was just in its experimental stage. There were very few in operation, and those purely experimental, which made the operating cost of steam plants extremely high.

Q. What load factor did you consider in connection with the $100 per HP for hydro power? A. I didn't consider any load factor in detail, except that a probable load factor was in the nature of 50%.

Q. What cost of the production of hydro did you consider, [17004] per kilowatt-hour? A. I have already stated that I considered that the development there could be made for $100 a HP.

* * *

Q. Is that the cost of investment per horsepower? A. Yes.

Q. Well, I had in mind the prices at which power could be sold. A. Well, the price at which power could be sold would be whatever the market would bear; not what it cost to make power but what you could sell it for.

Q. What cost of production did you have in mind, per kilowatt-hour? A. Well, if you wished to, if it cost about $100 a HP, the production costs wouldn't be over $10 a HP.

Q. And that is an estimate you make without reference to actual figures? A. Oh, yes. Anyone familiar with that kind of thing should know that.

Q. How did the $10 figure which you just gave us compare to the steam figure which you considered? [17005] A. I considered that the producer of steam power would be glad to pay at least $30 a HP—$20 to $30—for power in those days.

Q. Does the $10 per HP depend upon extreme flow characteristics? A. Oh, yes.

Q. And in reaching your $10 valuation did you consider stream flow characteristics? A. Yes.

Q. And that is stream flow characteristics of the Susquehanna River? A. That is correct.

TRIAL EXAMINER: To what degree?

THE WITNESS: To the degree that I knew that they would have to make contracts, where the purchaser of the power would probably have to hold his steam plant in reserve, or where he would have to build an auxiliary steam plant in order to continuously produce the full amount of water power.

TRIAL EXAMINER: How deeply did you go into that?

THE WITNESS: Well, not in detail. It was just done generally, I think. No river, no matter how well reservoired, always has the same amount of water in it, so you have to make provision for low flow.

* * *

[17006] Q. Mr. Uhl, before the noon recess, we had under consideration the engineering factors upon which you relied. Proceeding now to the third engineering factor which you considered, which reads "Extent of engineering information available regarding the site of the project," how did this factor enter into your determination? A. Principally with regard to the availability of definite information, such as the characteristics of the dam site and the flow of the stream to be developed. There was a good deal of information available in connection with the lower reaches of the Susquehanna River—much more so than generally is available in connection with the earlier studies of water-power projects.

Stream flow measurements had been carried out for some time, and the river had been used for navigation purposes [17007] for a great many years, which made people familiar with its behavior and also some water power had already been developed on the river for industrial purposes, and in the particular location for the proposed Holtwood dam, a suitable foundation could be viewed and studied, and also it was known that suitable material for concrete for building the project was available near the site.

Those are the kinds of things that I had reference to when I spoke of the engineering information available regarding the site.

Q. Was all the information to which you have just referred available as of March 1, 1905? A. Yes.

Q. Did you take into consideration any information or data which came into existence after that date? A. No, sir.

Q. You didn't consider any such data? A. No, sir.

Q. The fourth engineering factor which you considered was natural advantages and disadvantages of the site. How did this factor enter into your considerations? A. The natural advantages which were evident were the fall in the river, and the fact that the sound rock foundation was available, and also that a not excessive amount of

land would be flooded out by making the development. [17008] The particular dam site location was suitable in so far as the width of the river at that point made it possible to build a dam with sufficient spillway area to take care of floods, and also to build a power plant. Also, in that particular location there was about five feet of fall in a very short distance which meant that a dam could be built which was somewhat less in height than the head which would be developed. There were certain disadvantages, one of which was the railroad relocation made necessary, and the other which at that time was considered somewhat serious by some engineers was the fact that ice conditions are sometimes bad on that river.

There was also the fact that there would be, or at least there was at that time, no proposed storage, up-river storage in prospect and that river, in its natural state, was somewhat fluctuating. Those were the disadvantages that I considered.

Q. The fifth factor which you considered was "Probable costs of construction." Why did you deem this to be an important factor in determining the fair market value of the project, lands, and water rights? A. Because some sites are rather questionable because of bad foundation conditions and other risky situations, such as lack of availability of suitable construction materials, and the distance from railroads which [17009] would make transportation expensive. Some forms of foundations, such as limestone foundations, are very expensive to make watertight, and in this particular case, everything in connection with the cost of construction, as far as could be determined, was favorable. A foundation of good, sound rock was exposed, and, as I say, construction material was readily available, the railroad was nearby, the country was developed, it was within an area of availability of labor for construction purposes—all those things showed that construction conditions were favorable from a cost standpoint.

Q. What did you consider to be the probable cost of constructing the Holtwood project? A. I think I have already stated that I believed that the development could be made there in the lower ranges of general cost of hydro-electric developments at that time, of about $100 per horsepower.

Q. What does that make the total investment cost in the project? A. That would depend upon what to develop there, what the prospective purchaser might want to develop.

Q. What did you consider to be the probable development? A. I considered that an ultimate development of 165,000 horsepower would be suitable.

[17010] Q. And what did you consider to be the total investment on that basis? A. As I said, about $100 a horsepower, if the whole development was immediately made, which, of course, would not be the case.

Q. Well, how much in dollars? How much would the total investment be in dollars? A. I wouldn't be able to say. That would depend upon what the prospective purchaser intended to do, how much of the power he proposed to develop immediately and how quickly.

Q. And you gave that no consideration; is that what you are saying? A. Not the extent of development, no. Simply that a reasonable amount of power could be developed such that it could be marketed.

Q. Mr. Uhl, doesn't the over-all cost of a project have a bearing upon the economic feasibility of that project? A. Yes, sir.

Q. Well, didn't you determine, during the course of your study, what would be the over-all investment in the project? A. Well, I couldn't say how large a development a prospective purchaser might make, so I couldn't possibly [17011] estimate that.

Q. How did you arrive at the hundred dollars per horsepower value? A. Because I said the conditions were favorable towards a low cost development at that

point. And experience showed that, with conditions favorable, that is about what it would cost to make a hydro development.

Q. Well, in order to conclude that it was a low cost development, was it not necessary for you to calculate what the probable over-all cost would be? A. No, sir. I know that I knew from conditions that it would be within the lower ranges of cost of hydro-electric development such as they were being carried out at that time. And I was familiar with a great many of them.

Q. As I understand what you have said, the hundred dollars per horsepower valuation is a judgment determination which is not or was not subject to mathematical calculation? A. Well, if I had known just what kind of a development a prospective buyer would make there, I could have made an estimate of it. But it wasn't necessary for my purposes to do that.

Q. Mr. Uhl, would not what the prospective buyer intended to do have a bearing on what he was willing to pay for the lands and water rights? [17012] A. No, I don't think so. A prospective buyer might even buy it and not develop it at all.

Q. But that was not the type of buyer you were dealing with in connection with your evaluation of the Holtwood lands and water rights? A. Any kind of a buyer. As far as I was concerned, it could be any kind of a buyer.

Q. Are you saying that a buyer who is going to do no more than hold onto the lands, would pay $3,300,000 for the lands? A. That was my opinion, yes, sir. He could afford to pay that much.

Q. Would a buyer, in your opinion, be willing to pay that amount if he had no intention of selling it for power purposes?

MR. KING: Might we have that question read?

THE WITNESS: I don't think I understand it.

By Mr. Hall:

Q. Well, is it your statement, Mr. Uhl, that a willing buyer would be willing to pay $3,300,000 for the sole purpose of keeping the land in his own ownership without development for power purposes? A. Yes, if he thought he could sell it.

Q. That wasn't my question. A. Well, that would be the only possible reason he [17013] would buy it. If he didn't intend to make the development himself, he would buy it for the purpose of selling it to someone.

Q. You are saying if he is buying it for resale, he is buying it for the purpose of reselling it for power development, in other words? A. Very likely.

Q. Mr. Uhl, isn't it a fact that the amount of horsepower which a purchaser will develop has a bearing on what he is willing to pay for the necessary lands and water rights? A. It might and it might not. If he had in mind developing it himself, he probably would have in mind a certain size development, at least to begin with. He might increase it as time went on, just as that did happen at Holtwood.

Q. And those probabilities he would take into account in determining what he would be willing to pay? A. Yes; it depends upon the market conditions at the time. If he thought he could market 50,000 horsepower, he would undoubtedly develop it for that. If he thought he could market a hundred thousand horsepower, that is what he would develop it for. Practically all hydro developments are made with increased installations in view when they are first made. At least, they were in those days, and [17014] they still are, a great many.

Q. Mr. Uhl, you recognize, do you not, that there is a point beyond which the willing purchaser would not go because of consideration of the economic feasibility of the project; is that not so? A. In his mind, yes. Of course, different people have different ideas about what they can do with a property.

Q. What initial development was this willing buyer contemplating? A. I don't know.

Q. That would have a direct bearing on the hundred dollars per horsepower, would it not? A. Yes, if he made too small a development, the initial cost would probably be more than a hundred dollars per horsepower.

Q. Isn't it a fact that if your hundred dollars per horsepower is based upon a development of 165,000 horsepower, that initial installation of 50,000 would mean considerably more than a hundred dollars per horsepower; isn't that right? A. That is right.

Q. Do you know how much more? A. No. It would still be within the lower ranges of cost of hydro development at that time.

[17015] Q. Mr. Uhl, what determines whether a hydro project is economically feasible? A. Principally whether there is a market for its use. That is really the principal consideration.

Q. And you have reference to a market for power at reasonable prices? A. Of course.

Q. And reasonable profits? A. Why, I don't know what a reasonable profit might be.

Q. A reasonable return on the investment. A. Well, I think if I made a development, I would certainly want to be sure that the income was a little larger than the outgo.

Q. What you mean—when you say "a little larger than the outgo," you mean a reasonable return? A. Yes. But, of course, different people have different ideas about what a reasonable return is.

Q. Mr. Uhl, what would the willing buyer have considered a reasonable return for the Holtwood project in 1905 when he was considering buying the land? A. I wouldn't know. That would depend again, as I say, upon who did the dreaming, if you want to call it that. Of course, every promoter must have a good dream in order to have the courage to promote any kind of a project.

Q. The sixth engineering factor that you considered [17016] was pondage and storage possibilities.

Why did you consider this factor in arriving at your determination? A. Because both pondage and storage possibilities affect the use you can make of the flow of the stream. There should be sufficient pondage, so that during low flow conditions, the water could be held back for use at times when it is most valuable. And, of course, if storage could be developed, it would increase the low flow of the stream. Those are the reasons why pondage and storage possibilities must be considered.

Q. Just what effect did this factor have upon your determination? A. Well, if there had been storage possibilities at reasonable cost, the market value undoubtedly would have been higher.

Q. You say if it had or had not? A. If it had. If the storage possibilities were available at reasonable cost, it would have enhanced the market value.

Q. You mean the greater the storage possibilities, the higher you would have fixed the fair value of the land? A. That is correct.

Q. The seventh factor you considered is "stream flow characteristics."

[17017] Why was it necessary to consider this factor in arriving at your determination? A. Because the more constant the flow of the stream is, the greater the amount of prime power you could depend upon, whereas the more fluctuating it is, the less prime power could be depended upon, and, therefore, it would affect the standby power that is required to market the total output.

Q. The eighth factor you considered was "Time When the Development May be Carried Out."

What, in your opinion, is the importance of this factor in arriving at the fair market value of lands and water rights involved in the Holtwood project? A. Well, at Holtwood or any project, for that matter, if the market conditions are such that the development would not be jus-

tified for some time in the future, you would have to discount the market value of it at the particular time. If you have a situation where the existing market and the market immediately ahead is such that the development is warranted immediately, or soon after the time we are talking about, why, then, you wouldn't have to discount it.

Q. If I understand what you are saying— A. In other words, the present value of something in the future comes into the picture.

[17018] Q. And as I understand what you are saying in this connection and in connection with the other engineering factors that you relied on, the more favorable those engineering factors, the higher price you would fix, and the less favorable, the lower price you would fix? A. That is right.

Q. What date of completion did you have in mind when you made your determination? A. I didn't have any exact date in mind. I had in mind that the market conditions were such that immediate development would be warranted.

Q. What date of completion did you have in mind for the Holtwood project? A. Well, some two or three years, four years, something of that order. As near as anything of that kind can be estimated. Something that would be done in the near future, and not ten, five to ten years away.

Q. No, wait a minute. Assume that they had started construction on March 1, 1905. How long would you have estimated it would have taken to construct the property? A. Two to three years, I would say.

Q. Mr. Uhl, when you spoke of a period from two to three years, were you referring to 165,000 horsepower development? A. No, sir, I was referring to whatever initial [17019] development would be made.

Q. Would that be about 50,000 horsepower? A. Well, that is what the McCall Ferry people had in mind. I didn't figure on exactly 50,000 horsepower. I figured on

some reasonable amount of power, 50,000 to 100,000 horsepower, in that order, as an initial development I believed that the market would have warranted such a development, as quickly as it could be carried out in those days. Naturally, the hundred thousand horsepower wouldn't come into use at the same time. It would be one unit after another, as projects like that are actually carried out.

Q. Did you consider when the additional units would be installed? A. Well, it looked to me as though they could be installed, not as fast as they would want to, but probably the whole 165,000 horsepower would be installed in the course of ten years.

Q. Was the conclusion that you have just stated influenced by what you know actually transpired with reference to the Holtwood development? A. Well, I can't put facts out of my mind. Just what I would have known in 1905 and 1906, I can't tell you. I have tried to put myself in that position.

Q. I recognize that it is difficult to divorce [17020] from your mind— A. Subsequent events have transpired, and I knew about them. To what extent they influenced my thinking, I can't tell you.

Q. The ninth factor you considered was "Possibility of Financing." How did this factor influence your determination? A. Well, I knew that about that time everybody was falling all over themselves trying to finance those kinds of properties. That was my own personal experience that I am familiar with. I knew that with a situation that looked as favorable as this one, they would have no trouble in financing the project.

Q. When you refer to "everybody," do you mean people— A. Bankers. I am talking about bankers. At about that time there was a great deal of development going on, and the power situation was developing very fast, and large projects were being carried on all over the country, coast to coast. Minnesota, Washington, California,

Niagara Falls, all over, down South, everywhere. They had no difficulty in financing any of them at that time.

Q. And they were financing them by selling bonds and giving stock as "sweeteners" or as bonuses? A. Various ways.

[17021] Q. Including that? A. Including that, yes, sir. They had to make it attractive because the risk was great. They had to even go to England for some of the money in some of these cases.

Q. And that is why financing was not done through cash sales of common stock, because of the large risk involved; isn't that so?

* * *

A. Well, of course, I can't say, because I doubt if any two cases were exactly alike. I suppose in some cases common stock may have been sold for cash considerations, and in others not, as far as I know.

By Mr. Hall:

Q. Do you know of any instance where the project was financed by the sale of common stock for cash? [17022] A. Common stock for cash only?

Q. Yes. A. No, I personally don't know of any case.

Q. Mr. Uhl, what business were you engaged in from 1901 to 1905? A. In 1902, do you mean?

Q. From 1901 to 1905. A. Well, I graduated from college in 1902. In 1901 I went to college. In 1902 I started in doing water-power work. And have stayed in it ever since.

Q. Well, let me put my question in this way: what work were you engaged in from 1902 to 1905? A. In water-power work.

Q. That covers a multitude— A. Designing and selling equipment, machinery that was used in water-power work.

Q. That substantially covers what you did during that period? A. Yes, sir.

Q. You were working for equipment manufacturers? A. That is correct.

Q. Do the terms of financing have any effect on fair market value of lands and water rights? A. Not as far as I can see.

Q. You mean that you can think of no terms related [17023] to financing, which would have an effect upon fair market value of lands and water rights, using your approach? A. No, I can't see how there is any relation between the two.

Q. Then, what was the purpose of considering possibilities of financing? A. Well, if it was impossible to finance a project, it would be very difficult to imagine anybody wanting it. Where were you going to find a willing buyer if there wasn't a possibility of financing?

Q. You recognize, of course, that bankers could insist upon certain terms which would have an effect upon what a prudent man would be willing to pay; isn't that so? A. Well, I don't know. He might not have to go to a banker to finance the purchase of water rights.

Q. How about in the case of Holtwood? A. Well, I don't know. I don't think they did, as a matter of fact. I think the people who promoted it were very wealthy people.

Q. Who do you refer to as having promoted this project? A. Dr. Cary T. Hutchinson.

Q. And you think he was a well-to-do man, financially? A. I know he was. I knew him very well myself.

[17024] Q. You did? A. Oh, yes.

Q. Personally? A. Oh, yes, indeed.

Q. He was in control of this project, wasn't he? A. Promoter of it. He promoted it, not in the very beginning, but the man who finally promoted it and got it all together, as I understand.

Q. For the purposes of your determination, did you give any consideration to the financial arrangements whereby the money for the project was actually obtained?

A. No, sir, only in so far as I considered the project sufficiently attractive so that I believed that no trouble would have been encountered in financing it.

* * *

Q. That was an assumption on your part without going back and ascertaining the detailed facts? A. Only my general knowledge of the fact that many similar projects had been financed without difficulty in those days.

Q. My question, Mr. Uhl, was that for the purposes of your determination, did you give any consideration to [17025] the financial arrangements whereby the money for the Holtwood project was actually obtained? A. No, sir.

Q. You did not? A. No, sir.

Q. In your opinion, would the willing buyer of the lands and water rights give consideration to the rate of interest he would have to pay for his money? A. He might not have to obtain any money. He might spend his own money.

Q. Assuming that he did have to obtain money, would he give consideration to that fact? A. If he had to carry it for any length of time, yes, I think there is no question about that.

Q. And do not the fixed charges on funded debt affect the cost of the project?

MR. KING: Just a minute. What do you mean by "cost of the project"?

MR. HALL: I mean the cost of constructing the project.

* * *

A. Yes, interest during construction is one of the [17026] items that you have to consider in actually constructing a project.

By MR. HALL:

Q. And that, in turn, has a bearing upon the cost per kilowatt hour? A. Yes, the cost of the project, and consequently anything that is done with it.

Q. From your acquaintance with Hutchinson, do you know whether or not he was financially able to construct this project without going and seeking money from other sources? A. I wouldn't think that he would have considered assuming all the risk involved personally, even if he had the money. I don't think he had enough money, but I am not sure. But I can't conceive of any one man taking such a risk alone.

Q. Mr. Uhl, the tenth and last principal factor which you have testified you considered was the "Yearly cost of producing the estimated output." What do you consider to be the yearly cost of producing the project output? A. I think I previously said something in the order of $10 per horsepower.

Q. What is the nature and amount of the yearly cost which you considered? [17027] A. The things that enter into it are—

Q. Well, will you identify those "things"? A. Interest, depreciation, taxes, insurance, maintenance, operation, and administration.

Q. And did you determine what each of those elements were? A. No, sir.

Q. Are you referring to $10 per horsepower per year?

A. Yes, sir.

Q. Mr. Uhl, we have reviewed these ten individual factors which you have considered. Would you, in a general way, concisely as possible, tell us, step by step, how you arrived at the fair market value of the lands and water rights which you valued as of March 1, 1905?

Mr. King: Might I inquire of Mr. Hall if he asks the witness to repeat all of the cross examination up to now?

Mr. Hall: No. I want him to give us a concise statement as to just his mental processes in arriving at these amounts. He has told us the items he considered. Now, I am wondering if he could state, concisely, the different steps.

A. I considered all the factors that I could think of, to satisfy myself that a project could be constructed from a physical point of view, at a reasonable cost, at a cost in [17028] the lower ranges of water-power cost, at the time. And that the annual cost of the power, or, rather, the difference between the annual cost of the power and the price—

TRIAL EXAMINER: I think you are repeating something. I think what counsel is interested in is the mechanics of the $3,300,000.

THE WITNESS: I am getting to that, sir.

TRIAL EXAMINER: Can't you get to that without repeating what you have said before?

THE WITNESS: I will come to it shortly. I am getting to the picture.

TRIAL EXAMINER: I think it sounds like repetition of the previous testimony.

MR. HALL: I agree, Mr. Examiner.

MR. SPARKS: Well, Mr. Examiner, I just got through hearing Mr. Hall ask for his mental processes. I think that is what the witness is trying to give.

TRIAL EXAMINER: I can't imagine counsel asking for a repetition.

MR. SPARKS: Well, I can imagine it, Mr. Examiner, after nine months of this.

A. I came to the conclusion that there was a sufficient margin between the probable cost and the probable income from this power so that I could relate it—

TRIAL EXAMINER: Mr. Witness, I don't know whether [17029] you are proceeding under an implied suggestion of your counsel or my suggestion. But I wish you would adopt mine.

THE WITNESS: I am going to do that right now.

That margin which made me able to relate it to actual sales of other water-power sites. That is what I am coming to. And since none of these projects are exactly alike, yet there is considerable similarity, one must weigh the various differences and as nearly as possible relate this to actual sales and purchases of water rights. And, having done that, having considered all those factors, I arrived at what I considered a proper value of these water rights.

TRIAL EXAMINER: Now, then, how did you—

THE WITNESS: Based on actual purchases and sales of other water rights.

TRIAL EXAMINER: Then, how did you get the figure of $3,300,000?

THE WITNESS: By arriving at a figure of $20 a horsepower, which is in the lower ranges of actual sales of water rights. In my experience, in actual participation in purchases and sales, they have ranged all the way from $10 a horsepower to $150 a horsepower for undeveloped water rights, on the same comparative basis, and I have considered that, taking all these things into consideration, $20 per horsepower would be something a willing buyer would pay for [17030] it, which would give him sufficient margin to go ahead and make a development, and assume all the risks necessary if he wanted to make the development, or to buy it and hold it for a time and perhaps sell it to someone else.

TRIAL EXAMINER: Now, then, where did you get your $20 per horsepower?

THE WITNESS: From these actual purchases and sales which I spoke of.

TRIAL EXAMINER: Now, will you give the dollars per horsepower for each one you considered?

THE WITNESS: Yes, I will be glad to give you that.

I considered Clark's Rip on the Androscoggin River, which was purchased in 1909 at $19 a horsepower.

Clark's Rip was again sold in 1924 for $39 per horsepower.

It was also determined by the Internal Revenue Department of the United States Treasury that the value of those rights in 1913 was $27, because, in the purchase or sale of this water power, which was bought in 1909, it was necessary to determine the profit that the company made in 1913 at the beginning of income taxes.

The purchaser of those rights in 1924 added to it some additional rights, and brought the cost of the undeveloped site to $42 per horsepower, the same site.

On the Kennebec River, at Solon, in Maine, the purchaser, [17031] whom I represented, paid for those water power rights $30 per horsepower.

TRIAL EXAMINER: When was this?

THE WITNESS: In 1931.

TRIAL EXAMINER: And where?

THE WITNESS: Solon, Kennebec River, Maine. He sold those rights again in 1936 for $45 per horsepower.

Rams Island water rights, on the Androscoggin River in Maine, were purchased in 1931 for $10 a horsepower. I assisted the purchaser in that case.

At Milton, Vermont, on the Lamoille River, the purchaser, the Public Electric Light Company, bought the rights in 1926 for $22 a horsepower.

On the Green River in Vermont, the Green Mountain Power Company, in 1928 purchased the water rights there for $65 a horsepower. These same rights were sold to the Village of Morrisville in 1945—and I assisted the purchaser—for $79 per horsepower.

The water rights at Palmer's Falls, on the Hudson River, New York, were purchased in 1931 for $138 a horsepower. The water rights at Winooski, Vermont, on the Winooski River, were sold in 1941 by the American Woolen Company to the Green Mountain Power Company for $40

a horsepower. I assisted the seller, American Woolen Company, [17032] in that transaction.

At West Enfield, on the Penobscot River in Maine, the water rights were purchased in 1927 by the Bangor Hydroelectric Corporation for $20 per horsepower.

At Franklin Falls, on the Winnepesaukee River, the water rights were purchased in 1931 for $16 a horsepower and were sold again in 1945 for $34 a horsepower.

At Berlin on the Androscoggin River in Maine, the water rights were purchased in 1945 for $15 a horsepower.

Union and Cataract Falls, on the Saco River in Maine, in 1928 the water rights were purchased for $22 a horsepower.

And at the Rockaboma Rip on the Penobscot River in Maine, the water rights were sold in 1922 for $20 a horsepower.

Those are all transactions in which I participated, and then of course I participated in a good many developed water powers. These were all undeveloped water powers.

TRIAL EXAMINER: Just land and water rights?

THE WITNESS: These I mentioned were all just land and water rights. As I say, I did participate in a great many where they were developed.

TRIAL EXAMINER: Where did you get your horsepower figure?

THE WITNESS: Horsepower is calculated horsepower. [17033] The horsepower basis that I deal with is based on a flow in a stream available 20 to 25 per cent of the time. Most all developments in the last 35 years—at least those used for public utility purposes—have been made on about that basis. In other words, that is a common yardstick.

None of these figures are calculated figures. They are trade figures; that is, between buyer and seller.

By MR. HALL:

Q. Is this some more of the horse trading that you have referred to? A. Yes, sir. Nobody pays any more

for them than they have to, and everybody tries to get as much for them as they can. Just like they do for everything else.

Q. In connection with the transactions that you mentioned, was the consideration always paid in cash? Do you know? A. No, I don't know.

Q. In other words, the consideration may have been in securities, so far as you know? A. Well, as far as I know, that is not so. In none of these cases that I mentioned, I don't believe there were ever any securities involved. They were out and out sales.

Q. Do you know, for instance, what consideration passed for the Clark's Rip property at Lewiston, Maine? [17034] A. I am sure about that. There were no securities involved.

Q. All cash? A. Well, there might have been notes. I can't tell you that it was all cash. There might have been notes. But I mean there were no securities involved, I know that.

Q. What were the terms of the notes? A. I don't know about that.

Q. Were they long-term or short-term notes? A. That, I can't tell you. You see, I don't know as there were any notes. But I said there might have been. But I am sure there were no securities involved.

Q. But you are not sure of that with respect to all the transactions that you mentioned? A. No, I am not sure about it.

Q. Mr. Uhl, as I recall, in the figures you gave, there was a range from $15 to $138 per horsepower. How did you arrive at the $20 per horsepower? A. As I say, that was in the lower ranges of actual purchases and sales, and in 1905 not so much was paid for water power rights as later on. Those that I mentioned, where the consideration was greater, had peculiar advantages attached to them, such as in the case of Palmer Falls, a precipitous fall of—I have forgotten how much now, but 60 or 70 feet, so that

a small dam in practically [17035] no distance at all would provide a very large head, and also the fact that there was a good deal of storage on that river, and right in the midst of a very good market. Some of the lower figures that I gave you were in connection with developments where there was no immediate prospect of development. In other words, they were discounted figures because of future development.

Q. Is the number of feet of fall per mile an important consideration in the valuation of land and water rights, using the approach you did? A. Well, it may be, as in the case of Holtwood, it is quite an important consideration. Again, it might not be. It might be a disadvantage. If the fall was too rapid, the pondage might be too small, without flowing too much land.

Q. Mr. Uhl, in connection with the Clark's Rip project on the Androscoggin River, you stated that in 1909 it was sold for $19 per horsepower, whereas in 1924 you stated that it sold for $39 per horsepower. A. That is right.

Q. What caused the increase? A. Well, there are two things which caused the increase between 1909 and 1924. A substantial amount of storage was developed in the upper reaches of the river. The other element that came into it was that there was a [17036] greater demand for the power. The purchaser bought it for immediate development, whereas the original purchaser bought it for possible development.

Q. What are or what were the points of similarity between the Clark's Rip project in 1909 and the Holtwood project in 1905? A. Well, it was—

Q. Specifically, what was it? A. A good dam site was available; the land had all been assembled; a substantial amount of pondage was available. On the other hand, the prospect of immediate development wasn't as far ahead on the Androscoggin as at Holtwood, the cost per horsepower would probably have been somewhat more on the

Androscoggin than at Holtwood. The head was somewhat less

Q. Where? A. On the Androscoggin.

Q. Now, all these projects that you have referred to were sold as complete water-power projects? A. Oh, yes, complete water-power projects.

TRIAL EXAMINER: What do you mean by that?

THE WITNESS: Well, sufficient land and water rights so that the development could be made without the purchase of additional land and rights.

By MR. HALL:

[17037] Q. And the valuations that you have referred to were based upon the use of the land for water-power purposes? A. Yes.

Q. Mr. Uhl, was the power market available for the Clark's Rip project similar to that available to the Holtwood project? A. Not in 1909. It was in 1924.

Q. How about 1905? A. In 1905 there was less market near the Androscoggin River project than there was near the Holtwood project.

Q. Mr. Uhl, which of the sales to which you have referred took place within a period of time which you would consider reasonably contemporaneous with the date of March 1, 1905? A. Well, naturally, the first one that I participated in, which was in 1909.

Q. And that is the only one; is that right? A. That is the nearest one, yes.

Q. That is the only one anywhere that you consider reasonably contemporaneous with Holtwood; isn't that right? A. Yes, as far as period of time is concerned, that is correct.

* * *

[17038] Q. Mr. Uhl, in the case of Holtwood what water rights, if any, were acquired, separate and apart from the land acquisitions? A. I don't know.

* * *

Q. Mr. Uhl, you have used the phrase "water rights." A. Yes.

Q. What is your definition of "water rights?" And what do you include under that definition? A. I include under that definition riparian lands, and [17039] in some cases riparian lands may or may not include the bed of the stream. In some cases it does, and the water rights include all the riparian lands, and, if the stream bed is separate, also the stream bed. All lands and rights necessary to build a dam and flow the land which would be flowed by that dam.

Q. Now, "water rights" as you have used it includes the right to build the dam; is that right? A. That is right.

Q. Does it include preliminary engineering? A. I don't understand your question.

Q. Well, does it include necessary permits and licenses? A. To build a dam?

Q. Yes. A. Yes.

Q. In making your determination, what consideration, if any, did you give to the necessity of obtaining from the federal government a license to construct a project? A. There was no occasion for it in 1905.

Q. In your opinion. A. In my opinion and in my knowledge.

Q. You know that— A. The river was declared non-navigable in 1904, I know that.

Q. By whom? [17040] A. By the Secretary of War.

Q. You know, of course, that Penn Water has now been required to take out a license for the Holtwood project?

A. That is right. But there was no Federal Power Commission in 1905.

Q. Well, are you familiar with the requirements of the law in 1905 with respect to the construction of hydro projects? A. Yes, I think I am reasonably familiar with it.

Q. You know that there was a Rivers and Harbors Act, do you not? A. Yes. And I know that the river was declared non-navigable in 1904.

Q. And that is why you considered that you did not have to take into account whether or not it was necessary to obtain a license from the federal government? A. Oh, well, I assumed that everything necessary to make that development was existent, in arriving at that value.

* * *

Q. Mr. Uhl, I show you at this time a document containing 15 numbered pages, dated March 18, 1946. Is that the report which you prepared and submitted to Penn Water in connection with your determination of the fair market value of the land? [17041] A. Well, I wouldn't call it a report; no. It is a memorandum which I wrote.

Q. And submitted to Penn Water? A. And I did submit copies of it to them.

Q. And that is the only report that you did submit to Penn Water? A. That is, as far as I recall, the only report.

Q. And that document is entitled "Estimate of Fair Market Value, as of March 1, 1905, of the Lands and Water Rights Required to Carry out the Holtwood Hydroelectric Project Development of the McCall Ferry Power Company and Now Owned by the Pennsylvania Water & Power Company"? A. It is.

Q. Did you make any independent investigation and verification of the historical information contained in this document relating to the history of the Holtwood project, the cost of its plant, its operations, the date of commercial operation, and so forth? A. Only in so far as I studied these two documents that we spoke about this morning, which I think are Exhibits 26 and 27.

Q. And the power market surveys, consisting of 68 separate documents. A. Yes.

Q. In other words, you accepted the facts as stated in those [17042] documents for the purpose of writing this document? A. Yes.

* * *

[17043-A] RE-DIRECT EXAMINATION

By MR. KING:

Q. Mr. Uhl, this morning while you were being cross examined, I believe you made some references to contracts prior to March 1, 1905. Will you explain what you meant by that reference? A. I didn't say so. I meant to say that there were negotiations for contracts. There weren't actually contracts, but negotiations for contracts were being carried out.

Q. Prior to March 1, 1905? A. Yes.

* * *

[17045] RE-CROSS EXAMINATION

By MR. HALL:

Q. Mr. Uhl, you referred to negotiations for power contracts that were carried out prior to March 1, 1905. Specifically, just what negotiations did you refer to? A. I would have to refer to my working papers.

Q. You may do so. A. There is a report, so-called Warfield's report——

Q. What is the date of that report? A. Dated August 5, 1901.

This is a letter from the General Electric Company to Mr. Thomas J. Hayward, in which he refers to conversations regarding furnishing electric current from the Susquehanna River to Philadelphia Company.

Q. Who is this individual to whom the letter was addressed? [17046] A. He is a gentleman connected with the General Electric Company, Mr. Mullen.

Q. To whom was that letter addressed? A. Mr. Thomas J. Hayward of the firm of Bartlett, Hayward and Company.

Q. Where was that firm located? A. 100 Broadway, New York.

Q. Was that individual connected with the Holtwood project? A. He was connected with the General Elec-

tric Company; was a co-promoter of this project, you might say. They were interested in promoting this project.

Q. You mean General Electric was interested in promoting the Holtwood project? A. Yes.

Q. With Hutchinson? A. What was that?

Q. Was a co-promoter with Hutchinson? A. They were helping to promote it, yes.

Q. Helping Hutchinson? A. Yes.

Q. Was C. A. Coffin president of General Electric at that time? A. I believe so.

Q. Here is a letter dated February 19, 1910, from Mr. L. B. Stillwell, a consulting engineer, to Mr. Warfield [17-047] of Baltimore, President, Continental Trust Company, in which the advantages of taking power from the Susquehanna River are brought forward.

[17048] Q. Wasn't Mr. Warfield interested in a development in the vicinity of what is now Conowingo? A. No, I think he was interested in the utilities in Baltimore.

Q. And not the development of hydro power? A. I think he was only interested in the use of the power and not in the development of power, as I recall it.

Q. Was either Mr. Stillwell or Mr. Warfield connected with the Holtwood project? A. I think Mr. Stillwell is one of the engineers who made some reports on the Holtwood project.

Q. Now, these references which you have just made were the ones you had in mind when you stated that negotiations were being carried on prior to March 1, 1905; is that right? A. I think there were others. I would have to search for them more carefully. I know there are a good many references to the power market and negotiations for power.

Q. Are those two the only references you can put your hand on right now? A. Well, if you give me a little more time I think I can find some others. I would have to go through them one by one because it is so long since I have studied them.

Q. Without going any further, Mr. Uhl, these two negotiations, or these two documents to which you referred, are the only ones you have been able to find so far?
[17049] A. So far, yes.

* * *

[17056] GEORGE W. SPAULDING

* * *

CROSS EXAMINATION (Resumed)

By MR. WAHRENBROCK:

* * *

[17070] Q. I would like to ask you now if you will describe with some particularity all of the facilities owned by Penn Water which are actually used in the process of local distribution? A. Is that not in my testimony?
[17071] Q. Not the detailed description. There is a reference, a general reference to facilities; but I want to find out just what the facilities are.

Your testimony appears on transcript 16608 and 16609.

* * *

THE WITNESS: And we are speaking of what they own today?

By MR. WAHRENBROCK:

Q. Whatever period of time was covered, or whatever date was covered by your testimony on rebuttal. A. I would be glad to do so with the understanding, of course, that I am speaking from an operating point of view, and not from a legal point of view when I use the words "Distribution facilities".

There are facilities in the Holtwood power house and part of the Holtwood Development that are used in part for what we refer to as local village use, and by that I am referring to the use of electric services by the residences of company employees and the company buildings generally constituting the village.

Then, as a part of those facilities, is the connection to the distribution circuit of Pennsylvania Power and Light Company which formerly was owned by the Pioneer Electric Company, the predecessor of Pennsylvania Power and Light Company.

[17072] The facilities in the Highlandtown Station owned by Susquehanna Transmission Company of Maryland and consisting generally of step-down transformers from 66 KV to 13 KV with an extensive 13 Kv indoor bus arrangement with large numbers of 13 kv cable connections.

The outgoing cables from just inside the building line are owned by Consolidated Gas Electric Light and Power Company of Baltimore and constitute connections to their extensive 25 cycle distribution system.

Generally Baltimore Company owns those cable facilities from outside of the property into and including the potheads, the connections from the potheads back toward the bus being owned by S. T. Co.

There are several metering units generally referred to as metering facilities owned by the company, and by the "company" I am referring to Penn Water, that are a part of the distribution facilities of Pennsylvania Power and Light Company, such metering facilities being located in the latter company's substations.

Q. The latter company being Pennsylvania Power and Light Company? A. That is correct. There are certain facilities of the Pennsylvania Railroad at Conestoga substation which is a jointly occupied substation by Penn Water and the Pennsylvania Railroad near Safe Harbor, the control facilities for both Penn Water transmission facilities, the Pennsylvania Railroad [17073] transmission facilities and part of the railroad distribution facilities being owned and operated by Safe Harbor Water Power Corporation from the latter's control room at Safe Harbor.

Then there is the 110 kv Gunpowder line carrying two circuits.

Q. Excuse me. My question relates to facilities used in the process of local distribution. A. I have that in mind. This tower line and its transmission lines extending from the Philadelphia Road substation of Baltimore Company near Highlandtown substation of S.T.Co., but not electrically connected therewith and extending from Philadelphia Road to Gunpowder Switching Station, a distance of about nine miles, the tower line and circuits are owned by S.T.Co., are operated by S.T.Co., from a maintenance point of view, but from an electrical point of view are operated by Baltimore Company and are therefore used by Baltimore Company in connection with its transmission and distribution facilities in Baltimore County and the outskirts of Baltimore City.

I think I stated that these latter facilities are owned by S.T.Co. rather than by Penn Water. Those are all I recall at the moment.

* * *

[17151] Q. We are somewhat uncertain what the figures in the fourth column of figures on Exhibit 354, under the heading "PW&P, 60-cycle 220 KV, 25-cycle 132 KV" represent, and I would like to ask you to explain what those figures represent. A. They are the amounts of kilowatt hours determined on a net hourly basis, which are sent out in part over the 220 KV transmission system of Penn Water from Safe Harbor towards Baltimore and Washington, plus certain net hourly amounts that are sent out from Safe Harbor, over the 132 KV 25-cycle single phase circuits, to the railroad, and which are transmitted by the railroad to Benning, District of Columbia, and converted from 25-cycle single phase to 60-cycle three-phase.

* * *

Q. Mr. Spaulding, I think you said kilowatt hours; actually the values are in megowatt hours, are they not?

A. That is correct.

* * *

[17188] Q. What did you mean when you referred to certain facilities of the Pennsylvania Railroad as distribution facilities on Transcript 17,073? A. I don't have that page of the transcript here.

Q. Then I show you a copy of the transcript referred to. [17189] It is at the top of the page. A. I was referring to the transformer facilities and the circuit arrangements which the Pennsylvania Railroad Company owned in Conestoga substation for stepping the voltage down from 132 kv. to 12 kv. and for the use of their trolley service.

Q. Do I understand that the Railroad serves ultimate consumers such as householders or small commercial establishments or industries? A. No, it is for their own use on their own trolley, but it is for the purpose of distributing their electric services to their trains, wherever they may be.

Q. That is a somewhat different use of the word "distribution" than is normal in the practice of public utility engineers. A. No. From a technical point of view that is distribution when you distribute the energy in electric services—

* * *

Q. Is it your testimony that from an operating electric utility engineer's viewpoint the 110 Kv. transmission line from the Philadelphia Road substation in Baltimore to the Gunpowder substation in Maryland is used in the process of local distribution? A. I think it could be so looked at because it is part of the distribution system of Consolidated Gas Electric Light and [17190] Power Company of Baltimore.

Q. When you say that you think it could be so looked at, do you mean it is ordinarily not so looked at? A. No, I did not intend to so mean. I meant that perhaps one engineer would classify it as transmission facilities and another engineer distribution facilities.

Q. I thought you testified on your direct that it was a transmission facility used exclusively by Baltimore Company as a part of that company's transmission network supplying an area in Maryland outside of Baltimore.

* * *

THE WITNESS: I did so testify.

* * *

[17216] Q. Let me see if I understand that now. With the exception of these fluctuations in capacity services rendered, which you have stated do affect the amounts billed under Exhibit 382, do I understand that fluctuations in the other electric services which you say are rendered do not affect the dollar amounts of the bills unless power factor falls below .85 or voltage departs more than a specified amount from a stipulated figure? A. That is correct so long as it is understood that the services could not have been rendered except that these other services were provided at Safe Harbor and Holtwood plants.

Q. Do I understand you, then, as saying that the rendition of these other services is a necessary incident to the supply of energy for which the dollar amounts are billed? A. Absolutely.

* * *

[17270] H. ZINDER

* * *

CROSS EXAMINATION (resumed)

By MR. GOLDBERG:

Q. Mr. Zinder, in your Exhibit 319, page 1, in the second paragraph, you talk about cost as used in your study as including the cost of purchased power and energy. Do you see that? A. Yes.

Q. Does that mean that you have not included the cost of voltage, reactive, power factor cooperation, phase and frequency? A. I was dealing there with costs of power

and energy. In my mind that would include, let me say, any electrical services that were purchased for which a cost was shown on the books of the company.

Q. In other words, it included these elements I mentioned? A. All I can say is that it went into the various services rendered and the cost incurred—various services received and the costs incurred in connection with it, and I [17271] considered those costs.

Q. And that was all covered by this phrase "Power and Energy"? A. That is what I intended to have it cover, yes.

Q. And you intended by that phrase to cover voltage, reactive, power factor cooperation, frequency and the other services; is that right?

* * *

THE WITNESS: I would say yes, all services purchased.

* * *

[17272] Q. Now, I take it that the cost figures you have used in your exhibit or rather the figures you have used as cost in your exhibit have been accepted by you without assuming any responsibility for their accuracy? A. More specifically the cost figures received from the company shown in column 1, Schedule B, Table 1 and column 1, schedule B table 2, I take no responsibility for. I might add the same is true with respect to the cost figures shown on schedule A, table 1, column No. 1 and schedule A, table 2, column 1. Those cost figures were taken from Exhibit 64.

Likewise in that case I take no responsibility for those figures.

* * *

[17310] Q. Now, in that data supplied by Mr. George Diehl, he proposed certain allocations between 25 and 60-cycle equipment of the operating and production expenses; is not that so? [17311] A. Yes, let me get the question again, please, to be sure I have answered it properly.

(Question read.)

THE WITNESS: He indicated what to him might be the basis for allocating certain expenses, production and operating expenses.

By MR. GOLDBERG:

Q. And did you employ the allocations he proposed? A. I employed it by using it as a basis for reaching my own conclusions.

Q. Will you use one of his proposed allocations as an illustration and tell us whether you used that one as he proposed it, or whether you modified it in any regard? A. I arrived at a judgment figure on an over-all basis of 76 per cent of the hydro plant operating expenses as properly allocable to 25 cycle. Mr. Diehl's memorandum discusses the possibility of a portion of the expenses being on a 75 per cent basis, others on an 80 per cent basis, and I just considered that not item by item but on an over-all basis and I reached a judgment basis of 76 per cent.

Q. Well, your judgment was based upon the information he had supplied you, right? A. As part of the information that I received.

Q. Well, what other information did you have that provided you with a basis for modifying Mr. Diehl's judgment with [17312] respect to the appropriate allocation between 25 and 60 cycle equipment of production and operating expenses? A. Well, first, I do not know that I modified his judgment. He did not come out with an over-all figure. I do not know what his over-all figure would be if he made such an allocation but it would probably be somewhere between 75 per cent and 80 per cent, if you take his statement here. I have used 76 per cent.

In addition to talking to Mr. Diehl and getting this memorandum, I talked to other plant people.

Q. Who were they? A. Mr. Stabley, T. C. Stabley, station superintendent at Holtwood, and I talked to Mr. Loane.

Q. Were they the only plant people with whom you discussed the allocation of production and operating ex-

penses as between the 25 and 60 cycle equipment? A. Let me put it this way; they were the principal ones I discussed it with, as you recall, Messrs. Diehl, Stabley and Loane.

Q. And what Mr. Diehl told you is embodied in that letter which is part of your working papers? A. Right.

Q. What did you learn from Mr. Stabley with respect to the appropriate segregation of costs as between 25 and 60 cycle equipment, that is production and operating costs? [17313] A. I do not recall exactly what I learned from it. I discussed first of all, with him as I recall, whether he could not segregate his personnel, and how much of his cost he could segregate, how he worked his maintenance program, and points of that kind were discussed. I just used that as part of my basis of arriving at my own judgment in the matter.

Q. Did he segregate his personnel on a 76 per cent basis? A. He stated he could not segregate his personnel as between 25 and 60 cycle operations.

Q. How much of his costs could he segregate as between 25 and 60 cycle operations, did he say? A. I do not recall that he went into what particular items of the production expense he felt could be directly allocated.

I reached a conclusion after discussion with him that as a whole, it could not be done on the basis of getting specific cost records, that it would have to be done on a judgment and allocation basis.

Q. Now, did Mr. Stabley express any judgment as to what percentage of the costs were allocable to 25-cycle and what percentage was allocable to 60-cycle? A. No, I do not recall raising that question with him on an over-all basis.

Q. Now, what did he tell you about how he worked his [17314] maintenance program as it bore on the determination of an allocation of production and operating expenses between 25 and 60-cycle equipment? A. I do not recall specifically on that except that I felt satisfied with the con-

clusion that even maintenance expenses could not be allocated strictly in accordance with the number of units, that the number of units might be a predominating or largely determining factor, but you could not actually say that the maintenance expense would specifically vary in that relationship.

Q. So that is it not fair to state that as far as Mr. Stabley's information was concerned, it did not help you very much in arriving at your judgment allocation of production and operating expenses as between 25 and 60 cycle?

MR. SPARKS: Was it Mr. Stabley or Mr. Diehl?

MR. GOLDBERG: Stabley is the man we have been talking about.

THE WITNESS: I would say it was very helpful to me. Even a negative answer is an answer which is helpful to me.

By MR. GOLDBERG:

Q. When Mr. Stabley told you he could not segregate the personnel as between 25 and 60 cycle equipment, how did that help you in arriving at 76 per cent? A. That helped me reach the conclusion that it would have to be a judgment figure no matter who did it.

[17315] Q. But it did not help you in arriving at what that judgment should be? A. Well, other discussions with him helped me with that.

Q. What other discussions helped you in concluding that they should be 76 per cent? A. I would say my discussions with him as to the general behavior of the production expenses. I would recall that as far as he was concerned, there was a general agreement that an allocation on the basis of number of units, for example, and giving that considerable weight he would agree with, as far as I recall my conversation. He did not give me any final answer. That I reached myself, and I did not, or do not recall asking him for an over-all answer.

Q. What did he tell you about the general behavior of the production expenses that was helpful in arriving at the 76 per cent? A. Take, for example, maintenance. If an allocation was to be made predominating weight would be proper to the number of units involved. I think there was not an identity but a fairly close agreement between Mr. Stabley's views as I discussed them, and Mr. Diehl's views as set forth in this memorandum.

Q. So you got no more out of Mr. Stabley than you got out of Mr. Diehl; is that right? [17316] A. Well, I got something out of both of them. I cannot say how much from one or the other.

Q. All you got out of Mr. Stabley, as I understand it, was that if you were to go ahead on a number of unit bases, he would feel that that was a fair basis; I think that is right? A. I got out of Mr. Stabley, looking at it that way, and I believe this is a supposition—that if I made an allocation of 80 per cent, that would be as high as I could allocate to 25 cycle, and that 75 per cent would be about as low.

Now, I would say that both Mr. Diehl and Mr. Stabley were of the opinion that it might fall within those limits.

Q. Are you saying that Mr. Stabley actually expressed the view that the allocation of production and operating expenses as between 25 and 60 cycle equipment was somewhere between 75 per cent as a minimum and 80 per cent as a maximum? A. No, I did not say that. I answered the question I thought that you put to me, and it required an assumption, and I made the assumption.

Q. But Mr. Stabley never expressed any percentage to you, did he? A. No, and I have said that.

Q. Did you ask him to express any percentage? A. I do not recall.

Q. You were interested, however, in ascertaining what [17317] percentage he might have in mind, right? A. Yes.

Q. But you do not recall whether you asked him that? A. Right. I might say I was interested in going into the details with him.

Q. Did Mr. Loane express an opinion as to the percentage that might be properly allocable to the 25-cycle equipment and to the 60-cycle equipment of the production and operating expenses? A. Yes, I think he expressed an opinion in our discussions. I am trying to recall now whether it was on an over-all basis or for operation and maintenance separately, but I do not remember.

Q. Do you recall what percentage he expressed? A. No.

Q. So, essentially it was Mr. Diehl's information that you relied on in arriving at your judgment; is not that a fair statement? A. Well, I gave most weight to that.

Q. Even though Mr. Diehl did not arrive at an over-all percentage, did you reach the conclusion in considering the percentages he did arrive at, that they were accurate? A. No, I reached the conclusion that you could not get anything accurate in the sense of knowing exactly what was spent in terms of operation or maintenance on 25 as against [17318] 60 cycle.

Q. Do you know what basis Mr. Diehl followed in arriving at his percentages? A. I asked him to set those down, and they are set down in this memorandum.

Q. Is it your statement that you have in that memorandum sufficient information to enable you to reach an independent judgment as to the percentage allocations expressed by Mr. Diehl?

* * *

Mr. Sparks: Is that question clear to you, Mr. Zinder?

The Witness: I think it is.

I interpret the question in this way: Did I rely on that alone, or rather, could I by this alone reach an independent judgment?

By MR. GOLDBERG:

Q. As to the percentages expressed by Mr. Diehl?

MR. SPARKS: Now, Mr. Examiner, just a minute. What is the relevance here of this witness' independent judgment as to the accuracy of the conclusions reached by Mr. Diehl? I see no relevance, and I object to that.

MR. GOLDBERG: I think I can explain that, and it should be obvious. Here is information that he is relying on, and the question is, whether that information is sufficient as a basis for his own judgment.

[17319] MR. SPARKS: That is not the question. If that is it, I have no objection.

MR. GOLDBERG: I will have to ask the questions in my own way.

MR. SPARKS: I think the questions ought to be clear and proper.

TRIAL EXAMINER: The objection is overruled.

THE WITNESS: I felt I needed more than this memorandum to arrive at an independent judgment and sought, and did get more.

By MR. GOLDBERG:

Q. And the more you sought, and did get, is the information that you mentioned that Mr. Stabley gave you, right? A. And discussions with Mr. Loane.

Q. Now, what did Mr. Loane tell you that contributed to your store of knowledge that enabled you to determine what allocations should be made of production and operating expenses as between 25 and 60 cycle equipment? A. He furnished no specific information in terms of dollar figures that I recall. We discussed the problem in relation to the operation of the plant, what he knew of the operation of the plant, what his judgment was and I used that in arriving at my own judgment.

Q. But you cannot remember what his judgment was? A. No, I do not recall offhand as to what figures—[17320] I did not put them down in writing—that he gave me.

MR. SPARKS: What was the answer, please? I do not know whether it is complete.

(Record read.)

By MR. GOLDBERG:

Q. You do not know whether Mr. Loane's percentage was expressed as an over-all percentage, either, right? A. No, I do not recall specifically.

Q. Now, what did Mr. Loane tell you about the operations of the plant that helped you arrive at this 76 per cent? A. I do not recall.

Q. What do you recall about what he told you that helped you? A. I recall we discussed the question of how the plant was operated.

Q. What did he tell you? A. In terms of the labor and employment. He did not go into detail on that.

I also was testing my own tentative conclusions with what conclusions he might have with regard to items. For example, I recall specifically discussing with him also the question as to whether it would be proper in his judgment to separate operation and maintenance and take maintenance on a straight number of unit basis. All questions I thought that would be helpful to me in discussing the problem of what [17321] was a proper basis of allocating that item.

* * *

[17488] Q. Do you know how the 25 cycle hydro equipment is operated during periods of extremely low flow? A. No, I do not at the moment recall.

Q. Well, do you know whether or not the 25 cycle hydro equipment during such periods is operated independently of other transactions on the interconnected system? A. I could not answer that. I did not make any study of the matter.

Q. Does that mean that you are of the opinion that in an interconnected system you would expect the 25 cycle hydro equipment to be operated independently of what is occurring on that interconnected system? A. I cannot answer that question. It appears to me to be of a very general nature, and I could not answer that [17489] without more information. I would like to say that in this cost allocation, as I stated at the outset, I took and lifted Penn Water out of the interconnected system and treated it as a single unit, as a single corporation, looking at its transactions and its costs. That was part of the problem to take Penn Water alone, starting with that first basic premise and then determining what was necessary in order to arrive at the costs or Penn Water's costs for service to Baltimore by determining what those services were and what the costs were related to them.

Q. All right. Now, when you lifted Penn Water, as you say, out of the interconnected system and considered it as a self-contained unit, did you restate the operations of Penn Water to meet that assumed condition? A. I made no restatement of operation. I simply took the facilities as I found them. The transactions over those facilities as I found them.

Q. In other words, you took the facilities and the transactions as they are found as part of an interconnected, coordinated system and made a cost allocation based on Penn Water as not being part of that interconnected and coordinated system; is that right? A. That is not so.

Q. Now, when you lifted Penn Water out of that interconnected system and considered it as a self-contained whole, [17490] did you consider the costs in relation to operations of Penn Water as part of an inter-connected, coordinated system? A. I took their costs as I found them.

Q. And they are costs incurred in operating as part of a coordinated interconnected system, right? A. Yes. Now, for my purpose—and by my purpose I mean in con-

nection with determining the costs of service to Baltimore —I was only interested in a portion of those costs.

Now, the 25 cycle costs were not involved in interchange; there was no interchange with respect to 25 cycle 3 phase service. I took the 25 cycle costs as I found them.

Q. Did you determine the relationship of the 25 cycle service to Baltimore to the operations of the interconnected and coordinated system? A. It was not necessary.

Q. You did not do it? A. I did not do it because it was not necessary.

Q. And you did not consider it necessary even though the interconnected system was operated as a unified power pool? A. I would say my answer to that is yes, based upon or in relation to a determination or study such as I have presented here.

* * *

[17492] Q. On page 3 you say some of the agreements are joint with one or more of these other suppliers with varying degrees of responsibility and obligations on the part of the parties.

Which agreements did you conclude were joint?

* * *

[17493] THE WITNESS: First let me say that my use of the term "joint" as I stated before is where another party is involved or is a party to the contract. I considered the agreement with the Pennsylvania Railroad as being a joint agreement.

* * *

[17494] THE WITNESS: I believe that Safe Harbor is a party to the Pennsylvania Power and Light Company contract, to the Metropolitan Edison contract—

By MR. GOLDBERG:

Q. The new one or the old one? Do you have copies of the exhibits before you? If not, I can give them to you because that would help you in answering.

THE WITNESS: All right, if you will.

In answer to your question as to the Metropolitan Edison it appears that Safe Harbor is not a party to the new contract.

By Mr. Goldberg:

Q. Exhibit 72 in this proceeding? A. I am looking now at Exhibit 72, which is the contract between Metropolitan Edison and Pennsylvania Water and Power Company dated Nov. 15, 1945.

Q. Your reference to Metropolitan Edison was related to Exhibit 71, was it not? A. To Exhibit 71, that is right. Safe Harbor is a party to the Coatesville contract which is with the Philadelphia Electric Company and that is Exhibit 73; and also to the supplemental agreement between the same parties which is Exhibit 74.

Safe Harbor is also a party to the agreement with the [17495] Pennsylvania Power and Light Company, which is Exhibit 76.

* * *

[17498] Q. Now, when you say more than one party involved, does that mean you ascertained whether all the parties to the contract were actually supplying energy? A. No, I did not.

* * *

[17501] Q. You have never before in your consideration of Penn Water's contracts and Safe Harbor's contracts referred to them as joint agreements; is not that so? A. I do not recall that I ever had or that I haven't. That goes back quite a way when you say "never before".

Q. Up to this proceeding you have been of the opinion that Safe Harbor sold electric energy to only two customers, Consolidated and Penn Water; is not that right?

* * *

The Witness: I do not recall that I ever made a conclusion of that character. I do not recall that I have ever been called upon to make one.

By MR. GOLDBERG:

Q. I would like to show you Exhibit "X" in Docket IT-5914, being the Safe Harbor Water Power proceeding, which was Exhibit 18 in Docket No. IT-5494, being the first Safe [17502] Harbor rate case proceeding before the Commission, and to the first page of that exhibit.

That is a report, is it not, on the property, operations and contracts of Safe Harbor Water Power Corporation? A. That is right.

Q. And that is a report which you signed, is it not? A. Right.

Q. I direct your attention to the last page thereof. A. Right.

Q. You signed that at the time you were with the Federal Power Commission and were chief of the Division of Rates and Statistics; is not that so? A. Yes, sir.

Q. Now, referring to page 1 of that report, the first paragraph, you say there, don't you:

> "The energy generated at this plant is sold under long term contracts to the Consolidated Gas Electric Light and Power Company of Baltimore and to the Pennsylvania Water and Power Company."

* * *

THE WITNESS: That is right, as an introductory statement.

By MR. GOLDBERG:

Q. I shall get to the others, Mr. Zinder. The plant you were there referring to was the hydro-electric generating [17503] plant of Safe Harbor Water Power Corporation, is not that right? A. That is right.

* * *

[17509] Q. Referring to page 14 of that exhibit, the second paragraph, you there state, do you not:

> "Besides the generation of electric energy in the hydroelectric and steam plants at Holtwood, the com-

pany purchases one-third of the output of the Safe Harbor plant."

A. That statement appears on page 14 of the document which you have handed me.

Q. Is there any doubt in your mind you were there referring to Holtwood Company?

* * *

THE WITNESS: The company there referred to is the Pennsylvania Water & Power Company.

* * *

[17513] Q. Now, referring to page 39 of that same document under the section entitled "Other System Contracts," this statement is made, is it not:

> "In addition to the contract for the construction and operation of the Safe Harbor Plant, the Safe Harbor [17514] Water Power Corporation is a party to several other contracts and agreements. These contracts do not provide for any direct sales by Safe Harbor for, as previously pointed out, its entire output is sold to the Baltimore and Holtwood Companies. However, these contracts are important to Safe Harbor as they have affected the design, construction and operation of the plant to a considerable extent."

A. That statement that you read appears on page 39 of the document under the heading, or under the major heading of "Other System Contracts" and the subheading "Pennsylvania Railroad Company Contract."

Q. Referring to page 40 under the subheading "Other Contracts," of this section that we are talking about, there are listed the—I better read it, rather than paraphrase it. This appears, does it not:

> "The Safe Harbor Water Power Corporation is also a party to several contracts for the supply of electric energy and power to certain other utilities operating in the State of Pennsylvania. Most of these con-

tracts were originally entered into by Holtwood, but in recent years Safe Harbor has become a party thereto, although the agreements are carried out principally by Holtwood and Safe Harbor might be said to be a silent partner." That appears there, right?

[17515] A. That appears at the point you designated in the document.

Q. And then the contracts are listed on page 40 continuing over to the top of page 41, right? A. Certain contracts are listed following that statement on page 40 and continuing on page 41, yes.

Q. These contracts are listed as the contract of May 1, 1933, between Penn Water, Safe Harbor and Pennsylvania Power & Light Company for the supply of electric power and energy to the Lancaster System of P. P. & L.; the agreement of June 11, 1934, between Penn Water, Safe Harbor and P. P. & L. relative to the Safe Harbor-Donegal connection and the facilities to be provided by each party; as well as the letter agreement of April 28, 1939, between Penn Water, Safe Harbor and P. P. & L. relative to the provisions in the above contract pertaining to the parallel operation of the Lancaster Division with the main system of P. P. & L. Company and for the furnishing of certain other services, as well as the contract of August 1, 1933, and the supplement of December 13, 1938, between Penn Water, Safe Harbor and Philadelphia Electric Company for the supply of electric power and energy to the Coatesville System of Philadelphia Electric Company and, finally, the contract of January 1, 1935, between Edison Light & Power Company, Met Edison and Pennsylvania Water & Power Company and Safe Harbor for the supply of energy and power to York, [17516] Pennsylvania, and vicinity, isn't that right? I have correctly described the contracts that are listed as the "Other contracts" on pages 40 and 41, right? A. That is a statement of the contracts listed under the statement you read appearing on pages 40 and 41 of the document.

Q. Now, following the description of these contracts on page 41 you state, do you not:

"As previously pointed out, although Safe Harbor is a party to these contracts and furnishes a part of the power and energy, the actual sales are made by Holtwood which collects the revenue."

A. That statement appears on page 41.

Q. And on page 44 under Section 8 entitled "System Power And Energy Transactions In 1938" and the subheading "Safe Harbor to Baltimore and Holtwood," you state:

"As previously brought out the Safe Harbor Company sells its entire output under a long term contract to Baltimore and Holtwood."

A. That statement appears at the point in the document you designated.

Q. Now then, on page 44 again you show in a tabulation, do you not, sales to Baltimore, Pennsylvania Power & Light, Philadelphia Electric Company, Edison Light & Power Company, and the Pennsylvania Railroad Company of kilowatt hours?

[17517] MR. SPARKS: Where does it say sales, Mr. Goldberg?

MR. GOLDBERG: Let me read what it does say.

"In 1938 Holtwood generated 757,177,000 kilowatt hours and received 332,513,900 kilowatt hours from other systems including the purchase from Safe Harbor which represented 25.2 percent of its total system energy or a total of 1,089,690,900 kilowatt hours available on the system. It disposed of such energy as follows."

By MR. GOLDBERG:

Q. I have correctly read that, right? A. That appears on page 44.

Q. And that is an introduction to a tabulation showing the disposition of that energy to Baltimore, Pennsylvania Power & Light Company, Philadelphia Electric Company, Edison Light & Power Company and the Pennsylvania Railroad, right? A. That is right.

Q. Disposition by Penn Water, right? A. Disposition by Holtwood.

Q. To Baltimore and other customers, right? A. That is right.

Q. Now then, on page 45 this appears:

"In addition to the sales by Holtwood, it participated in several interchange transactions some or all of which involved Safe Harbor energy as follows."

[17518] I have correctly read that, have I not, from page 45? A. That statement appears on page 45.

Q. Following that statement is a tabulation which names Philadelphia Electric Company, Pennsylvania Power & Light Company and Metropolitan Edison and shows point of interchange with these companies as Perryville and Thorndale, Harrisburg and Violet Hill respectively, right? A. That appears after the statement you just read.

Q. Now on page 44 where disposition of the energy by Holtwood to Baltimore and other companies is tabulated, revenue is shown for such disposition, right? A. There is a column headed "Revenue," yes.

Q. And there is a column with respect to the interchange referred to on page 45, the tabulation on page 45 of the exhibit headed "Amount of settlement," isn't that so? A. There is such a column on page 45.

Q. Now then, I want to show you Exhibit 24 in Docket No. IT-5914, which is entitled "Supplemental rate report, property operations and contracts of Safe Harbor Water Power Corporation." You recognize that document, don't you? A. The document looks familiar.

Q. If you look at the next to the last page you find, do you not, that you signed it as Chief of the Division of Rates and Research? A. I see that.

[17519] Q. Now referring to the second paragraph on page 17 of Exhibit 24 in Docket No. IT-5914, this statement appears, does it not:

> "Energy generated at Safe Harbor Plant in Pennsylvania is transmitted over these lines into the State of Maryland to the vicinity of Baltimore and Takoma Park where it is sold by Holtwood and Safe Harbor at wholesale to Baltimore."

A. That statement appears on page 17 of the document I have before me.

MR. SPARKS: Now, Mr. Examiner, I object to any further questions and to the last question with respect to what Mr. Goldberg has termed as Exhibit 24 in Docket IT-5914. In the first place, there is nothing to show that that is the exhibit that was put in in that case. Its authenticity is not proved and the same thing is true of this so-called Item X which was, according to Mr. Goldberg's statement, Exhibit 18 in the first Safe Harbor case.

This witness has been and is being questioned about a document which has not been authenticated.

TRIAL EXAMINER: It has been authenticated to the extent the witness accepts his authorship of it, isn't that right?

MR. SPARKS: But, Mr. Examiner, that hasn't been authenticated to the extent that it is proved that either one [17520] is an exhibit in any other case. All we have is Mr. Goldberg's statement about it.

MR. GOLDBERG: Mr. Examiner, may the witness be withdrawn and I will take the stand and authenticate the exhibits?

TRIAL EXAMINER: I don't think that the description of the document as an exhibit in a prior proceeding is as important as the acknowledgment of the authorship of the statements at some prior date by this witness.

MR. SPARKS: That is all right, Mr. Examiner, if Mr. Goldberg is not going to argue in his brief that in Item X, which is in the record in the Safe Harbor case in Docket IT-5914 Mr. Zinder made certain statements. If he is not going to argue that, then there is no question of authenticity except as they may be documents which Mr. Zinder signed.

TRIAL EXAMINER: Mr. Witness, do you recognize the documents as described by counsel?

MR. GOLDBERG: Both, Mr. Examiner, I take it the items I have referred to as Exhibit X by reference in IT-5914 and Exhibit 24 in IT-5914?

TRIAL EXAMINER: Yes.

THE WITNESS: By recognizing the documents, Mr. Examiner, I recognize the signatures in both cases and do say they are my signatures. The first document I recognize as a report. I still don't exactly recall it in detail.

[17521] TRIAL EXAMINER: Did you qualify each of these documents, do you recall, for admission in a prior proceeding?

MR. SPARKS: You mean did he testify, Mr. Examiner?

TRIAL EXAMINER: That is correct.

THE WITNESS: My best recollection is, and I am quite certain of that, that I did not testify in either of these two proceedings.

By MR. GOLDBERG:

Q. Mr. Dunstan testified in IT-5494 and Mr. Fosdick testified in IT-5914 and sponsored each of those exhibits, is that right? A. That is my impression—

MR. SPARKS: Wait a minute, let's get the question first. I don't think the witness understood the last part of the question.

TRIAL EXAMINER: All right, read the question.

(Question read.)

THE WITNESS: Well, Mr. Dunstan testified with regard to the first in Docket IT-5494.

MR. SPARKS: With regard to that exact document, Mr. Zinder?

THE WITNESS: That I would have to check. I know that Mr. Fosdick testified in Docket IT-5914. My best recollection is I did not testify in either of those dockets or cases.

TRIAL EXAMINER: Now, unless it is absolutely necessary [17522] I do not wish to have counsel taking the witness chair. Is there any other way in which counsel could establish that?

MR. GOLDBERG: Yes, I can bring the official records of the Commission in.

TRIAL EXAMINER: Suppose you do that. You could do that after the luncheon recess.

MR. GOLDBERG: It would have to be after the luncheon recess.

TRIAL EXAMINER: Suppose we proceed on that basis and have the original exhibits produced.

MR. GOLDBERG: Let me inquire, are counsel for the respondents actually questioning the authenticity of the copies I have here as being accurate copies of the exhibits in the official records of the Commission?

MR. SPARKS: Yes, we are, Mr. Examiner.

MR. GOLDBERG: All right.

MR. SPARKS: I don't know whether those documents which Mr. Goldberg has been questioning the

witness about are either the exhibits that were introduced in those cases or are true copies; we don't know that.

TRIAL EXAMINER: All right.

MR. SPARKS: We have had no opportunity this morning to examine either one of those documents and this morning is the first time any reference was made to either one of them on this cross-examination.

[17523] TRIAL EXAMINER: All right.

MR. GOLDBERG: I suggest, Mr. Examiner,—

TRIAL EXAMINER: If counsel can assure the Examiner it is his belief that when the original copies of the exhibits are produced they will prove to be exact copies—

MR. GOLDBERG: That these will prove to be?

TRIAL EXAMINER: Yes.

MR. GOLDBERG: No question in my mind about that.

TRIAL EXAMINER: All right, then, the objection is overruled as directed to this line of questioning in so far as it relates to the authentication of these two documents, pending the production of the original exhibits. I mean by that, if on the production of the original exhibits it should prove these are not exact copies then some remedial steps will be taken.

Is there a pending question?

MR. SPARKS: I believe the question was answered.

TRIAL EXAMINER: Let us have the record read.

(The record was read.)

MR. SPARKS: May I have a continuing objection, Mr. Examiner, to any further questions with regard

to what has been referred to by Mr. Goldberg as Exhibit 24 in IT-5914?

TRIAL EXAMINER: Yes.

By MR. GOLDBERG:

Q. Mr. Zinder, the lines there referred to are the [17524] 220 Kv. lines, are they not? A. The statement which you read appearing on page 17 of this document refers to two circuits operating at 230 Kv. connected directly with two circuits of Holtwood Company running to Baltimore.

Q. We now speak of them as 220 Kv., do we not? A. Yes, I believe that is right.

Q. This appears, does it not, at the bottom of page 17 and top of page 18:

> "The 25 cycle 13.3 Kv. energy transmitted from Safe Harbor to Conestoga Substation is stepped up to 132 Kv. for transmission by Holtwood to various points from Conestoga Substation in Pennsylvania, to Perryville Substation in Maryland where it is sold to the Railroad by Baltimore. Four 132 Kv. 25 cycle, single phase, transmission lines owned and operated by Holtwood for this purpose run between these two points. Energy is also purchased by the Railroad at Conestoga for transmission over its own transmission lines running from Conestoga to Harrisburg, Pennsylvania, to Coatesville, Pennsylvania, and also to Perryville, Maryland."

I have correctly read that, haven't I?

A. The statement you read appears at the bottom of page 17 and the top of page 18 of the document you have submitted [17525] to me.

Q. You state, do you not, on page 18:

> "Energy is also sold by Holtwood to the Edison Light and Power Company at York, Pennsylvania, and

to the Philadelphia Electric Company at Coatesville, Pennsylvania, over the 2-circuit 70 KV transmission lines running from the Holtwood plant"?

A. What you read is a portion of the last paragraph beginning on page 18 of the document before me.

Q. You do not there say, do you, that the energy is also sold by Safe Harbor? A. There is nothing in that statement saying that energy is also sold by Safe Harbor.

Q. At the top of page— A. Pardon me, could I go back to page 18?

Q. Yes. A. All right.

Q. At the top of page 25 of Exhibit 24 you state, do you not:

"The contract between Holtwood and Baltimore as it is modified is similar to the agreement under which Safe Harbor sells all of its power and energy to Holtwood and Baltimore in that it is largely independent of the amount of power and energy supplied."

You so state, do you not?

[17526] A. That is a portion of the paragraph appearing on page 25 of the document before me.

Q. Do you want to read the balance of the paragraph? A. I don't want to read it.

Q. I just want you to know you are at liberty to read any additional portions you wish. A. I just wanted the record to show that it is not an entire paragraph.

Q. Yes. The balance of the paragraph isn't necessary for that first sentence, the first sentence is an accurate sentence without the balance of the paragraph, isn't that so? A. Well, I am not sure, I would have to study it a little bit more.

Q. Then let's read the balance of the paragraph so that nobody will have any doubts. Continuing the paragraph on page 25, you state, do you not:

"Thus, a reduction in Holtwood's operating expenses as a result of reduction in the cost of service

supplied to Holtwood by Safe Harbor would automatically reduce the cost of service to Baltimore"?

A. What you have read is the balance of the first paragraph appearing on page 25 of that document.

Q. Referring to page 27 there is a table entitled: "Table 8, Safe Harbor Water Power Corporation, Docket IT-5914, Revenue from Energy Sales 1938-1943, Inclusive," isn't [17527] that so? A. That heading appears on page 27 of the document.

Q. And it has seven columns, right? A. Correct.

Q. The first column is "Year;" the second is "Sales to;" the third is "Kilowatt hours;" the fourth is "Percent of total;" the fifth is "Gross revenue;" the sixth is "Percent of total;" and the seventh is "Average revenue cents per kilowatt hours." A. Those are the seven columns.

Q. Under the second column "Sales to" there is shown Baltimore and Holtwood companies, right? A. There is shown Baltimore and Holtwood.

Q. Those are Baltimore and Holtwood companies, right? A. I assume so.

Q. Those are the only sales shown for Safe Harbor, right? A. There are no other sales listed under the column "Sales to."

Q. On page 28 there is a tabulation entitled "Table 9, Safe Harbor Water Power Corporation, Docket IT-5914, Holtwood Sales of Energy 1938-1943, inclusive," isn't that so? A. The title appears at the top of Table 9, page 28.

Q. And Column 2 of that table is entitled "Purchaser," right? [17528] A. That is correct.

Q. And the purchasers are shown in each of those years as Baltimore, Pennsylvania Power & Light Company, Philadelphia Electric Company, Edison Light & Power Company and Pennsylvania Railroad Company? A. That is right.

Q. Turning now to page 29 we find another table, do we not, entitled "Table 10, Safe Harbor Water Power Corporation, Docket IT-5914, Interchange Transactions by

Holtwood, 1938-1943, inclusive," isn't that so? A. That title appears at the top of Table 10 on page 29 of the document.

Q. And the companies with whom the interchange transactions take place are listed as Philadelphia Electric Company at Perryville and Thorndale, Pennsylvania Power & Light Company at Harrisburg and Metropolitan Edison Company at Violet Hill, isn't that so? A. The companies you named are those listed in Column 2 of that table.

Q. And on Tables 9 and 10 Safe Harbor isn't mentioned, isn't that so? A. Safe Harbor's name appears at the top of the table.

Q. Well, as a purchaser or seller? A. It isn't mentioned as a purchaser and is not listed in Column 2 labelled "Company."

[17529] Q. Of Table 10? A. Of Table 10.

Q. And the appearance of Safe Harbor is in connection with the designation of the proceeding, the appearance of the name "Safe Harbor"? A. I assume so.

Q. Now then, referring to page 30 there is a table entitled "Table 11, Safe Harbor Water Power Corporation, Docket IT-5914, Sales to Railroad for Years 1938-1943, inclusive," isn't that so? A. That title appears on page 30.

Q. And the selling companies to the Railroad on that table are shown as being Baltimore Company and Holtwood, isn't that so? A. Column 2 of the table on page 30 under the heading "Selling company" has only two names, Baltimore and Holtwood.

* * *

[17537] MR. SPARKS: Mr. Examiner, we are prepared with some redirect at this time, but I think you will realize that the character of the cross-examination today, up to now, has been such that we could not under

any circumstances be prepared to go forward with redirect with regard to that cross examination.

TRIAL EXAMINER: Will you specify what cross examination you have reference to?

MR. SPARKS: I will be glad to. I refer specifically to the cross examination by counsel for the staff relating to Exhibit X in the Safe Harbor case, IT-5914, which contains 40-some pages, and to cross examination by counsel for the staff with regard to Exhibit 24, in the Safe Harbor [17538] rate case, IT-5914, which documents were first referred to in this record this morning. We have had no opportunity to examine those two documents, nor have we had an opportunity to examine the direct testimony or the testimony given under cross examination, if there was any, of the witnesses who sponsored those two exhibits in IT-5914, and in the earlier Safe Harbor case, where I understand the document referred to as Exhibit X was also an exhibit.

It will be necessary for us, if we are to have a reasonable opportunity to complete the redirect testimony of this witness, to examine the testimony of the witnesses who sponsored those two exhibits and to examine those two exhibits. We have not, as I say, had an opportunity to do that, and it is unreasonable to require us to go ahead with redirect based on this morning's cross examination, without our having an opportunity to make that study and to give consideration to those documents and to today's transcript.

[17539] TRIAL EXAMINER: Why do you refer to the testimony of the witnesses in the prior proceeding?

MR. SPARKS: Because we don't know, Mr. Examiner, at this time, whether the testimony of the witnesses who sponsored those two exhibits has any bearing on the redirect of this witness with relation to his

cross-examination this morning. We don't know until we examine that testimony. They qualified the exhibits in that proceeding, presumably, but we have had no opportunity to even determine that, let alone to determine what they said.

MR. GOLDBERG: May I be heard, Mr. Examiner?

MR. SPARKS: And let me say one other thing, Mr. Examiner. This witness was first on cross-examination, I think, a week ago. Counsel for the Staff waited until the last day before he brought in these exhibits, and made it necessary for us to consider those exhibits before going forward with redirect.

MR. GOLDBERG: May I be heard?

TRIAL EXAMINER: No, I don't think it is necessary.

MR. GOLDBERG: I just wanted to address one inquiry to counsel for the Respondents through the Examiner.

TRIAL EXAMINER: What is the nature of the inquiry?

MR. GOLDBERG: Counsel for the Respondents stated this is the first time today that on the record reference has been made to these exhibits. I would like to inquire whether today, [17540] was his first knowledge of those exhibits and his knowledge of their contents.

MR. SPARKS: My answer to that, Mr. Examiner, is an unqualified "yes." Today is the first time I have ever laid eyes on those two exhibits, and it is the first time I have ever heard of those two exhibits.

TRIAL EXAMINER: I don't see why you should not be prepared to conduct redirect examination of the witness by Monday morning with regard to those two exhibits.

MR. SPARKS: I am not sure that we will be, Mr. Examiner. You will recall that we have had proposed rebuttal testimony, and exhibits served on us. If your ruling is to be applied to us with regard to cross-examination, on those exhibits and on that testimony, and if we are to be given an opportunity to prepare rebuttal on those exhibits and on that testimony, I don't believe we can be ready by Monday morning with this witness.

TRIAL EXAMINER: Well, I will give you until Monday morning. Now, Respondents' counsel is not single-handed. He has here before us the very witness who prepared those previous exhibits and who apparently is familiar with that in both those previous proceedings.

MR. SPARKS: We have here before us the witness who prepared those exhibits, Mr. Examiner, did I hear you say?

TRIAL EXAMINER: Exhibit X and Exhibit 24.

[17541] MR. SPARKS: No, Mr. Examiner, there is no testimony that the witness Zinder prepared those exhibits.

TRIAL EXAMINER: He assumed responsibility for the preparation of those exhibits, did he not?

MR. GOLDBERG: "Directed and supervised," according to his testimony.

MR. SPARKS: Whatever the evidence shows, Mr. Examiner, it shows. But I am sure it does not show that this witness prepared them; and I am sure the record does show, this morning, that the witnesses who sponsored those exhibits in the Safe Harbor case prepared them, and not this witness.

TRIAL EXAMINER: Well, I think this witness can be of sufficient aid to you in preparing for that part of

the redirect to justify the Examiner setting Monday morning, 10 o'clock, as the time for you to conduct your redirect of this witness.

MR. SPARKS: Let me say, Mr. Examiner, that on the basis of Mr. Goldberg's statement yesterday that he would be through with the cross-examination early today, the witness Zinder made an appointment to go to New York Friday. So that he will not be available for any help to me, or to anybody else, in preparing his redirect.

TRIAL EXAMINER: When will the witness return from New York? Tomorrow evening?

THE WITNESS: Probably.

[17542] TRIAL EXAMINER: I still set Monday, 10 o'clock, as the time for your redirect.

MR. SPARKS: I take exception to your Honor's ruling and say the ruling deprives Respondents of a fair trial because we have not been given a reasonable opportunity to prepare redirect.

* * *

[17543] REDIRECT EXAMINATION

By MR. SPARKS:

* * *

[17552] Q. At page 16517 you were questioned about the possibility of depending on "as, if and when available" power to meet firm power commitments. This question followed other questions relating to the differences between Penn Water's 60-cycle generation under certain specified conditions and the 60-cycle requirements of the Pennsylvania customer loads. Then, at line 16 of page 16518, you agreed that "sources that are available only on an as, if, and when basis, are not considered by me as firm power commitments," was that your testimony? A. That is right, yes.

Q. Does that testimony mean that Penn Water cannot receive supplemental energy supplies on an as, if, and when basis, and use them in connection with its supply of firm power loads? A. No, it certainly does not.

* * *

[17553] Q. Have you now been informed that there may be some misunderstanding of the designation "Manor Substation"? A. Yes, I have. I have now been informed that there will soon be a 66 kv Manor Substation in addition to the 220 kv Manor Substation.

* * *

[17563] FURTHER CROSS-EXAMINATION

By MR. GOLDBERG:

* * *

[17573] Q. Does that mean that you did have all of Penn Water costs, which it incurs in rendering service to its customers? [17574] A. To the best of my knowledge, I have. That was what was given to me, and, as I stated, I started with those figures and took no responsibility for them.

Q. And they are in column 1 on page 25, Exhibit 319; is that right? A. The costs given to me are in Column 1, Page 25, yes.

Q. And those are the costs given to you pursuant to your request for all of the costs incurred by Penn Water in rendering service to its customers; isn't that so? A. I do not recall the exact nature of my request, but I believe it was essentially that.

Q. That is what you had wanted to make your allocations, total costs, all costs of service? A. That is right.

* * *

[17613] GEORGE W. SPAULDING

* * *

CROSS EXAMINATION

By MR. WAHRENBROCK:

* * *

[17667] Q. Well, maybe it is implicit in your understanding as an engineer, but do I understand that what you mean is that for interchange accounting any particular amount of electric energy moving from one party to the interchange to the other is considered as having the same cost as that moving from the second to the first during the same hour, but may not have the same cost during different hours?

* * *

A. The reason I ask is that your question carried a statement about which you and I have been discussing for several days, namely, whether the energy and the other services actually were transmitted between two parties—that is, delivered by one and received by the other, and of course, I have continuously stated that they were not in [17668] connection with this transaction, I didn't want to encumber the record by going all through that again and, therefore, I wanted to point that out before I went back and was more specific about the rest of your question. With that understanding, I shall be glad to have the question read and endeavor to explain it.

* * *

A. May I answer it this way: that the costs on the system of each party are assumed not to change within a clock hour. And that is the reason that we used the net flow in that hour.

By MR. WAHRENBROCK:

Q. And that assumption of no change within the hour does not extend outside the hour and hence you do not attempt to net the net of one hour against the net of the

[17669] other; is that right? A. That is correct, yes. It would be a coincidence, perhaps, if you found the same cost on two different hours in the same day. Frequently, of course, that coincidence does occur.

Q. Yes. Then, it is the assumption of the equality of cost which is the basis for the netting within the hour? A. That is right. Well, may I say the behavior of the costs, rather than the assumption of the costs, and I am not using behavior in any peculiar sense there. The costs don't, as a rule, change very much within the hour, and while they may on one hour change in one direction, perhaps in another hour they may change in the other direction, and for all practical purposes, it is acceptable by the systems with which I am familiar, in connection with the interchange transactions, to assume, based on the experience of the companies, that the costs do not vary within the hour, or if they do, such changes do not justify any more accuracy of accounting.

Q. Then, it isn't because the gross flows are not actual or real, physically, but because of this cost aspect, that they are netted within the hour?

* * *

[17670] A. So long as we are talking about a single line between two parties, I think I would agree.

By Mr. Wahrenbrock:

Q. Yes. A. And by single line I mean a single electrical interconnection between the two systems.

Q. Involving merely actual interchange at that point, such as is involved in this testimony at the bottom of transcript 16616 and the top of 16617? A. No, because at 16616 that is not the situation. We have more than one interconnection over which the flow of electric services are metered separately on the two parallel paths.

* * *

[17672] Q. You have spoken in several different connections of net hourly energy flows. The first reference you

made was that on 16595, lines 12 to 15. Now, what I seek to ascertain is that generally, in this interchange accounting, to which Penn Water is a party, the reason for the hourly netting is essentially this cost aspect which you have just explained. A. I think that is generally correct, but to be sure that I do understand it, when we speak of the cost aspects, we have to include, of course, the additional accounting that might be required if you attempted to use shorter periods of time, the amount of records, the amount of manpower, and so forth, which is all a part of these costs that we are talking about. After all, we operate our system on a practical basis and not on a theoretical basis at all times in connection with this accounting. There are certain limits to the practicalities of carrying out interchange accounting as distinct from firm power accounting, and we have to consider the practical aspects of it, and we do. And it was for that reason that I stated, on page 16595, that the gross flows of energy have no significance in that connection.

Q. But you don't mean to say, do you, that there are not actual energy flows as measured by the ratcheted megawatt hour meter readings on the system?

* * *

[17673] The Witness: No, indeed.

* * *

[17681] Q. Referring, if you will, please, to transcript 16626, and your answer, which begins on line 9, where you say that Mr. Roland's assumptions are not related to the energy accounting used in connection with the billing for interchange transactions, do you mean that he has used gross energy flows, while the billing is done on the net hourly basis? A. The accounting and recording of energy is done on a net hourly basis, yes.

[17682] Q. Whereas he used the gross energy flows? A. That is correct, and I don't know of any use made of those

gross figures, and that is the reason I thought they did not have significance.

Q. Yes. But again, in this case, as in the other case, you are not denying that the gross energy flows are actual electric energy flows? A. I am not denying that the meters recorded the kilowatt hours shown, no.

Q. And that the kilowatt hours flows shown by the meters did occur? A. Instantaneously, yes.

Q. Well, weren't Mr. Boland's figures to which you were here referring based on integrating meter readings? A. That is correct.

Q. Then, it would not be limited to just instantaneous flows? A. It might be.

Q. Don't the integrating meters integrate all of the flows throughout an hour? A. Well, I am sorry. I see you misunderstood my use of the word "instantaneous." I wasn't thinking in terms of cycles, I was thinking in terms of a few minutes. In other words, if you have power flowing in one direction and for a short time you have it flowing in the other, [17683] actually, of course, the kilowatt hour meters read the proper flow of power for whatever period that may be, in one direction, and then in the reverse direction.

Q. And the integrating ratcheted kilowatt hour meter readings add up to the total of those flows, however long or short in one direction, and the other ones add up to the totals of those flows, however long or short in the other direction? A. Certainly.

Q. You are not saying here that those flows didn't actually occur as so added up? A. No, indeed.

* * *

[17689] Q. By backfeed you mean flow, from Maryland north? A. From Baltimore and Washington Companies north.

* * *

[17709] Q. Directing your attention to transcript 16599 of your rebuttal testimony, and particularly to the sentence which begins on line 19 and ends on line 23, in which you refer to energy originating in Maryland, is the supply of electric energy from the Baltimore Company accompanied by the supply of any other electric services transmitted from Maryland? A. Generally not.

Q. The Baltimore Company does not supply to Penn Water or Safe Harbor voltage regulation services or any power factor cooperation, or any frequency control? A. Generally not.

Q. When does it supply? You say generally not. A. I say that because the back-feed received from Maryland, under the conditions referred to at this point in the record, is received in the same manner that interchange services are received, and when interchange services are being received, it is the responsibility of the receiving company to provide the necessary voltage regulation, necessary capacity services, the necessary frequency control, and the necessary power factor cooperation.

Q. And the company which supplies the energy under these interchange arrangements does not supply these other [17710] electric services? A. As a rule, no, that is correct, except by special arrangement, which are separate arrangements.

Q. And does the Baltimore Company generally not supply capacity or spinning reserve when it supplies energy? A. Generally not, that is correct.

Q. Have you examined meter readings to ascertain whether the Baltimore Company did supply any r. v. a.? A. I have examined a lot of meter readings on the log sheets as recorded on the log sheets of the companies, and I find that Baltimore Company almost never provides any reactive kva in such connection. There are a few occasions when very small amounts of such service are provided.

Q. Has Penn Water ever called on the Baltimore Company to provide spinning reserve? A. No, it doesn't have to during those conditions. It has ample for itself.

Q. But does it, in fact? A. No.

• • •

[17747] Q. What I have reference to is perhaps explainable by reference to the sentence in your testimony which begins on line 7 where you say "The electric services so rendered are rendered jointly."

[17748] Now by saying that those services were so rendered jointly what did you mean as to what Penn Water did that is different from what it would be if Penn Water supplied those services by itself.

• • •

[17749] THE WITNESS: If these electric services were not rendered jointly Penn Water would have to operate much differently than it now does, both as respects the supply of reactive KVA and the other electric services.

• • •

[17750] THE WITNESS: I cannot state specifically what Penn Water would do differently but I know it would do something differently.

• • •

Q. Is there anything in the physical operations of Penn Water which enables you to characterize, as you do in line 8, the services which it renders as joint services?

• • •

[17753] THE WITNESS: The answer is yes.

• • •

Q. What?

MR. MYSE: I object to that, Mr. Examiner. That calls for at least several days' testimony. It is all set out fully in his direct examination in the case in chief.

TRIAL EXAMINER: What makes you think it is going to call for two days' testimony?

MR. MYSE: Well, Mr. Examiner, it took that to put it in in the first case in chief.

TRIAL EXAMINER: Why did you put it back in the rebuttal?

MR. MYSE: I haven't put that question in rebuttal. I keep repeating, Mr. Examiner, the whole line of cross-examination is outside the scope of the witness' direct examination.

TRIAL EXAMINER: If this witness had covered the question of joint services, why did you put in that last sentence?

MR. MYSE: In order to rebut the statement of Mr. Roland at page 912 on line 11 of the record.

TRIAL EXAMINER: The objection is overruled. I think counsel's statement is sufficient justification for the [17754] cross.

* * * *

THE WITNESS: In order that I may answer it as specifically as possible, which services are we talking about and to whom?

By MR. WAHRENBROCK:

Q. The question goes to the services which you are referring to in lines 7 and 8 and the two companies which you name in lines 2 and 3, to which those services are supplied? A. Yes. Penn Water alone cannot perform the necessary physical operations and Safe Harbor must cooperate in the performance of those physical operations in order that the proper amounts of electrical services may be supplied both to Pennsylvania Power and Light and to Philadelphia Electric. The physical operations I have in mind are the physical control of the electrical facilities, including the turbine and generators, the transformers, the switching equipment; I am also referring to the availability of the necessary indicating instruments which are essential to the proper control of the flow of electric services and

the facilities that need to be controlled in connection therewith.

Q. I am sorry, Mr. Spaulding; that does not answer the question.

• • • •

[17755] THE WITNESS: I cannot be any more specific than I was in my last answer.

MR. WAHRENBROCK: May I have the last answer read?

(Answer read.)

THE WITNESS: I am referring to the answer that was struck.

• • •

[17771] Q. Well, doesn't Baltimore supply three-phase 25-cycle energy which is utilized by the railroad for its requirements, its single-phase requirements? A. No.

• • •

Q. Isn't it a mere matter of connection of transformers in order to be able to utilize energy at a single-phase from three-phase facilities?

• • •

THE WITNESS: That is possible with the proper connections [17772] and arrangement of transformers, but Baltimore does not have such facilities for doing that.

• • •

[17775] Q. Then is it true that your testimony was not referring to all of the backfeed energy received by Penn Water from Maryland as referred to by Mr. Roland at pages 935 to 941?

• • •

[17776] THE WITNESS: Mr. Roland did not show the amount of the backfeed energy received by Penn Water from Maryland. He referred only to the amounts after it was delivered to Safe Harbor. I was talking about the same backfeed energy he was except that the amounts are dif-

ferent in two respects: First, he used gross flow and I used hourly nets. Second, he metered it at one end of the line and I metered it at the lower end of the line in Maryland.

• • •

[17805] Q. Do you agree that two-thirds of the entire output of Safe Harbor is sold to Baltimore Company and one-third to Holtwood?

• • •

THE WITNESS: I don't know.

• • •

[17809] Q. Do you know whether Baltimore receives two-thirds of the energy output of Safe Harbor, either by delivery to it of energy, or by the delivery to others for the account of Baltimore of energy? A. No, it does not receive two-thirds by those two methods.

Q. Why not? A. Because it doesn't.

Q. In what respect does it not?

MR. MYSE: Mr. Examiner, I think that question is [17810] argumentative, and objectionable on the grounds that it is too vague.

TRIAL EXAMINER: Yes.

By MR. WAHRENBROCK:

Q. Is it your point that when delivery is made to someone else for the account of Baltimore that it is not delivered to Baltimore? A. To whom does it make deliveries for the account of Baltimore?

Q. To the Pennsylvania customers. A. No delivery is made to Pennsylvania customers for the account of Baltimore. Notwithstanding Mr. Roland's testimony, no delivery is made to Pennsylvania customers for the account of Baltimore. I don't think Baltimore wants to be in interstate business right now, either. So I am surprised they would contend that.

• • •

Q. I wish you to refer to transcript 16619, if you will, please. When you say that net meter readings are used for interchange accounting and billing, do I understand you to mean that amounts of energy supplied in one direction are offset against corresponding amounts supplied in the other direction? And only the difference is paid for in dollars and cents?

• • •

[17811] A. Within the same hour, yes, sir.

• • •

Q. Would you agree that by that process the [17812] corresponding amounts during the same hour are, in effect, traded? A. No.

Q. Or bartered, for each other? A. No, I would not.

Q. Why not? A. Because I don't think they are.

• • •

[17839] CARL WILLIAM WATCHORN.

• • •

[17840] RE-DIRECT EXAMINATION (Continued).

• • •

[17848] By MR. SPARKS:

• • •

Q. Now I refer you to page 15616 where Mr. Goldberg was referring to the questionnaire used in the gathering of data on hydroelectric units and where at lines 4 to 7 he asked you to ascertain the number of utilities to whom the questionnaire was sent, the number which responded, and he also asked you to obtain a copy of the questionnaire and bring it into the hearing [17849] room.

Are you now prepared to furnish the data there requested and do you have a copy of the questionnaire before you? A. I do.

Q. All right. Will you proceed to give the data requested by Mr. Goldberg at that point? A. The ques-

tionnaire was sent out to 72 companies in the United States and Canada, of which 37 responded, many of them for several years and some for only one year. I have a copy of that questionnaire and explanatory notes with me.

* * *

[17851] RE-CROSS-EXAMINATION.

By MR. GOLDBERG:

Q. With respect to the questionnaire sent to 72 companies in the United States and Canada, you said 37 responded, many of them for several years and some for one year only. How many of the 37 responded for several years? A. I don't know.

Q. Approximately. [17852] A. The data was with respect to 295 units and the responses accounted for 1,092 unit years. On the average that would result in 3.7 years of experience as to each of the units.

* * *

[17898] EDWARD S. LOANE.

* * *

[17899] DIRECT EXAMINATION.

By MR. SPARKS:

Q. Mr. Loane, I show you a copy of a document entitled "Results of Certain Corrections Made to Exhibit 64," which document consists of 13 pages of text and several pages of tables in the back, and which has been identified as Exhibit 351, and ask you if you prepared that exhibit? A. Yes, sir; I did.

Q. Was that exhibit prepared by you in the light of the Examiner's ruling that Exhibit 350 would not be admitted in evidence because of certain defects which the Examiner referred to? A. Yes, it was.

Q. Is Exhibit 351 a revision of your Exhibit 350? A. Yes, sir.

* * *

[17901] CROSS-EXAMINATION.

By MR. GOLDBERG:

* * *

[17916] Q. When you referred to the table V-b at the bottom of page 12 and the top of page 13 and suggest the change of cost of backfeed energy from Baltimore to a cost computed on a daily net basis, do you there have reference to Article 6 of Item H in this proceeding? A. I suppose it would ultimately get back to that, but I referred to the billing which was carried out when there was [17917] actually billing for the backfeed.

Q. Did you conclude that billing was under Article 6? A. I know it is.

Q. What billing are you referring to? A. Exhibits which Mr. Spaulding introduced referring to the billing, I think back in 1931 or 1932.

Q. Just that one year? A. Prior to that, too, from 1927 on, we had such billings.

Q. You say there was billing from 1927 on for backfeed. Is that right? A. I believe so.

Q. Have you personally checked that? A. I know it is so in 1931 or 1932, whichever year he has.

Q. The only year that you are certain about is 1931 or 1932. Is that right? A. Yes.

Q. Was there billing all through the year or just for one month of that year? A. Whenever there was that daily backfeed in those years.

Q. Do you know of your own knowledge for what months there was billing in 1931 or 1932? A. It seems to me the last billing there was September, 1932. I am not sure.

[17918] Q. Exhibit 367 presented by Mr. Spaulding shows billing for backfeed for November, 1931. Are you familiar with that exhibit? A. I have seen it before.

Q. Is it your statement that there are bills for backfeed from the year 1931 in addition to the one which has been marked as Exhibit 367?

• • •

THE WITNESS: I don't know.

By MR. GOLDBERG:

Q. When you referred to the existence of billing, did you have Exhibit No. 367 in mind? A. No. I was more certain about September, 1932 bill, which was the last time such billing was carried out.

Q. That is what you had in mind, at least? A. I also knew of the exhibit.

Q. In connection with your statement on page 13 regarding the basis for the adjustment of the cost of the backfeed energy from Baltimore Company, did you take into consideration any of the other provisions of Items H and I? [17919] A. I didn't take into consideration any of it.

• • •

[17921] By MR. REIBLICH:

Q. Mr. Loane, you would agree, would you not, that the combined Baltimore-Safe Harbor-Holtwood system is operated as a unified power pool in the interests of overall system economy.

• • •

THE WITNESS: That is right.

• • •

[17956] GEORGE W. SPAULDING.

• • • • •

CROSS-EXAMINATION.

By MR. WAHRENBROCK:

• • •

[17976] Q. Will you explain the method you used in arriving at the conclusion that 35 per cent of the total backfeed—that at least 35 per cent of the total backfeed in 1946 was used in connection with the requirements of the Pennsylvania Railroad?

• • •

[17978] THE WITNESS: For any hour in which there was a net amount of energy received at Safe Harbor over the 220 kv circuits from Baltimore to Washington, I first presumed that a portion of that energy was received for the purpose of supplying interchange or used in connection with interchange arranged by Penn Water with its Pennsylvania customers, involving additional generation by Baltimore Company in order to do so, and therefore it was proper and is proper to recognize that the first use of that backfeed was for such interchange because had there not been interchange there would have been less energy received.

The second step was then to determine how much of the remainder was converted by the frequency changer at Safe Harbor from three-phase sixty cycle to single phase, twenty-five cycles.

By MR. WAHRENBROCK:

Q. Can you explain how you did that? A. Yes, I did that in two ways.

In order to determine the maximum amount of such backfeed used in connection with railroad services, I assumed that all remaining backfeed after adjustment for interchange transactions was so converted, and using that method of determination on an hourly basis, I found that about 43 per cent of the [17979] backfeed was used in con-

nection with single phase and railroad supply to the Pennsylvania Railroad.

Then in order to get any possible limitations or other assumptions someone else might prefer, I used a second assumption and arrived at a second answer of 35 per cent of the backfeed used in connection with railroad services, by assuming that none of the backfeed remaining after accounting for interchange transactions was available for conversion until all of the sixty cycle generation at Safe Harbor, plus all the infeed at Safe Harbor from the 66 kv circuits from Holtwood Company was first used for conversion and then the remainder, if any, was assumed to come from the backfeed from Baltimore as indicated by the notes on my work sheet.

* * *

Q. Let me ask you a question now, first about your first assumption, which as I understand it was that the flow of energy from Maryland onto the Safe Harbor bus is a flow of energy which is first used for the supply of interchange energy delivered by Penn Water to the Pennsylvania customers, is that correct? [17980] A. That is generally correct, yes.

Q. That assumption is an assumption not that the energy received from Baltimore is actually the energy which is delivered by Penn Water to the Pennsylvania customers at the points of deliveries, but that as a matter of economics of the operation of the business you treat it that way, is that correct? A. No, I do not think I would agree with you and I think I stated before the reason for treating it in that manner.

The economics of system operation determine the amount of interchange transactions, namely the amount delivered by Penn Water and Safe Harbor to its Pennsylvania customers as interchange. Whenever such transaction is arranged for, it generally means that Baltimore will increase its generation or that Washington would have to increase their generation.

That, at times may result in backfeed from Maryland to Pennsylvania over the 230 kv circuits. When it does result in such backfeed I know as an operating man that the only reason there is backfeed is in order to supply energy for use in connection with these interchange transactions.

I am not interested in the slightest where that energy goes in a tracing manner. I am interested in the purpose for which it does come back from Maryland to Pennsylvania.

Therefore, in everything that we do today, and everything [17981] we have done for years Baltimore Company and Penn Water have always recognized that that backfeed is first used in connection with interchange transactions.

It was only natural then that in preparing this worksheet and this figure that I would use exactly that same procedure.

I cannot answer the question of where it went as a matter of physical fact and I am not interested, I am only interested in the purpose for which this backfeed was received.

TRIAL EXAMINER: Now, let us not repeat unnecessarily.

By MR. WAHRENBROCK:

Q. The same explanation applies to your second presumption, does it not, your second assumption? A. Which one?

Q. That is, that none of the remaining backfeed is available for supply of the railroad until all of the 60 cycle Safe Harbor generation and all of the infeed at Safe Harbor from the 66 kv circuits from Holtwood has first been used for the supply of the railroad's requirements? A. In that connection, I do not agree with that assumption; but I was afraid that someone else might want to use it and I wanted to show the extreme possibilities, on any possible assumption that one might use, what percentage figure one

could get and that is the reason I used the second presumption, not that I agree with it in any respect.

[17982] Q. The second assumption, whether you agree or disagree with it, is likewise one which is not based upon the actual tracing of the energy? A. Absolutely, that is correct. It is not based on any tracing of energy.

• • •

[17984] Q. Are there hours when there is a receipt of what you refer to as backfeed on the Safe Harbor bus and no delivery of interchange energy to the Pennsylvania customers? A. There may be.

Q. During such hours is the receipt of backfeed determined by the interchange requirements? A. Obviously, if there were no interchange requirements the amount received would not be related to the interchange requirements, if I understood your question.

Q. Then the answer is yes? A. My answer stands as it was.

Q. Can you answer it yes or no?

• • •

[17985] THE WITNESS: No.

By MR. WAHRENBROCK:

Q. Is it determined by the firm power requirements?

• • •

[17986] THE WITNESS: It may or may not be, not necessarily, no.

• • •

Q. You have said it may or may not be, I want to know under what circumstances it would and under what circumstances it would not.

TRIAL EXAMINER: That is going too far afield. Obviously the circumstances mean nothing in this hearing unless they relate to the exhibit you are now using as the basis of your cross-examination.

• • •

[17987] Q. Mr. Spaulding, why during an hour when there was no interchange requirement and backfeed was received

from Maryland and there was a firm power requirement, did you not assume that the backfeed went to the supply of that firm power requirement before going to the supply of the railroad requirement? A. Because Baltimore Company has an operating responsibility relating to the supply of the Pennsylvania Railroad's firm requirements. That is very obvious from all of my testimony.

[17988] Q. Why did that firm obligation—why did you assume that firm obligation was of such a nature that the energy went first to it over the supply of energy to the other firm obligations? A. Because in one case Baltimore Company has an operating responsibility and in the other case it has none, and when I say it has an operating responsibility of course I am talking about the supply to the Pennsylvania Railroad, and when I say it has none I am referring to the Pennsylvania customers of Penn Water and Safe Harbor, including Met. Edison, Pennsylvania Power and Light, and Philadelphia Electric.

* * *

[17995] Q. I will now reframe the question and put this question to the witness: When you say that the Baltimore Company has an operating responsibility for the supply of the firm power requirements of the Pennsylvania Railroad is that operating responsibility an operating responsibility for the supply of energy which is transmitted from Maryland? A. At times, and I am assuming when you talk of "the supply of energy which is transmitted from Maryland", you are not referring to the supply of energy to the railroad, but rather the supply of energy to Penn Water and Safe Harbor who have the facilities for furnishing electric services to the railroad.

I have to make that assumption in connection with my answer, Mr. Wahrenbrock.

Q. All right. Now, you say at times, what are those times? A. At such times as Penn Water and Safe Harbor do not have sufficient energy themselves to supply the requirements of the Pennsylvania Railroad—and I am speaking of all the requirements of Pennsylvania Railroad,

under Exhibit 10—while operating their facilities—and I am referring to their generating facilities—for maximum utilization of the natural resources.

• • • •

[18002] TRIAL EXAMINER: Mr. Witness, in addition to the interchange requirements should the firm power requirements under some circumstances come ahead?

THE WITNESS: No.

TRIAL EXAMINER: Why not?

[18003] THE WITNESS: Because Baltimore Company has no operating responsibility at any time for the firm power requirements in Pennsylvania. They do have an operating responsibility for at least a portion of the Pennsylvania Railroad requirements and the interchange is not a requirement at all but is a transaction to carry out the most economical operation.

• • • •

[18005] Q. I ask that you direct your attention, if you will, please, to transcript 16601 of your rebuttal testimony, and particularly to line 18 of that page, and I ask if you will, please, that you state what you meant in that answer by the term "net Baltimore backfeed"? A. It is the amount of kilowatt-hours determined from the sum of the net hourly readings measuring the amount of backfeed received by Penn Water and transmitted to Safe Harbor.

Q. Is that limited to the amounts received over the 220 kv circuits? A. Right.

Q. And by backfeed, you mean energy transmitted from Maryland to Safe Harbor, is that right? A. That is correct.

Q. Now, in the same line and in the next line, will you explain what in that answer you mean by the phrase "In connection with electric services supplied to Penn Water's or Penn Water's and Safe Harbor's firm power customers in Pennsylvania (excluding the Pennsylvania Railroad)"? A. The net kilowatt-hours received by Penn Water and Safe Harbor, used in connection with all electric services

[18006] supplied to the Pennsylvania customers, inclu g energy, capacity and so on.

Q. When you say "used in connection with", do you mean that that energy supplied in whole or in part energy requirements of those customers? A. I do not know. The energy was received at Safe Harbor at the time that energy was being delivered to these Pennsylvania customers to meet their requirements.

Q. The figures which you show in your Exhibit 357 are not clear to us, Mr. Spaulding, and I would like to have you refer to your Exhibit 357, and take the kilowatt-hours in column 1 and explain how you computed it for any one year, if you will, please? A. Supposing that you use one hour as an example, and of course, I do not have the exact hourly figures to use, but I would use a hypothetical hour for purposes of illustration.

I again, as in our discussion this morning, considered that any of the backfeed received at Safe Harbor was the amount actually metered because of the interchange transactions that may have been arranged for in that hour, and therefore I reduced my net backfeed by that amount.

Secondly, I further considered that the second use of backfeed was for the supply of the Pennsylvania Railroad loads.

However, in this instance, in contrast with Exhibit 354 I assumed that any amounts so received and delivered to the [18007] Pennsylvania Railroad, any amount so received in connection with the delivery of services to the Pennsylvania Railroad for service in Maryland was a delivery from Safe Harbor to Baltimore Co. I was therefore only concerned with the amounts supplied to Pa. Railroad in Pennsylvania in connection with the computation of this figure.

TRIAL EXAMINER: What figures are you referring to, Exhibit 357?

THE WITNESS: Yes.

TRIAL EXAMINER: What column?

THE WITNESS: Column 1.

By Mr. Wahrenbrock:

Q. How did you determine the amount of that portion to which you last referred of the deliveries to the Pennsylvania Railroad which were used in Maryland? A. For the hypothetical hour, I knew the requirements of the Pennsylvania Railroad in Maryland. I knew the amounts delivered to the Pennsylvania Railroad facilities at Benning. The balance was the amount delivered to the Pennsylvania Railroad in Maryland.

Q. Did you have to take into account the amounts delivered or interchanged at Perryville and which originated from the Philadelphia Electric Company at Chester? A. Not for this purpose, no.

Q. Well, if there were during any of these hours receipts [18008] at Perryville from the facilities of the railroad of energy originating in Philadelphia Electric at Chester, how was that measured and determined that it was not included in these amounts? A. May I use a second example to show that? May we assume that there were 20,000 kwh received at Safe Harbor over the 220,000 volt facilities from Baltimore and that there were during the same period or hour delivered to Pennsylvania R. R. from whatever source it may have been delivered a total of 30,000 kilowatt-hours used by the railroad in Maryland; that 5,000 of those kilowatt-hours were supplied from Benning.

The net amount supplied to the railroad in Maryland was 25,000 kilowatt-hours delivered to the railroad at Perryville for use in Maryland.

Q. And delivered at Conowingo, also, or in part? A. That is correct; Conowingo and Perryville for use in Maryland.

I was not concerned with who made the delivery. For that hour, then, we have 20,000 kilowatt-hours received at Safe Harbor from Baltimore and 25,000 delivered to the railroad for use in Maryland.

I then had for that hour no backfeed at all used for any other purpose because there was more delivery to the

railroad in Maryland than there was received from Baltimore.

Q. Now, to test the question that I was seeking the [18009] answer to, may I just change one figure for you and ask you what you did under those circumstances? A. You may.

Q. Instead of 20,000 kilowatt hours received at Safe Harbor over the 220 circuit from Baltimore, assume during that hour there were 25,000 kilowatt hours? A. There would still be no use of backfeed for Pennsylvania customers as is shown in column 1 of Exhibit 357.

Q. Now, that is the way you did make your calculation, on that theory illustrated by that hypothetical hour? A. That is correct.

Q. Now, what I want to inquire is how in so making your allocations of energy you took into account, or whether you in fact did not take into account that during that hour part of the 25,000 delivered to the railroad at Conowingo and at Perryville may have been energy which, as you explained earlier in your cross-examination, was supplied to the railroad facilities at Chester by the Philadelphia Electric Co. and being in excess of the requirements of the railroad between that point and Perryville were treated as delivered to Penn Water, and by it to the Pennsylvania Railroad for use beyond Perryville.

* * *

[18010] THE WITNESS: I did not concern myself with whether or not a portion of the 25,000 kwh delivered to the railroad for use in Maryland at Conowingo and Perryville came from Chester, or whether it came from Safe Harbor for the purpose of these figures on Exhibit 357.

By MR. WAHRENBROCK:

Q. A portion may have come from that source during those hours? A. That is correct.

Q. And as much as 25,000 might come from that source during any one of those hours? A. Perhaps.

Q. That is 25,000 megawatt hours or kilowatt hours? A. Kilowatt hours in one hour and I doubt that there would be that much.

Q. Now, with this same hour in mind that we have last been talking about, that is the illustration you gave with the 25,000 kilowatt hours received at Safe Harbor over the 220 circuits from Baltimore, the other figures remaining as you gave them, assume, if you will, that the meters show a flow from the 60 cycle Safe Harbor bus to the 25 cycle Safe [18011] Harbor bus of only 10,000 kilowatt hours.

Under such conditions, did you make any adjustment in the manner of treatment which you have previously explained?

* * * *

THE WITNESS: I did not concern myself with the operation of the frequency changer at Safe Harbor in connection with the determination of the amounts shown on Exhibit 357.

By MR. WAHRENBROCK:

Q. And I understand that to mean that if the meters on the circuit between the 60 cycle bus and the 25 cycle bus recorded less than 25,000 kilowatt hours in the direction [18012] of the 25 cycle bus during this hypothetical hour, that made no difference in your treatment of the allocation of energy during that hour.

* * *

THE WITNESS: My statement was that I gave no consideration to the operation of the frequency changer or the amount of energy converted through the frequency changer in either direction.

By MR. WAHRENBROCK:

Q. We are not clear, in spite of your previous answer, that you have started in this allocation with the net hourly energy receipts over the 220 kv circuits, that you may not in your answer have overlooked transactions over 66 kv. 25 cycle line from Holtwood to Highlandtown, and I want

to ask you if you will state specifically whether the starting figure which you used in this computation on Exhibit 357 was the receipts over the 220 kv circuits without any deduction for any amount which might have been flowing in the other direction during the same hour over the 25 cycle circuit? A. I did net the flow on the 25 and 60 cycles as a starting figure, but that was not your first question. Your first question was how does the energy become transmitted as shown on that exhibit and that energy is transmitted from Safe Harbor over the 220 kv circuits.

[18013] Q. Were there substantial amounts transmitted from Holtwood to Highlandtown during the hours which you considered in calculating the figures in the first column on Exhibit 357? A. I do not understand your question. First, what do you mean by "substantial amounts"?

Q. Substantial in relation to the amount of backfeed over the 220 kv circuits?

* * *

THE WITNESS: I do not know how to answer that question specifically. Of course I did consider all hours in the year in order to arrive at the figures shown, but in all hours there was not backfeed over the 220 kv lines.

In certain hours of the year there were substantial amounts flowing from Holtwood to Highlandtown in Baltimore, as the record clearly shows.

I still do not know whether I have answered your question.

By MR. WAHRENBROCK:

Q. Well, maybe we can approach it if you can tell us what the figures for any one of the years in column 1 on Exhibit 357 would have been if you had not deducted from the receipts over the 220 kv the flow toward Highlandtown over [18014] the 132 kv circuits from Holtwood to Highlandtown?

* * *

THE WITNESS: I do not believe I can.

By Mr. Wahrenbrock:

Q. Were there hours in which the flow toward Highlandtown over the 132 kv circuits exceeded the amount of flow—you are shaking your head; I do not understand. A. There is something wrong with your question already. You talk about the 132 kv lines at Highlandtown. Of course, there are no 132 kv lines at Highlandtown.

Q. I see. The line from Holtwood to Highlandtown is a 66 kv line? A. Yes.

Q. All right. Were there hours when the amount of the net flow to Highlandtown from Holtwood over the 66 kv circuit exceeded the amount of the flow from Baltimore to Safe Harbor over the 220 kv circuits? A. Most of the time.

Q. Now, during an hour in which the flow toward Highlandtown over the 66 kv circuit exceeded the amount of the flow towards Safe Harbor over the 220 circuit, did you use a negative figure in computing the total which went into the first column on Exhibit 357? A. No, I did not. [18015] There is nothing in that hour. I would use zero in that hour.

Q. You would use zero in that hour? A. Right.

Q. I wish you would look at Exhibit 369, if you will, please, and tell me whether the figures in the first column on that exhibit are computed by netting the flows on the 66 kv circuit from Holtwood to Highlandtown against the flows on the 220 kv circuit from Baltimore to Safe Harbor? A. That is correct, and in order that you may understand, I wish to state again that in each instance after netting the flows in those two circuits, I also gave consideration to the amount of energy delivered to the railroad at Perryville for use in Maryland, so that those three factors must be taken into consideration in each hour in connection with the amounts shown in column 1 of Exhibit 354.

Q. Is the same thing true of Exhibit 369, the first figure, the figures in the first column? A. That is correct.

Q. Now, your reference to your deduction of the deliveries to the railroad makes it seem to me material to inquire whether the flows over the line from the Conestoga bus at Safe Harbor to Perryville are predominantly in that direction or in the reverse direction? A. I think—I was not concerned with that.

[18016] Q. But do you know? A. The flow was predominantly from Conestoga substation to Perryville over circuits P-7 and P-8, and predominantly from Perryville to Conestoga on circuits P-5 and P-6.

Q. In your deduction of the amounts supplied to the railroad, to which you previously referred, did you take net amounts over those four circuits? A. No, I computed it exactly, as I stated sometime back, by taking the difference between the requirements of the railroad in Maryland and the amounts received by the Railroad from the Benning frequency changer.

Q. And the actual metered flows on the circuits from the Conestoga bus to Perryville did not influence your determination? A. The amount of energy flowing on any of the groups of circuits was not used by me in arriving at the figure used in the determination of the amounts shown on Exhibit 357.

Q. Well, then, will you explain what the basis is for the figures you used as representing the railroad's requirements for its own purposes in Maryland?

* * *

The Witness: I will have to give consideration to the meters at Perryville on the so-called bypass that we discussed yesterday, the meter readings on P-7 and P-8 circuits at [18017] Safe Harbor, the meter readings at Fishing Creek and the meter readings at Benning.

Q. And your figures which are reflected in the first column of Exhibit 357 are based upon the totals for each of those three years of figures so computed from such meter readings?

* * *

THE WITNESS: I am sorry. I do not understand the question.

By MR. WAHRENBROCK:

Q. Well, you say you gave consideration to the meters on the bypass, on circuits 7 and 8, at Safe Harbor, at Fishing Creek and at Benning? A. Oh, those were for the purpose of determining the requirements of the railroad in Maryland for its own use.

Q. Now, do I understand you mean that you took the yearly totals of those meter readings and computed the yearly requirements for each of these three years of the railroad in Maryland from those meter readings?

MR. MYSE: For what purpose?

THE WITNESS: Certainly not for the purpose of Exhibit 357. I considered them hourly along with the other things we have been discussing in the last 15 or 20 minutes. I took no annual figures.

[18018] Everything was on an hourly basis.

By MR. WAHRENBROCK:

Q. But you took those hourly figures that you have just referred to for these meters on the bypass, on circuits 7 and 8, Fishing Creek, and Benning which entered into your hourly calculations which you made for every hour for each of these three years? A. No, but I had to have that amount being the railroad's requirement in Maryland for each hour of each of three years as one of the components that I considered in connection with the figures shown on 357; but I did not use the figure for every hour. It is not a matter of plus or minus. I had to set it up in order to determine this figure but I only used it for relatively few hours.

Q. That is to say you made a sampling study? A. No, I had to do it every hour but only in certain hours of the year were there amounts that I reflected in Exhibit 357, as the title would indicate.

For instance, there were only certain hours in the year when there was a net backfeed from Baltimore for any purpose. There are two purposes: one was the net backfeed that is used for railroad purposes, such as we discussed this morning in connection with Exhibit 354.

Then there were also amounts of net Baltimore backfeed used in connection, et cetera, which are computed for the [18019] purpose of Exhibit 357.

Q. Now, for every hour in which there was a net backfeed, that is a net of the flow on 66 kv circuits and on the 220 kv circuits, did you in reaching the figures in the first column of Exhibit 357 actually compute the railroad's Maryland requirements by using the meter readings on these four sets of meters that you referred to, the bypass, circuits 7 and 8, Fishing Creek and Benning? A. I think that is generally a correct statement, yes. The only reason I do not want to say yes, is because I had determined that amount as well as the amount of such energy supplied from Benning before I could determine whether there was a net Baltimore backfeed for the purpose of Exhibit 357.

Q. Yes, I assumed that.

Did the deductions which you made in connection with computation of the figures in the first column of Exhibit 357 for supply of the railroad's requirements for its own use in Maryland have the effect of reducing the amount for most hours which went into the total in the first column on Exhibit 357? A. I think that would be the mathematical effect, yes; not in every hour, but I think the net effect for the year would be as you intimate.

Q. Do you recall whether the actual net hourly delivery to Safe Harbor over the 220 kv circuits, without deduction for the flows in the opposite direction during those hours over [18020] the 66 kv circuits to Highlandtown for 1946, was in the neighborhood of 155 million kilowatt hours?

• • •

THE WITNESS: Yes. It was actually 157,809,000 kilowatt-hours.

TRIAL EXAMINER: Did you have that on an exhibit?

THE WITNESS: It is the figure in the lower right-hand corner of Exhibit 354, being the bottom figure in the last column to the right after adjusting or after deducting the amount of actual net hourly backfeed over the 25 cycle circuit from Highlandtown to Holtwood in an amount of 1,673,000 kilowatt-hours.

TRIAL EXAMINER: Where did you get the 1,673,000?

THE WITNESS: That is shown on one of my work sheets, entitled, "Net Hourly Megawatts Received by P. W. P. from Baltimore Company".

TRIAL EXAMINER: It is not in an exhibit?

THE WITNESS: No, I do not think it is.

• • •

[18021] By MR. WAHRENBROCK:

Q. Inasmuch as that work sheet to which you referred in answer to the Examiner is not in the record, can you give us for the years 1944 and 1945 the corresponding figures to the one which you gave the Examiner of 157,809,000 for the year 1946? A. The corresponding figure for the year 1945 is the amount shown for the year 1945 in Exhibit 354 the last column to the right after adjustment or after deducting the sum of the net hourly readings of the backfeed from Highlandtown to Holtwood of 60,000 Kwh. I do not have the figures for 1944 with me.

Q. May I understand your last answer for 1945? The figure would be 50,216 megawatt-hours less 60 megawatt-hours, is that correct? A. Yes, sir.

Q. Or 50,156 megawatt-hours? A. Yes.

Q. For 1945 and that figure for 1945 differs from the figure which you show for 1945 in the first column of Exhibit 369 by reason of the fact that that figure of 50,000

hours represents flows to Safe Harbor over the 220 kv circuits without deduction for flows from Holtwood to Highlandtown over the 66 kv circuits; is that correct? A. Yes.

[18022] Q. And the figure of 157,809 megawatt-hours which you give us for 1946 differs in the same way from the figure of 99,439 megawatt-hours in the first column on Exhibit 369 for the year 1946? A. It does differ because in Exhibit 369 I have netted the flows on the two circuits in order to determine the annual backfeed energy supply for the purpose of Exhibit 369.

Q. Directing your attention again, if you will, please, to your Exhibit 354 and particularly to the last column of figures on that exhibit, will you tell me first whether that includes energy transfers across the Maryland-Pennsylvania boundary over the facilities of the railroad not used for its own use? A. No, there is no reflection in that figure in any way for any flows over the Safe Harbor-Perryville line.

Q. Do the figures in that column include deliveries from Perryville to Conestoga across the Maryland-Pennsylvania boundary? A. They do not.

Q. Why did you exclude those?

• • •

The Witness: Because there is no energy flow across that boundary, namely, the state line, which is not used for [18023] the Pennsylvania Railroad directly.

Now, to be sure that we are talking about the same thing we are there talking in that column about the net flows from Perryville to Safe Harbor and I think that the other answer is that there never is a net hourly flow in that direction and if there is the resultant energy is used directly by the Pennsylvania Railroad in Maryland.

I am sorry, Mr. Examiner, on reconsideration of that last answer, it is not responsive, obviously, because we are talking about net hourly flows from Maryland to Pennsyl-

vania. I am still of the opinion that there is not experienced any net hourly flows on those lines from Maryland to Pennsylvania but if there are, such energy is used by the Pennsylvania Railroad north of the State Line of Pennsylvania and Conestoga Substation.

TRIAL EXAMINER: What lines are you referring to now?

THE WITNESS: P-5, P-6, P-7 and P-8 and such energy is received from the Philadelphia Electric Company at Chester via Perryville.

By MR. WAHRENBROCK:

Q. Let me understand this, Mr. Spaulding: As I understood your testimony the other day—and I think you will remember it clearly, I cannot point to it in the record—but there was a reference to the fact that at times energy from Chester, Pennsylvania would come to Perryville, Maryland, [18024] go up to Safe Harbor, to the Conestoga bus at Safe Harbor, come down over the other two circuits to Perryville again and go on down over the railroad facilities to Benning where it was delivered to PEPCO.

Do you recall that testimony? A. I do recall it. I do not recall that statement but I recall the testimony where we were discussing the general subject.

Q. Yes, now in the event of such a flow of energy there would be a flow from Perryville in Maryland up on two circuits to the Conestoga bus in Pennsylvania, is not that true? A. Yes.

Q. No such amounts are reflected in your last column or any place else on your Exhibit 354? A. No, because there would be an equal amount going down the other circuit and the hourly net would be zero, or at least would not be a negative hourly net representing flow from Perryville to Conestoga.

Q. Upon what basis do you assume that the energy which flows from Perryville to the Conestoga bus over one pair of circuits returns to Perryville over another pair?

• • •

[18025] THE WITNESS: I do not know what you mean by basis. Do you mean how do I know what happens?

By MR. WAHRENBROCK:

Q. I would be glad to have you explain that. A. I know from the operating records and my knowledge of the operations over those circuits it does happen.

Secondly, it is a very obvious electrical phenomena because if you have power flowing between two points over two paths with different impedance the flow of the current over those two paths will be in proportion to the impedance.

I know there is a considerable amount of energy—a relatively small amount of energy to be sure—but some of the energy that flows around the bypass of Perryville, and for the same reason this power goes up one pair of lines and back on the others, from Perryville to Conestoga and return.

That is something I can see on the meter any day at all. That is how I know it takes place, but perhaps that does not answer your question.

Q. As I understand it, there may be hours when energy originating at Chester reaches Perryville and is transmitted from Perryville up to the Conestoga bus of Safe Harbor in Pennsylvania? A. Frequently.

Q. As I understood your answer a few questions ago, you [18026] did not reflect those amounts which were energy-moving from Perryville in Maryland to the Conestoga bus in Pennsylvania because you said any such flows are offset by corresponding flows in the opposite direction over the other pair of circuits from the Conestoga bus back to Perryville? A. That is correct and I should add that there is usually more energy flowing from Conestoga to Perryville than there is flowing from Perryville to Conestoga.

Q. What I am seeking to ascertain is the basis of your statement that whenever there is such a flow of energy originating at Chester from Perryville to the Conestoga bus

there is always an equal amount or a corresponding amount flowing from the Conestoga bus down to Perryville. A. I know that from my intimate knowledge of the operations over those circuits.

Q. When you say that you mean that there are corresponding amounts but again not necessarily the same electric energy?

* * *

THE WITNESS: There are corresponding amounts, that is correct.

[18027] By MR. WAHRENBROCK:

Q. But those amounts are not necessarily the same electric energy? A. I do not know that and no scientist in the U. S. knows that and I include the most technical scientists there could be. No one knows when energy flows on to a bus and flows off which is the same energy and which is not.

* * * *

Q. Mr. Spaulding, directing your attention, if you will to your Exhibit 356 and to your testimony with respect thereto, when you there refer to hours of net Baltimore backfeed, do you again mean the same as you did in using that term with respect to Exhibit 357? A. I am not quite sure. I presume you are referring to page 16,600 and I think the wording there is a little different. I can say, perhaps to save time that the method of determining the net Baltimore backfeed which I used in connection with the preparation of Exhibit 356, was the same procedure and generally the same basic figures that I [18028] used in connection with the preparation of Exhibit 357.

Q. On Exhibit 356, the second column of figures in the first tabulation, the figure for 1944 being the figure of 180,675,000 should the heading of that column be understood as though it read "Kilowatt-hours supplied during Hours of net Baltimore Backfeed"? A. They were the kilowatt-hours supplied during the hours when I found

there was "Net Baltimore Backfeed" in the manner that we just discussed.

Q. And the same thing is true of the fourth heading on the same tabulation, "Kilowatt-hours supplied during hours of no net Baltimore backfeed"? A. That is correct, with the same qualifications.

Q. And the same thing is true for the corresponding headings in the second tabulation on the same exhibit, the third heading and the fifth heading? A. I am sorry, I do not believe I see exactly what headings you are referring to now.

Q. The heading in the second tabulation for the third column of figures should be read in the sense that it means "Revenue received for energy only during hours of net Baltimore Backfeed"? A. I think that is correct.

Q. And the fifth heading "Total revenue received for Electric Services Exclusive of Revenue Received for Energy [18029] only during Hours of Net Baltimore Backfeed"? A. That is correct, using net Baltimore backfeed in the manner that we discussed before the recess.

Q. Refer, if you will, please, to Exhibit 358 and to your testimony with respect thereto; when you speak of hours of net Baltimore backfeed in this exhibit and with respect to this exhibit, do you use that term with the same meaning as that to which you previously testified?

* * *

THE WITNESS: I do not think I should answer this one categorically and I will try to answer it as direct as possible.

So far as the determination of the hours during which the amount of net Baltimore backfeed is concerned, I used the same basic figures in connection with Exhibit 358 that I did in connection with Exhibits 356 and 357.

However, in determining the use of such "Net Baltimore Backfeed" I here considered its first use in connection with interchange transactions.

By Mr. Wahrenbrock:

Q. And then do I understand that the hours of net Baltimore backfeed referred to in the heading of Exhibit 358 are not the identical hours as the hours of net Baltimore backfeed referred to in the heading to Exhibit 356? [18030] A. No, they are not the same hours nor are they the same hours in connection with Exhibit 357.

The same basic data was used in each, the same method of approach was used in each but they do not represent the same hours and, of course, they do not represent the same use of energy in connection with the several services.

Q. Let me understand you. With respect to Exhibit 358 by "Hours of Net Baltimore Backfeed" as used in this exhibit, do you mean hours in which there was a net supply of energy over the 220 kv circuits from Baltimore to Safe Harbor after deducting the amount flowing in the opposite direction over the 66 kv circuits from Holtwood to Highlandtown, is that correct?

* * *

The Witness: May I put it a little differently and see if I can answer it specifically. If there was backfeed over the 66 kv, 25 cycle circuits that would be added to any backfeed over the 220 kv circuits; if there was a delivery from Holtwood to Highlandtown at the time there was backfeed over the 220 kv circuits then the net effect was first considered and then that was reduced by the supply, if any, from Conestoga substation to the Pennsylvania Railroad at Perryville and Conowingo for the railroad's own use, other than what was delivered at Benning.

[18031] By Mr. Wahrenbrock:

Q. For the Railroad's own use in Maryland? A. That is correct. The net of those three figures then determined the amount of net Baltimore backfeed in that hour.

Q. And you chose only such hours as did show such a net flow towards Safe Harbor; is that correct? A. That is correct.

Q. Aren't those the same hours that you used on Exhibit 357 as hours of net Baltimore backfeed? A. They are the same basic hours but there may or may not have been interchange during those hours.

Q. But those are the same hours of net Baltimore backfeed? A. That is correct.

Q. And those are the same hours of net Baltimore backfeed as you used on Exhibit 356? A. That is correct.

Q. In each case the hours of net Baltimore backfeed means the same thing but you have used in the one case—that is to say, you have used in the case of Exhibit 356—you have shown kilowatt-hours supplied to Pennsylvania firm customers during such hours of net Baltimore backfeed whereas in Exhibit 358 you have used interchange supplied to Pennsylvania customers during such hours of net Baltimore [18032] backfeed, is that correct? A. That is correct. There would always be amounts of firm power services delivered, for example, to the Coatesville Division of Philadelphia Electric Company and therefore I gave consideration in Exhibit 356 to all of the hours in which there was "Net Baltimore backfeed".

But in Exhibit 358 I only gave consideration to those hours in which there was interchange supplied by Penn Water and Safe Harbor to their Pennsylvania customers and that did not occur in every hour in which there was backfeed. That is the distinction I was trying to make.

Q. Yes. A. So that we do not use necessarily the same hours in each instance although the same basic hours are first considered.

Q. Then on Exhibit 358 where in the headings to particular columns there is a reference to hours of Baltimore backfeed, you mean hours of net Baltimore backfeed? A. That is correct.

Q. And where there is a reference to hours of no Baltimore backfeed you mean hours of no net Baltimore backfeed? A. That is correct.

Q. Within the meaning of the term "net Baltimore backfeed" that you have just described? A. That is correct, that I have just described in [18033] connection with these three exhibits, 356, 357 and 358.

Q. Now, in these Exhibits 356, 357 and 358—let me withdraw that for the moment. Is the same thing true of your use of the term "net Baltimore Backfeed" in Exhibit 359? A. The same basic figures, the same basic hours were first determined and used in connection with Exhibit 359 as we used in connection with Exhibits 356, 357 and 358.

Q. In Exhibit 369 does "Annual backfeed energy supplied by Baltimore Company," similarly mean net Baltimore backfeed?

* * *

THE WITNESS: That cannot be answered categorically because there are several figures shown in Exhibit 369. The amounts shown in the first column are determined in the same way and were from the same basic data as was used with reference to the last few exhibits we have been talking about, but the amount shown in the second column was not so determined.

By MR. WAHRENBROCK:

Q. Kilowatt hours received on hourly net basis there refers to net Baltimore backfeed as you have described your computation of net Baltimore backfeed in your previous testimony? A. Which we have just been referring to, yes.

Q. In these Exhibits 356, 357, 358, 359 and 369 you have netted energy as you have just described irrespective [18034] of whether it was supplied at 60-cycle, 3 phase or 25-cycle 3 phase, or 25-cycle single phase and irrespective of differences in voltage? A. That is correct, in the manner that I have described.

Q. In your Exhibits 356, 357 and 358 if instead of netting against the amounts of energy supplied to Safe Harbor over the 220 kv circuits, any flows in the opposite direc-

tion over the 66 kv circuits and deliveries for Maryland use by the railroad, you had used the flows on the 220 kv circuits without any deductions, would you have obtained a larger number of hours of Baltimore backfeed? A. I think that would be the tendency. I do not know what effect there would be.

Q. Would there also have been a tendency to substantially increase the amounts of such Baltimore backfeed in each hour? A. I would not agree it was substantial; I would agree that was the direction.

Q. Did you attempt to ascertain what that effect would be, the amount of it? A. I did not determine what the amount would be.

Q. Did you attempt to ascertain what the effect would be on the number of hours? A. I did not attempt to do that. I only know from my general knowledge that it would be in that direction.

Q. Directing your attention to Exhibit 359, if instead [18035] of using net Baltimore backfeed as you have explained your usage of that term you had used Baltimore backfeed without deducting flows toward Highlandtown and Maryland use of energy by the Pennsylvania Railroad, would the percentage figures in column three have been larger?

MR. MYSE: Mr. Examiner, we have just gone over that. The witness said yes, it would be in that direction, but he has not made any specific study of it. Why do we have to go all over it chapter and verse again?

TRIAL EXAMINER: Is that the thing you had in mind, Mr. Witness, when you gave your previous answer, it would have that same effect on this place?

THE WITNESS: I think so but I should like to check this particular exhibit to be sure. My difficulty is that here he is asking about percentage figures and percentage figures could be misleading. If you are talking about kilowatt-hour figures my answer would be correct.

Question, please.

(Question read.)

THE WITNESS: That would have been the tendency.

By MR. WAHRENBROCK:

Q. In your testimony before the afternoon recess today and shortly after the noon recess you testified with respect to what the figure would have been without the deduction of the flows over the 66 kv circuit and for Maryland use by [18036] the railroad which, as I believe in the case of the year 1946 you said would have been 157,809,000 kilowatt hours instead of the 99,439,000 kilowatt hours shown for 1946 in the first column of Exhibit 369. Would the difference between the 157 million and the 99 million figure be made up of the additional hours and the increase within the hours to which I have previously referred?

• • •

MR. MYSE: Which hours are you now talking about?

THE WITNESS: I do not think the number of hours has any bearing on the difference but they are the differences between the net hour delivery on the 220 kv circuits alone and the net hourly delivery on the basis that we have been referring to as net Baltimore backfeed.

By MR. WAHRENBROCK:

Q. If, as you have testified, the use of the deliveries to Safe Harbor over the 220 kv circuits without deduction for the amounts in the opposite direction over the 66 kv circuits and the Maryland consumption by the railroad would tend to increase the number of hours of Baltimore backfeed and tend to increase the amount of hours, those two tendencies would be reflected in the difference between the figure of 99 million and the figure of 157 million to which I previously referred? [18037] A. That is correct.

Q. Mr. Spaulding, as a matter of fact, were there hours in which Penn Water received interchange from Philadelphia Electric and during the same hour delivered interchange to Pennsylvania Power and Light or Met. Edison

or both of them, and during the same hour received what you have defined as net Baltimore backfeed?

• • •

THE WITNESS: I do not know and my difficulty comes from your inquiry about the interchange with the Philadelphia Electric because that is the thing that I am not in a position to answer.

By MR. WAHRENBROCK:

Q. That is, you did not ascertain whether hours of net Baltimore backfeed during which Penn Water was delivering to Pennsylvania Power and Light or Met. Edison were hours in which there were also receipts of interchange from Philadelphia Electric? A. I would not be interested in that because the amounts of receipts from the Philadelphia Electric are used by the railroad.

TRIAL EXAMINER: What is that?

THE WITNESS: The amount of receipts from the Philadelphia Electric Company—and I, of course, understand the [18038] way in which he uses that expression—is, in fact, all used by the railroad.

TRIAL EXAMINER: That would be over P-5 and P-6?

THE WITNESS: It would be either at Thorndale or Perryville, Mr. Examiner. His question is more general than the one we had before.

By MR. WAHRENBROCK:

Q. Then do I understand that you treated any such energy as not being received because it was energy which was actually used by the railroad, not because of any priority which you assigned to it? A. Which exhibit are we talking about now?

Q. All of these three in which we have used net Baltimore backfeed, that is to say, 356, 357, and 358.

MR. MYSE: Mr. Examiner, I have been listening very patiently and I pride myself in being able—at

least. I think I know something about the flows of energy but this last question stumps me. I do not see how it has any connection whatsoever with any of the exhibits or the direct testimony up to this point.

* * *

TRIAL EXAMINER: The witness may answer.

THE WITNESS: The amounts received by the railroad and metered at Perryville and Thorndale as being used by the [18039] railroad west of Thorndale and south of Perryville, did not affect in any way my determinations on Exhibits 356, 357, 358 and 359.

TRIAL EXAMINER: The question asked why.

THE WITNESS: I do not understand that question, Mr. Examiner, I merely state that it did not affect the answer. It did not influence what I did, I used it in no way. I do not know what your next question is.

By MR. WAHRENBROCK:

Q. Well, if there was such energy you treated that on the basis of the use actually made of the specific energy; is that true?

MR. MYSE: Same objection.

TRIAL EXAMINER: He may answer.

THE WITNESS: I knew that it was used by the Pennsylvania Railroad and was not used for anything else. I am sorry, I do not believe I understand the question beyond that point.

By MR. WAHRENBROCK:

Q. I think that answers it, if I understand the answer right, that is, that the fact that energy was actually used by the railroad determined that you would exclude that from your consideration? A. No, I did not have to use it, there was no occasion to use it at all. That is the reason I have difficulty. There is no relation between this ques-

tion and all the questions [18040] we have been talking about for the last two hours.

Q. And the reason you did not have to use it was because that energy you regarded as actually used by the railroad? A. No, it is because I had no occasion to use that energy at all in connection with my determination. It was not of any interest to me in making my determination, any more so than the amount of energy that was sold in the City of Chicago in the same hour, it just did not have any relation.

Q. I think maybe I can ascertain what I have been seeking to ascertain by asking you this: In connection with your testimony earlier today you said that in allocating the net Baltimore backfeed you treated it as being utilized first to supply the interchange requirements of the other Pennsylvania customers, meaning other than the Pennsylvania Railroad.

Do you recall that? A. Yes.

Q. Now, if during such an hour when there was net Baltimore backfeed and interchange requirements of the other Pennsylvania customers were being supplied and you applied the net Baltimore backfeed to those requirements, those interchange requirements of the other Pennsylvania customers, you did not deem it necessary to give any consideration to the receipt of interchange energy from Philadelphia Electric during any such hour as it may have occurred? [18041] A. I do not think it would occur. It would be very, very abnormal to receive energy over the railroad circuits and send it out somewhere else. It may happen once in a great while but then I do not believe we had backfeed from Baltimore. You are getting a lot of probabilities there and I do not think that has any relation.

Q. All right——

THE WITNESS: May I have the first part of your inquiry read?

(Question read.)

THE WITNESS: I went back to get the first sentence in your statement because we have been talking about two determinations here today, one represented by Exhibit 354 and the other by Exhibits 356 and 357, 358 and so on.

Therefore, in order to be responsive I must know when during the day we were talking about this Baltimore backfeed.

Was it in connection with Exhibit 354?

MR. WAHRENBROCK: Ir connection with Exhibit 354, yes.

MR. MYSE: Now, may I have the question, please.

TRIAL EXAMINER: Yes.

THE REPORTER: There is no question pending.

MR. MYSE: I withdraw my request.

MR. WAHRENBROCK: I withdraw my statement, too. You are right in asking which of these it is, and I mean to say [18042] 357.

• • •

THE WITNESS: In other words, I do not believe we were receiving energy as interchange from the Philadelphia Electric which was being consumed by the railroad at the time we are sending out interchange over the 60 cycle tie.

By MR. WAHRENBROCK:

Q. During hours of net Baltimore backfeed when interchange requirements for the other Pennsylvania customers were treated by you as being first supplied with such net Baltimore backfeed, did you give any effect to the fact that interchange energy was being received from any of the other Pennsylvania customers during the same hour?

• • •

THE WITNESS: No, that would become circulating power that we talked about the other day. If it was coming in over one sixty cycle tie and going out over the other it is

treated as circulating power and is not considered as interchange at all under any circumstances.

TRIAL EXAMINER: Counsel referred to Exhibit 357, was that 357 or 358?

[18043] MR. WAHRENBROCK: I was referring to 357. I do not believe it would make any difference, if the Examiner has 358 in mind.

TRIAL EXAMINER: 357 is the firm, is it not?

MR. WAHRENBROCK: I was referring to 357.

THE WITNESS: In principle it would not make any difference; in detail, of course, it would.

MR. WAHRENBROCK: Let me carry the last question just one step further if I may.

By MR. WAHRENBROCK:

Q. Assume an hour of net Baltimore backfeed in which electric energy is being supplied to Pennsylvania Power and Light under interchange agreements and is being received from Met. Edison under interchange agreements, in such an hour did you in deducting from the Baltimore backfeed or in allocating the Baltimore backfeed first to the interchange requirements, did you give any effect to the receipt of energy—interchange energy from Met. Edison? A. No, because in that instance assuming that the amount delivered to P. P. & L. as interchange was the same as the amount received from ME Company as interchange, would not be considered an interchange transaction but would be considered circulating flow which we discussed a couple of days ago. That is not considered an interchange transaction and there is no accounting for it as such.

* * *

[18044] Q. If the amounts were not equal what effect, if any, did you give? A. If the amounts were not equal and it was a delivery of interchange services then of course we considered that first in determining how the Baltimore

backfeed was to be used or in what connection it was to be used. If it was a receipt then obviously it was a receipt and there was no adjustment to the Baltimore backfeed.

Then you go back to the question as to what you next consider it was used for. If the net was a receipt then obviously none of Baltimore's backfeed was considered in connection with interchange in connection with Exhibit 358.

Q. To take specific figures, suppose during a particular hour the net Baltimore backfeed as you have treated it was 20 and the interchange supplied to P. P. & L. was 10 and the interchange received from Met. Edison was 5, how much [18045] did you treat of the 20 Baltimore backfeed as going to interchange with other Pennsylvania customers before determining how much you allotted to other purposes? A. Well, the assumptions you made would result in an interchange transaction of 5,000 or five units—I assume you mean 5,000 kwh—and presumably that would be a transaction with P. P. & L.

The difference between the 10,000 to P. P. & L. and the 5,000 from M. E. Company being circulating, therefore I would assign 5,000 of the net backfeed as being used in connection with interchange services and 15,000 for some other purpose.

Q. That helps me to understand it. Now, just to see what you did in the other type of situation, reverse the Pennsylvania Power and Light and the Met. Edison figures —I am sorry, I do not mean reverse them. I mean 5,000 was delivered to Pennsylvania Power and Light and 10,000 was receiv d from Met. Edison. Now, in such a circumstance did you apply any of the net Baltimore backfeed to interchange requirements ahead of the other uses to which you allocated it? A. I did not because there were no interchange deliveries in that hour. The net interchange transaction was 5,000 received by Pennsylvania Water at Safe Harbor and Holtwood.

[18049] Q. * * * As I understood your use of the term "net Baltimore backfeed," as you described it it was the amount transmitted from Maryland to Safe Harbor over the 220 kv. circuits less the amount in the same hour, if any, transmitted from Holtwood to Highlandtown over the 66 kv. circuits. Is that correct and is that the method by which you actually determined those amounts, or did you also deduct the amount, if any, supplied to the railroad facilities over and above the amount used by the railroad for its own use?

* * *

[18050] MR. WAHRENBROCK: May I strike the last part of the question, please, beginning "or"? I will end my question at that point, Mr. Examiner.

* * *

THE WITNESS: That is neither correct nor the method I used.

By MR. WAHRENBROCK:

Q. I think it is a good thing, then, that I asked because that was my understanding. Will you explain, then?

* * *

[18051] THE WITNESS: In any hour I determined the amount of "net Baltimore backfeed" by first determining the net hourly amounts of energy transmitted from Maryland to Safe Harbor over the 220 kv. lines, and if such net amount was representative of a net flow from Maryland to Pennsylvania I then deducted from such net amount the net amount, if any, of the flow from Holtwood to Highlandtown over the 66 kv. 25 cycle circuits, and further deducted such amounts, if any, which were consumed by the Pennsylvania Railroad in Maryland in excess of the net hourly amounts, if any, which may have been supplied to the railroad from the Benning frequency changer.

By MR. WAHRENBROCK:

Q. Thank you, Mr. Spaulding. That answers directly what I was seeking to get at. I believe if your attention

were directed to it you would want to say that in deducting the amount transmitted from Holtwood to Highlandtown, deducting the net amount transmitted from Holtwood to Highlandtown, you meant to say deducting the net hourly amount? A. That is what I did in fact, deduct the net hourly [18052] amount of the energy, if any, delivered at Highlandtown being transmitted from Holtwood.

Q. And the amounts which you deducted representing amounts consumed by the Pennsylvania Railroad in Maryland in excess of amounts supplied to the Pennsylvania Railroad from the Benning frequency changer were also net hourly amounts? A. I considered the net hourly amounts of the supply, if any, to the railroad from Benning. Obviously the amount consumed by the railroad is not a net amount.

TRIAL EXAMINER: That net hourly is figured on the basis of both of the 220 kv. lines, is that right?

THE WITNESS: Yes.

TRIAL EXAMINER: One from Westport and the other Riverside?

THE WITNESS: Yes.

[18053] By MR. WAHRENBROCK:

Q. Mr. Spaulding, in computing the kilowatt-hours of net Baltimore backfeed used in connection with the electric services supplied to Pennsylvania firm customers as shown in your Exhibit 357, will you illustrate your method of computation by taking the following hypothetical hour: namely, one in which the net Baltimore backfeed, as you have just explained that term, is 50,000 kilowatt-hours. The interchange requirements of the Pennsylvania customers, other than the Pennsylvania Railroad, are 10,000 kilowatt-hours.

The Pennsylvania Railroad consumes in Maryland, exclusive of the amounts supplied to it through the Benning frequency changer, 25,000, and upon those facts, how did you determine the number of kilowatt-hours used in con-

nection with electric services supplied to Pennsylvania firm customers out of the net Baltimore backfeed? A. May I make two comments before I answer?

Q. Yes. A. You referred to interchange requirements. I do not agree they are requirements. They are interchange transactions.

Q. I will be glad to accept that statement. A. Secondly, I thought it was evident from my last answer that the amount of 25,000 kwh. used by the Railroad for its own use in Maryland less any amount which may have been supplied from Benning had already been considered and accounted for in [18054] connection with the determination of the net Baltimore backfeed of 50,000 kilowatt-hours which you first used in your assumption.

My answer to your question, therefore, would be that 40,000 kilowatt-hours would have been considered by me as being used in connection with electric services supplied to the Pennsylvania firm customers under your assumption.

Q. And in arriving at the figures which appear on Exhibit 357 the method which you have just explained for such hours was followed by you; where such hours occurred, I mean. A. No, because you have not indicated in your assumption what the requirements of the Pennsylvania Railroad were in the State of Pennsylvania for its own use, and the figure of 40,000 kilowatt-hours which I gave you might have been used in whole or in part in supplying the Pennsylvania Railroad requirements in Pennsylvania before I would have considered it available for use in connection with electric services supplied to Pennsylvania firm power customers exclusive of Pennsylvania Railroad, as shown on the heading of Exhibit 357.

Q. Then the method which you described with respect to the hypothetical hour I gave was used, and in addition you deducted the requirements of the Pennsylvania Railroad in Pennsylvania? A. I did so in arriving at the amount shown in Exhibit 357, as will be indicated by the title.

[18055] Q. Will you explain how, for that purpose, you determined the Pennsylvania Railroad requirements in Pennsylvania? A. They are known to me hourly from meter records.

Q. Which meter records, on which circuits? A. I have to give consideration to the meters at Thorndale, Pennsylvania; certain of the meters at Perryville, Maryland; the meters at Fishing Creek, and certain meters at Conestoga substation,

* * *

[18058] Q. In an hour in which there was transmitted over the 220 kv. circuits to Safe Harbor, 50,000 kilowatt-hours net amount and there was transmitted over the 25-cycle lines from Holtwood to Highlandtown a net amount of 25,000 kilowatt-hours, and there was supplied to the Railroad for consumption in Maryland, exclusive of the amount supplied to the Railroad at Benning, a net amount of 25,000 kilowatt-hours, you treated the net Baltimore backfeed as being zero for that hour. Is that correct? [18059] A. I so considered it.

Q. Did you consider that the amount of energy supplied to the Baltimore Company for that hour was zero? A. For what purpose?

Q. For the purposes of interchange accounting under the contracts. A. I am afraid you will have to be a little more specific, Mr. Wahrenbrock.

MR. MYSE: Mr. Wahrenbrock, do you mind if I furnish the witness with Exhibits 18 and 19, and also 20?

MR. WAHRENBROCK: No, indeed.

THE WITNESS: Is there a question pending?

By MR. WAHRENBROCK:

Q. You have made a comment. I would like to ask you whether, in the light of those exhibits which have been handed you, you are now able to answer the question. A. May I have the original question?

(Question read.)

THE WITNESS: For the purpose of determining Holtwood Company's firm power bill to Baltimore Company for the years 1944, '45, '46, such firm power bills being shown for the year 1944 and 1945 in Exhibit 19 and for the year 1946 in Exhibit 379, Schedule D, the interchange accounting with Baltimore Company was determined in that manner.

By MR. WAHRENBROCK:

[18060] Q. Thank you.

TRIAL EXAMINER: To what manner do you refer?

THE WITNESS: In the manner just described in the preceding question.

TRIAL EXAMINER: Will you indicate more specifically what that is?

THE WITNESS: The amount of net Baltimore backfeed which we have been discussing this morning was determined, as I stated in the second or third answer in this morning's record and that was the method used in determining the interchange accounting shown and used in connection with the Holtwood firm power bills I have just described.

TRIAL EXAMINER: The question was whether, on the basis of the hypothetical figures, the interchange accounting would not come out zero.

THE WITNESS: And I agreed that it would. He then asked me if that method was the method used.

TRIAL EXAMINER: I didn't hear that.

THE WITNESS: As represented by the several examples he gave me.

Let me state again, Mr. Examiner——

TRIAL EXAMINER: Offset against the 50,000 net over the 220 kv. circuits to Safe Harbor, the 25,000 running over the 66 kv. at 25-cycles and the 25,000 to the railroad for use in Maryland?

[18061] THE WITNESS: With the understanding that no part of that 25,000 was supplied to the Railroad from Benning.

By MR. WAHRENBROCK:

Q. Referring to transcript 16,607, the first line and the 51 per cent figure, it appears from the work sheets which you have supplied to us, and particularly the work sheet which has the heading, "Generation by Penn Water and Safe Harbor and Distribution Between Maryland and Pennsylvania in Megawatt-Hours", that for 1946 you derived a percentage figure of 51.7 by a method which includes the consideration of an amount of 126,095 megawatt-hours designated as "132 kv., Perryville and Conowingo, net hourly delivery."

Do you recognize that figure, and will you explain how it was computed? A. Yes, I will. The amounts shown on the work sheet are the actual amounts supplied to the Pennsylvania Railroad at Conowingo and Perryville. Such actual supplies are taken on a net hourly basis and accumulated and shown on the work sheets as amounting to 126,095 megawatt-hours for the year 1946.

Q. In computing that figure did you make any deductions for amounts at other points, such as Fishing Creek? A. I don't know what you mean by "deductions." It states it is the amount delivered at Perryville and Conowingo. Obviously it does not include the amounts at Fishing Creek.

Q. Is any of the amount included in the 126,095 based [18062] on meter readings at Perryville? A. In part.

Q. The part being the Philadelphia Electric interchange? A. No.

Q. What part? A. Being the amount supplied to the Railroad section in Maryland through the by-pass meter known as the BB meter.

Q. That is the only part of this 126,095 based on meter readings at Perryville. Is that right? A. Yes.

Q. All the other meter readings are of meters located at Conestoga? A. Well, we are right back into the com-

plications of the meters. I will have to explain it here so we won't get confused.

Under the Railroad contract identified as Exhibit 10, electric companies—and I am there referring to Penn Water, Safe Harbor, and Baltimore Company—agree to provide meters at Perryville on the 132 kv. high-tension lines. However, those meters would have cost, as I recall it, something like 75 or 100 thousand dollars, and it was determined that meters could be installed at Conestoga substation on those circuits with special compensating windings which were referred to as "loss meters" which, in effect, looked down over the lines and measured the quantities at Perryville in both directions.

Therefore, although the actual kilowatt-hour meters are [18063] not at Perryville, they do meter the amounts at Perryville and were provided for a few thousand dollars instead of $100,000.

Q. The figure of 126,095 is a net figure based upon readings of the by-pass meters actually located at Perryville and these "loss meters" physically located at Conestoga but reading as though located at Perryville, to which you have just referred, and not others. Is that correct?
A. No. Let me explain that again.

You have kilowatt-hour meters on each transformer at Conestoga substation connected to the lines going to Perryville.

I am here concerned only with those meters on lines P-7 and P-8. In addition to those kilowatt-hour meters there are compensating meters known as "loss meters". By reading the kwh. meters and either adding or subtracting the "losses" as metered, it is possible to determine the amounts on the circuit at Perryville. However, consideration must be also given for the amounts tapped from circuits P-7 and P-8 at Safe Harbor and at Fishing Creek and proper adjustments made for those amounts so taken off.

It is because of these complications that I recognize it would take so long to explain the other question you asked

me about the meters used in determining the supply to the Railroad in Maryland and Pennsylvania, respectively.

[18064] TRIAL EXAMINER: How does the by-pass meter work?

THE WITNESS: The by-pass meter, Mr. Examiner, is in the bus tie breaker at the distribution substation of the railroad at Perryville, being a 12,000 volt bus. One section of that bus is supplied through transformers with the 132 kv. circuits running from Safe Harbor via Perryville to Benning and the other section of that low tension bus is supplied by transformers connected to the 132 kv. circuits extending from Safe Harbor via Perryville to the Lamokin Substation of the Railroad near Chester, Pennsylvania. There is a certain amount of power flow between the 132 kv. circuits north and those south, and that is metered at the time it flows across the bus tie breaker in the Perryville Substation. That is known as the BB meter.

* * *

By MR. WAHRENBROCK:

Q. Then do I understand that this figure of 126,095 is based upon the readings of the by-pass meters at Perryville, the meters on circuits P-7 and P-8 physically located at the Conestoga Substation, with adjustments based upon the readings of the so-called "Loss meters" physically located at the Conestoga Substation, and with deductions for amounts supplied [18065] from the P-7 and P-8 circuits to Safe Harbor and to Fishing Creek? A. At Safe Harbor and Fishing Creek, yes. The Railroad has distribution substations at Safe Harbor and Fishing Creek that are supplied from these circuits and adjustment has to be made for the amount so supplied.

Q. The deductions, then, are of amounts supplied from the P-7 and P-8 circuits at Safe Harbor and at Fishing Creek? A. That is correct.

Q. With that amendment my statement is correct? A. That is correct.

TRIAL EXAMINER: What becomes of the amounts taken off there? Are they used by the railroad?

THE WITNESS: They are used by the railroad on their trolley circuits for the operation of electric trains along the C&PD freight division of the railroad.

• • •

[18088] Q. So that Exhibit 42 reflects whatever supply of energy there may have been from the house units on to the main bus at Safe Harbor during the hours covered by that exhibit? A. That is correct.

• • • •

[18260] EDWARD L. DUNN.

• • •

RE-CROSS-EXAMINATION (Continued).

By MR. HULL:

• • •

[18262] Q. You have in your exhibits and testimony considered five per cent as a reasonable rate of return to be allowed to the Respondent company for the immediate future, have you not?

• • •

THE WITNESS: I have made no study of what is a reasonable rate of return for Pennsylvania Water & Power Company and the fact that I selected five per cent is merely for illustrative purposes.

• • •

[18318] GEORGE W. SPAULDING.

• • •

CROSS-EXAMINATION (Resumed).

By MR. GOLDBERG:

• • •

[18322] Q. Now, then, Mr. Spaulding, directing your attention to 189.9 million kilowatt hours appearing in line 4

schedule 3-a [18323] of Exhibit 378, would you please describe for us your derivation of that figure? A. That figure is the sum of two groups of items, namely, first the sum of the kilowatt hours supplied as interchange by Penn Water and Safe Harbor to their Pennsylvania customers that did not involve any net hourly backfeed from Baltimore.

Secondly, it includes the sum of the kwh supplied by Penn Water and Safe Harbor to their Pennsylvania customers that was supplied during the time that "Net Baltimore Backfeed was being received from Maryland."

Q. So that relating your answer to your exhibits, Exhibit 359 shows 23,019,000 kilowatt hours used for interchange. Therefore the balance of the 189 million kilowatt hours being the difference between 189.9 million kilowatt hours and the 23,019,000 comes from diverted energy; is that right? A. I think that is correct.

• • •

TRIAL EXAMINER: What do you mean by "Diverted Energy"?

THE WITNESS: I am glad you asked me that, Mr. Examiner. That is a term I have coined here, and I should like to explain it in order that there may be no misunderstanding. It is the [18324] amount of energy that would have been delivered to Baltimore Company and Washington Company except that it was more economical to supply that energy to the Pennsylvania customers and for Baltimore or Washington Company to increase their own generation. It was called diverted energy merely for the purpose of distinguishing it from the amount of backfeed itself.

By MR. GOLDBERG:

Q. Does my memory serve me right? I have a recollection that the company speaks of diverted energy in its FPC form 12 report; is that right? A. I am not sure whether they do or not. I am not familiar with that use,

although if you show it to me, it might recall my memory.

Q. I am just looking here to see—yes, I think that this probably refers to the same thing. If it does not I wish you would tell me.

I show you the 1944 Power System Statement, FPC form 12 filed by Pennsylvania Water and Power Company covering the Holtwood-Safe Harbor system, and I direct your attention to Schedule 8 and the notes to Schedule 8, Column 4, lines 11 to 22, inclusive, and there reference is made, is it not, to the diversion of energy which is delivered by Penn Water over its northern interconnections to others whenever interchange transactions are practicable and economically justified; that is, whenever the cost of increased generation at the [18325] steam plants on Consolidated or PEPCO systems is lower than the cost of power generation in other plants in the interconnected systems? A. The term is used in the same way as it was used in that issue of form 12.

Q. That is what I thought.

In speaking of this diverted energy, do you make any distinction or attempt to determine whether it is Holtwood's entitlement or Baltimore's entitlement which is diverted? A. I do not know what you mean by "entitlement" in that connection.

Q. Well, I will try to be more specific. Under Items E, F and G, for example, there are two-thirds entitlement and one-third entitlement to Consolidated and Holtwood respectively of Safe Harbor's output.

Now, then, when you speak of this diverted energy, do you attempt to make any identification of the diverted energy in relation to entitlements, that is, whether it is Baltimore's entitlement that is diverted or Penn Water's? A. No, I make no attempt to distinguish between them. I was not interested in that because I am treating both companies together here.

* * *

[18341] Q. It is the fact, is it not, that a considerable amount of the backfeed is transmitted to Pennsylvania during daylight hours? A. No, it is not a fact. When you say "considerable amount" that is such an ambiguous statement. In my opinion there are relatively small amounts of energy received from Baltimore and use in connection with firm supply in Pennsylvania during the daylight hours. There are at times considerable amounts of backfeed received and used in connection with interchange transactions but I would not agree that there was any amount of energy received and used in connection with firm power services in the daytime hours unless by daytime you mean Saturdays, Sundays and holidays, or after the peak in the evening while the sun is still shining. I do not think of those as daytime hours.

• • •

[18342] Q. If you have 50 going to Highlandtown and 50 going back in the other direction over the 220 kv lines, you cancelled out one against the other in arriving at your 80 million kilowatt hours, is not that so? A. For the purpose of this cost-of-service study I did that; yes, sir.

Q. So that it is a fact, is it not, that the actual [18343] physical deliveries of backfeed to Pennsylvania used in connection with firm supply at Pennsylvania would be greater than the amount shown in line 3 of schedule 4-a? A. That is correct, because I have considered all the generating sources as a group for the purpose of this cost-of-service study; I could not do otherwise for this purpose.

• • •

Q. If I understood one of your answers in connection with line 3, Schedule 4-a of Exhibit 378, it was this, was it not, that the backfeed is supplied by Baltimore Company as it is, so that Baltimore Company can receive, as you put it, energy which is more valuable to it at other times? A. That is correct.

Q. Doesn't that apply as well to the Pennsylvania customers? A. I am sorry, I do not understand your question. Doesn't what apply as well?

Q. The use of the backfeed makes the Safe Harbor-Holtwood energy output more valuable to the Pennsylvania customers [18344] as well? A. No, I would not agree.

Q. Why not? A. I do not see that there is any relation at all. Let me explain what I meant again. Let's assume Baltimore sent back to Penn Water 1 million kilowatt hours in a day during the hours from 9 P. M. to 9 A. M. the following morning, and received from Penn Water and Safe Harbor 1 million kilowatt hours between the hours of 9 A. M. and 9 P. M. the following day.

The net delivery to Baltimore from Penn Water and Safe Harbor is zero but Penn Water and Safe Harbor have delivered energy when its value is high and received energy when its value was very low, so that the net deliveries may be zero but a very valuable service has been rendered.

There is nothing comparable to that in connection with Pennsylvania customers at all.

Q. Is it a fact that the supply of backfeed during off-peak hours enables Penn Water to supply the Pennsylvania customers during on-peak hours? A. No. It enables Penn Water and Safe Harbor to have more service to supply during the on-peak hours to everybody.

Q. Including the Pennsylvania customers? A. That is right, and due to that it is necessary for Penn Water and Safe Harbor to obtain supplemental energy. [18345] It can obtain it from wherever it is most economical to do so. In the year 1946 a portion of that supplemental energy was received from Baltimore.

Q. Now, when the backfeed is the supplemental energy that you have referred to then it does enable Penn Water to supply the Pennsylvania loads during on-peak hours? A. No, it permits Penn Water and Safe Harbor to have more energy to supply Baltimore during the on-peak hours.

Q. When talking about the Pennsylvania customers it

does, in so far as Pennsylvania customers are concerned, enable Penn Water to supply their loads during on-peak hours? A. No, that is not correct.

Q. You say it is not correct because you want to include Baltimore as well? A. No, I am just saying it is not a correct statement.

Q. Is not the supplemental energy which Penn Water receives a benefit to Penn Water in connection with the supply of the Pennsylvania loads during on-peak hours? A. No, it is not.

• • •

[18346] Q. Let me put it this way, which I hope will eliminate any difficulties. Is it possible by using the hydro energy only without any supplemental supply of energy to meet the on-peak requirements of the Pennsylvania customers? A. I should like to answer that, I should like to give two answers to that question. First, the answer is yes, they can. Secondly, they do not operate that way, they never were intended to operate that way and it would not be economical for them to operate that way unless we changed the Pennsylvania contracts and provided for greater supply.

Q. Now, then, do I understand that your answer "yes, they can" is, if I may put it this way, "An answer based upon physical capacity alone without regard to the economics of [18347] the situation"? A. That is correct.

We went all through that on my re-direct, as you recall.

Q. I just want to understand exactly what you are saying; by having regard for the economics of the situation reliance is had on the supplemental energy to assist in meeting the on-peak requirements of the Pennsylvania customers? A. No, that is not correct. The supplemental energy makes possible a greater utilization of the energy and capacity resources of the hydro plants when used in supplying both the Pennsylvania customers and Baltimore Company and Washington.

Q. You mean, then, that the hydro plants can supply the firm power requirements of the Pennsylvania customers without any supplemental energy, right? A. They could as a physical fact.

Q. But as an economic fact they cannot? A. They could not supply the firm power requirements of Baltimore Company, the Pennsylvania Railroad and the Pennsylvania customers without operating their hydro plants in such a manner as to make the fullest use of the energy in providing capacity value of the hydro plants. You go right back to my Exhibit Number 8 in this proceeding where I explained that by conserving hydro energy for use during the peak hours it is possible to obtain a greater capacity value in terms of kilowatts—not dollars—from the hydro plants [18348] by such operation. To obtain this operation it is necessary for Penn Water and Safe Harbor to obtain supplemental energy to meet their off-peak requirements.

Q. Could the firm requirements of P. P. & L., M. E. Company and Philadelphia Electric Company be supplied by the hydros without any supply of supplemental energy? A. Yes, it could but it would not be for the reasons I have just given.

Q. And you say they could, even during periods of low flow? A. That is correct, but that is not the way they operate. It is not the way they were intended to operate.

Q. It is not the way they were intended to operate and it is not the way they operate because of a desire to secure maximum economy and maximum utilization of natural resources, is that right? A. That is correct, and when I say the way they do not operate and would not operate I am referring, of course, only to the present firm power requirements of the Pennsylvania customers. There might be quite a different method of operation if there were changes in those Pennsylvania customers' contracts which would permit an entirely different operation of the hydro plant and there would not be any requirement of supplemental energy and we might not have to consider the firm

power requirements to Baltimore, but we are talking [18349] about the situation as we find it today.

Q. You mean they would supply their own off-peak requirements? A. That is correct, as Metropolitan Edison Company does today.

I am referring to that type of contract. If all the Pennsylvania contracts—in fact, if Baltimore had the same type of contract there would be no need of supplemental energy at all and it would be possible to obtain even a greater utilization of natural resources of the Susquehanna River.

Q. Under those circumstances you are saying each company would supply its own off-peak requirements? A. Yes, sir, as they can today.

Q. In securing maximum economy and utilization of natural resources the supply of supplemental energy is a necessary component of that operation in meeting the on-peak requirements of the Pa. customers, is not that so?

* * *

MR. SPARKS: Mr. Examiner, I have listened to this at quite some length this morning without objecting. I do object now to this line of cross-examination since it was gone into thoroughly on cross-examination after re-direct of Mr. Spaulding last fall, and I am sure it was gone into during his cross-examination in chief. It is therefore, repetitive.

[18350] TRIAL EXAMINER: The objection is overruled.

* * *

THE WITNESS: No, that is not correct. The supplemental energy is required to meet the off-peak requirements of the present firm power customers, not the on-peak requirements.

By MR. GOLDBERG:

Q. Those off-peak requirements are firm power requirements? A. Yes, sir, they are, in connection with present contracts.

* * *

[18355] Q. Will you please turn to Exhibit 379, Schedule D? A. Yes, sir.

Q. Do I correctly understand that Schedule D does not represent any bill which is actually rendered to Baltimore Company? A. You correctly understand that the dollars shown on that bill were not the dollars paid by Baltimore Company.

Q. Well, is Schedule D a reproduction of a bill actually rendered to Baltimore Company for 1946? A. No, it is not.

Q. It is, shall we say, a hypothetical, a synthetic bill which you have developed to point out Items (d) 5a and 5b? A. I think I would say more than that, Mr. Goldberg. For some time Baltimore and Penn Water have considered the necessity of a firm power bill and have discussed the means of preparing such a bill and billing in accord with a firm power bill, but because of the imminence of the present proceedings Baltimore Co. did not desire to use this form of bill.

• • •

[18378] Q. Have the rates gone up on Pennsylvania Power and Light Company since 1933? A. They have.

[18379] Q. Since 1933 they have been increased? A. That is right, by reason of adjustments in the contract.

Q. A fuel adjustment? A. That is correct, by reason of the fuel rate adjustments provided for in the contract.

MR. SPARKS: May we have Mr. Goldberg's original question about the rate?

TRIAL EXAMINER: Yes.

(Question read.)

THE WITNESS: I am sorry. I did not recognize that you were limiting that to Pennsylvania Power and Light Company. The Pennsylvania Power and Light Company contract for firm power services does not contain a fuel rate

adjustment, so that is the exception of the Pennsylvania customers.

By Mr. Goldberg:

Q. So that the rates of Pennsylvania Power and Light Company have not been increased since 1933, and your answer was directed to Philadelphia Electric Company? A. And to Metropolitan Edison and the Railroad.

Q. What are the "very definite advantages and benefits not available to the other customers of Penn Water" that Baltimore Company obtained in 1931 and still has today? A. One of them was the matter we discussed this morning, whereby supplying off-peak energy at a time when [18380] Baltimore's cost is low, and when it is being generated on the most efficient generating units, permitting the conservation or retention of water behind the hydro dams in order that the same amount of energy may be supplied to Baltimore Company during the on-peak hours when such energy would otherwise have to be generated on the less efficient and higher cost generating equipment at Baltimore and Washington.

Q. And your testimony is that in so far as Penn Water and Safe Harbor, if you will, are concerned, that supply of backfeed is not beneficial to Penn Water? A. No, that is not; that is beneficial to Baltimore Company.

Q. In relation to Penn Water's and Safe Harbor's, if you want to put it that way, firm power requirements of Pennsylvania? A. That is right, and that is one of the several big advantages to Baltimore Company.

Q. Now, what are the other very definite advantages and benefits not available to the other customers of Penn Water which Baltimore Company secured in 1931 and still has today? A. The flexibility that comes from operating large hydro plants such as those at Holtwood and Safe Harbor together with the generating facilities of Baltimore and Washington, as two horses in a team, if you will, all of the advantages of such operation inure to Baltimore

Company and do not [18381] inure to any of the Pennsylvania customers, including in that manner the capacity advantages which permit the flexibility of operation of the hydro and steam at such times as they will have the greatest benefit to Baltimore Company both from an operating point of view as to economy, and from an operating point of view as to scheduling of maintenance.

Q. This flexibility of operation is of benefit to Penn Water? A. No, it is not. It is a benefit to Baltimore Company.

Q. In other words, you have the interconnected system with the benefit flowing from the flexibility of the interconnected system, flowing solely to one member of that interconnected system; is that it? A. That is the benefit that flows to Baltimore through the contract, and is not available to the other customers of Penn Water.

Q. Is your answer "yes" to my question? A. May I have it again? I thought I answered it.

(Question read.)

THE WITNESS: Well, I did not say to one member, because there is more than one party that benefits to some extent. Washington gets some benefit from that as the result of being a member or being a party to a pooling arrangement, but most of the economic advantages flow directly to Baltimore Company [18382] and I think it would be correct to say that any advantages that might otherwise go to Washington other than those provided for in that contract still flow to Baltimore Company, so that I think your statement is correct.

Q. Well, I want to be sure I understand. Are there any advantages flowing to Penn Water from this flexibility of operations derived from this pooling arrangement? A. No.

Q. So that it is your testimony that it goes to only two members of the interconnected system, namely, Washington Company and Baltimore Company? A. Well, I have

since qualified that and said that it all goes to Baltimore Company because Baltimore Company gets all the economic benefits that grow out of the interconnection arrangement between Baltimore and Washington except such as may go to Washington under the terms of that agreement.

Q. That qualification really goes to one customer, is your testimony? A. That is correct, all the benefits flow to Baltimore Company, those benefits we have been talking about.

Q. Is maximum utilization of natural resources a benefit flowing from the interconnected system? A. The maximum utilization of the natural resources results from such coordination, and the benefits of such operation flow to Baltimore.

[18383] Q. All of it flows to Baltimore? A. The day to day, hour to hour or year by year benefits flow to Baltimore Company, that is correct.

Q. And would that be your testimony if I substituted for maximum utilization of natural resources resulting from the operations of the interconnected system, maximum economy resulting from the operations of the interconnected system, all of those advantages flow only to Baltimore from day to day, hour to hour and year to year?

• • •

THE WITNESS: I do not believe so because some of the economies are the result of interchange transactions, the savings from which are divided between Baltimore Company on the one hand and Penn Water on the other, which Penn Water passes on to its Pennsylvania customers in the way of a saving in their operating expense from such interchange.

By MR. GOLDBERG:

Q. So you would say that there is a benefit in connection with interchange that flows to Penn Water and the Pennsylvania customers? A. Yes, there is.

Q. That is the only qualification you would make, interchange? A. My difficulty in answering that is just what we go [18384] back to when you say is that the only qualification, interchange. Are you going back to the economies of operation?

Q. That is right, the point you just mentioned. A. That is correct.

* * *

[18386] Q. So that we can safely talk about the minimum amount and in talking about that amount it is your testimony—and I will not relate it to anything else right now—is it your testimony that the hydros, Safe Harbor and Penn Water can meet the requirements of 45,000 kw on a continuous basis without receiving any supplemental supply of energy? A. Of course, giving consideration to the steam generation at Holtwood?

Q. Yes. A. It could not under all low-flow conditions, no, but under most low-flow conditions it could and at such times it would not require supplemental energy from some source.

Q. What are the advantages to Baltimore Company as the residual receiver as you have testified in lines 20 to 22 of transcript 16,669? A. One of the advantages is the ability or opportunity [18387] to use hydro energy and capacity during high-flow periods for purposes of steam station maintenance and for other equipment maintenance work.

It must be recognized in connection with that position as a residual receiver that there is a very definite seasonal variation in the amounts available and while it cannot always be predicted way in advance, it can be predicted with reasonable accuracy for periods of six weeks or thereabouts.

Q. That fits into the advantage that you described as flexibility of operations? A. Yes, that is right, that is one of them.

Q. Are there any other advantages that you have in mind when you use the word "advantages" in line 22 of

transcript 16,669? A. There is a definite tax advantage under the existing contract in such a position.

Q. You mean a federal tax advantage? A. Yes.

Q. Is that related to that pyramiding situation? A. That is right, yes, it grows out of that form of contract. The difference between a "d. c." company that Mr. Walls testified to in the proceedings in IT-5914 and the "S. H." type of contract is a very real dollar advantage, several hundred thousand dollars a year, I believe.

Q. Any other advantages that you have in mind? [18388] A. No, I think those were the only two.

Q. What do you understand by the phrase "residual receiver"? A. A company who will receive or can receive the amounts that may be available after some other situation has been met. In this instance, of course, the amount of energy, capacity and other services that are available after the other obligations of Penn Water and Safe Harbor have been met and provided for.

* * *

[18436] Q. * * * I would like to show you an article written by Mr. Allner, with which you are probably familiar——
[18437] A. Yes, I think I assisted him in the preparation of the data therein.

Q. Which appears in Volume 66 of Power at page 135. I have a photostatic copy so I can leave this before you.

The article is entitled "Operation of Hydro and Steam Plants in Parallel." Isn't that right? A. Yes.

Q. And it is by F. A. Allner; is that correct? A. That is correct.

[18438] Q. And from what you have just said you, of course, knew Mr. Allner and worked with him. Is that right? A. Very well, yes, indeed.

Q. At the time he wrote the article he was general superintendent of Pennsylvania Water and Power Company. Is that right? A. It so states in the article.

Q. Mr. Allner was connected, was he not, with the design and construction of the Holtwood Steam plant? A. Yes, he was.

Q. Referring to page 136 under the caption "Size and Type of Generating Units," do you see that? A. Yes.

Q. This appears, does it not: "From the point of view of low first cost and of economy of operation under base load conditions, larger generating units would have been desirable. However, these considerations were subordinated to sturdiness, reliability of service, quick starting and maximum coordination with the hydroelectric plant." It so states, does it not? A. It does. You have read it correctly.

Q. You don't disagree with that, do you? A. No, indeed, recognizing it was written in 1927 under then-existing conditions, and I think the next sentence which you did not read is the sentence you and I have been discussing [18439] at some length for the last hour and a half.

Q. If you think so I would be glad to have you read it. A. I would like to.

> "Furthermore, under the existing conditions these initial steam units must often operate at a comparatively small load, either when separated from the rest of the generating system, or in high flow when operating on the peaks so as to take the top of the load and give the hydroelectric units maximum load. All these considerations pointed toward relatively small sturdy machines for the initial installation, approximating in capacity the hydroelectric units."

* * *

[18441] Q. I want to refer you to another article written by the same Mr. Allner entitled "The Holtwood Steam Plant Design and Operation in Coordination with Water Power." Are you familiar with that article? A. It appears to have considerably the same text as the other article appearing in "Power" had.

MR. SPARKS: Does it have a date on it?

THE WITNESS: Yes, it was presented at the summer convention of the American Institute of Electrical Engineers in Detroit, Michigan, in June of 1927.

By MR. GOLDBERG:

Q. The same year the other article was presented to which we referred, is that correct? A. It was.

Q. Will you refer to page 8 of the article, the first paragraph in the right-hand column on that page? Beginning at about the third line this appears, does it not: "The present boiler installation is larger than needed for the first two turbines, and surplus pulverizing capacity on a bituminous rating was installed to offset partially the reduction in capacity when milling river coal." Is that right? A. Yes.

Q. "Switching equipment is installed for two more units [18442] and the cable tunnel to the hydroelectric plant will take care of the ultimate station."

Have I correctly read from the article? A. You have.

Q. And I imagine you agree with that, do you not? A. I agree with the statement as written in 1927, yes. Those are not all the facts today which I referred to on page 16,680.

Q. The facts today, Mr. Spaulding, can't change the reasons why capacity was installed at the time it was installed, isn't that so? A. But additional costs have been incurred since then, Mr. Goldberg.

* * *

[18459] Q. Is it your statement, in the light of that testimony, that furnishing backfeed does not constitute furnishing capacity service? A. That is correct.

* * *

Q. You say when arrangements have been made to operate capacity without energy that that constitutes the furnishing [18460] of backfeed as a capacity service? A.

Well, my difficulty with the question is this: That backfeed has generally been used in reference to energy alone, yet we had an example the other day in one exhibit, I believe it was a bill for interchange services rendered between Penn Water and P. P. & L. Company for April, 1944 in which there was capacity services arranged in advance and billed as interchange services, and during that month certain of that capacity that was operated without energy was operated by Baltimore Company. That is an instance where capacity service is provided by Baltimore Company in connection with interchange transactions arranged, first, by Penn Water with its Pennsylvania customers, and may or may not involve the furnishing of backfeed energy.

I assumed you were using the word "backfeed" in a general sense rather than as energy itself.

Q. When there is a backfeed flow of energy, at such times does Baltimore Company ever furnish any capacity service? A. In connection with such interchange transactions as I have just referred to.

Q. How about when the backfeed is being supplied for firm delivery in Pennsylvania? A. No, Penn Water and Safe Harbor are themselves providing capacity service in that connection, and they are receiving services as backfeed.

Q. That is true even when Safe Harbor and Penn Water [18461] generating units are not generating electric energy? A. That is correct, they need not be generating electric energy.

Q. Could you define capacity service that Safe Harbor and Penn Water are then providing? A. Yes. There is capacity operating for the rendering of such capacity service, such as I have described the last several days.

Q. You mean reactive? A. Reactive, yes, as well as capacity being one of the services being rendered by Penn Water and Safe Harbor. Reactive is another service. Voltage regulation is another service being rendered by Penn Water and Safe Harbor, and supplied together with

energy received by Baltimore Company in connection with such service.

Q. Does that apply during extended low-flow periods? A. Yes. One doesn't have to have energy to provide capacity service at all.

Q. One can be supplying energy and still be supplying capacity service? A. One can be. One doesn't necessarily. For instance, interchange transactions largely relate to supply of energy without any capacity commitment whatsoever, or any capacity obligation whatsoever.

Q. You said a little while ago that when Baltimore starts [18462] up a unit in a generating station that is already operating to meet Penn Water's requests for backfeed that Baltimore is doing no more than anybody else does. A. That is correct.

Q. Does that apply to the Pennsylvania customers? A. Yes.

Q. Is it your statement that they are obligated to start up a unit in an operating station that is operating to supply Penn Water's demands? A. They have the same obligation that Baltimore Company has to do so.

Q. Your answer is "Yes", then, to my question? A. That is correct. Neither one, of course, is considered to have such an obligation. It is merely an agreement to do so from time to time.

* * * *

Q. Is it your statement that Article 6 on page 9 of the Item H is not the basis for the furnishing of backfeed by Baltimore upon request by Penn Water? A. It is the provision which indicates that Baltimore will provide such backfeed energy, yes.

Q. And is it your statement that there is nothing in Article 6 imposing an obligation upon Baltimore Company to [18463] start up a unit in a generating station in operation if necessary to meet the requirements for backfeed made upon it by Penn Water? A. No more so than any

other customer that Penn Water arranges with to provide interchange energy.

Q. That is not my question. My question is directed solely to Baltimore Company. I will have it read. A. It is an agreement by Baltimore Company to do so; that is correct.

Q. It is an obligation of Baltimore Company? A. From an operating point of view I do not consider that any different operating responsibility than is undertaken by any of the other customers.

Q. That is not my question. It is an obligation of Baltimore Company—— A. What do you mean by "obligation"?

Q. You used it yourself this evening.

TRIAL EXAMINER: Is it an operating responsibility?

THE WITNESS: It is.

By MR. GOLDBERG:

Q. Is it an operating obligation? A. I don't know what the legal obligation is, Mr. Goldberg.

Q. You have used "operating obligation" without regard to any legal concepts, and I ask you in that sense whether it [18464] is an operating obligation.

TRIAL EXAMINER: Look at your testimony on 16,682.

MR. GOLDBERG: I was just looking at that, Mr. Examiner. I was going to get at that next.

• • •

THE WITNESS: I don't consider it so.

By MR. GOLDBERG:

Q. But you do consider, whatever it is that Baltimore has to do, is no more than what the Pennsylvania customers have to do on an as, if and when basis; is that correct? A. That is correct.

Q. You do recognize, however, do you not, that whatever Baltimore has to do it has to do until 1980 while what-

ever the Pennsylvania customers do they do on an hour to hour or day to day basis? A. I still don't consider it any different.

Q. You recognize that, however, don't you? A. I recognize that the contracts have different termination dates.

Q. You recognize, do you not, that the provisions of Article 6 are not on an hour to hour and day to day basis? A. No, I do not.

Q. You look at them as representing nothing more than an hour to hour and day to day basis? [18465] A. That is correct. I look at them exactly that way, as nothing more than an hour to hour and day to day basis.

* * *

[18466] Q. You are familiar with Article VIII appearing on page 35 of Item H, I am sure. Does that Article VIII mean [18467] to you that the operations of the steam stations and the hydro stations of the interconnected system are to be so coordinated that backfeed from Baltimore and Washington will be available when and to the extent that it is required by Penn Water?

* * *

THE WITNESS: No, it means that it will be operated to provide maximum economy only.

* * *

[18548] Q. What investments are now being accumulated in connection with contemplated projects which are classified as property held for future use? A. Largely land items.

Q. What are the contemplated projects? A. Additional transmission facilities and additional [18549] hydroelectric developments.

* * *

[18555] Q. Now, you were talking about an investment having been made for future use in connection with "an additional hydroelectric development". What is the amount of

the investment that has been made for that purpose? A. The amounts as of December 31, 1946 were slightly under $60,000.

Q. Is the general location of the property above Safe Harbor? A. Yes, sir.

Q. Is it not fair to state that there are no definite plans for that additional hydroelectric development? A. There are no definite plans in that a specific design, a specific location or a specific date has been set; and when I say "specific" of course, I mean that they have not been definitely determined.

Q. In thinking about this additional hydroelectric development, I take it you are thinking about it as a separate hydroelectric development above Safe Harbor? A. That is right.

I should like to change an answer I made a few moments ago as to the amounts that have been invested for such purposes. I think I gave a figure as of December 31, 1946.

Q. Right. A. I should like to qualify that statement by saying that for the purposes of my cost-allocation study, evidenced [18556] by Exhibits 35 and 378, I only included an amount of dollars equal to some $57,000.

MR. SPARKS: You are relating that statement, Mr. Spaulding, to the investments being made for future use in connection with an additional hydroelectric development?

THE WITNESS: Yes.

By MR. GOLDBERG:

Q. I take it the money has been spent for the acquisition of land rights; is that right? A. Yes, sir.

Q. I take it there has been no thought given to who would own and operate the plant if and when constructed, is that right? A. Yes, there has been some thought given to it.

Q. Is it contemplated that Penn Water would own and operate it, in your present thinking? A. That decision has not been made.

• • •

[18563] Q. Now, at transcript 16686 you complain, line 24, to transcript 16687 line 6, both inclusive, about Mr. Davis' use of $992,535 in his allocation because you say Penn Water actually paid more than that in 1944.

Now, then, considering as you have said, that an allocation should have regard for the future, was $992,535 more consistent with the future than the $1,214,000? A. That remains for the courts to determine. That matter is already before the Third Circuit Court, and I cannot determine what their judgment is going to be.

Q. Is the rate reduction ordered by the Commission in Safe Harbor's rates presently in force? A. With the stipulation by the parties that the money will be refunded to Safe Harbor in the event the courts hold that such amounts are deficient.

Q. So that the charges today are based upon the Commission's order, right? [18564] A. That is right. With the stipulation I just stated, which I believe is also in the hands of the Federal Power Commission.

Q. When were Items E, F and G filed with the Pennsylvania Commission? A. I could not tell you. I do not have that date. I will be glad to get it for you if you wish.

Q. I would appreciate it. A. Probably there was more than one date because the contract identified Item G was filed, I am sure, later than contracts E and F.

Q. I would appreciate having all the dates. A. I think I can give it to you, and it was filed both by Safe Harbor and by Penn Water with Pennsylvania Public Utility Commission.

Q. And filed by Penn Water at the same time and Safe Harbor? A. I would presume at the same time, yes.

Q. Will you ascertain that? A. If I can do so over the evening.

Q. Have any revised schedules been filed with the Pennsylvania Commission regarding Items E, F and G by either Safe Harbor or Penn. Water? A. As I recall, the Pennsylvania Commission has been advised of the receipt of FPC Order 143, and that the parties [18565] have entered into a stipulation relating to the amounts currently being paid and the conditions under which Safe Harbor may look to those parties for additional sums in the event that the contentions of Safe Harbor Company are upheld by the Third Circuit Court.

Q. So that no revised schedules have been filed with the Pennsylvania Commission? A. Not that I recall unless you call that letter a schedule. It was not filed as a schedule.

* * * *

[18614] Q. Do you recall at all when you reached your conclusion with respect to the 295,000 kw for hydro and the 28,000 kw for steam capacity in connection with the capacity values as you express it in Exhibit 35?

* * *

A. I would say it was within a matter of weeks of the time the testimony was finished and I think it was finished very shortly before it was presented. I would say it was during the first part of the year 1946, probably the first quarter.

[18615] By Mr. Goldberg:

Q. That was the testimony presented in connection with the identification of Exhibit 35, is that correct? A. Yes, sir.

Q. Do I correctly understand you did not employ the probability method in arriving at that 295,000 kw? A. No, you are not to understand that. I had the benefit of Mr. Watchorn's conclusions in the probability determination of dependable hydro capacity and at that time I gave

very careful consideration to it, among the other factors that he considered.

Q. You mean it entered into your judgment in arriving at the 295,000 kw? A. Yes, definitely, and was one of the strongest factors, but I did not desire to use it until I had considered these other matters, as well.

* * *

[18618] Q. What do you mean by that, every time you have used it in such connection? A. Every time I have used "dependable capacity" in connection with my rebuttal testimony of Mr. Davis, Exhibit 64, every time I have used dependable capacity as I used it in connection with Exhibit 35 and Exhibit 378, I have used dependable capacity as being the dependable capacity determined from a probability study.

* * *

[18635] Q. When you stated to the Examiner a little while ago that Penn Water always had, I think you said, services available or resources available—— A. I think the latter is right.

Q. You were there confining yourself to capacity, and it did not intend to extend your answer to availability of energy, is not that so? A. I did intend to include availability of energy.

Q. You always have enough energy? A. Yes, but may I explain that, because I think I see the difficulty.

Penn Water and Safe Harbor do have the necessary energy resources to meet all the firm power requirements of the Pennsylvania customers. In order that they may provide energy services to Baltimore also, Penn Water and Safe Harbor obtain supplemental energy services, not capacity services but energy services, from either the Pennsylvania customers or from Baltimore off-peak, in order that there may be ample energy resources to supply Baltimore Co. during the on-peak hours in addition to the sup-

ply of all of the firm power services to the Pennsylvania customers on-peak.

• • •

[18675] Q. Referring you to your answer at lines 1 to 8 of transcript 16638, has Baltimore Company since 1933 physically provided electric service for supply to Coatesville at times when Safe Harbor and Penn Water were unable to do so? A. No.

• • •

[18685] Q. Referring to 16649, to the question beginning at line 23 and the answer following, will you please specify the times since the effective date of the 1931 supplemental agreement when Baltimore did actually render a bill to Penn Water for backfeed?

MR. SPARKS: I object to that as cumulative. Mr. Goldberg questioned Mr. Loane about the same details, as I recall, a few days ago.

• • •

TRIAL EXAMINER: He may answer.

THE WITNESS: In the years 1931, 1932 and I believe '33, if that is sufficient. I do not have the exact months in those years.

By MR. GOLDBERG:

Q. Was it more than one month? A. Oh, yes; several months, if not many months in those three years.

Q. Is it your testimony that such bills were rendered under "Article 6 of Item H"? A. Generally so; not exactly in accord with that section.

[18686] Q. That brings us to the next question: You have testified: "Such bills were computed generally in accord with Article 6—" and I will stop there. I was wondering what your qualification was when you say "Generally in accord"? A. Article 6 of the 1927 agreement in Item H states, "The costs to be used are those reported on Electric's monthly production statement covering the month

during which steam energy was furnished to Power—" in this instance Electric refers to Baltimore Co. and Power to Penn Water, and the costs there referred to are the costs to be used and to which 10 per cent is to be added in determining the amount of the bills. Actually that exact method was not used after 1931, or at least was not used after the middle of 1931; rather, the amounts used were as shown on Exhibit 367 where it indicates that the Westport production cost alone was used rather than the monthly production statement cost for all of the generating stations of Baltimore, and the difference was rather material.

Q. You have answered three questions in one. Tell me this: Was the supply of energy shown in Exhibit 367 provided by the Westport Station? A. That is not known, of course, exactly where it was provided. It was provided by the system and the costs at Westport were used for the month in which such energy was supplied by Baltimore Company to Penn Water.

Q. Am I correct in my conclusion that the face of the [18687] bill discloses that the charge was based on an agreement between R. L. Thomas and F. E. Ricketts? A. Yes, to the extent that Mr. Thomas and Mr. Ricketts were at that time—that is, in 1931 and 1932—members of the operating committee designated under the provisions of the contract H, and the bill was made out in accord with that operating committee's determination.

Q. Does that agreement which appears on the face of Exhibit 367, in substance apply to all the bills which were rendered in 1931, 1932 and 1933? A. Yes.

Q. Was it a written agreement or an oral agreement? A. There was no written agreement and I do not know whether it was any more than merely the arrangement by the operating committee, they having power to do so in connection with this matter.

MR. SPARKS: I take it your question about the agreement, Mr. Goldberg, in the years 1931, 1932 and 1933, related to the backfeed bills?

MR. GOLDBERG: That is right.

THE WITNESS: And specifically such as is shown on Exhibit 367.

By MR. GOLDBERG:

Q. Do you view the agreement appearing on Exhibit 367 as a modification of Article 6 or as having nothing to do [18688] with Article 6? A. I do not view it as an agreement. I view it as a procedure which the operating committee agreed to, which was their interpretation, I guess, I cannot say, presumably their interpretation of Article 6.

I do not know whether they had advice of counsel in that matter or not.

Q. Did I understand you correctly to say that Article 6 is not limited to Westport's production costs or to any station's production costs? A. It does not appear to be and I know that prior to 1931 the system costs were used.

Q. Is the $8,383.16 shown on Exhibit 367 a part of the $14,452.47 shown as Item (d)-2 on Exhibit 368? A. It is.

Q. Do you know in what months the other backfeed charges covered by the additional $6,000 took place? A. No, I do not recall. I think it was the latter part of the year but I would not be certain.

Q. Was it at the same rate as shown in 367? A. Not at the same rate but under the same bases as are shown on Exhibit 367.

Q. Will you turn to Exhibit 369? A. Yes, sir.

Q. Referring to Exhibit 369, what do you mean by [18689] "Baltimore Co. Average Monthly Production Cost Plus 10%" which is the heading for the fourth column? A. The amounts shown or the rates shown in column 3 were determined in the following manner: Baltimore Company's average production cost for each month was determined from their production statements. To that 10 per cent was added, then such amounts were averaged for the year in proportion to the amounts of daily net backfeed

energy received by Penn Water in each month of that year, so it was done on a monthly basis using monthly averages, and then from that getting an average for the year, but it was done on a weighted basis rather than a numerical average basis.

* * *

[18691] Q. When you put the caption "Baltimore Co. Bill to Penn Water under Article 6 of 1927 Contract" on the last column of Exhibit 369 you were not there referring to any actual bills for 1944, 1945 and 1946, is not that so?

* * * *

[18692] THE WITNESS: No, I was not referring to any actual bill rendered, but rather the bills that would have been rendered under the contract except for the reason given that such billing did not affect either company's net income.

TRIAL EXAMINER: No, I do not understand that.

THE WITNESS: Mr. Examiner, in the past the record will show that I stated that the reason there was today no billing for backfeed under H and I was because the operating committee [18693] had been advised by counsel for Baltimore Company that the necessity for billing for backfeed between Penn Water and Baltimore Company under H and I was of no interest to any party other than Penn Water and Baltimore and that because it did not affect the operating income of either company it could be dispensed with.

Accordingly, we have not been billing for backfeed under Article 6 of the 1927 agreement or under H and I since about 1933.

It is true that it did not appear to affect anybody until these proceedings started and now it is evident that it does affect somebody and that is the reason we have pointed that out, particularly the distinction between the net billing and the gross billing, the gross bills being the firm power bills rendered by Penn Water to Baltimore Company.

TRIAL EXAMINER: I see. What is the net bill?

THE WITNESS: The net bill is the bill actually rendered by Penn Water to Baltimore Company. The firm power bills are the bills that would have been rendered had we billed for backfeed and accounted for backfeed services separately in accordance with the initial intent of the contract.

• • •

[18699] Q. Is it not a fact that in 1927, when Article 6 was executed as part of the 1927 agreement the 220 kv lines were not in existence? A. They were not in existence.

• • •

[18700] Q. Now, this backfeed that appears in Exhibit 367 was handled over the 25-cycle line, that is over the Highlandtown line, right? A. No, I do not think it all was.

Q. Well, none of it was handled over the 220 kv lines, was it? A. I think so, yes.

Q. Were the 220 kv lines already operating in December, 1931? A. No, there was no power flow over the 220 lines. They did not go in until about 2 weeks after this bill was rendered.

[18701] Q. The energy was November? A. Yes, and that is why I was first confused; there was subsequent billing of course related to energy that flowed over the 220 lines.

Q. So that this energy in Exhibit 367 was handled over the 25-cycle lines, right? A. Yes.

Q. So there is no netting involved in Exhibit 367 between flows over the 220 kv circuits and flows over the 25-cycle lines, right?

• • •

[18741] Q. Mr. Spaulding, I think there are some matters of homework that you were to report on. Are you ready to report on them? A. Yes.

Q. I think one of them related to the dates of filing of Items E, F and G with the Pennsylvania Commission? A. I have those dates.

Q. Would you please state them? A. The original Safe Harbor contract identified as Item E, dated June 1, 1931, together with the supplement to this 1931 contract dated August 1, 1932 and identified in these proceedings as Item F, was filed by Safe Harbor Water Power Corporation with the Pennsylvania Public Utility Commission on September 16, 1933, and was designated by that Commission [18742] as Safe Harbor Tariff No. 1.

These two contracts identified as Items E and F were also filed with the Pennsylvania Public Utility Commission by Penn Water on September 16, 1933 and were designated by that Commission as Penn Water Tariff No. 5.

The second supplement to this 1931 Safe Harbor agreement which has been identified in these proceedings as Item G and dated November 22, 1939 was filed with the Pennsylvania Public Utility Commission by Safe Harbor Water Power Corporation on December 7, 1939 and was designated by that Commission as Safe Harbor Tariff No. 1, Supplement No. 1.

This supplemental agreement, Item G, was filed by Penn Water with the Pennsylvania Public Utility Commission on December 7, 1939 and that was designated by that Commission as Penn Water Tariff No. 5, Supplement No. 1.

• • •

[18757] RE-DIRECT EXAMINATION.

By MR. SPARKS:

Q. Mr. Spaulding, at transcript page 17,216 Mr. Wahrenbrock asked you at line 17:

> "Do I understand you, then, as saying that the rendition of these other services is a necessary incident to the supply of energy for which the dollar amounts are billed?"

And you answered "Absolutely".

In making that answer, did you mean to imply that the services provided at the Safe Harbor and Holtwood plants

other than the supply of energy are incidental to the supply of energy?

• • •

[18758] THE WITNESS: No, I did not. As I have pointed out in many places in my testimony there are times when the other services, such as capacity service, is provided at Safe Harbor and Holtwood when no energy is supplied.

• • •

[18759] Q. Referring to your answer at lines 4 to 6, inclusive, page 18,343, is that answer reported correctly? A. It is not. When I referred to generating sources——

TRIAL EXAMINER: Now, wait just a minute.

THE WITNESS: I was referring to the generating sources of Penn Water and Safe Harbor as a group.

• • •

[18857] DALE E. GOUBLEMAN

a witness herein, having been first duly sworn, testified as follows:

• • •

[18858] DIRECT EXAMINATION.

By MR. GOLDBERG:

• • •

[18864] Q. Do you have data showing whether or not Penn Water investors in common stock were concerned with the probability of future rate reductions? A. Yes, I have.

Q. What data do you have? A. I have photostat copies of "Standard Unlisted Securities—Stock Reports", published by Standard & Poor's which [18865] are utilized by investors in making investments.

Q. Are there statements in such reports disclosing concern with probability of rate deductions? A. Yes, there are.

Q. Please tell us what reports you have? A. I have reports dated May 25, 1938, December 5, 1938, February 27,

1939, October 11, 1939, January 12, 1940, May 6, 1940, August 28, 1940, February 26, 1941, April 13, 1942, June 4, 1943 and November 29, 1944.

Q. What is the nature of the statements which appear in those reports to which you have had reference in your earlier answers? A. Well, the report for May 25, 1938 states with respect to Penn Water common stock, as follows: "The possibility that earning power may be impaired by rate reductions dictates a conservative attitude toward the otherwise strongly situated common stock."

This same statement in virtually those very words appears in each of the reports to which I have made reference. In addition, the report of May 25, 1938, states that "because of the contractual nature of the business, earnings should be well maintained. Nevertheless, rate investigations make for some uncertainty."

The report also states: "Pennsylvania Water & Power's 1937 operating income was equal to 9.3 per cent of depreciated [18866] book value of plant." Again, in the report of August 28, 1940, after referring to the Commission's order reducing Safe Harbor's rates it is stated that if the Safe Harbor order is upheld "Pennsylvania Water & Power also would be vulnerable to a rate reduction", and in the report of February 26, 1941, it is stated that: "Regulation of hydro wholesalers has taken a more aggressive turn in the recent past. In 1940 the FPC limited earnings of Safe Harbor Water Power to 6 per cent on 'net investment'. Should the Commission be upheld, Pennsylvania Water & Power also would be vulnerable to a rate reduction."

This same warning appears in virtually the same words in the report of April 13, 1942. Also the report of August 28, 1940 states:

> "In 1939, operating income was equal to 8.9 per cent of depreciated book value of plant." The report of June 4, 1942, stated:

"In 1942, the Company earned 9.0 per cent on net plant, excluding $2,106,765 transferred from plant to the electric plant adjustment account", and under the caption "Prospects" is the statement "One uncertainty in the outlook is the possibility of regulatory pressure upon the high rate of return."

Q. Are the reports to which you have referred all of the reports in which the investors' attention is directed to the possibility of rate reductions affecting the earnings of [18867] Penn Water? A. No, there are others. I have merely referred to some of the typical statements which appear in those reports.

• • •

[18875] CROSS-EXAMINATION.

By MR. SPARKS:

• • •

[18879] Q. This was my question, Mr. Goubleman: Are you in agreement with the standards and principles which Mr. Joseph testified were followed in the compilation of Exhibit 46? A. Yes, I believe that I am.

Q. Were those standards and principles followed in the preparation of Exhibit 404? A. I believe they were with one or two minor exceptions. I have supplemented Exhibit 404 in one or two places.

• • •

[18894] Q. Mr. Goubleman, referring now to page 38 of Exhibit 404, do you have the figure for April, 1947 which should follow the 6.89 as shown for March, 1947? A. I have computed that figure to be 6.97 per cent.

Q. That is for April, 1947? A. Yes.

• • •

[18925] GEORGE H. DAVIS.

• • •

DIRECT EXAMINATION.

• • •

[18928] By MR. GOLDBERG:

Q. Have you examined the "Cost of Service Study", Exhibit 378, in which Mr. Spaulding allocates Pennsylvania Water & Power Company's and Safe Harbor's cost of service to Baltimore? A. Yes.

Q. What are the principal differences between the method used by Mr. Spaulding and that used by you in your allocation? A. Mr. Spaulding allocates costs to Baltimore only and makes no allocation between any of Holtwood's other customers.

Mr. Spaulding does not consider Pennsylvania Water & Power Company by itself but combines it with Safe Harbor. His analysis, therefore, gives no answer to the question of how much of Pennsylvania Water & Power Company's costs are applicable to Baltimore or to any other customer.

Q. What is the effect of Mr. Spaulding's method on the proportion of Pennsylvania Water & Power Company's service which is included in the total service that he allocates to Baltimore? A. It tends to increase the percentage of Holtwood's service that he allocates to Baltimore.

[18929] Q. How does it increase the percentage? A. By entitlement under Items E, F and G, Baltimore purchases 66 2/3 per cent of Safe Harbor's output. However, the per cent of Holtwood's output delivered to Baltimore is much less than that, due to the greater proportion of it which is required to supply the Pennsylvania customers.

Q. How does this affect the result? A. On the combined ratio, the proportion of Holtwood's costs allocated to Baltimore is greater than the proportion of its service supplied to Baltimore.

Q. Have you prepared a cost allocation based on the data and costs of 1946? A. Yes.

Q. Have you also prepared an explanation of this allocation and its relation to the allocation based on 1944 data and costs as part of the 1946 study? A. Yes.

Q. Is Exhibit 421 for Idenfification the document referred to? A. Yes.

Q. In this allocation have you made a determination of dependable hydro capacity? A. Yes.

[18930] Q. In making that determination, have you followed the method used by the Holtwood Company? A. I have followed the general method which was used by Holtwood and Baltimore in reporting dependable capacity prior to 1945, and which was discussed at a conference between this Company's engineers and members of the Commission Staff on June 25, 1946.

Q. Who attended this conference and where was it held? A. It was held in Mr. Spaulding's office in Baltimore and was attended by Messrs. Spaulding, Watchorn, Loane and Von Eiff of Holtwood Company and Mr. Roland and myself for the Staff.

Q. What was the occasion for the conference? A. The Commission had received reports from Holtwood and Baltimore Companies giving estimates of dependable capacity which varied widely. The conference was held at the request of the Staff for the purpose of learning the methods by which these different results were obtained.

Q. What information were you given at the conference in Mr. Spaulding's office? A. There was no disagreement as to the derivation of the load-carrying capability of the hydro plants, based on minimum flow and the actual loads during the peak week under the weekly recovery program. This figure for 1945 was 161,000 kilowatts. This basic capacity had previously been determined each year [18931] by both Holtwood and Baltimore Companies.

In this conference Mr. Watchorn agreed that the 161,000 kilowatts was correct for that capacity, based on

1945 loads, but said it was not the dependable capacity of the plants. He went on to explain that other elements of capacity value had to be considered in estimating dependable capacity and gave us the following list of other components that should be considered. He gave us values for each component, which when added to the basic capacity of 161,000 kilowatts, gave 295,000 kilowatts, which was the figure that Holtwood Company had reported to the Commission as dependable hydro capacity:

Base load carrying capability	161,000 kw.
Added Capacity:	
For use of Safe Harbor Storage without refill	59,000 kw.
For change in load shape and energy from Pa. customers	46,000 kw.
For probability of better than most adverse flow	29,000 kw.
Total	295,000 kw.

Q. What dependable capacity did you use in your cost allocation for 1946? A. 250,000 kilowatts.

Q. Have you made a computation to determine what the result of your allocation would be if you used the 295,000 kilowatts as dependable hydro capacity? A. Yes.

[18932] Q. What is the result, using 295,000 kilowatts? A. It would increase the costs allocated to Baltimore Company from $181,739 to $269,645 and reduce the percentage of revenue in excess of allocated cost applicable to Baltimore Company from 96.37 per cent to 92.5 per cent.

Q. Did you make a mathematical determination to arrive at 250,000 kilowatts? A. No, except in computing the basic load carrying capability of 167,000 kilowatts.

Q. How did you determine the added amount which you include in the 250,000 kilowatts? A. This is a judgment figure based on consideration of the factors which may have additional capacity value. This estimate is also based

on the principle that dependable capacity is not what the seller may be able to compute, as a possible steam capacity replacement, and it may not be just what the buyer would be pleased to pay for, but it is that amount which operating engineers and officials of the company upon which will rest the responsibility for any failure to carry the load, can reasonably, and actually will depend on, in any determination of investment to be made for additional capacity requirements.

* * * *

[18933] By Mr. Goldberg:

Q. Mr. Davis, I show you Exhibit 422 for Identification and ask you if you prepared that exhibit? A. I did.

Q. Do I understand that that is a cost allocation prepared in the same manner as Exhibit 421, except that Exhibit 422 is prepared on 1944 data?

* * * *

Mr. Myse: I want to object to that question on these grounds—and it may be a little bit premature to object to the exhibit but the same objections go to the exhibit. Those objections are as follows: Exhibit 422 and any testimony in connection therewith is not proper rebuttal. They do not rebut any of the evidence which Respondents have put in up to this date. So far as I can see, Exhibit 422 is nothing more than a cumulative exhibit based on a new method, in part. As I said before, that does not rebut anything except it may rebut Mr. Davis' own testimony in the case in chief of the [18934] Commission Staff and I therefore object to this exhibit and any testimony based thereon.

Mr. Goldberg: I hardly think that calls for a response, Mr. Examiner.

Trial Examiner: I think maybe you had better respond to it.

Mr. Goldberg: I would be glad to, Mr. Examiner. The Examiner will recall that the witness Loane pre-

sented an alleged rebuttal exhibit in which he testified certain additional adjustments should be made to the 1944 cost allocation presented by the witness Davis.

Mr. Examiner, this is clearly in rebuttal to that.

TRIAL EXAMINER: Is it confined to that?

MR. MYSE: May I explain my objection a little bit further?

TRIAL EXAMINER: Just a minute. Is it confined to that?

MR. GOLDBERG: Well, it is not confined to that because it would only be half an exhibit if it were only confined to matters that Mr. Loane brings out. Mr. Loane did not bring out the adjustments that operate in favor of Baltimore Company.

MR. MYSE: Let me explain my objection and show how it is not confined to that.

TRIAL EXAMINER: Wait just a minute. What is the scope of Exhibit 422 for Identification?

[18935] MR. GOLDBERG: Precisely the scope of 421 for Identification, except that 422 is 1944 data.

TRIAL EXAMINER: 421 is your own exhibit, it is not Respondents?

MR. GOLDBERG: I realize that, Mr. Examiner.

TRIAL EXAMINER: What has this to do with the witness Loane?

MR. GOLDBERG: The witness Loane has testified on rebuttal that the proper cost allocation based on 1944 data would be thus and so, as he reflects in his Exhibit 351. Now, then our reply to that is quite the contrary, it is what is shown in Exhibit 422.

MR. MYSE: May I be heard, Mr. Examiner?

TRIAL EXAMINER: Not just yet. Mr. Witness, refer to your Exhibit 422 for Identification. What does it consist of briefly?

THE WITNESS: It consists of the same allocation of costs as Exhibit 64, incorporating all of the things which appeared to me to be proper that were brought out during cross-examination on Exhibit 64, together with some other items that were suggested by the things that were brought out in cross-examination on Exhibit 64.

MR. MYSE: It seems to me to be redirect, Mr. Examiner.

TRIAL EXAMINER: It seems to me you referred to the cross-examination twice.

[18936] THE WITNESS: Of Exhibit 64?

TRIAL EXAMINER: Yes.

THE WITNESS: Yes, I did.

TRIAL EXAMINER: Read me the witness' statement?

(Statement read.)

TRIAL EXAMINER: You mean there was one category you brought out which you considered proper and another category you were uncertain about?

THE WITNESS: No, the other category was things suggested to me in a study of the exhibit by the things that were brought out but which were not brought out in cross-examination on Exhibit 64.

TRIAL EXAMINER: How does your Exhibit 422 relate to Respondents' Exhibit 351?

MR. GOLDBERG: What does the Examiner mean by relate?

TRIAL EXAMINER: Let us see if the witness can answer that.

THE WITNESS: Exhibit 351 introduced a number of things that were brought out during cross-examination on Exhibit 64 which appeared to me to be proper corrections and which I adopted. It brought out a number of others which I did not consider to be proper and which I did not

adopt. It also suggested others which had not been brought out which seemed to me to be proper corrections and I incorporated those in Exhibit 421.

[18937] TRIAL EXAMINER: When you were recalled at one time you presented an exhibit that accepted certain changes that were brought out in your cross-examination?

THE WITNESS: 292 and 249.

MR. GOLDBERG: That is right, and the witness has just stated those were reflected in Exhibit 351 but that Exhibit 351 goes far beyond that.

TRIAL EXAMINER: What is the relationship of Exhibits 249, 292 and 64 to your Exhibit 422 for Identification? Have you gone farther in your 422 than you did in 249 and 292?

THE WITNESS: That is right, incorporating things that were suggested.

TRIAL EXAMINER: Your Exhibits 249 and 292 incorporated things that were directly brought out on your cross-examination?

THE WITNESS: That is right.

TRIAL EXAMINER: And your proposed 422 goes one step further and incorporates certain matters that you selected after further deliberation, is that right?

THE WITNESS: That is correct.

TRIAL EXAMINER: In other words, there is in the record now no cost allocation study by you in one simple, consolidated form that does all of these things that you have proposed to do in 422, is that right?

THE WITNESS: Up to this point, no, there is not.

MR. MYSE: May I ask a few questions along that line?

[18938] TRIAL EXAMINER: Yes.

By MR. MYSE:

Q. Mr. Davis, will you tell me what connection Table V-B of Exhibit 422 has with Mr. Loane's Exhibit 351?

MR. GOLDBERG: Objection, Mr. Examiner. I say that is entirely immaterial and irrelevant to the presentation of this exhibit.

MR. MYSE: The reason I ask this question—and I might explain it to the Examiner—is because Table V-B introduces an entirely new theory of energy balance. There was nothing in Exhibit 64, Exhibit 249 or Exhibit 292 that had any connection with Table V-B and, what is more, there is nothing in Exhibit 351 or 350 that has any connection with the energy balance which is now introduced for the first time.

MR. GOLDBERG: That is the trouble with Exhibit 351.

TRIAL EXAMINER: Mr. Witness, you may answer that question, but do it in the same general way in which you responded to the Trial Examiner's questions with regard to the consolidation of all these matters.

THE WITNESS: Table V-B incorporates those criticisms of Exhibit 64 which appeared to me to be proper. It also incorporates a change in the amount of energy which is supplied by Baltimore to the Holtwood system which was suggested to me by that cross-examination but was not brought out or suggested in either the cross-examination or Mr. Loane's exhibit. [18939] Otherwise this is exactly the same treatment of energy as that in Exhibit 64.

TRIAL EXAMINER: Have you numbered your tables in 422 for Identification so that they are parallel with the corresponding tables in Exhibit 64?

THE WITNESS: That is correct.

By MR. MYSE:

Q. Did I understand you to say, Mr. Davis, that Table V-B was something that was not brought out in the testi-

mony of Mr. Loane? A. He did not suggest this change in the amount of energy supplied by Baltimore to the Holtwood system.

MR. MYSE: That is my point, Mr. Examiner, there is absolutely nothing in Exhibit 351 or in any of the testimony of Respondents which calls for this particular testimony in rebuttal. So, I say it is not proper rebuttal and on the witness' own statement it is apparent, if proper at all it may have been proper on redirect but time has long gone since redirect.

* * *

[18941] MR. MYSE: I also object to Exhibit 422 on the ground that it is immaterial and irrelevant. Certainly at this late date the year 1944 and any costs therefor have no bearing [18942] on what the reasonableness of the Penn Water or Susquehanna charges should be.

I also point out that we object to Exhibit 422 on the ground that Tables I, II, III, III-A, IV and V are cumulative in that they are merely revisions of prior exhibits, namely Exhibits 64, 249 and 292.

Insofar as the balance of the tables are concerned —I should have included V-A in that—in so far as Table V-B, Table V-C and Table VI are concerned, as well as Table VI-A, they of course are based in part on Table V-B, which is something entirely new to this proceeding up to this point.

To that extent, of course, they are not cumulative but they are subject to the objection I made at first, not proper rebuttal.

MR. GOLDBERG: Mr. Examiner, I cannot help but reach the conclusion that these are but frivolous objections because if the tables referred to are cumulative then by the same token so are the tables presented in Exhibit 351 because they merely go over in part the same revisions made by the witness Davis.

Now, then, the Respondents objecting here would be the first ones to object to an allocation which carried through only part of the suggested revisions. They would insist that there be brought into the hearing room a complete picture of the situation as it relates to 1944. That certainly is what we have done here and it is a desirable procedure.

[18943] Mr. Examiner, counsel has stated that the year 1944 at this late stage is immaterial and irrelevant. I am not so sure about that but I am sure that that is a matter to be decided by the Commission and the Commission should have all of the information available to it to determine whether 1944 is the appropriate basis or 1946 is the appropriate basis, or perhaps some combination of both.

After all, we have had testimony here that the year 1944 is abnormal but by the same token we have had testimony that the witnesses who have so testified regarding the abnormality of the year 1944 have no standard to test the normality or abnormality of the year.

Now, Mr. Examiner, apart from anything else, I might say it is absolutely essential to have in this record an allocation based upon 1944 data companion to that based upon 1946 data. We have had in this case alleged rebuttal testimony which was clearly not rebuttal testimony but which represented no more than Respondents' case in chief which they had elected to withhold until they had had an opportunity to see the Staff's case and cross-examine it.

A clear example of that was the witness Uhl's testimony. His testimony reveals that even before the proceedings had started he had reached conclusions regarding the value of certain land and land rights for the purpose of the determination of the cash value of securities and they brought it in for the [18944] first time only in connection with rebuttal.

I do not think we need any more argument as to the propriety of Exhibit 422.

MR. MYSE: Let me reply briefly to that. I want to deny that we have elected to withhold anything and state that we have been suffering under a handicap because of the fact that we have been unable to find out from the Commission staff what the government proposes in this case, and we still have not found out.

MR. GOLDBERG: That is not what is causing your suffering if that be true. I might point out to the Examiner, there are changes in Exhibit 378 that were never brought into the case before. Who was Mr. Spaulding rebutting there?

TRIAL EXAMINER: I was just considering that. Respondents' Exhibit 35 treated of 1945 and 1946 estimated, and 378 treated of 1946 actual, is that right?

MR. MYSE: That is right.

MR. GOLDBERG: Actual and adjusted.

MR. MYSE: Those adjustments were made and explained in the exhibit. They were necessary because of certain nonrecurring items.

MR. GOLDBERG: I think it goes beyond that.

TRIAL EXAMINER: The objection is overruled.

MR. MYSE: May I take an exception. I want to point out to the Examiner one thing in this connection: We spent [18945] something like three months of intensive labor—a great many people worked on it; I do not know just offhand how many man-hours were involved but there were a great many—in preparing for cross-examination of Exhibit 64. Now, we are suddently confronted with an exhibit which purports to be a correction of Exhibit 64 but, because of Table V-B is something that is entirely new.

TRIAL EXAMINER: How much does V-B influence 422?

MR. MYSE: Table V-B, Your Honor will note is one of the most important influences on column 9, line 5 of Table VI which is the pay-off.

I might say that in Exhibit 421, which the witness has described as the exhibit which includes an explanation of the differences, the witness himself says in the explanation included in Exhibit 421, page 4, in connection with Table V-B of Exhibit 421—and as I just got through saying the witness said the same explanation applies to V-B in Exhibit 422—he says as follows:

> "The increase in the credit to Baltimore over that shown in Exhibit 64 is due in a small part to this credit for capacity, but mostly from the credit for energy delivered to Holtwood from Baltimore's portion of Safe Harbor."

TRIAL EXAMINER: Where are you reading from?

MR. MYSE: The second to the last paragraph on page 4 in [18946] the text of Exhibit 421.

It is that phrase "The increase in credit to Baltimore Company results mostly from the credit for energy delivered to Holtwood from Baltimore's portion of Safe Harbor" which is the keystone of this entire business in Table V-B.

If you will examine Table V-B in this Exhibit 422 and compare it with the comparable table in Exhibit 64, which is the energy balance, you will see they are widely different, they have no connection with each other and it will take us months of study to trace back the figures.

MR. GOLDBERG: Mr. Examiner, I think you are familiar with the story of "Wolf, Wolf." I think we have had here that cry of "Wolf" raised over and over again and I submit that the authenticity of that cry

of anguish can best be tested by reflecting upon the times when that plea is made. For example, yesterday when counsel for Respondents stood up and protested that he had not had a reasonable opportunity to prepare for the cross-examination on the subject of rate of return of the witness Goubleman, which was on a very narrow scope, although they had had that testimony in their possession almost a month. I think that is a pretty fair index of how authentic these claims are.

TRIAL EXAMINER: Well, let's get on. Counsel may make any motion he desires after the cross-examination of direct rebuttal with regard to Exhibit 422, in respect to further time to [18947] prepare further cross-examination, and I will take that under advisement.

* * *

THE WITNESS: Yes, that is right.

* * *

[18948] Q. Mr. Davis, I show you Exhibit 423 for Identification and ask you whether the tabulations which constitute that exhibit were furnished the staff of the Federal Power Commission by Pennsylvania Water & Power Company? A. That is correct.

Q. Did the staff suggest the titles for the columns or any of the descriptive material on Exhibit 423 for Identification? A. No.

* * *

[18952] CROSS EXAMINATION

By MR. MYSE:

* * *

[18999] Q. In order to avoid misunderstanding I would like to have your idea of what the total cost of Holtwood is that you found as applicable and so allocated to Baltimore. Will you do that and give me the total figure? A. I told you what the total figure was.

TRIAL EXAMINER: Do you have any objection to simply adding up those figures?

THE WITNESS: I do not like to take my mind off from where he is going; I would like to have him do it.

TRIAL EXAMINER: I think that is a minor consideration.

THE WITNESS: The gross cost is $1,425,459.

[19000] By MR. MYSE:

Q. Now, as I understand it, that is the figure which shows the cost of Holtwood which you found allocable to Baltimore before deducting credits to Baltimore, right? A. That is right.

TRIAL EXAMINER: How did you get that figure?

THE WITNESS: From Table VI, line 5, column 5, we have the special facility cost of $772,540. In note 3 to line 5, column 4, we show the charge to Baltimore for energy as $652,919. That makes a total of $1,425,459.

TRIAL EXAMINER: $652,919?

THE WITNESS: Right.

TRIAL EXAMINER: You add that to the $772,540?

THE WITNESS: Right.

TRIAL EXAMINER: I thought you added the 552,000, the 38,000 and the 181,000.

THE WITNESS: The 181,000 is a net cost after deducting credits.

By MR. MYSE:

Q. Net cost of what? A. I probably cut that. The net cost to Baltimore after deducting credits is $181,739. The two credits are the one shown in column 6, line 5 of $38,400 and the second item shown in note 3 to column 4, line 5, which is the credit for energy supplied from Baltimore of $1,205,320.

[19001] The sum of those two, $1,243,720 substracted from $1,425,459 gives the $181,739.

Q. That means, does it not, that the $1,425,459 which you found as the total Holtwood cost to be applicable to Baltimore Company is made up of two items, "Special Facility Costs" as shown on line 5, column 5, Table VI of Exhibit 421 and "Energy Costs" which are shown in the first line of footnote 3, is that right? A. That is right.

Q. And there is nothing included in that total cost for capacity cost? A. No.

* * *

[19013] Q. Do I understand that these accountants gave you the breakdown of the $32,939,420 as that breakdown appears in the last column of Table I? A. Yes.

Q. And you take no responsibility for any of the figures? A. That is correct.

Q. So that you do not know whether they are accurate or not, is that right? A. I take no responsibility for them.

[19014] Q. You do not know whether they are accurate then, is that right? A. No, except for my faith in the accounting examiners.

Q. Do I understand that the accounting examiners of the Commission's Staff gave you none of the other figures in any of the other columns on Table I, but that represents your work, right? A. That is right.

* * *

[19015] Q. What I am getting at, Mr. Davis, is do you or do you not take any responsibility for any of the figures appearing in column 7 of Table II? A. Oh, no.

Q. When you say you do not take any responsibility that means you do not know whether they are accurate, or not? A. I know Mr. Dunn.

Q. But you personally, do not know whether the figures are accurate, or not, do you? A. I didn't investigate myself, no, sir.

* * *

[19022] Q. Referring to Table II of Exhibit 421, line 2, as I understand it, those figures as to depreciation reserve, like the comparable figures in your Exhibit 64, are figures for which you take no responsibility; is that right? A. That is right.

TRIAL EXAMINER: How did you get those figures, by direct ratios that you developed on Table I?

THE WITNESS: No, those figures are developed, as I understand it, from the particular groups of property to which they apply, which groups of property are shown in Table I and there are various rates of depreciation on the different classes of property.

TRIAL EXAMINER: You used the parenthetical figure of one-third, two-thirds, 91 per cent, 9 per cent and so on?

MR. MYSE: We are talking about Table II, Mr. Examiner.

[19023] TRIAL EXAMINER: I know, but he is back to Table I.

THE WITNESS: On Table I we used those ratios to assign property to the various customers and to the pool and from the totals of the property that was thus assigned the various items for the depreciation reserve and the depreciation expense were developed, from the particular items of property.

TRIAL EXAMINER: How did you get "P. P. & L. $40,000" on Table II from Table I?

THE WITNESS: That is the accountant's derivation from the depreciation; $40,000, you mean?

MR. MYSE: You mean the $5,000, do you not, Mr. Examiner?

TRIAL EXAMINER: Yes, the $5,000.

THE WITNESS: That is the accountant's development of depreciation for that property, those items of property which are listed on Table I amounting to a total of $40,000.

By Mr. Myse:

Q. Well, as I understand you used that same figure of $5,401 appearing on Table II, line 2, column 1 of Exhibit 421 and that is a figure which was furnished to you by the Commission's accountants, is that right? A. That is right.

Q. And that is an example of what you testified to a moment ago as to the kind of figures for which you take no responsibility whatever? A. That is right. I was just explaining how I [19024] understood it was developed.

Q. That means, does it not, that you do not know whether the figure of $5,401, as an example, is accurate or not? A. I accepted that as it was given to me without knowing what it was.

* * *

[19028] Q. Will you refer to Table IV of Exhibit 421, please.

Now, as I understand it, you take no responsibility for the accuracy or otherwise of any of the figures appearing in Column 7 of Table IV. Am I right in that? A. That is right.

Q. And those were all obtained from Commission accountants? A. That is right.

Q. Likewise, you take no responsibility whatsoever for [19029] any of the figures appearing in Line 4 of any of the columns of Table IV of Exhibit 421. Is that right? A. That is right.

Q. And those are figures which again were furnished to you by Commission counsel? A. That is right.

* * *

Mr. Myse: Can we amend it by saying Commission's Staff accountants instead of counsel?

Trial Examiner: Yes.

By Mr. Myse:

Q. Now, as I also understand, you take no responsibility for the use of the figure of 5 per cent as the rate of return. Is that right. A. I do not.

Q. Now, do you take any responsibility whatsoever for any of the figures appearing in any of the columns in Line 3 of Table IV of Exhibit 421? A. All of them except the one in Column 7.

Q. Well, I understand, then, by that testimony that you actually figured all the taxes applicable to each of the columns in Table 4 of Exhibit 421. Is that right? A. I made that allocation, that is right.

* * *

[19032] Q. Now, if you will again refer to the first page of the text of your Exhibit 421, you there state that the engineering and operating data are from reports by Holtwood Company to the Commission.

Now, my first question is, what reports were you there referring to? A. For 1946 the only report we had was the Form 1 report up to date.

Q. So that was the only report then that you were [19033] referring to in the text of your Exhibit 421. Is that right? A. That is true. We had to obtain additional information by special request.

Q. Without specifying in detail, can you refer me generally to the kind of engineering and operating data that you there referred to in the text of your Exhibit 421 as having come from Form 1 for 1946 filed by Holtwood Company and used in your Exhibit 421? A. I believe we have already been over most of it that came from Form 1.

Q. Well, I don't care for detail. I would just like to have you identify generally, if you can, just what the character of information was, engineering and operating data. A. Well, there is no engineering data in Form 1 or operating data except as regards the plants and transmission lines which are given in the Form 1 report.

Q. Well, generally what schedules of that Form 1 did you rely upon for the engineering and operating data that you used in your Exhibit 421? A. Well, sales data we used in developing some of the ratios.

Q. Were you referring to Schedule 530 of Form 1 for 1946? A. 530.

Q. 532? [19034] A. 532 is so twisted up I couldn't use it. 550—

Q. Just a moment.

All right, what else? A. 551, 552, 575.

Q. 575, you say? A. That is right—Schedule, not page.

Q. Yes, I understand. A. 579. There are data in 584 and 586 that are used in the exhibit, but figures shown there I did not take directly from Form 1. Most of those figures were compiled and furnished to me by the accountants.

Q. By who? A. By the Staff accountants.

Q. Does that complete all of the schedules which you can say you used, or which show any of the figures which you described as engineering and operating data from reports by Holtwood Company to the Commission? A. Well, generally: I wouldn't say that there are no other figures in the report that I didn't use. I just went through hurriedly and gave you the major ones.

Q. Those are the important ones? A. That is right.

* * * *

[19045] Q. The fact is you made the allocation of 45 percent of the York line, for example, to Baltimore because that is your opinion of the ratio of the interchange use of that line. Isn't that right? A. That is right.

Q. Now, coming back to the Ellicott City-Takoma line, isn't it a fact that that line is also used for interchange purposes? [19046] A. That may be.

Q. Well, don't you know that to be a fact? A. I think it probably is.

Q. And it is used primarily for interchange purposes between Baltimore and Pepco. Isn't that right? A. That is probably true.

Q. And if it isn't used for interchange purposes between Baltimore and Pepco, it is used for the purpose of supplying firm energy from Baltimore Company to Pepco. Isn't that right?

* * *

THE WITNESS: I believe that is right.

* * *

[19056] DALE E. GOUBLEMAN

* * *

FURTHER DIRECT EXAMINATION

By MR. GOLDBERG:

Q. Mr. Goubleman, you were asked to supply the May, 1947 earnings-price ratio for page 38 of Exhibit 404. Do you have that figure? A. Yes.

Q. I might state inferentially or parenthetically that the request appears at 18903 and 18904. Will you give that figure, please? A. 7.14 per cent.

* * *

[19061] GEORGE H. DAVIS

* * *

CROSS-EXAMINATION (Resumed)

By MR. MYSE:

Q. Mr. Davis, last night we were referring to a figure of 88,606,000 kwh which you used in arriving at your 45 per cent of the York Line allocable to Baltimore Company and 45 per cent of the Violet Hill Substation allocable to Baltimore Company.

Now, it is a fact, is it not, that you assumed in making your calculation that all of the 88,606,000 kwh which was

billed to Metropolitan Edison Company as firm energy was actually delivered over the York Line and through the Violet Hill Substation, isn't that right? A. That is right.

Q. Now, if, in fact not all of that 88,606,000 kwh was actually transmitted over the York Line and through the Violet Hill Substation, it would tend to increase your percentage, would it not? A. If you used more than 88,000,000 which is 55 per cent, you would have something greater than 55 per cent.

Q. I think you misunderstood my question.

[19062] MR. MYSE: Will you read it back, please?

(Question read.)

By MR. MYSE:

Q. It would tend to increase the 45 percentage that I am referring to. Isn't that right? A. Oh, yes, if you used a smaller total and the interchange amount remained the same, the 45 per cent would increase.

* * *

[19063] Q. Well, if we assumed that the 88,606,000 kwh that we have been referring to was in fact transmitted over the York Line and through the Violet Hill Substation, and the total energy transmitted over that line was the figure of 175,958,000 kwh, what is the ratio between those two figures? A. Well, that would be something less than 55 per cent for firm, but your 175,000,000 includes another amount that was delivered to Pennsylvania Power and Light Company through the Metropolitan Edison system which was simply an incidental delivery because there existed parallel paths, and doesn't represent anything that this line was built for.

Q. The fact is the energy was transmitted over that line, was it not? A. 175,000,000 was transmitted over that line.

Q. And that represents a use of the line, does it not? A. That represents a use of the line which was incidental

and apart from any purpose of the line and would be offset by the use of some other lines that might have carried that energy to P.P. and L. through Harrisburg.

* * *

[19067] Q. Yes; all right. Now, will you refer to page 18986, line 4 of the transcript where I asked you to furnish the [19068] figure showing the percentage of energy furnished by Holtwood to Baltimore compared with the total resources as you testified to them, as well as the percentage of energy costs which you allocated to Baltimore compared with the total costs of service as you testified to them in your Exhibit 421.

MR. GOLDBERG: What is the page reference?

MR. MYSE: Page 18986.

By MR. MYSE:

Q. And a little later at page 18987, line 14, where the question was repeated and it was clarified to make it clear that I meant total costs of energy when I was referring to costs or total costs of service. Have you those figures available this morning, Mr. Davis? A. I think maybe I can give them to you. I was asked this in connection with my statement as to the ratio that would have been obtained by Mr. Spaulding if he had used Holtwood Company alone, and the ratio that I had in mind there was the Holtwood resources compared with the requirements of the firm customers in Pennsylvania, which would be about 25 per cent. I could add to those resources, as Mr. Spaulding did, the amounts supplied by Baltimore, and if I add that 256,000,000 to Holtwood's resources, that would bring the ratio up to about 40 per cent. That 40 per cent ratio, however, includes sending back to Baltimore the energy which it has already supplied at its own cost from steam generation, and charging it back [19069] at a hydro cost.

Now, the other ratio that you asked for as to what I allocated has no relation to my reference to a ratio on

Mr. Spaulding's method, because my method is different, and the ratios are not comparable in any way.

Q. Well, let's have the figure. A. The ratio of energy allocated to Baltimore, which includes the delivery to the Highlandtown Substation and also energy sold as interchange in Pennsylvania from Holtwood's resources, which is 502,000,000 kilowatt-hours—

TRIAL EXAMINER: What is 502,000,000, interchange?

THE WITNESS: 502,000,000 kilowatt-hours is the total energy charged to Baltimore at average Holtwood hydro costs.

By MR. MYSE:

Q. It is actually 502,485,000? A. That is right.

TRIAL EXAMINER: Where did you get that figure?

THE WITNESS: That is the 376,684,000 that is delivered directly to Baltimore at Highlandtown, plus 125,801,000 of Holtwood's resources which are sold as interchange in Pennsylvania which are treated here as sold for the account of Baltimore.

Q. Both of those figures come from column 11 of Table V-B of your Exhibit 421, do they not? A. That is correct, and that 502,000,000 is [19070] approximately 50 per cent of Holtwood's total resources.

Q. And the total energy resources you refer to then must be 992,320,000 kwh as shown in column 3 of Table V-B of Exhibit 421, is that right? A. That is correct. That ratio, however, is not comparable at all to a ratio developed and used on Mr. Spaulding's method of allocation.

* * *

Q. And that ratio, to be a little more accurate, would be 50.6 per cent, isn't that correct? A. I think that is probably right. You also asked for the ratio of the cost charged to Baltimore for that energy to the total energy costs.

Q. Total energy costs of Holtwood? A. That is right.

Q. That would be the same ratio, would it not, the way you have done it in your exhibit? A. That is right, that is the energy cost, Holtwood's cost.

* * *

[19071] Q. Now, Mr. Davis, if we were to determine the ratio of the Holtwood energy delivered at Highlandtown as you found it as compared with the net generation less the losses as you found them at Holtwood, what ratio would you get? A. Just generation at Holtwood only?

[19072] Q. That is right, we will leave off the one-third Safe Harbor this time. A. That generation at Holtwood is 758,801,000.

Q. From which you would have to subtract 58,804,000 as losses. Is that correct? A. Well, that wouldn't be quite right. Those losses apply to the handling of the other energy from Safe Harbor. Strictly Holtwood losses would be—

Q. Somewhat less? A. —somewhat less than that.

Q. For the moment let's subtract the 58,804,000. A. That would be 700,000,000.

TRIAL EXAMINER: Why do that if it doesn't obtain?

MR. MYSE: Well, I can show, Mr. Examiner, that the ratio by subtracting somewhat less will be slightly smaller, but not much different.

TRIAL EXAMINER: Why would you give him the ratio of the two amounts?

MR. MYSE: If he has the amounts of losses of Holtwood alone he can use those.

THE WITNESS: I don't have the amount of losses applicable to the net generation only.

By MR. MYSE:

Q. Well, couldn't you divide the 58,804,000 proportionately? [19073] A. 992 and 758.

Q. Yes, which would give you a rough approximation, would it not? A. Yes, that would give me about 44 or 45 million.

Q. 758,801,000 less 45,000,000, is that right? A. That is right.

Q. According to my calculation that is 713,801,000, is that right? A. Yes, that is right.

Q. And that would be a figure equivalent to the generation at Holtwood less whatever losses are applicable to that generation, is that right? A. That should be somewhere near.

Q. And that would be the figure equivalent to what you would call the generating resources at Holtwood? A. That is right.

Q. Now, if you take the ratio of the amount delivered at Highlandtown to those generating resources at Holtwood, what figure do you come out with? A. About 53 per cent.

TRIAL EXAMINER: Now, what figures are those that you are relating?

THE WITNESS: That was Holtwood's net generation, line 1, column 3 in Table V-B minus an adjusted figure for losses applicable to that net generation which we roughly took to [19074] be 45 million, I believe, and that then considered to be Holtwood's generating resources from its own plants, a ratio of the 376,000,000 delivered to Highlandtown to that net generation minus losses was about 53 per cent. I don't know what it means, but that is the arithmetic.

By MR. MYSE:

Q. Well, it means this much, does it not, Mr. Davis, that that 53 per cent is the per cent of the Holtwood output that you say was delivered to Baltimore? A. That is the per cent of roughly Holtwood's net generation delivered to Baltimore.

THE WITNESS: The 376,000,000 is 25 cycle energy and there is no other place for it to go but to Baltimore, even if it has to turn around and come back up to Holtwood as 60 cycle energy. It has to go there and when the water is up they have to generate 80 per cent of the output of Holtwood as 25 cycle and there is no place to use it except to send it to Baltimore.

By MR. MYSE:

Q. Mr. Davis, I haven't asked you for a speech. Can you tell me whether my statement is correct or not. The 53. [19075] per cent represents 53 per cent of Holtwood's output delivered to Baltimore, is that correct, or is it not? A. 376,684,000 kilowatt-hours was delivered to Highlandtown and that is roughly 53 per cent of Holtwood's net generation minus a roughly-adjusted figure for losses.

* * *

[19076] Q. Are you saying that that means that it is 53 per cent of Holtwood's output when you are saying it is 53 per cent of Holtwood's generation? A. I don't know just exactly how you distinguish between output and net generation.

Q. Well, I have no distinction. I want to know if that means the same thing to you, Mr. Davis. A. Yes.

Q. It does? A. Surely.

Q. So that it is a true statement— A. That Holtwood's output from its own generation—

Q. That is right, so it is a true statement that the 53 per cent represents Holtwood output delivered to Highlandtown from its own generation? A. I think I told you that twice already.

* * *

[19094] Q. So my statement is correct if I say that you have no place in your Exhibit 421 allocated any of the costs associated with those facilities referred to in lines 20 to 24 inclusive, of the first column under the heading P. P. & L. of Table I of Exhibit No. 421 to Baltimore on account of

any interchange use which may be made of them? [19095] A. I think that is a correct conclusion from my answer.

Q. And it may or may not be obvious, but I want you to tell me whether or not it is the fact that you have not allocated to Baltimore any costs associated with the transmission lines owned by Pennsylvania Power and Light Company which may be used for interchange purposes between Harrisburg and Safe Harbor or Holtwood? A. I have no cost figures for Pennsylvania Power and Light Company's lines; in my study I haven't allocated them to anything for any purpose.

Q. Now, likewise, as I understand your exhibit, you have included all of the costs associated with the transmission circuits between Safe Harbor and Penn Water in what you term the balance of transmission system on line 25 of Table I, and the balance of transmission expense in line 16 of Table III, isn't that right? A. That is right.

Q. And that means, doesn't it, that you have not allocated directly to Baltimore any of the costs of such transmission circuits which may be associated with the interchange use of those circuits, isn't that right? A. The only allocation to Baltimore from those circuits would be through allocation from the pool.

Q. So the answer is you have not allocated to Baltimore any of the interchange costs associated with those circuits [19096] between Safe Harbor and Holtwood; isn't that right, Mr. Davis? A. If you say "have not allocated directly to Baltimore," that is right.

TRIAL EXAMINER: Does it eventually get allocated to Baltimore?

THE WITNESS: A portion of it gets allocated to Baltimore, but not on the basis of interchange use.

By MR. MYSE:

Q. As I understand your Table III of Exhibit 421, the figure of $952,712 which you show on line 5 under the head-

ing, "Pool" as total production expenses were allocated to pool on the assumption that the facilities associated with such costs are used in common by all customers. Isn't that right? A. That is right.

Q. That means, does it not, that the services produced by the steam plant, for example, represented by the costs in lines 2, 3 and 4, are services for all of the customers of Holtwood; is that right? A. You said 2, 3 and 4?

Q. Yes. A. That is correct.

Q. And that means you assumed that all of the customers obtain a use of those steam facilities by obtaining some service from those facilities, isn't that right? A. That is right.

[19097] Q. Now, just how does Baltimore, for example, obtain the use of the steam facilities of Holtwood? A. You mean to trace directly some of the energy from the steam plant to Baltimore?

Q. Can you do that? A. Well, a very small amount could be traced directly.

Q. I don't want you to trace the amounts.

MR. GOLDBERG: Let him finish.

TRIAL EXAMINER: You may finish your answer.

THE WITNESS: The service from any particular piece of equipment is valuable at times, not because it goes directly from that piece of equipment to some customer, but it may replace other energy and release some from another source to go to that customer, and I have classed them all in the pool together, and allocated them on the basis of use.

MR. MYSE: May I have that last answer read, please?

TRIAL EXAMINER: Yes.

(Question read.)

By Mr. Myse:

Q. Now, let's see if I understand your idea of "use" as embodied in that last answer. That means, does it not, Mr. Davis, that if all of the services produced by the Holtwood steam plant were actually transmitted to a Pennsylvania customer, that you assume, nevertheless Baltimore may be using those steam facilities because it replaces energy which might [19098] otherwise be transmitted to Baltimore? A. It might do that, and it might relieve Baltimore of supplying some backfeed, or various other ways.

Q. And because of that replacement, as you have just described it, you say that is a use of Holtwood's steam facilities, for example, by Baltimore Company, is that right? A. That is the way it goes.

Q. Now, Mr. Davis, does line 1 of Table III of Exhibit 421, in the amount of $269,145 show the total cost of service as you or the Commission accountants found them? A. Unfortunately, no. That contains an artificial reduction in cost there which I tried to remedy, but failed to make it satisfactory, so I have to deduct, according to the accountant's advice, the backwater payment from Conowingo from the total cost of the hydro, which reduces the cost that is charged to the customers artificially. It doesn't reduce it really, but simply compels the use of a lower figure because someone else pays a part of the cost.

Q. Well, actually the figure of total hydro production cost is higher than $269,145; isn't that correct? A. That is correct.

Q. And it is higher by how much? A. By $133,750.

Q. And that $133,750 represents as I understand it, the payment from the Conowingo Company under the backwater agreement? [19099] A. That is right.

Q. Now, is it your judgment that the total cost of hydro production as shown in line 1 should be only $269,145 instead of the higher figure with the addition of $133,750, or was it the accountant's judgment?

* * *

THE WITNESS: My judgment was that the higher figure was the proper cost to be allocated to customers of Penn Water; but inasmuch as Penn Water is receiving the $133,750, there seems to be no satisfactory way of handling it except to say that Penn Water had a net cost of only $269,000. I tried to represent that in a way that seemed to me more proper in Exhibit 64, but it was objected to so strenuously that I consulted the accountants, and they said this was this proper way to handle it.

TRIAL EXAMINER: Who objected to it?

THE WITNESS: Mr. Myse, principally, or his experts.

MR. MYSE: Well, I don't recall any such objection that he refers to. I might say that we objected to the method in the way he handled Exhibit 64, but we certainly don't agree with this method, as well.

MR. GOLDBERG: That means there is no satisfying him.

[19100] By MR. MYSE:

Q. Now, you said it was unfortunate. Have you explained that in your last answer? A. Yes, that is what I meant to explain, that it does not actually reduce the cost by having someone else pay a part of it. But the financial effect on Holtwood is as if the cost were reduced to $269,000.

Q. Now, referring to line 18 of Table III of Exhibit 421—

TRIAL EXAMINER: Before you do that, referring to your Exhibit 64, your corresponding figure is $357,980, isn't it?

THE WITNESS: What figure?

TRIAL EXAMINER: Comparing with your $269,145.

THE WITNESS: Well, in Exhibit 64—I don't have it here—the corresponding figure in Exhibit 64 was the total cost of the hydro. Now, the total cost of hydro in 1946 is $402,895, and from that—

TRIAL EXAMINER: 402,000 what?

THE WITNESS: 402,895. That is reduced to $269,145 by crediting the backwater payment from Conowingo.

MR. MYSE: May I proceed?

TRIAL EXAMINER: Well, the $357,980 which appears in Table III of Exhibit 64, line 1—

THE WITNESS: That would be the total cost without any reduction.

TRIAL EXAMINER: —is affected by the fact that it [19101] belongs to another year?

THE WITNESS: That is right.

* * *

[19108] Q. Let me understand that. That figure of $1,053,-564 which appears in column 7, line 2 of Table IV of Exhibit 421, comes from sheet 1 of Schedule 5 of Exhibit 392 prepared by Mr. Dunn? A. That is correct.

Q. And that figure does not represent either the actual bill rendered by Safe Harbor to P.W. for the year 1946 or the actual amount paid by Penn Water to Safe Harbor for the year 1946, does it? A. It is slightly greater, I believe.

Q. In any event, it doesn't represent the actual figures that I referred to? A. That is true.

* * *

[19121] Q. Now if we went through a similar process of tracing your allocation of the intangible and general plant, which appears in lines 27 and 28 of Table I of your Exhibit 421, we would find, would we not, that although you have allocated a certain proportion of that intangible plant and general plant to the one-third of the transmission lines which you have allocated to the pool, appearing in lines 7 through 11, inclusive of Table I, you have not allocated any of that intangible and general plant to the remaining two-thirds of those same transmission lines, is not that correct?

* * *

[19122] THE WITNESS: The intangible and general plant is allocated to transmission on Table V, shown in column 4 line 5 on the percentage of the directly assignable items, which in this case is the 11.8 per cent of the total.

TRIAL EXAMINER: How do you do that, did you add up the figures in the pool column of Table I?

THE WITNESS: Yes, we have the total.

TRIAL EXAMINER: What is the total?

THE WITNESS: The total pool on Table I is $24,227,004 and the total intangible and general plant, total of items 27 and 28 on Table I is shown on line 5 of Table V, column 5, as $970,810, and 11.8 per cent of that is assigned to transmission on the ratio of the actual amount of transmission investment to the total.

Then the total transmission investment and rate base developed in line 13, column 4 of Table V determines the items of depreciation and return in lines 18 and 19, column 4. Those items are the fixed costs on all of the items above in Table IV, or are fixed costs on the total investment, and together with the other items of operating costs of transmission, they are assigned entirely to the capacity component and, because I have no capacity shown here for Baltimore, no part of that is allocated to Baltimore in Table VI.

By MR. MYSE:

Q. Mr. Davis, I have not heard an answer to my question [19123] yet. I appreciate the Examiner has been asking you some clarifying questions. A. I have been through practically the same as what you called the "Rigmarole" for the investment and have come out with approximately the answer you need.

Q. Let's see if I understand it. That means that although you have allocated part of the costs and part of the investment associated with general and intangible plant to one-third of the transmission lines, known as the 220 kv

lines, you have not allocated either any of the investment or costs associated therewith of such intangible and general plant to the remaining two-thirds of such 220 kv lines, is not that right? A. Nothing of the intangible and general plant assigned to transmission in the pool gets allocated to transmission lines which are assigned directly.

Q. To Baltimore? A. To Baltimore or to any other customer.

Q. That is the two-thirds of the 220 kv lines which you had assigned to Baltimore, and hence there is none of that intangible and general expense allocated to that two-thirds portion, is that right? A. That is true.

Q. You have, however, allocated 68.4 per cent of the total intangible and general plant to hydro production [19124] facilities?

TRIAL EXAMINER: Where is that?

MR. MYSE: That appears on Table V, column 1, line 4.

THE WITNESS: You mean line 5?

MR. MYSE: Line 4.

THE WITNESS: Oh, the percentage, 68 per cent to hydro production, that is true.

By MR. MYSE:

Q. Would you say it is approximately correct to say that you have allocated as an energy component approximately 25 per cent of the return costs associated with that 68.4 per cent of intangible and general plant that I have just referred to? A. Approximately 25 per cent of that would go with the items 18 and 19 which are derived from the rate base to the energy component.

Q. Now, it is that 25 per cent of the 68.4 per cent in terms of return which is all that was allocated to Baltimore as costs associated with intangible and general plant, is not that correct? A. That is correct. It was only from

the energy component that any costs are allocated to Baltimore.

* * *

[19125] Q. Mr. Davis, I show you a photostat of a document headed "Safe Harbor Facilities" and I ask you whether or not that is the photostat of the work sheets which were furnished to Respondents yesterday in connection with your determination of the difference between the figure of 1,007,185 appearing in column 6, line 2 of Table IV of your Exhibit 421 and the figure of $1,053,564 appearing in the same line of the same table, column 7? A. That is correct. This develops $46,379, which is the difference between those two figures.

MR. MYSE: I would like to have marked for identification with the next exhibit number the document just described by the witness, and I ask that we may have the opportunity to withdraw it to make additional positive photostats for [19126] service on all counsel and for the record.

TRIAL EXAMINER: The document handed the reporter may be marked Exhibit 424 for Identification and may be withdrawn by counsel.

(Exhibit No. 424 is marked for Identification.)

By MR. MYSE:

Q. Referring to Exhibit 424 for Identification, it is a fact, is it not, that in determining the depreciation expense which you ultimately included within the figure of $46,379, you applied a percentage of 6.4 per cent to a figure of $507,370, right? A. That is right.

Q. Where did the figure of $507,370 come from? I might refer you to sheet 1 of Schedule 5 of Exhibit 392. The same figure appears thereon, and I ask you if that is where you obtained the figure?

TRIAL EXAMINER: What is the reference again?

MR. MYSE: Sheet 1 of Schedule 5 of Exhibit 392?

THE WITNESS: That is right.

By MR. MYSE:

Q. Now, as I understand it, this method that you used represents your judgment, not the judgment necessarily of Commission accountants; is that right? A. This method of deriving the costs from the investment furnished us by the company is my own derivation.

[19127] Q. And as well as the method of deriving the portion of the depreciation expense from the total of $507,370 is also your method, and you take responsibility for it; is that right? A. Applying that 6.4 ratio, you mean, yes.

Q. Now, how was that 6.4 per cent determined? A. That is the ratio of the total investment figure supplied by the Company as representing the facilities at Safe Harbor installed for service to the Railroad Company to the total Safe Harbor plant.

Q. In other words, it is a ratio of investment items? A. That is right.

Q. Now, actually the figure of $1,934,300 which you use in Exhibit 424 as the total gross investment for railroad service was a figure supplied by the company, but includes only excess costs of 25 cycle generators in the amount of $608,100, is that right? A. That is right.

Q. It does not include all of the costs of the 25 cycle generators? A. No, this just includes the costs that are assigned for railroad service that would not have been otherwise incurred.

Q. Now, you are not saying, however, that the investment made in the 25 cycle generators other than the [19128] $608,100 is not used for railroad service, are you? A. No, the balance of that goes in the pool. That is the cost that is assumed would have been incurred if they had been all 60 cycle 3 phase generators.

* * *

[19129] Q. I think your answer to my last question preceding this one may not be quite correct, and in order that we might get the record clear on that, I would like to go over it again. In order to determine the return component of the $46,379 as derived in your Exhibit 424, you applied the ratio of 6.4 per cent as derived in the manner described heretofore to a figure of $1,400,208 which you describe in Exhibit 424 as "Return 5 per cent", is not that right? A. That is right.

Q. Now, where did you get the figure of $1,400,208? You did not derive that, of your own knowledge. You got that from the accountants, did you not? A. Yes, sir.

Q. Now, that return of 5 per cent in the amount of $1,400,208 is a return figured on a depreciated rate base, is it not, or do you know? A. Yes, it is.

Q. The ratio of 6.4 per cent, however, was determined [19130] by comparing the gross investment figures, is that correct? A. Yes.

Q. And it was not determined by comparing the depreciated investment figures, if you want to call them that? A. No, that would assume that the depreciation reserve was not significantly different in the two items that I used to derive the 6.4 per cent.

Q. That means, does it not, that you assumed that the depreciation reserve applicable to the gross investment for railroad service, as furnished to you by the company, would be the same percentage as the depreciation reserve applicable to the entire investment of Safe Harbor? A. I assumed it would be near enough to make no significant difference in the answer.

Q. And implicit in that assumption is the further assumption that the age of the two groups of property is approximately the same, is not that right? A. Well, it is an assumption that whatever factors there are determined, the depreciation reserve would be near enough together on the whole on an average so that the ratio would

make no significant difference in the answer derived by applying it.

Q. Well, do you consider that age is a significant factor? A. In depreciation reserve?

[19131] Q. Yes. A. Surely.

Q. Now, referring again to Exhibit 424, I note that you arrived at a figure of $17,053 for operating and maintenance of the frequency converter at Safe Harbor, and you arrived at that figure, as I understand it, by applying the ratio of 2 per cent to something. How did you arrive at the figure? A. 2 per cent to the total value of the frequency changer as given above in the list of investments.

Q. You mean you applied 2 per cent to the figure of $852,500? A. Yes.

Q. Where did you get the figure of 2 per cent? A. 2 per cent is assumed to be a fair average amount to represent operating and maintenance of electrical equipment.

* * *

Q. Well, what do you base your assumption on? That is what I am trying to get at. A. It is a figure that is quite generally used for approximate determination of operating and maintenance of electrical equipment where it cannot be directly determined readily.

Q. Well, did you make any investigation of Safe Harbor's [19132] records to determine whether or not you could determine any portion of that operation and maintenance with respect to the frequency changer? A. I inquired whether any records were kept of separate equipment, and I found there were no records available.

Q. Did you examine any of the work sheets of Mr. Spaulding in connection with Exhibit 378 in determining what method he had used in arriving at the operation and maintenance expenses associated with such frequency converters at Safe Harbor? A. I examined that exhibit. I do not recall what method he used for that at the moment.

Q. Well, I did not ask you whether you examined the exhibit. Did you examine any of the work sheets which

were furnished to the Commission Staff? A. Yes, I examined some of the work papers.

Q. Did you not find in there a breakdown of operation and maintenance with respect to the frequency converters at Safe Harbor? A. I do not recall that.

Q. In any event, you did not use that breakdown, if there is such a one, in your estimate. You used 2 per cent? A. I used 2 per cent before that exhibit and its work sheets were available to me.

* * *

[19134] Q. Did you inquire of any of the operating people at Holtwood or Safe Harbor with respect to the operating expenses and maintenance expenses of the frequency converter? A. I made no inquiry since way back before Exhibit 64 was prepared, and the preparation of this work sheet here is a repetition of the method I used in Exhibit 64 without any further inquiry.

Q. Well, when you inquired in connection with the preparation of Exhibit 64, did you inquire with respect to the expenses incurred in operating and maintaining the frequency converter at Safe Harbor from any of the operating people at Holtwood or Safe Harbor?

MR. GOLDBERG: Objection, Mr. Examiner. We have finished with Exhibit 64.

MR. MYSE: Mr. Examiner, he has tied it right back.

TRIAL EXAMINER: All right, you may answer.

MR. GOLDBERG: He did not do any tying back. It was brought up by counsel for Respondents.

TRIAL EXAMINER: All right.

THE WITNESS: I made no inquiry except as to the existence of separate records of operating and maintenance of the separate pieces of equipment at Safe Harbor.

[19135] By Mr. Myse:

Q. And, as a matter of fact, Mr. Davis, the fact is, is it not, that you did not have to make any inquiry with respect to the maintenance or operating expense of these frequency changers because in the original 64 you did not make any such calculation, right?

Mr. Goldberg: Now, I object to that, Mr. Examiner. We are right back into Exhibit 64.

Trial Examiner: Yes, I think so.

Mr. Myse: Well, I think it is apparent from the exhibit. I will withdraw the question.

By Mr. Myse:

Q. Now, in arriving at the $46,379 you did not include any taxes, did you? A. No.

Q. Nor, did you include any general or administrative expense in connection with the operation of that frequency changer, did you? A. That is supposed to be included in the 2 per cent, all expense.

Q. Do you think the 2 per cent covers general and administrative as well as operating and maintenance? A. Well, the general and administrative expense that would apply to a particular machine I did not consider particularly at all. I did not consider that any significant amount of the [19136] administrative and general expense would apply to this particular equipment or this particular machine.

Q. Well, the 2 per cent certainly does not cover taxes, does it? A. I understood there were no property taxes in Pennsylvania that applied to such equipment.

Q. What about income taxes and general taxes? A. Income taxes are based on revenue and I had no revenue to base them on in determining the cost of this particular equipment.

Q. You did find a return, however, on this particular equipment, did you not? A. Surely, that is fixed cost.

based on the investment, and the investment is what I had to start with.

Q. Now, I note on 424 that you deduct, or that what you did do is arrive at a figure of $139,138 as total cost of railroad facilities, you termed it, is that right? A. That means the total excess cost of those facilities over what would have been incurred if they had been the same as the other generators in the station.

Q. And the total cost of facilities would be something greater, right? A. The total cost of these facilities, sure, that is true.

Q. Now, however, you arrived at the $46,379 by [19137] dividing the figure of $139,138 by three, did you not? A. That is the portion paid by Holtwood Company.

Q. Now, how does Holtwood Company pay that portion? A. By paying one-third of the total Safe Harbor costs.

Q. And that goes back to your assumptions in connection with Items E, F, and G that we cross-examined you on at length before?

MR. GOLDBERG: What assumptions are those? I object to the question as vague and indefinite, Mr. Examiner.

MR. MYSE: I was trying to shorten the cross-examination and if I have to get into it again, it will take weeks.

TRIAL EXAMINER: Well, you had better establish what you are talking about in the way of assumptions.

By MR. MYSE:

Q. Well, Mr. Davis, you assume that Safe Harbor paid one-third, or that Penn Water paid one-third of the cost of $139,138, and only one-third of those costs by reason of the provisions in Items E, F, and G, right? A. Provisions of E, F and G, and the other documents that show the carrying out of those provisions, such as the bill to Holtwood Company.

Q. What other document do you now have in mind other than the bill? A. Well, the bill, and it appears in other records that the payment that Holtwood makes is one-third of the Safe Harbor [19138] costs. What I mean is that I got it from the contract, and also from the evidence that the provisions of the contract had been carried out.

Q. You say that evidence is embodied in the bill from Safe Harbor to Holtwood, is that right? A. That is right, and the inclusion of that amount in Holtwood's cost. That is all I have here to allocate is one-third of Safe Harbor's costs.

Q. You are not saying that in the bill from Safe Harbor to Holtwood there appears an item of $46,379, are you? A. I got called down for characterizing a question this morning, and I almost did it again. I am not saying that, no.

* * *

[19139] Q. Referring again to Table V, Exhibit 421, as I understand your previous testimony, I take it that you are not responsible for the accuracy of any of the figures appearing in line 7 of Table V, am I correct in that? A. Yes, sir.

Q. Nor are you responsible for the accuracy of any of the figures appearing in line 18 of Table V of Exhibit 421, right? A. Yes, sir.

Q. And that means any of the figures in any of the columns in each case? A. That is right.

TRIAL EXAMINER: What do you mean by "Any of the figures in any of the columns"?

MR. MYSE: Lines 7 and 18, isn't that right, Mr. Davis?

THE WITNESS: Yes.

By Mr. Myse:

Q. I take it you are also not responsible for the figure of 5 per cent used in computing the figures appearing in line 19 of Table V. Right? A. I believe so.

Q. Well, I do not like your belief necessarily, Mr Davis. [19140] A. Well, I think I have told you that about three times in the last day or so. I am not responsible for it, for the five per cent return.

Q. Now, do I understand your exhibit correctly in saying that the 74.85 per cent figure appearing in line 22 of Table V was derived from Table V-A by taking the ratio of 250,000 kw found by you to be the total dependable capacity, the total dependable hydro capacity as compared with the total hydro installed capacity? A. That is right, following the same method I used in Exhibit 64.

* * *

[19147] Q. There is one correction I think I should make. I refer to lines 16 to 21, inclusive of page 19124. The question is:

> "Q. Now, it is that 25 per cent of the 68.4 per cent in terms of return which is all that was allocated to Baltimore as costs associated with the intangible and general plant, is not that correct? "A. That is correct."

Now, as I understand it, the answer is not entirely correct. It is correct only in so far as 25 per cent of the 68.4 per cent was allocated to the energy component, is not that right? A. 68.4 per cent of the return for the investment in the pool is included under hydro, column 1.

Q. Let's take it step by step, Mr. Davis. That means, does it not that 68.4 per cent of the return costs associated with intangible and general plant was allocated to hydro production costs, is that right? A. 68.4 per cent of the intangible and general plant is allocated to hydro and the return on that proportion of [19148] general and intangible plant would be included in the total amount of

return allocated to hydro in line 19 and the total hydro cost, approximately 25 per cent of it, is assigned to the energy component.

Q. And as we went through it yesterday only approximately 50 per cent of the cost assigned to the energy component was allocated under your method to Baltimore, is not that right? A. That is correct.

Q. So that if you can say that approximately 68 per cent of the return associated with intangible and general plant was allocated to hydro production costs then only 50 per cent of the 25 per cent of that 68.4 per cent in terms of return costs was allocated to Baltimore Company, right? A. That was all that was in the energy component.

Q. And whatever was in the energy component, only approximately half of it was allocated to Baltimore Company, is that right? A. Yes, sir.

Q. Now, will you turn to Table V-A of Exhibit 421? A. Yes, sir.

Q. Mr. Davis, where did you get the figure of 167,000 kw, appearing in column 4, line 3 of Table V-A of Exhibit 421? A. That is obtained by applying the total energy available from the hydro plants under minimum flow conditions for [19149] the week of the peak load in December, to the maximum loads for that week that actually occurred in 1946.

TRIAL EXAMINER: What figure are you now talking about?

THE WITNESS: The 167,000 kilowatts of dependable capacity on the weekly recovery cycle under minimum flow and peak load conditions.

TRIAL EXAMINER: What was your actual mathematics in that?

THE WITNESS: The actual mathematics was computation of the total amount of energy that the hydro plants could generate during that week under the minimum flow conditions.

TRIAL EXAMINER: What was that, do you have it?

THE WITNESS: It is approximately 5½ million kilowatt-hours as I recall—No, that was wrong; it was 3,561,000 kilowatt-hours.

By MR. MYSE:

Q. Mr. Davis, first of all, as I recall your testimony you referred to the week of the peak load of December 16? A. The week of December 16 to the 22nd, inclusive.

Q. In the year 1946? A. Yes.

Q. That was the week of the peak load on the area 6 system, is that right? A. That is correct.

Q. And it was not the week of the peak load on the [19150] Holtwood-Safe Harbor system, was it? A. No.

Q. And it was not the week of the peak load on the Holtwood system alone, is that right? A. The Holtwood system alone, do you mean the Holtwood steam and hydro plants?

Q. That is right. A. No, it was not.

* * *

THE WITNESS: I should qualify that first answer by saying it was the peak load of area 6 system plus the load to the Pennsylvania customers.

By MR. MYSE:

Q. I wanted to make that clear. That is the area 6 system as you have used it throughout your testimony? A. That is true.

By MR. GOLDBERG:

Q. Do I correctly understand that Holtwood and Safe Harbor are part of that Area 6 system? A. The Pennsylvania customers of Holtwood are included in the peak of the area 6 system.

Q. And Penn Water and Safe Harbor are part of that area 6 system, right? [19151] A. That is right.

MR. GOLDBERG: My question to counsel is, what is this Holtwood-Safe Harbor system?

* * *

THE WITNESS: What I presume he means by the Holtwood-Safe Harbor system is the Holtwood hydro and steam plants, plus the Safe Harbor hydro plant.

* * *

[19176] Q. Mr. Davis, referring again to your Table V-A of Exhibit 421, you there show that you added to the figure of 167,000 kw in column 4, line 3, which you call a "Dependable capacity on weekly recovery cycle under minimum flow and peak load conditions," a figure of 83,000 kw in the same column, [19177] line 4, which you call "Additional capacity value for maintenance, short period loads, from use of pondage, etc." Is that right? A. Yes, sir.

Q. And you therefore arrived at a figure of 250,000 kw, which you call "Total dependable capacity allocated on the basis of installed capacity?" A. That is right.

Q. And in column 4, however, it is what you call the total dependable capacity? A. For the hydros, yes.

Q. Now, that 83,000 kw that you show on Table V-A of Exhibit 421 is the same 83,000 kw that you referred to in note (6) at page 2 of the text of Exhibit 421. Is that right? A. That is right.

Q. Now, can you explain for me just exactly how you arrived at that figure of 83,000 kw? A. Well, that general explanation is in the text following mention of 83,000 kilowatts on page 2 of the text. There are a number of uses where capacity in addition to the minimum load-carrying capability of the plant is of value, and can justly be added to obtain the total dependable capacity of the hydros.

This is a repetition of the method used in Exhibit 64 [19178] for determining dependable capacity except that in that exhibit a figure of 75,000 kilowatts was already added by the company in its estimate of a change to post-war conditions and to standard time, which I accepted and considered that it included something for these other items.

As it turned out, about 36,000, if I recall, was contained in that figure which would account for some of these other items.

In addition to the 75,000 there I added 28,000 as capacity for the sustained use of storage. Now, that is half of what is calculated to be the sustained load on storage for a period of a week. 28 was used in Exhibit 64 on the judgment that all of that 58 or 59 thousand which was computed as sustained load from the use of storage was certainly not of the same value as the base-load carrying capability of the plant under minimum flow conditions, and a judgment figure of half of it was included as a portion of the dependable capacity.

Now, not having any estimated figure for changed conditions here, but applying it to the actual conditions of 1946, I considered approximately the same amount available for the use of pondage, and from the 83,000 that would leave 55,000 which can be considered capacity value for scheduled maintenance, for short time emergencies, for expectation of better than minimum-flow conditions, for swings, for any of the intangibles that the plant can be depended upon for valuable capacity [19179] service.

That figure is not a mathematical determination. It cannot be assigned in detail, parts of it, to any of those items in particular, because sometimes it might be all applied to one item. It might be that the whole amount might be used for short-time emergency at one time, or all of its value used for scheduled maintenance at another time.

The fundamental basis of the determination of dependable capacity for the purpose of allocating costs is an attempt to determine what capacity would be of value in saving investment in additional generating equipment. Whatever you could figure out by any method mathematical or otherwise, as dependable capacity so far as applying that to a cost allocation goes, if it would not, in fact be sufficiently convincing to people responsible for carrying the load so that actually investment would be saved, then it is not dependable capacity for cost allocation purposes.

TRIAL EXAMINER: Just a minute. Read the question.

(Question read.)

MR. MYSE: Mr. Examiner, I recognize that the question has been answered long since, and that I did not call for a speech, but in the hope that he would wind up sometime soon, I have been letting him run on.

If the Examiner feels that we have exceeded the bounds of all reason, and I think there might be some justification [19180] for that conclusion, I am willing to object to any further testimony in response to that question.

TRIAL EXAMINER: I think we are getting too lengthy an answer. I am afraid it is going to create some difficulty in cross-examination. I think you had better proceed by putting further questions to the witness.

By MR. MYSE:

Q. As I understand it, the 83,000 kilowatts that we have been referring to consists of at least two components that you can identify: one is 28,000, which you said was for use of pondage, and the balance of 55,000 for all these other items which you called intangible items; is that right? A. That is correct.

Q. Now, as I understood your testimony up to this point, part of that 55,000 at least was added by you because of the value of the plants at Holtwood and Safe Harbor used in scheduling maintenance, is that right? A. That is right.

Q. Maintenance by whom? A. Maintenance by Safe Harbor, Penn Water and Baltimore.

Q. Does that include maintenance by any of the Pennsylvania customers? A. No, I have no cause here to deal with Pennsylvania customers.

Q. Well, I did not ask you that, Mr. Davis. My [19181] question was, did you in arriving at your 55,000 kw consider in any way the capacity value of the Safe Harbor and Holtwood plants to the Pennsylvania customers in scheduling maintenance? A. I do not know that I specifically considered any of them; when I mentioned scheduled maintenance, I was primarily referring to the value of the capacity to the Baltimore system for scheduled maintenance.

Q. And you were not referring to the value to the Pennsylvania customer system? A. No.

Q. As I recollect your testimony in connection with Exhibit 64 on this subject of allocating the dependable capacity as between Holtwood and Safe Harbor, you stated that the reason you allocated it in proportion to the installed capacity was because the dependable capacity was estimated and reported by Penn Water or Penn Water and Safe Harbor only on a combined basis; right? A. Well, that is the reason why I had to make an allocation, that is true.

Q. Now, that reason is no longer a valid one today, is it? A. There has been some testimony in the proceeding indicating a capacity for Holtwood alone.

* * *

[19182] THE WITNESS: The figure that I was referring to was one that I heard Mr. Watchorn give on cross-examination.

TRIAL EXAMINER: All right.

[19183] By MR. MYSE:

Q. That was 100,000 kw? A. Yes.

* * *

THE WITNESS: Which is not new. I had that before.

* * *

[19184] Q. Now, that 153,512 kw is a summation of certain demands that you used of the Pennsylvania customers plus

the [19185] Pennsylvania Railroad in Pennsylvania, plus 10 per cent, which demands you assumed all took place at the time of the area 6 system peak in 1946, right? A. The demands of P. P. & L., P. E. and M. E. Companies did take place or were reported to have taken place at the time of the system peak. For the railroad company, an average of the three highest is used, but is not one specific peak and only one of the three that I averaged, I believe occurred at the hour of system peak.

Q. Well, I think you are right. In any event, the figure of 36,557 kw appearing on line 14 of Table V-A of Exhibit 421 is not the actual peak demand of the railroad company in Pennsylvania during the time of the area 6 system peak. Am I right? A. Yes.

Q. Now, that area 6 system peak occurred at 6 p.m. December 19, 1946, right? A. That is correct.

Q. And that is shown on Exhibit 372, one of Mr. Spaulding's exhibits, is not that right? A. That is correct.

Q. Do you know what the actual demand of the Pennsylvania railroad was at 6 p.m. on December 19, 1946 limited to Pennsylvania? If I show you Exhibit 372, will that refresh your recollection any? [19186] A. The actual measured demand of the railroad in Pennsylvania at that hour is reported as 24,000.

Q. Kw? A. Yes.

Q. Now, Mr. Davis, if the actual Pennsylvania Railroad load in Pennsylvania at the time of the area 6 system peak at 6 p.m. on December 19, 1946 had actually been 36,557 kw—that is, 12,557 kw higher than the 24,000 we have just referred to—would not the load shown on your Exhibit 425 have been higher by 12,557 kw on that same peak hour?

* * *

THE WITNESS: That is probably true.

By MR. MYSE:

Q. In other words, you should have made the same adjustment or a similar adjustment to the adjustment you

made for the Metropolitan Edison requirements, is not that right? A. No, I do not believe that is comparable. The use of the 36,557 as an average load there is due entirely to the character of the railroad load. When you are taking some hour that is determined without any relation to the railroad load, you might at one time get a high peak and at another time a low at that particular hour, which is recognized in the method of billing the railroad company, and I think a more [19187] representative demand for the railroad company at that hour is obtained by using this average.

Q. Well, in using the figure of 36,557 kw, don't you assume that that is the average peak that the railroad demands on the Holtwood-Safe Harbor system during the peak week of the area 6 system peak? A. I am using that as a portion of the capacity required to serve those loads.

Q. Now, actually what you have done on Table V-A is deducted this estimated load of the railroad in Pennsylvania from what you found to be the dependable capacity at the time of the area 6 system peak, is not that right? A. That is correct.

Q. Now is it not a correct statement to say that if you had used that estimated peak load of the railroad in Pennsylvania instead of the actual peak load of the railroad in Pennsylvania at the time of the area 6 system peak in determining your dependable capacity, you would have come out with a higher figure for dependable capacity, is not that right? A. That is right, if it had been determined that way.

* * *

Q. And that higher figure would be 262,557 kw, is not that right? [19188] A. At that particular time, that is right.

Q. And correspondingly, the net dependable capacity available for load in line 9 of column 4 of Table V-A would be 242,773 kw, is not that right?

* * * *

THE WITNESS: If we added 12,557 onto that, that would have been 242,773.

By MR. MYSE:

Q. And correspondingly if there were no changes in the figure of 153,512 kw shown in line 15 of Table V-A, the figure of 102,488 kw would be increased to a figure of 115,045 kw, right? A. If you add the 12,557 to the 102,488 that is what you would get.

Q. Now, as I understand your exhibit, table V-A of Exhibit 421, Mr. Davis, the firm loads of the Pennsylyania customers during the time of the area 6 system peak which you show in lines 10 to 12, inclusive, and summarized at line 13 to a total of 103,000 kw, are the firm loads which you assume would be incurred under conditions of most adverse river flow of record, is that right? A. Those are the firm loads that are reported actually did occur in 1946.

Q. During the time of the area 6 system peak? [19189] A. Yes, sir.

Q. Would those same firm loads occur under conditions of most adverse river flow of record? A. I do not know of any reason why the loads of these customers would have been changed by minimum flow conditions so long as the M.E. steam line remained as it was at this hour.

Q. Well, you assume, then, that there would be no change under adverse-flow conditions, right? A. I see no relation between these loads and river flow.

Q. Well, is not that your assumption that there would be no change? A. That is true.

* * *

[19190] Q. Under the method you pursued in Table V-A of Exhibit 421, is it not a fact that you assumed that 74.85 per cent of the 104,000 kw which you show as the installed capacity in column 2, line 1 of Table V-A is dependable capacity?

* * *

[19191] A. That is what it seems to work out.

Q. And that means, does it not, that approximately 75 per cent of the 80,000 kw of 25 cycle capacity at Holtwood you also assumed to be dependable capacity, right? A. I did not make any distinction between 25 and 60 cycle.

Q. Well, is not that implicit in your method that approximately 75 per cent of the 80,000 kw of 25 cycle capacity at Holtwood is dependable capacity? A. That would be a logical conclusion.

• • •

[19192] Q. But under the method you have pursued, the net result is that you have allocated no capacity to Baltimore? A. Right.

Q. That means, does it not, that you are saying and you are assuming that Baltimore uses none of the capacity of Holtwood? A. I am assuming there is no dependable capacity of Holtwood left for Baltimore after the requirements of the Pennsylvania customers are supplied.

Q. Well, does not that mean, Mr. Davis, that you assumed under the method you pursued that there is no dependable capacity of Holtwood used by Baltimore Co.?

MR. GOLDBERG: What do you mean by "used"?

TRIAL EXAMINER: You may answer, Mr. Witness.

THE WITNESS: The dependable capacity which I have determined in accordance with the method shown in Table V-A is more than used up in supplying the obligations of Holtwood [19193] in Pennsylvania.

Q. I have not asked you that, Mr. Davis, if you will read the question.

• • •

THE WITNESS: I assumed that there was no dependable capacity as determined by this method that Baltimore could depend on. Baltimore uses capacity when the water is up, when conditions are good; but that is not dependable capacity.

• • •

[19195] Q. Mr. Davis, referring again to your Table V-A of Exhibit 421, as I understand it, your purpose in going through the calculations you did go through on that table, to get the figure of 102,488 kw, as the balance available to Baltimore from Holtwood and Safe Harbor, was to obtain the balance of dependable capacity available to Baltimore under most adverse flow conditions of record, from the Holtwood and Safe Harbor developments; is that right? A. One component of that is the load-carrying capability under most adverse conditions, which is modified by the addition of the 83,000 for some other factors or more capacity at times other than minimum flow, but the calculations have been gone through to obtain the balance available to Baltimore under the conditions which I have explained.

[19196] And those conditions are most adverse flow conditions of record; is that right? A. The basic load-carrying capability of 167,000 under most adverse flow conditions of record.

Q. Now, in order to arrive at that figure of 102,488 kw, you deducted the firm loads plus 10 percent of the Pennsylvania customers, plus the amounts you deducted for the Pennsylvania Railroad in Pennsylvania, on the assumption that those obligations, in terms of firm loads and Pennsylvania load in Pennsylvania, would obtain during most adverse flow conditions; is that not right? A. I attempted to develop the capacity that could be depended upon to carry those loads.

Q. Mr. Davis, can you tell me whether my statement is correct or not? A. Not quite.

Q. What is there that is incorrect about my statement? A. It is a little too narrow.

Q. In what respect? A. I was just about to tell you.

Q. All right, if you will, please.

TRIAL EXAMINER: Proceed.

A. The capacity which I have developed as dependable is the capacity that can be depended upon to carry those loads when they occur.

[19197] By Mr. Myse:

Q. Now, if they would not occur during adverse flow conditions, then, you should make some adjustment for that fact; is that right? A. Well, I have made some adjustment for probability of better than adverse flows in a part of the 55,000 kilowatts which I have added.

Q. Well, have you made any adjustment, however, to the firm loads plus 10 per cent of any of the Pennsylvania customers for the fact that under adverse flow conditions Holtwood and Saf. Harbor might not be obligated to furnish the actual firm loads at the time of the Area 6 system peak? A. I think I testified just before lunch that these were the actual peaks of the three customers, without adjustment.

Q. You are familiar with Exhibit 76, I take it, which is the contract between Pennsylvania Water and Power Company, Safe Harbor Water Power Corporation, on the one hand, and Pennsylvania Power and Light Company, on the other; isn't that right? A. Yes.

Q. As I recall from our cross-examination on Exhibit 64, you are also familiar with Section 2, Art. IV thereof, which defines the obligation of the generating companies, that [19198] is, Penn Water and Safe Harbor, during on-peak periods of days of low flow; is that right? A. You mean their obligations under an option?

Q. Well, Section 2 defines the obligations of Penn Water and Safe Harbor during the on-peak periods of days of low flow; isn't that right?

A. That is right.

Q. And it defines that obligation to be only 80 per cent of the Lancaster load requirements; isn't that correct?

A. That is what is defined there: "Generating Companies may at their option reduce their supply to Receiving Company to 80% of the Lancaster Load Requirements. * * *"

Q. And there is a similar provision in Section 3, is there not? A. That is right.

Q. And Section 3 also defines on-peak periods, and I won't trouble you to read it into the record, because the exhibit is in the record, isn't that right? A. That is right.

Q. And it also defines what are days of high flow and days of low flow; isn't that right? A. That is correct.

Q. In Exhibit 77, which is a supplement to Exhibit 76, there appear certain options; isn't that correct? [19199] A. That is true.

Q. And one of the options is to continue to operate under the provisions of Sections 2, 3, and 4 of Article IV of Exhibit 76; isn't that correct? A. That is right.

Q. And that is Option A? A. Option A; correct.

Q. Do you know at this time whether or not Option A is in effect? A. I understand that it has been in effect since early this year.

Q. And if you will refer to transcript 16636, line 12, which is part of Mr. Spaulding's testimony on direct on rebuttal, to refresh your recollection, it went into effect on February 15, 1947; isn't that correct? A. That is as I remember it, and that is what it says.

Q. With that option in effect, the fact is that whatever firm loads there are of Pennsylvania Power and Light, only 80 per cent of that firm demand is an obligation of Penn Water and Safe Harbor during adverse flow conditions; isn't that correct? A. I had understood that during 1946 there was no option in operation.

Q. Well, we will get to that, Mr. Davis. Will you answer my question? [19200] A. At the present time, that is true.

Q. That is true at the present time, is it not? A. Yes.

Q. In order that your Exhibit 421 may be applicable to the year 1947 and the future, you would have to take into consideration that reduction in the obligation of the peak demands of the Pennsylvania Power and Light Company under most adverse flow conditions, would you not? A. Well, if we could take into consideration also the actual de-

mands at that time, so that, if they should happen to increase 20 or 25 per cent, the 20 per cent reduction could be applied to the proper figure, that would be right.

Q. In other words, whatever the actual demands would be in the future, you would have to take only 80 per cent of those demands in working out your calculations; isn't that true? A. That is true.

Q. Is it your testimony that the demands that you show at line 10 of Pennsylvania Power and Light, or any of the firm load demands which you show at lines 10, 11, and 12 of Table V-A of Exhibit 421 cannot be used as the criterion for the demands of the future? A. No, I wouldn't say that you could use those as criterion for the demands of the future. When you come to [19201] use those for allocating costs, it doesn't mean that the company's revenue would be confined to these demands, if they should increase, or if they should decrease.

* * *

[19211] Q. Now, it is true, is it not, Mr. Davis, that the backfeed that Penn Water receives from Batlimore Company is a resource of Holtwood's which may be used for serving any of its customers, isn't that right? A. That is a resource which I have distinguished from—

Q. Well, now, Mr. Davis, I haven't asked you how you distinguished it. You have answered my question. It is a resource, is it not?

TRIAL EXAMINER: For what?

MR. MYSE: For use of any of Penn Water's customers. Isn't that right?

THE WITNESS: Sure, it is a supply by Baltimore to [19212] increase the resources of Holtwood's own plant.

By MR. MYSE:

Q. Likewise the interchange purchases by Penn Water or Safe Harbor are resources to them which may be used in serving their customers; isn't that correct? A. That is true.

Q. To the extent, then, that you have not included Baltimore backfeed and interchange purchases in the figure which you show at line 3, column 3 of Table V-B, of Exhibit 421, you have not included all of the Holtwood resources in that line; isn't that correct? A. I have included all—

[19213] Q. Now will you answer my question, please? I haven't asked you what you have included. I have asked you whether or not you have included all the resources of Holtwood in that particular line. A. I have.

MR. HALL: Mr. Myse, will you define what you mean by "resources"? Are you using that term in any different way than he has used it in connection with Table V-B?

MR. MYSE: Whatever way the witness has been using it.

THE WITNESS: The way I have been using it, Holtwood's resources are included in line 3.

By MR. MYSE:

Q. Then were you saying that Baltimore backfeed is not a resource of Holtwood, as you used the term "resources"? A. I used the term "Baltimore supply" for that backfeed, and I included—

Q. Well, now, will you answer my question, please? I haven't asked you where you have included it. A. I have not so interpreted it.

Q. You are now saying that the backfeed from Baltimore is not a resource of Holtwood as you use it. Is that your testimony? A. As I have used the term "Holtwood resources," it is not.

Q. Likewise, you are now testifying under oath that the [19214] interchange purchases that Penn Water receives are not a Holtwood resource, as you used the term? A. I have not so treated it.

* * *

[19215] Q. That figure of 615,636 mwh., which you label the balance of Holtwood resources, I take it we are to under-

stand that when you speak of Holtwood resources, there, you mean Holtwood resources as you have defined them a few moments [19216] ago—as excluding the backfeed from Baltimore and the interchange purchases? A. That is right.

Q. Where did the figure of 157,961 mwh. come from, which appears in line 8 of Table V-B, Exhibit 421 and is labeled "Backfeed on 220 kv. lines"? A. That comes from Form 1 report.

Q. Can you tell me where you got it from, in the Form 1 report? A. We used to get it in the Form 1 report, but it doesn't seem—

Q. As a matter of fact the Form 1 report, on Schedule 552, page 524, shows that the amount of interchange power received from Consolidated Gas Electric Light and Power Company is 159,482 mwh., or 159,482,000 kwh.; isn't that correct?

TRIAL EXAMINER: Received from Baltimore?

MR. MYSE: It doesn't say so. That is the total on both lines, is it not—220 kv. and 66 kv. Isn't that correct?

THE WITNESS: No. That is the total on the 220 kv.

By MR. MYSE:

Q. Where did you get the figure 157,961, then? A. I guess you are right. The 159,482 mwh. is the backfeed on the 220 kv. lines, plus the backfeed on the Highlandtown line.

* * * *

[19217] Q. Maybe this can help you, Mr. Davis, in order to save time. I am informed that there is a possibility, at least—we are not sure—that the figures you used are gross figures received at Safe Harbor. A. That is what they are; yes.

Q. Whereas the figures appearing in the Form 1 are the net hourly figures metered at Baltimore. Do you think that accounts for the difference? A. That probably will.

I can give you in just a minute the figures that we were using. The 157,961 is the gross [19218] backfeed received at Safe Harbor on the 220 kv. line.

Q. What is the 1,676 mwh. appearing at line 9 of Table V-B of Exhibit 421? A. That is backfeed on the Highlandtown line to Holtwood.

Q. Is it a gross metered figure or a net hourly figure, or what? And where is it measured? A. That is measured at Highlandtown.

• • •

[19220] Q. Where did you get the figure of 162,677 mwh. appearing in line 10 of Table V-B of Exhibit 421? A. That is the total delivery from Safe Harbor to Holtwood in excess of the 292,323,000 kilowatt hours representing Holtwood's entitlement from Safe Harbor.

Q. Well, "how did you compute it?" is my question. A. We computed it by deducting from the net generation at Safe Harbor the delivery to Baltimore over the 220 kv. lines, plus the delivery to the railroad for Maryland service, and then deducting from that balance the 292,323,000 of Holtwood's entitlements, leaving 162,687,000 delivered to Holtwood in excess of Holtwood's entitlement.

• • •

[19222] Q. What next did you do in order to arrive at the 162,677 mwh.? I take it you subtracted the 300,340 mwh. first, did you not? A. Well, I added that to the delivery to the railroad from Safe Harbor for Maryland service and subtracted the sum.

Q. How much was that? A. 121,628,000.

Q. 121,628,000, or 121,628 mwh., is the net delivered to the Pennsylvania Railroad at Perryville and Conowingo as part of the contractual supply of the electric companies, and by "electric companies," I mean Safe Harbor, Penn

Water, and Baltimore Company; is that correct? A. I don't know about that. This is the delivery [19223] from Safe Harbor, with a small amount added at Perryville.

• • •

[19224] THE WITNESS: I have been working all through the recess working up the figures of how I derived the 121,628 [19225] delivered to the railroad. That was the last question he asked me.

MR. MYSE: That is all right.

THE WITNESS: And that 121,628 mwh. is derived from a number of figures which are on the five sheets of special meter readings which I testified the other day were furnished by the company at our request in addition to the other data that was supplied.

TRIAL EXAMINER: May I see what you have tabulated during the recess?

THE WITNESS: Yes, sir. That is the data. That data is all furnished by special meter readings requested of the company.

TRIAL EXAMINER: What is "Cga"?

THE WITNESS: Conestoga.

TRIAL EXAMINER: Is there any objection to having the reporter copy that in the record?

MR. MYSE: No objection.

TRIAL EXAMINER: The witness may hand his tabulation to the reporter and the reporter may copy it in the record at this point.

(The tabulation is as follows:)

[19226] SUPPLY FROM SAFE HARBOR TO PENNSYLVANIA RAILROAD COMPANY FOR SERVICE IN MARYLAND

Gross 25-cycle generation at Safe Harbor		299,384
Station use		2,709
		296,675
Transfer 60-cycle to 25-cycle		109,846
Total 25-cycle output at Safe Harbor		407,746
Back feed		1,225
Net output 25-cycle from Safe Harbor		406,521
Delivery to Philadelphia Electric Co. in interchange at Perryville and Thorndale		75,809
Net to Railroad Company for Pennsylvania and Maryland		330,712
Net output on circuits P-7 and P-8 from Conestoga	129,774	
Diversion at Safe Harbor to Railroad 6254		
Diversion at Fishing Creek to Railroad 9003		
	15,257	
Balance delivered to Railroad for Maryland	114,517	
Net through "BB Meter" at Perryville	4,264	
	118,781	
Peak Transfer energy	2,847	
Total from Safe Harbor to Railroad in Maryland	121,628	

[19227] By Mr. Myse:

Q. Now, Mr. Davis, didn't you have to make a somewhat similar calculation to arrive at the figure of 121,628 mwh., which you say is the delivery to Baltimore for the railroad in Maryland, and appears on your work sheet? A. That is the way I arrived at the 121,628.

* * *

[19231] Q. Now, I don't think you have completed your statement as to how you derived the figure of 162,677 mwh. We got as far as the figure 121,628 mwh. that we have been referring to.

Does the work sheet entitled "Backfeed and Diverted Energy Supplied by Baltimore for Firm and Interchange Sales in Pennsylvania" show the derivation of that figure? A. Of the 162,000 figure?

Q. Yes. A. That is correct. I first deducted the sum of the delivery over the 220 kv. lines to Baltimore of 300,340 mwh.

Q. Well, I think it will save time, Mr. Davis, if we mark for identification, if we may, Mr. Examiner, the work sheet I have just referred to, as Exhibit 432.

[19232] Mr. Myse: Mr. Examiner, I am informed that the Commission Staff has a negative of Exhibit 432 for Identification, and if we can have the Examiner's permission we should like to use that negative for purposes of making the required additional copies.

Mr. Hall: We will be glad to furnish it, Mr. Examiner.

Trial Examiner: Yes.

The document handed the reporter may be marked Exhibit 432 for Identification.

(The document referred to was marked Exhibit 432 for Identification.)

* * *

[19233] Q. Mr. Davis, if you will put down on a piece of paper for me the net generation at Holtwood which appears on schedule 575 of the Form 1 report for 1946 filed by Penn Water in an amount of 758,801,000 kwh and add to it a number of figures, the first one of which is the amount shown by Penn Water in Schedule 551 entitled, "Purchased Power," appearing at page 552 of the Form 1 report as the kilowatt hours received from Safe Harbor Water Power Corporation in the amount of 583,171,000—am I right so far? A. That is the figure reported on page 523.

MR. HALL: For my own information, Mr. Myse, the first figure of 758,801,000, is that net generation of Holtwood for 1946?

MR. MYSE: That is correct, is it not, Mr. Davis?

THE WITNESS: Yes.

MR. HALL: Holtwood hydro or Holtwood steam?

THE WITNESS: Both.

By MR. MYSE:

Q. And also add to it the amount of backfeed purchased from Baltimore during the year 1946 as shown on schedule 552 of the Form 1 report filed by Penn Water, page 524, in the amount of 159,482,000 kwh. Am I right so far? A. 159,482,000?

[19234] Q. Yes, am I right so far? A. That is right.

Q. And also add to it the amount of other interchange purchases also appearing on the same schedule 552 shown in column K of that schedule which amounts add up, I believe, to 12,760,000 kwh for the year 1946, is that right?

TRIAL EXAMINER: Read that, will you, please?

(Question read.)

TRIAL EXAMINER: That is the amount you get by adding together the three figures you have given plus this interchange energy figure, or is the interchange energy figure that 12 million?

MR. MYSE: No, sir. It is the amount we get as the annual interchange purchases from other customers other than Consolidated by adding four figures as they appear in schedule 552, is not that right?

THE WITNESS: That is right.

By MR. MYSE:

Q. Is my addition correct? A. 12,760,000?

Q. That is right. Now, if you add these four figures, that is the net generation and the amounts shown in Penn Water's report as received from Safe Harbor, and the Baltimore backfeed and the other interchange purchases, you arrive at a figure of 1,514,214,000 kwh, is not that right? A. That is the arithmetic of it.

[19235] Q. And if you deduct the losses reported by Penn Water in its Form 1 report for 1946 in schedule 575 in the amount of 64,763,000 kwh, you will arrive at a balance of 1,449,478,000 kwh, is that right?

TRIAL EXAMINER: Your decimal is off, is it not? It is not a billion, is it?

MR. MYSE: Yes, I am saying subtract 64 million odd from 1,514,000,000—

THE WITNESS: 1,449,000,000.

* * *

[19236] Q. From which, if you subtract the 64,763,000 loss as shown by Penn Water, you arrive at a figure of 1,449,478,000 kwh for the year 1946, right? A. You arrive at 1,449,478,000.

Q. Kwh? A. Yes, sir.

Q. Now, if you will subtract from that figure of 1,449,478,000 kwh the firm load requirements of Pennsylvania as found by you in Table V-B of Exhibit 421, line 13, column 6 in the amount of 746,286,000 kwh, you will get a balance of 703,192,000 kwh. Is not that correct? A. That is right.

Q. Now, if you deduct from the 703,192,000 kwh we have just referred to, the amount of interchange sales shown on schedule 575 of the Form 1 report filed by Penn Water in the year 1946 in the amount of 204,424,000 kwh you will arrive at a figure of 498,768,000 kwh; is that right? A. That is right.

Q. Now, the 1,514,214,000 kwh which we arrived at by adding the first four figures represents, does it not, the total energy actually received by Holtwood from all sources in the year 1946, is not that right, as shown by the Penn Water Form 1 report? A. Those are the figures taken out of the Penn Water [19237] Form 1 report.

Q. Now, Mr. Davis, will you answer my question. My question is simply this: Is my statement correct? A. I do not know whether it is or not.

Q. You are unable to tell me whether it is correct, is that right? A. Yes.

* * *

[19244] Q. Now, if you will refer to your Table V-B, Exhibit 421, column 6, line 13, you show a figure of 746,286 mwh which is equivalent to 746,286,000 kwh as the firm load requirements in Pennsylvania. Now, my question is, that amount includes not only the firm supply to the three Pennsylvania customers that you show on Table V-A of your exhibit, but also an amount of energy supplied to the Pennsylvania Railroad; is that not correct? A. Right.

Q. Now, what is the figure for the firm energy requirements of the three Pennsylvania customers alone? [19245] A. That is 538,000,000 if I recall.

Q. Is that shown in Form 1? A. 532,804,000.

Q. And that is shown in Form 1, Schedule 530, page 513, is it not? A. Yes, sir.

Q. Now, how much does that leave, if you will do the arithmetic for me, as the amount which you show in the figure in column 6, line 13 of Table V-B of Exhibit 422, as furnished to the railroad in 1946? A. 213,482,000.

Q. Now, is it your testimony that that 213,482,000 was furnished to the railroad in Pennsylvania during the year 1946? A. Yes, sir.

Q. Where did you get the figure of 213,482,000 kwh? A. That is the balance of the output at Safe Harbor that we worked out a short time ago after deducting the 121 million that goes through to the Railroad Service in Maryland.

* * *

[19247] Q. Now, at line 14, column 6 of your Table V-B, Exhibit 421, you show an amount of 191,664,000 which you label as the total net interchange sales in Pennsylvania? A. That is correct.

Q. Now, those are net interchange sales and not gross sales? A. That is true.

Q. The actual gross sales in Pennsylvania of interchange energy are an amount derived by adding back 12,760,000 kwh, is not that right? A. That is right, and you get 204,424,000 kwh.

Q. Now, actually, a large proportion of those interchange sales are made by the use of energy generated at Safe Harbor, right? A. That is probably true.

Q. Mr. Davis, if you will now refer to column 10, line 14 of your exhibit, you there show a figure of 65,863,000 kwh as the amount of net interchange sales in Pennsylvania which [19248] you show as coming from what you call Baltimore supply; is not that right? A. Baltimore supply to Holtwood, that is right.

Q. Now, under the method you have pursued in arriving at that figure of 65,863,000 kwh, about half of that amount roughly comes from what you call diversion from Baltimore's two-thirds of Safe Harbor, is not that right? A. It may be, I do not see just how you figured that.

Q. Well, now, the 322,314,000 kwh appearing in column 4, line 11 of Table V-B was derived by adding the figures appearing in lines 8, 9, and 10, right? A. Yes, sir.

Q. And roughly half of that 322,314,000 kwh is what you call diversion from Baltimore's two-thirds of Safe Harbor, is that right? A. That is right.

* * *

[19249] Q. Well, if instead of adding the three figures in lines 8, 9 and 10 to the total of 322,314,000 you had transferred them over into column 4 and applied a percentage to the figure of 162,677,000 kwh which you call diversion from Baltimore's two-thirds of Safe Harbor, you would have roughly 17 per cent, would you not? A. Yes, sir.

Q. And if you followed out your calculations in exactly the same way with the difference of not adding the three figures appearing in lines 8, 9 and 10, you would find that you would have roughly 17 per cent of the total net interchange sales in Pennsylvania coming from the diversion from Baltimore's two-thirds of Safe Harbor generation, is not that right? A. That is right.

Q. And that would be roughly half of the figure of [19250] 65,863,000 kwh appearing in column 10, line 14 of Table V-B of Exhibit 421, is not that right? A. Yes, sir.

MR. HALL: Mr. Davis, are your last answers predicated upon the assumptions that Mr. Myse has made?

THE WITNESS: Yes.

* * *

[19253] Q. The next question, then, is: How did you derive the figure of 213,482,000 kwh as referred to by you on page 19245? We are unable to check it. A. In the table on page 19226 of the transcript, line 11, I have a figure of 330,712,000 kwh., which is the balance of the 25-cycle output from Conestoga after deducting interchange to Philadelphia Electric Company. That should be changed in the transcript.

Q. That is line 9. The word "Pennsylvania" should be changed to Philadelphia; is that it? A. That is right. Philadelphia Electric Company at Perryville and Thorn-

dale. That balance is available for the Railroad Company, both in Maryland and in Pennsylvania.

Then the amount of 121,628,000, which is the balance of energy delivered down the P-7 and P-8 circuits to the railroad, for service in Maryland, deducted from the 330,712,000 kwh., gives 209,084,000 kwh., which is increased by 4,398,000 to make the 213,482,000 kwh.

Q. Where did the 4,398,000 kwh. come from? A. That is the peak transfer energy which is deducted from the interchange sales to Philadelphia Electric Company and added to the railroad bill.

Q. But you show, in line 19, page 19226, which reads "Peak Transmission energy", which I understand should be [19254] "Peak Transfer Energy," as 2,847,000 kwh. A. Yes. I gave you that erroneously. That is a discrepancy that I could not account for in getting the Railroad Company bill as reported by the Holtwood Company. That figure of 2,847,000 kwh. is an adjustment figure that I cannot account for.

Q. Well, do I understand, then, that the figure of 2,847,000 kwh. appearing at line 19 of page 19226 of the transcript is not peak transfer energy? A. That is not peak transfer energy that I know of. It may be. It is a discrepancy between the result of applying the method used by the company in computing the railroad bill which differs by that amount from the bill as reported in the company's reports, and I don't know whether it is peak transfer energy or what.

Q. Well, I'm lost, Mr. Davis. I understood you to say yesterday that the calculation shown by page 19226 of the transcript was the kind of calculation used by you in determining the amount of 121,628,000 kwh. appearing at line 20 of that page. Was I right in that? A. Surely.

Q. Well, now, do I understand, then, that you arrived at that figure by adding some arbitrary amount to 118,781,000 to make it come out with some figure you say the company reported? [19255] A. That is right.

* * *

[19263] Q. Will you refer again, Mr. Davis to your Table V-B of Exhibit 421? [19264] A. Yes, sir.

Q. Am I correct in understanding that table to mean, referring more particularly to Column 11, that the figure of 502,485,000 kwh, shown in line 15 of that column is the total amount of energy which you regard as sold to the Baltimore Company? A. From Holtwood's resources; that is right.

Q. When you say from Holtwood's resources, you are using the term "resources" as you defined it yesterday; that is correct? A. That is correct.

Q. And that figure is made up of a delivery to Baltimore Company at Highlandtown shown in line 6 of an amount of 376,684,000 kwh—is that right? A. That is right.

Q. —and, in part, of a delivery—or shall I say a net delivery—of interchange energy, to the Pennsylvania customers, of an amount of 125,801,000 kwh. Now, which is it: net or gross? A. It is net delivery. It is the proportion of the total net of 191,664,000 kwh shown in Column 6.

Q. Now, as I understand your Exhibit 421, the summation of those two figures of 502,485,000 kwh, you regarded, by the method that you pursued on Table VI, as sold to Baltimore Company at 1.3 mills; is that right? [19265] A. I believe that is right, yes.

Q. And that shows in Footnote No. 3 to Column 4 of Table VI; is that right? A. That is right.

Q. And the cost of 1.3 mills that you show there is derived on line 27 of Table V; is that right? A. That is right.

Q. As I also understand your exhibit, the amounts shown in Column 12 of Table V-B, in two places, or specifically the amount of 256,451,000 kwh, is that portion of the firm load requirements of the Pennsylvania customers which you regarded as having been furnished from either Baltimore back feed or diversion from Baltimore's

two-thirds of Safe Harbor generation? A. Yes, that is right. That is what that figure represents.

Q. That means, does it not, that approximately half of the amount of 256,451,000 kwh was regarded by you as a firm power supply in Pennsylvania, coming from diversion from Baltimore's two-thirds of Safe Harbor output; is that right? A. That would be what would show if you prorated it separately on the items of backfeed and diversion.

Q. Yes.

TRIAL EXAMINER: What do you mean by that?

[19266] THE WITNESS: I have taken back feed and diversion of 322,314,000 kwh and developed the percent of the total supply at Holtwood at 34 percent, and the firm, the balance of it, as 65 percent. The 256,451,000 kwh is then prorated from that total. Mr. Myse says then that if I had prorated it separately from the back feed and from the diversion, each of which is approximately half of this 322 million, I would have gotten half of this 256,451,000 kwh as derived from diversion at Safe Harbor from Baltimore's two-thirds share.

TRIAL EXAMINER: I see.

By MR. MYSE:

Q. In your Table VI, Mr. Davis, of Exhibit 421, you have, in effect, have you not, credited Baltimore Company with that amount of 256,451,000 kwh at a rate of 4.7 mills; is that right? A. That is correct.

Q. So that means, does it not, you regard that amount of energy at that rate as having been bought from Baltimore Company? A. In allocating the costs I have regarded that amount as having been supplied by Baltimore Company to Holtwood, for which there are no costs in the figures that I have allocated—that is taken from Holtwood's reported costs. These costs, then, of this energy at 4.7 mills [19267] have been added to the costs

reported by Holtwood, and prorated over the energy supplied to the Pennsylvania customers.

Q. Is that 4.7 mills, in your view, supposed to represent the cost to Baltimore? A. Baltimore's average production cost.

Q. Well, actually, half of that 256,451,000 kwh, which you regarded as supplied from the diversion from Baltimore's two-thirds of Safe Harbor's output, does not cost anywhere near 4.7 mills at Safe Harbor, does it, in your view? A. At Safe Harbor, no. I don't consider that cost at Safe Harbor.

Q. Do you know what the cost of that energy was, which you regarded as having been diverted from Baltimore's two-thirds of Safe Harbor output? And when I refer to cost, I mean cost to Safe Harbor. A. No, I wasn't interested in that figure.

Q. You just don't have any idea at all of what the cost would be in terms of kwh? A. I didn't try to find out, no.

Q. Do you know whether it would be less or more than 4.7 mills? A. Oh, certainly, it would be less.

Q. Much less?

MR. GOLDBERG: For my own edification, are you referring [19268] to the assumption of what the energy would cost at Safe Harbor if generated by Safe Harbor; is that it?

MR. MYSE: Yes.

* * *

A. I don't know how much less, but I imagine it wouldn't have been so very far away from the average cost of 502 million kwh, although I don't know exactly what it would have been.

MR. MYSE: In other words, you think it would be somewhere near the 1.3 mills you found on Table V; is that right?

THE WITNESS: It would be nearer that than 4.7.

By Mr. Myse:

Q. You can figure it very easily from Table V, can you not? Will you turn to Table V? A. I have it.

[19269] Q. Let's look at Table V, line 20. You there show what you assume as the cost of power to Holtwood from Safe Harbor, do you not, in Column 1? A. That is right.

Q. In an amount of $1,007,185; isn't that right? A. That is right.

Q. Now, if you followed the same procedure that you followed on Table V, you would allocate 74.85 per cent of that amount to capacity, and the balance to energy, would you not? A. Yes.

Q. How much would those two capacities and energy components of cost be, if you did that? A. It would be somewhere around—

Q. Will you figure it on the slide rule, please? A. Somewhere around $750,000.

Q. I get $754,000. Does that check with you as a capacity cost? A. That is about right, yes.

Q. Is that right? A. That is right.

Q. That means that the energy costs allocated as you have allocated them on Table V for Safe Harbor alone would be approximately $253,000; isn't that right? A. That would be the balance of the total; that is [19270] right.

Q. Now, if you divide that amount of $253,000 by the amount which you show as Holtwood receipts from Safe Harbor in line 2, Column 3 of Table V-B of your Exhibit 421, in the amount of 292,323,000 kwh, what rate do you get? And I get a rate of .865 mills. Will you check that for me, please? A. That is probably about right.

Q. That means that the cost of Safe Harbor energy on that basis is approximately .865 mills per kwh; isn't that right? A. That is 25 percent of the cost.

Q. Well, so far as energy cost is concerned, that is the energy cost of Safe Harbor energy; isn't that right? A.

That is the component that I have allocated on an energy basis.

Q. And that is the comparable figure to the 1.3 mills you show in Table V-A, is it not? A. That is right.

* * *

[19276] TRIAL EXAMINER: Well, I want to know what it is.

THE WITNESS: The costs of that energy at Safe Harbor have nothing to do with the way I have allocated those costs, and the way I have credited the cost of that energy to Baltimore at Baltimore's average steam production cost.

TRIAL EXAMINER: Why did you credit it to Baltimore at its average steam production cost?

THE WITNESS: Because that energy at Safe Harbor is paid for in full by Baltimore Company, and, according to contract, Baltimore is entitled to have it delivered to Baltimore at whatever the cost is and whenever it allows it to be diverted for any other purpose it has to generate steam energy in Baltimore to replace it.

By MR. MYSE:

Q. Does it always have to generate steam energy in Baltimore at times that the energy from Safe Harbor is diverted, as you say? A. Any energy that it might receive from Safe Harbor and does not receive has to be replaced in Baltimore by steam generated energy.

Q. Are there any times when Baltimore diversion is transmitted to Pennsylvania customers as you view it, when Baltimore Company cannot use that same amount of that diversion during the same hour?

* * *

[19277] A. I think there are some times during good water periods and low load periods when Baltimore feels that it cannot reduce its steam generation to the point of taking all of that.

By Mr. Myse:

Q. So that means, does it not, that the amount which is diverted during those times does not cause Baltimore to generate any additional energy; is that right? A. That is true, to that extent.

Q. Did you make any investigation to determine the number of hours during 1946 when that does happen? A. Well, the amount of energy is reported in several of these exhibits. I didn't look to see in how many hours it happened.

Q. Where did you get the rate of 4.7 mills which you used in Table VI? A. That is from the reported costs of production of Baltimore Company.

Trial Examiner: Is that from the Form 1 report?

The Witness: That comes from the Form 1 report, yes.

Trial Examiner: That wouldn't be the pool report, would it?

The Witness: No, Baltimore Company's Form 1 report.

[19278] By Mr. Myse:

Q. Do you have Baltimore Company's Form 1 report before you, so you can show me just exactly where that figure came from? A. It is the average of three stations in Baltimore. I thought I had the figures added up so I could give it to you immediately, but it is the average cost reported from the Westport, Gould Street, and Riverside plants, divided by the net generation as reported—the 4.7 mills can be derived by adding the figures from those three plants and—

Q. Well, have you any calculation showing how you derived the figure of 4.7 mills? A. I thought I had those figures added up here.

Do you still want me to figure it?

Q. I would like to know where the figure came from, and if you have any calculations, I would like to see them.

A. The figure came from the Consolidated's Form 1 report for 1946, Schedule 579, Consolidated Gas Electric Light and Power Company's report for 1946, line 34, shows total production expenses for four plants. Three of them are the main generating stations. The other one is used more for steam heating than for generation, and it was omitted. The sum of the operating expenses reported on line 34 is $9,202,392.

[19279] On line 12 is shown the net generation, the sum of which for the three plants is 1,950,252,000 kwh. Dividing the dollars by the kilowatt hours results in approximately 4.7 mills per kilowatt hour.

Q. Do I understand, then, that you took the figures from this Consolidated Gas and Electric Company Form 1 report for 1946, and you didn't make any calculation similar to the one you made now, or you did? A. Yes, this calculation was made.

Q. Well, did you have it in the form of a working sheet at all? A. No. I didn't save anything like that. I had a statement that it was 4.7 mills.

Q. Did you make any investigation of the figures appearing in lines 22 to 33, inclusive, of Schedule 579 to determine whether or not any of them were proper expenses applicable to the steam plants of Consolidated Gas Electric Light and Power Company? A. I observed what those items were, and figured the average production cost on the basis of the totals.

Q. Well, answer my question, will you, please? A. Yes, I did.

Q. You did make an investigation of each and every item of costs shown in those lines that I have referred to to determine whether or not they were proper; is that [19280] your testimony? A. You mean to go back of this report and find the components of them?

Q. To determine whether each and every figure appearing in the report was a proper figure or not. Did you do that?

MR. GOLDBERG: Each and every figure appearing in the report involved in the matter you are referring to?

MR. MYSE: In the lines I have referred to, yes.

A. That is the total of all of the items of production expense? You mean did I go back in to the Company's books and see what items were charged into those various amounts?

By MR. MYSE:

Q. That is right. A. I did not.

Q. Did anyone under your direction do that? A. I didn't ask anybody to.

Q. So far as you know, you just took the figures from the report; is that right? A. That is right.

Q. You do know that Consolidated Gas Electric Light and Power Company has other business other than its electric business, do you not?

[19281] MR. GOLDBERG: I object to that as entirely immaterial and irrelevant, unless counsel can show what he is attempting to prove here through suggestion, which is not a proper way.

MR. MYSE: I am cross-examining on the figure of 4.7 mills.

MR. GOLDBERG: He has answered he didn't go behind those figures. He accepted them. They are furnished under oath.

* * *

TRIAL EXAMINER: If counsel knows what that business is he should put it in the form of a question. This is taking too much time.

MR. MYSE: Do I understand the objection is sustained?

TRIAL EXAMINER: It is in part. I am making a suggestion whereby you can put a proper question—which

the Examiner would deem a proper question—to the witness.

MR. MYSE: I would like to know, Mr. Examiner, what the ruling is.

TRIAL EXAMINER: You are not going to pin the Examiner down like you are doing the witness.

MR. MYSE: In order that it may be clear—this is very important to our case—I would like to repeat the question, Mr. Davis. Do you know whether or not Consolidated Gas Electric Light and Power Company of Baltimore does in fact conduct other business other than its electric business?

[19282] MR. GOLDBERG: I object, unless counsel specifies what other business.

TRIAL EXAMINER: Objection sustained.

By MR. MYSE:

Q. Do you know whether or not Consolidated Gas Electric Light and Power Company of Baltimore conducts a gas distribution business?

MR. GOLDBERG: I object, Mr. Examiner, unless a foundation is shown that such business would be reported in FPC Form 1, in connection with electric operating expenses and revenues.

TRIAL EXAMINER: Objection sustained.

By MR. MYSE:

Q. Do you know how the electric operating expenses shown in Schedule 579 of the Consolidated Gas Electric Light and Power Company Form 1 report for 1946 were derived?

MR. GOLDBERG: I object to that. The witness has testified that he accepted the figures and did not go behind them.

THE WITNESS: Did you say "revenues"?

MR. MYSE: No. Expenses. If I said revenues it should be corrected.

MR. GOLDBERG: I object to the question anyway.

* * *

TRIAL EXAMINER: This is the point I have in mind. I have [19283] observed, in the cross-examination of this witness, as I have in the cross-examination of other witnesses by other counsel, that too often there is a tendency to subject the witness to a type of questioning which, to use a military expression, resembles a creeping barrage or a box barrage. And I am opposed to it because of the time that has been consumed by that kind of thing in this hearing. I think that partly explains why this hearing has gone on and on through cross-examination for day after day.

Now, if counsel knows of anything that exists that invalidates the use of this Schedule 579, as he knows the witness has used it, let him put a direct question to the witness.

MR. MYSE: Do I understand, Mr. Examiner, that the objection to my last question is sustained?

TRIAL EXAMINER: Yes.

MR. MYSE: In reply to the Examiner's statement I would like to say this: That of the total number of days of cross-examination, approximately some one hundred days were consumed by cross-examination by Staff counsel.

By MR. MYSE:

Q. Now, Mr. Davis, do you know whether or not any of the expenses shown in lines 22 to 33, inclusive, of Schedule 579 of the Form 1 report to the Federal Power Commission for the year 1946 by Consolidated Gas Electric Light and Power [19284] Company of Baltimore were derived by allocation of joint expenses between the gas business of

that Company and its electric business? A. That does frequently happen in accounting for two classes of business. I accepted the figures here, which are reported as electric costs, as such, and, if any allocations were made, I have assumed that the proper proportion was allocated to electric costs.

Q. You did not determine whether or not the allocation was correct, did you?

MR. GOLDBERG: I object. The witness has testified to what he has done.

TRIAL EXAMINER: Objection sustained.

MR. MYSE: Mr. Examiner, I would like to point out that we are now being deprived of a very, very essential portion of our right of cross-examination upon the specific figure of 4.7 mills per kwh. used by this witness in arriving at the results in Exhibit 421, and, as shown by the testimony at this point, derived from a report by Consolidated Gas Electric Light and Power Company of Baltimore without further examination on his part. And we therefore make the point that we are being deprived of that right in violation of our rights under the Constitution of the United States.

MR. GOLDBERG: May I be heard, momentarily, Mr. Examiner?

TRIAL EXAMINER: Just a minute. I wish to point out [19285] this: You have three answers from this witness which are completely negative, as the Examiner sees it, in so far as any assignment of error as you have just made is concerned.

First, the witness testified that he took the table as he found it; second, that he made no investigation as to the computation of the data as it appears in the table, and, third, that there might be assignment of expenses as between different types of business.

And I have ruled the questions out on the grounds that the matter has been covered.

MR. GOLDBERG: Mr. Examiner, in connection with counsel's statement of deprivation of due process, I have been sitting here all morning wondering why all this cross-examination about the 4.7 mills when in Exhibit 369 Mr. Spaulding himself shows, for 1946, under the heading "Baltimore Company Average Monthly Production Cost Plus 10%," 5.10 mills per kwh.

Now, if you deduct the 10% from that there is no substantial difference between the 4.7 and the figure we would get after deducting 10% from 5.10. I just haven't been able to understand it.

MR. MYSE: All I can say to that is that there is no substantial similarity between the figures to which the mill rates were applied either between the two exhibits.

MR. GOLDBERG: Look at the description by Mr. Spaulding.

[19286] TRIAL EXAMINER: All right; proceed.

That mill rate in Exhibit 369 works out to 4.63, does it not?

MR. GOLDBERG: Something like that.

* * *

[19294] Q. Well, is it your testimony that that supply of interchange energy to the Pennsylvania customers benefits Baltimore? A. That, in effect, is Baltimore selling energy in Pennsylvania. It pays all the costs of it, it gets all the revenue from it.

Q. And that is in conformity with the testimony you gave once before on cross examination in connection with Exhibit 64; is that right? A. I think I said that same thing, yes.

Q. That means, does it not, that the greater the amount of interchange energy supplied to the Pennsylvania customers, the greater will be the back feed and diversion of Baltimore's two-thirds from Safe Harbor, as shown in line

11, column 4 of your Table V-B, Exhibit 421; isn't that correct? A. If all other conditions remain the same and the interchange is increased, that would require more back feed or diversion.

Q. And that would increase the percentage figure shown [19295] in your column 5, line 12, as 34.4 per cent, under those conditions; isn't that correct? A. With all other conditions remaining the same, and an increase in back feed and diversion, that percentage would increase.

[19296] Q. Well, to put it another way, the greater the amount of interchange supplied to the Pennsylvania customers, with the firm loads of those Pennsylvania customers remaining the same, the greater the percentage of available supply for firm and interchange sales in Pennsylvania, as shown in your columns 4 and 5, line 12, Table V-B of Exhibit 421. Isn't that correct? A. That would be correct if the generation at Holtwood and Safe Harbor remained the same and the load remained the same.

Q. Assuming all other conditions the same but interchange supply to Pennsylvania customers increased, it would have that effect, would it not? A. That is correct.

Q. And, as a result of that, if you therefore increased the amount of interchange supplied to the Pennsylvania customers, and all other conditions, as you show them on your Table V-B of Exhibit 421, remained the same, you would come out with, if you pursue your method of cost allocation as shown on Table VI, a higher weighted average cost of firm energy to Holtwood, as shown in your footnote 1 of Table VI. Is that correct? A. The amount of energy supplied from Baltimore would be increased and the additional charge at steam production cost would be increased, and the weighted average would [19297] therefore increase, that is correct.

Q. By a mere change or increase in the amount of interchange energy sold to the Pennsylvania customers; isn't that right?

MR. GOLDBERG: All other things remaining equal.

MR. MYSE: Yes.

THE WITNESS: That is correct.

* * * *

[19301] Q. Well, then, you are testifying that that rate of 4.7 mills represents, to you, the average cost of backfeed? Is that your testimony? A. I have so used it.

Q. Well, do you know whether it is the average cost of [19302] backfeed? A. Now you are asking me again if I have analyzed Baltimore's books to find out all the items in there.

Q. No, sir. A. I have not.

Q. Well, did you analyze any of the costs of Baltimore Company to determine whether or not the costs of just the backfeed energy supplied by Baltimore to Holtwood were any different from the average costs of production of energy?

* * * *

[19303] A. I have made no distinction. I applied the average cost to both back feed and diversion.

By MR. MYSE:

Q. All right. Now, the average cost of production of energy at the three plants which you referred to from the Consolidated Form 1 report does vary widely, doesn't it?

* * *

[19304] THE WITNESS: There is some variation in the average cost of one plant and another.

By MR. MYSE:

Q. And, as a matter of fact, the average production cost for the year 1946 for the Riverside plant was only 3.57 mills; isn't that correct? A. I don't have that in mind at the moment.

Q. Well, you can check it very quickly, can't you, from the same Consolidated Form 1 report? A. 3.57 mills.

Q. And, as a matter of fact, the average cost of energy

which Consolidated Gas Electric Light and Power Company received from Pepco in the year 1946 is only 3.68 mills; isn't that right? A. I don't know.

* * *

[19305] Q. Mr. Davis, don't you know, as a matter of fact, that a large proportion of the back feed energy furnished by Baltimore to Holtwood is generated and comes from the Riverside plant?

MR. GOLDBERG: I object to that, Mr. Examiner, as vague and indefinite. "Large proportion" is a relative term and there is no foundation laid as to what he means.

TRIAL EXAMINER: Objection overruled.

A. I don't know what proportion comes from the Riverside plant.

By MR. MYSE:

[19306] Q. I take it you made no study, then; is that right? A. That is right.

Q. You know that some comes from the Riverside plant? A. I assume that some comes from each of the plants.

Q. Do you know that a substantial proportion of the back feed energy furnished by Baltimore Company to Holtwood originates on the system of Pepco, and is purchased originally by Baltimore Company from Pepco at some mill rate which we will furnish later in the record? A. I knew that some back feed came from Washington. I didn't know how much.

* * *

Q. Mr. Davis, Table VI, Exhibit 421, Footnote (2). You show there a rate of $12 per kw, which you applied to the negative capacity supplied from Holtwood to Baltimore Company in arriving at a figure of $38,400, which you used in Column 6, Line 5, of your Table VI. My question is: where did you get the rate of $12? [19307] A. I used $12 as a conservative amount that would be considered reason-

able as a cost to the Pennsylvania customers, believing that it was not the full capacity cost.

* * *

Q. You say cost to the Pennsylvania customers? A. As an amount to be included in the cost of serving the Pennsylvania customers.

Q. Well, is that $12 per kw related in any way to costs of Baltimore Company? A. It is not definitely related —that is, mathematically—but, as I said, not attempting to charge what would be full capacity costs from Baltimore supply, but a reasonable addition to the cost of serving the Pennsylvania customers.

Q. Well, what factors did you consider in coming to the conclusion that $12 was that reasonable cost? A. I didn't consider any mathematical quantities.

Q. I am not asking you that. I haven't confined my question to mathematical quantities. I asked you generally what factors you considered. A. Just a general judgment of reasonableness, as a cost to be included in that of serving the Pennsylvania [19308] customers.

Q. Well, didn't you have anything in mind as a criterion of what is the measure of reasonableness? A. Knowing that steam generating costs are usually more than that, and knowing that the capacity or demand charges in contracts for sale of that power are considerably above that figure, I just put that in as a judgment figure to be very conservative and reasonable in adding to the Pennsylvania service cost.

Q. What studies of capacity charges and steam capacity cost did you make in order to arrive at that judgment figure? A. I just had in mind the demand charges that are made in contracts in this area.

Q. What contracts? A. Oh, a number of them.

Q. Well, can't you be specific? A. Well, you can take Holtwood's contracts with the Pennsylvania customers.

Q. What is the demand charge made by Baltimore to Pepco? A. I don't know.

Q. Didn't you consider that at all in arriving at your reasonable figure of $12? A. No, I didn't consider any definite quantities.

[19309] Q. Nothing definite at all? A. Just being sure that I got below actual cost.

* * *

[19312] Q. Where does the figure of $141,777 come from which you show as an adjustment of revenue received for special facilities from the Penn Railroad in accordance with the allocation of costs of special facilities? A. That is the amount of special facility cost collected by Holtwood on the energy ratio, which is in excess of the special facility costs that I have allocated to the railroad in Pennsylvania.

Q. How much special facility cost have you allocated? Is that shown on Table VI of Exhibit 421, line 4, column 5, as $94,038; is that what you mean by the special facility costs allocated to the railroad?

TRIAL EXAMINER: What table is this?

MR. MYSE: Table VI.

By MR. MYSE:

Q. Mr. Davis, I haven't asked you what you did. My question is: is the $94,038 the special facility cost you have just referred to in the testimony? A. That is the amount allocated to the railroad in Pennsylvania.

Q. Well, I show you a work sheet which is headed "Holtwood Cost and Revenue Collected for Special Railroad [19313] Facilities." Is that the work sheet that you furnished Respondents showing the derivation of the figure of $141,777 appearing on Table VI-A of Exhibit 421? A. That is right.

MR. MYSE: May we have the work sheet just described marked for identification as Exhibit No. 433 for identification?

TRIAL EXAMINER: The document handed the reporter will be marked as requested.

(Document marked Exhibit 433 for Identification.)

By MR. MYSE:

Q. Is it correct to say, Mr. Davis, that the first column of Exhibit 433 for identification shows the special facility charges to the railroad? A. That is as I understand it.

Q. Well, are those the charges that are provided for in the contract known as Exhibit 10 in this record? A. I believe so.

Q. Can't you be a little more positive? A. I think they are.

Q. And that is where you obtained the figures; isn't that right? A. Yes.

Q. The next column is headed "Collected by Holtwood." How did you arrive at those figures? [1931] A. Holtwood collects that portion of those costs represented by the proportion of the energy delivered to the railroad in Pennsylvania.

Q. How did you arrive at that ratio? A. The ratio of the total energy furnished to the railroad to the portion furnished in Pennsylvania.

Q. Do I understand you to mean that it is the ratio of energy furnished to the railroad in Pennsylvania to the total energy furnished to the Railroad? A. Well, yes, that is putting it properly.

Q. That would be the ratio of the figure—what figures did you use, can you tell me that? A. It is approximately 48 per cent, 47 and a fraction per cent, I believe. I used the figures that are shown in—I have forgotten the name of the exhibit. The tabulation of the Railroad Company's billing.

MR. GOLDBERG: Exhibit 423: is that the one you are referring to?

THE WITNESS: Yes.

By Mr. Myse:

Q. Let's be more specific as to which figures you used. A. The ratio of 451,843,000 kwh to 213,482,000 kwh.

Q. You mean just the reverse, do you not, the ratio of 213,000,000-some odd kwh to the figure of 451 some odd [19315] million kwh? A. Yes; that would be roughly 48 per cent, if I recall rightly.

Q. And those figures appear on one of the sheets in Exhibit 423, which is headed "Monthly charges to Pennsylvania Railroad Company;" isn't that correct? A. That is correct.

Q. In the third column of Exhibit 433 you show that none of the cost of the Benning frequency changer and the 110 kv line credit is allocated to the Pennsylvania Railroad in Pennsylvania; is that right? A. Yes.

Q. On the next line, as I understand your Exhibit 433, you allocate $36,973 to the railroad in Pennsylvania, on account of the Safe Harbor facilities used for the railroad; is that right? A. Yes.

Q. How did you arrive at that allocation? A. That is allocated on the basis of the ratios which are developed for the Conestoga Substation, and the Safe Harbor facilities, which is in one of my working papers.

Q. Well, as I understand that, you show that you find, in one of those working papers, 53 per cent of the use of the Conestoga Substation is for use of the railroad in Pennsylvania; isn't that right? [19316] A. Yes.

Q. Did you apply that 53 per cent to the total charges of $211,271 shown in the first column of Exhibit 433? A. Apparently not.

Q. Did you intend to? A. No, that is cost incurred by Safe Harbor, for which Holtwood paid only one-third.

Q. Well, actually the cost incurred by Safe Harbor to serve the railroad is incurred regardless of what Holtwood pays; isn't that right?

* * *

A. That is right.

By Mr. Myse:

Q. How did you arrive at the $36,973 shown in the third column of Exhibit 433, opposite Safe Harbor facilities for the railroad? A. That is supposed to be 53 per cent of one-third of the $211,271.

Q. Well, is it? A. It seems to be a dollar or two off.

Q. Well, assume it is what it is supposed to be: why do you take only one-third of $211,000 and apply 53 per cent to it? A. Because that is all the cost that Holtwood incurs.

[19317] Q. You mean Holtwood only incurs one-third of $211,271 as cost? Is that your testimony? A. That is right.

Q. Well, actually, that $211,271 isn't a cost at all: it is just a charge specified in Exhibit 10, the contract, isn't that right? A. That is a charge to the railroad company.

Q. So it isn't a cost; it is a charge specified in the contract; isn't that right? A. That is right.

Q. Have you determined whether or not the charges in the contract are related to costs? A. They are related to costs, yes. They are a fixed percentage of investment. They are not the same costs that were included in the bill of Safe Harbor to Holtwood.

Q. Well, do you think they are reasonable costs? I will withdraw that.

Do you think the charges specified in the contract represent reasonable costs? A. Well, I had no particular reason for judging whether they were or not. I was taking them as they were reported.

Q. Then, I understand your testimony to be that you do not know whether or not the charges specified in the contract, as listed in column one of Exhibit 433, [19318] actually represent reasonable cost? A. I don't know what you mean by "reasonable". I didn't attempt to decide whether they were reasonable or not.

Q. Then, actually, your third column in Exhibit 433, which is headed "Cost Allocated to the Railroad in Penn-

sylvania," should read "The Charges Specified in the Railroad Contract Known as Exhibit 10, allocated to the railroad in Pennsylvania;" isn't that a more correct statement? A. That would be all right, yes.

Q. And, as a result of that, your fourth column which is headed "Excess Collected over Cost Allocated to Pennsylvania," should read "Excess Collected over the Charges Specified in the Railroad Contract, Allocated to Pennsylvania"? A. Well, I called those costs.

Q. Well, isn't my statement correct, Mr. Witness?

* * *

A. This particular item, which is different from any of the others, is a cost allocated from the charge made by Safe Harbor.

MR. MUSE: Mr. Examiner, I haven't called for that.

MR. GOLDBERG: Let the witness finish, please.

[19319] TRIAL EXAMINER: No. Just a minute. Start off answering that question as directly as you can. Then, if you have to add anything to it, you may do so. It is impossible to evaluate the witness' answer as his answer now starts off.

THE WITNESS: May I have the pending question?

TRIAL EXAMINER: Yes.

(Question read.)

MR. GOLDBERG: That has been answered directly, Mr. Examiner. He has answered directly what that means there.

TRIAL EXAMINER: He may answer.

A. The items which I have taken as charges to the railroad, which are the Benning frequency changer and the Safe Harbor facilities, which are not in Holtwood costs, could be titled as you stated. The other two items are costs of Holtwood and the title that I have here would be more correct for them.

By Mr. Myse:

Q. Are you saying that the amount of $36,973 appearing in Column 3 is a cost of Holtwood, and is not merely an allocated portion of the charges specified in Exhibit 10, the railroad contract?

Mr. Goldberg: Mr. Examiner, I object to that unless there is a contention being made here that charges do not represent costs.

[19320] Mr. Myse: Well, certainly there is.

Mr. Goldberg: If anybody charges me anything and I pay for it, it is a cost, and counsel knows it.

Trial Examiner: All right. Just a minute.

Mr. Myse: I still don't think I got an answer to my question.

Trial Examiner: Just a minute. Isn't that the same question that you asked once before?

Mr. Myse: Only because, in attempting to argue with me, by his answer to the question, the witness hasn't answered the question. If the Examiner prefers I think he can have my question read back. It is a very simple question and can be answered yes or no. The question was: was my statement correct with respect to the heading in column 4.

Trial Examiner: Well, you check the transcript over the evening, because we have been over that $36,000 item.

Mr. Myse: I take exception to that, Mr. Examiner. I think it is clear he has not answered my question.

Trial Examiner: I don't think it is clear, and if, on reviewing the transcript, it develops he hasn't answered it, then, we will consider the question further.

By Mr. Myse:

Q. Mr. Davis, is the figure of $49,074 in column 3 of Exhibit 433, a cost to Holtwood Company? [19321] A. That

is the portion of Holtwood's cost for the Conestoga Substation allocated to the railroad.

* * *

Q. How did you compute it? A. The computation of the amount allocated to the railroad is based on the ratio developed in the working paper which was supplied.

Q. Is that the 53 per cent you referred to before? A. Yes.

Q. So you applied the 53 per cent to the figure of $93,474 in column 1, which is headed "Charges to the railroad;" isn't that right? A. That is right.

Q. So that what it is is a figure representing 53 per cent of a charge specified in Exhibit 10; isn't that right? A. That is right.

Q. Does that represent a cost to Holtwood? A. Yes, that is a portion of Holtwood's cost.

Q. How did you get the figure of $10,989 appearing in column 3 of Exhibit 433, opposite the designation "Perryville line"? [19322] A. That is developed in the same way, using the ratio of the Perryville line, which is—

Q. Is that the 9 per cent figure which you developed? A. 9 per cent for service to the railroad in Pennsylvania.

Q. So you applied 9 per cent to $122,100 appearing in column 1 of Exhibit 433? A. That is right.

Q. And that figure is also a charge specified in the contract, so that the figure of $10,989 represents 9 per cent of the contract charge; is that right? A. That is right.

Q. And you consider that a cost to Holtwood? A. Surely, it is a part of Holtwood's costs that are charged to the railroad.

Q. How did you arrive at the figure of $6,654 appearing in the third column of Exhibit 433, opposite the designation "Switch for railroad transformer"? A. That percentage is developed also in working papers supplied for the switching positions and switches, I believe, supplied for the railroad company transformers at Conestoga.

Q. Is it on the working paper I show you headed "Conestoga Substation" and "Safe Harbor Single Phase Equipment"? [19323] A. No, it is not on that sheet.

Q. What other working sheet is there relating to that? A. I find the work sheet in my notes here, but it hasn't been discovered in the photostatic copies as yet.

Q. Well, will you supply us with a copy of that working sheet? A. Certainly.

Q. What does the work sheet show, in the interim, as to how you arrived at the figure of $6,654 appearing in the third column of Exhibit 433? A. It starts with the total output of Conestoga Substation of 406 million kwh, deducting first the delivery over circuits P-7 and P-8.

Q. Of how much? A. 130,862,000 and then the net to Perryville, over Circuits P-5 and P-6 of 35,060,000, leaving a balance which had to go over Circuits P-2, P-3 and P-4, and out of the amount of that balance, which is 240,599,000, 45,013,000 went to Philadelphia Electric through Thorndale, leaving a balance of 195,586,000 as the use handled by these switching facilities, or 81.3 per cent of the total energy flowing over Circuits P-2, P-3, and P-4.

Q. Then, as I understand it, you applied the figure of 81.3 per cent, which you derived in the manner you have just described, to the figure of $8,184 appearing in column 1 [19324] of Exhibit 433, to get the $6,654; is that right? A. That is correct.

Q. Likewise, the figure of $8,184 is a contract charge; isn't that correct? A. That is correct.

Q. Do you consider that a cost to Holtwood? A. Yes, that is a part of Holtwood's cost.

TRIAL EXAMINER: What was the contract charge?

MR. MYSE: $8,184.

By MR. MYSE:

Q. That means, Mr. Davis, that your total of $103,690 is what you consider as the cost to Holtwood allocated to

the railroad in Pennsylvania; is that right? A. That is the way it is allocated, yes.

TRIAL EXAMINER: What makes up the $103,000 figure?

THE WITNESS: These four figures.

TRIAL EXAMINER: $6,654, $10,089, $49,074, and $36,963?

THE WITNESS: Yes.

* * *

[19339] Q. Referring to Table III of Exhibit 422, the fact is that the figures appearing in line 1 as hydro production costs, exclusive of purchased power, are comparable to the figures appearing in Table III of Exhibit 421, line 1, and do not include all of the hydro production costs. Isn't that right? A. That is exactly the same situation.

* * *

Q. That was that unfortunate situation. [19340] A. Unfortunate, indeed; yes.

Q. And to that extent Table III, line one of Exhibit 422, differs in your method which you used in arriving at the figures on the comparable tables in Exhibit 64 and the worksheet to Exhibit 292 which appears as Table I of Exhibit 351; isn't that right? A. That is correct.

Q. That should be the worksheet which appears as Table III in Exhibit 351. A. Yes.

* * *

TRIAL EXAMINER: You say this figure of 224,230 in your Exhibit 422 is computed on a different basis from the 357,980?

THE WITNESS: No. It is the 357,980 minus 133,750, Conowingo backwater payment, which in both 421 and 422 is deducted from hydro costs.

TRIAL EXAMINER: All right.

The 357,980 is hydro costs?

THE WITNESS: The total hydro costs reported.

TRIAL EXAMINER: Likewise in your 421 the total hydro cost reported was 402,895; is that it?

THE WITNESS: That is correct.

[19341] TRIAL EXAMINER: When you say "reported", that is in Form 1?

THE WITNESS: Yes, operating costs.

TRIAL EXAMINER: As I get it, then, the only difference between the latter Exhibits 421 and 422, and your Exhibit 64, is that in Exhibit 64 you did not deduct the Conowingo item.

THE WITNESS: That is right, in Exhibit 64 I did not.

TRIAL EXAMINER: All right.

By MR. MYSE:

Q. Nor in the worksheet to back up Exhibit 292. Isn't that right, Mr. Davis? A. That is right.

Q. The ratios that you show for allocating the various transmission facilities on Table III of Exhibit 422 differ from the ratios shown in the comparable table of Exhibit 64 and the worksheet supporting your Exhibit 292, which is shown as Table III of Exhibit 351, in the same manner as the ratios we referred to on Table I of Exhibit 422 insofar as such ratios on such table differ from the comparable tables in the other exhibits. A. That is true.

[19342] Q. Refer to Table IV of Exhibit 422, please, Mr. Davis.

First of all, Table IV differs from Exhibit 64 and the Table IV of Exhibit 351 which is the worksheet to your Exhibit 292 insofar as you have allocated a portion of the dollars which you label in line 2 "Bill for Safe Harbor Power." Isn't that correct? A. It differs from Exhibit 64, yes.

Q. And Table IV of Exhibit 351? A. Yes.

Q. Do I understand correctly that that allocation to Baltimore and to the Pennsylvania Railroad Company appearing at columns 4 and 5, line 2 of Table IV of Exhibit 422 was made on the comparable basis to the allocation appearing in Table IV, line 2, columns 4 and 5 of Exhibit 421? A. That is true. All the other allocations, also.

Q. I show you a worksheet headed "Pennsylvania Railroad Service Cost Allocation, Safe Harbor Facilities" which shows figures for 1944-1945. Is that the worksheet showing the allocation of the figures on columns 4 and 5, line 2, Table IV of Exhibit 422 as well as the derivation of the amounts of the two figures together? A. That is right—only the total of the two figures.

* * *

[19369] Q. Mr. Davis, at page 19,356 you agreed to furnish one or more tabulations showing how you arrived at certain figures referred to on that page, and also a revision of a table which had been copied into the record some time before. Is that right? A. That is correct.

Q. Do you have those tabulations available this morning? A. I do.

Q. May we have copies of them? A. This is a revision of the table which was copied into the record. That is the only copy I have.

Q. This is one entitled: "1946, Energy Delivered to Railroad in Maryland and Pennsylvania from Safe Harbor." Is that right? A. That is correct.

Q. Have you used any new figures in this particular table which you have handed me other than the ones that are already in the record and which we have asked you about? A. No; those are exactly the same figures except for the slight change to show the gross and backfeed and the net delivery from Conestoga. That was a little mixed up on the [19370] other table.

Q. The other table is on page 19226; is that correct? A. That is right.

MR. MYSE: I ask the permission of the Examiner to have the calculation just handed me by the witness copied into the record as if read.

TRIAL EXAMINER: Any objection?

(No response.)

TRIAL EXAMINER: The tabulation handed the Reporter will be copied into the transcript at this point.)

(The Table referred to above is as follows:)

ENERGY DELIVERED TO RAILROAD IN MARYLAND AND PENNSYLVANIA FROM SAFE HARBOR

Gross sendout from Conestoga		407,746
Backfeed to Conestoga		1,225
Net sendout from Conestoga		406,521
Delivery to P. E. Company		
Net north at Pv'l.	30,796	
Net east at Th.	45,013	
		75,809
Balance to R.R. in Pa. and Md.		330,712
Gross Delivery on P7 and P8	130,862	
Backfeed	1,088	
Net	129,774	
[19371] Less diversion at S. H..	9,003	
Less diversion at Fishing Crk..	6,254	
Total	15,257	
Bal. for service in Md.	114,517	
Add BB meter at Pv'l.	4,264	
Total to R.R. in Md.	118,781	
Adjustment to R.R. billing	2,847	
		121,628
Balance for R.R. in Pa.		209,084

Total peak transfer energy which is transferred from P.E. interchange to R.R. Co. and pro-rated to Md. and Pa.	4,398
Supply to R.R. incl. peak transfer:	
In Md.	121,628
In Pa.	213,482

* * *

[19375] Q. Will you refer to Table V-B of Exhibit 422 and line 15, wherein you report a figure of 104,182,000 kwh. as additional energy delivered to Baltimore from Holtwood in an average year? Is that right? A. Additional energy available to Baltimore from Holtwood in an average year?

Q. Is it delivered or isn't it? A. It was not delivered in 1944. It is an estimated increase which would have been available in an average year.

Q. Well, in column 11 where it is located you have it under the heading "Delivery to Baltimore." Is it a delivery or isn't it? A. It is a delivery which could have been made in an average year.

Q. Are you saying, then, that 1944 was below average and [19376] you had to adjust it for that reason? A. That is correct, I took the adjustment furnished by the company.

Q. You say you got that adjustment of 104,182,000 kwh. from the company? A. That is right.

Q. Does that appear any place in Form 1? A. That is right.

Q. Where in Form 1 does it appear? A. I might have to do a slight subtraction to get that figure.

Q. I think I can arrive at it. If you look at 513-A of the Form 1 for the year 1944 filed by Penn Water and page 2 of the notes to Schedule 530— A. That is where it comes from.

Q. Did you arrive at that figure by taking the figure of 131,000,000 kwh., which is reported as the estimated net

sales by respondent to Baltimore Company, with average river flow and deducting the figure of 26,818,000 kwh., which appears immediately above it? A. That is right.

Q. Those two figures you used in arriving at the figure of 104,182,000 are both reported by the Company as net sales, are they not? A. That is right.

[19377] Q. So the figure you used in Exhibit 422 is a difference of net sales and thus must be itself a net figure. Isn't that right? A. That is right.

Q. So it is not the gross energy available to Baltimore but it is the net amount of energy available to Baltimore from Holtwood during an average year. Isn't that right? A. It is the net additional, that is right, the same thing.

Q. It is possible to increase the net deliveries to Baltimore Company by reducing the backfeed under the computation as reported in the Form 1 report in the year 1944, is it not?

MR. GOLDBERG: Talking about the same type which resulted in the 104,182,000?

MR. MYSE: That is right.

THE WITNESS: May I have the question?

(Question read.)

THE WITNESS: If all other conditions remain the same, and the backfeed from Baltimore is increased, then the net delivery to Baltimore could be decreased by that amount.

By MR. MYSE:

Q. If in fact there had been available in the year 1944 a net amount of 104,182,000 kwh. as shown by you in your Table V-B of Exhibit 422, how do you know that that amount of energy [19378] would not have been applied to wipe out the figure of 92,662,000 which is shown by you in column 1 of line 10 of the same table? A. No one can tell, of course, exactly what would have happened if the river had been up to a point of generating 104,000,000 kilowatt-hours more than was actually produced. We can com-

pare the figures of 1944 with 1946 which was very close to an average year, and the diversion increased quite materially in 1946.

Q. Does that complete your answer? A. I was just going to say what the backfeed did but I do not see the figure right here. I believe the backfeed increased considerably in 1946 over 1944.

Q. Your Exhibit shows that it decreased in 1946 over 1944. Isn't that right, Mr. Davis? A. Yes, I see it now. It did decrease and the diversion increased.

Q. And the net interchange sales as you show them in Exhibit 421 for 1946 increased substantially over the same figures, or comparable figures, for the year 1944, did they not? A. They did.

Q. Are you testifying that if Holtwood had had available an additional 104,182,000 kwh. in the year 1944 under average river flow conditions it would have chosen to deliver that to Baltimore at a rate of 1.4 mills per kwh. and continue diverting 92,662,000 kwh. at a rate of 4.3 mills?

* * *

[19379] THE WITNESS: This 104,000,000 is from Holtwood resources only.

By MR. MYSE:

Q. Will you answer my question, please? A. I just want to get your question straight first. If Holtwood had had 104,000,000 more energy available from its own generation, and its one-third of Safe Harbor, if the firm loads had remained the same, then it would have had no choice in what to do with it except deliver it to Baltimore or sell it in interchange in Pennsylvania.

Q. Could it not have been used to reduce either the figure of 201,075,000 kwh., appearing in line 8, column 1 of Table V-B, Exhibit 422, or the figure of 92,662,000 kwh. appearing in line 10, column 1 of the same table?

MR. GOLDBERG: I object to that as argumentative. The [19380] witness answered the question, which is highly speculative, to begin with.

TRIAL EXAMINER: Objection is overruled.

THE WITNESS: If Holtwood had had 104,000,000 additional kilowatt hours that would mean that Safe Harbor would have had a proportionate amount in addition, and the backfeed could have been reduced, the diversion might have been reduced and it might not.

By MR. MYSE:

Q. The fact is you just don't know what would have happened under those conditions. A. I told you that in the first place.

* * *

[19381] Q. If under average river flow conditions the amount of energy shown by you as backfeed on the 220 kv lines, or the diversion from Baltimore's two-thirds of Safe Harbor, or both, had been reduced under average river flow conditions where there was an additional 104,182,000 kwh available, as you testified, the result would be that on your Table VI, the amount of credit to Baltimore at the rate of 4.3 mills for that energy would have been reduced. Isn't that right?

* * *

[19382] THE WITNESS: All that I can say is that if the energy delivered to Baltimore was less there would have been a smaller amount charged to Baltimore.

By MR. MYSE:

Q. And that would have had a material effect upon the amount of total costs which you charged against Baltimore in line 5, Table VI of your Exhibit 422. Isn't that right? A. I don't know about the material effect. The effect of reducing the amount of energy delivered to Baltimore would, of course, reduce the charge to Baltimore, and the amount of reduction—

Q. It would reduce the credit, would it not? You said "charge." A. It would have reduced the energy supplied from outside of Holtwood's system; if the amount was reduced the amount of energy which Baltimore would

be required to furnish would have been less, then the charge, or the credit, rather, which is based on [19383] the amount of energy coming from Baltimore resources would have been less.

Q. As a result of that the weighted average cost of 2.37 mills which you show in Table VI, note 1, would have been reduced under those conditions. Isn't that right? A. A weighted average cost will be reduced if the higher component of it is reduced.

Q. And that would be the effect under the conditions we have been speaking about. Isn't that right, Mr. Davis? A. If Baltimore furnished less energy there would be a smaller amount at the 4.3 mills.

Q. Mr. Davis, where did the figure of 4.3 mills come from which you show in footnote 1, Table VI of Exhibit 422? A. That is from the same source of 1944 data which the 4.7 comes from in 1946.

Q. That means, as I understand you, that it comes from a Form 1 report filed by Consolidated Gas Electric Light and Power Company of Baltimore for the year 1944. Is that right? A. That is right.

* * *

[19384] Q. In any event, as I understand your testimony with respect to the 4.7 mills rate, and which is used in your Exhibit 421, like that figure you take no responsibility for the accuracy of the 4.3 mills except to the extent that you take the responsibility for having computed it accurately from whatever data does appear in Consolidated's report. Is [19385] that right? A. That is true.

Q. Will you refer to Table VI-A of Exhibit 422, please? Am I correct in understanding the figure of $115,047 which appears in that table as an adjustment of revenue was derived in substantially the same manner as the comparable figure of— A. $141,777.

Q. $141,777 appearing in Table VI-A of Exhibit 421? A. That is correct, exactly the same way.

Q. And the figures have the same meaning? A. Same meaning, transferring the revenue in the way the costs were allocated.

Q. I show you what purports to be a worksheet which has been furnished us with a heading, "Adjustment to Bill to R.R. in Pennsylvania." Is that the worksheet used by you in arriving at the figure of $115,047? A. That is correct.

Q. For the year 1944? A. That is right.

Q. I note you have written on the year 1944 which did not appear on my photostat. A. That is correct.

* * * *

[19409] Q. Mr. Davis, in figuring your mill rate of 4.3 mills, did you take the net generation appearing on line 12 of that schedule 579 for the Westport, Gould Street and Riverside plants? A. That is right.

Q. You did not take the net generation for the Pratt Street plant? A. No.

Q. And you totaled those three figures and divided them into the total of dollars appearing on line 34 in columns B, C and D. Is that right? A. That is correct.

* * *

[19412] STANLEY W. ROLAND

* * *

DIRECT EXAMINATION

By MR. GOLDBERG:

Q. Have you made a study to determine whether or not the transmission facilities owned by Holtwood and Susquehanna Companies were used for the transmission of electric energy from a state to points outside thereof during the years 1945 and 1946? A. I have.

Q. Do these studies parallel the studies you made and testified to on May 2 and 3, 1946, for 1943 and 1944? A. Yes. The studies that I have made for 1945 and 1946 operations parallel the studies which I made and testified to on May 2 and 3, 1946, regarding 1943 and 1944 operations.

Q. What additional information did you obtain for purposes of your 1945 and 1946 studies? A. Monthly operating, sales, and billing data for the years 1945 and 1946, and data showing meter quantities by hours at various points on the system for certain days during 1946. In a conference with Messrs. Von Eiff and Watchorn of the Holtwood Company, I obtained data on river flow in 1946 and ascertained whether or not there had been any significant [19413] changes in system facilities and operations since my 1944 study.

Q. On transcript page 908 of your testimony, you introduced Exhibit 37, a map entitled "Transmission Lines and Interconnections of the Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland." Has the company revised that map? A. Yes. According to the legend on a map bearing the same title and presented through Mr. Spaulding for identification as Exhibit 353, the map which is Exhibit 37 in this proceeding is stated as having been superseded by the map marked Exhibit 353.

Q. At transcript pages 908, 909 and 910, you testified that certain transmission lines shown on Exhibit 37 were owned and operated by Holtwood and Susquehanna. Would your testimony on those pages be any different if you were relating it to Exhibit 353? A. No.

Q. Would your testimony regarding the function of the lines shown on Exhibit 37 be any different if you were relating it to Exhibit 353? A. No.

Q. What are some of the differences, then, between Exhibits 353 and 37? A. Exhibit 353 states that the line which has been referred to in this proceeding as the "Gun-

powder Line" is "used" [19414] by the Baltimore Company, whereas on Exhibit 37 it states that this line is "leased" by the Baltimore Company. Exhibit 37 designates the points shown on the map by a circled "W-1" at Conowingo, Perryville and Takoma Park as "Point of Delivery for Account of Consolidated Gas Electric Light and Power Company of Baltimore"; on Exhibit 353, however, the first two of these three points of interconnection are designated by a circled "V" and are noted as "Interconnection with the Pennsylvania Railroad Company." Exhibit 353 designates the interconnection between Susquehanna and Potomac Electric Power, north of Takoma Park, by a circled "T" and denotes this as "Interconnection with the Potomac Electric Power Company." Other changes and additions were made in Exhibit 353 but none of them appear to be pertinent to my study.

Q. Did Holtwood, during 1945 and 1946, deliver energy to the same companies which you named at transcript pages 910 and 911 of your testimony? A. Yes.

Q. Were such deliveries in 1945 and 1946 made under the same contracts which you named on page 911? A. Yes, excepting that the contract under which deliveries were made to Edison Light and Power Company during 1945 was terminated on December 31, 1945.

Q. Did Holtwood Company receive delivery of electric energy during 1945 and 1946 from the companies you named on [19415] page 912? A. Yes.

Q. Did Susquehanna perform the same character of service in 1945 and 1946 that it did in 1944? A. Yes.

Q. Did Holtwood sell electric energy in 1945 and 1946, as you stated on page 912 that it did in 1944, to Baltimore Company, Pennsylvania Power and Light Company, Philadelphia Electric Company and Metropolitan Edison Company? A. Yes.

Q. Did Holtwood sell electric energy in 1946 under the contracts you named on page 911 to the Baltimore Com-

pany, Pennsylvania Power and Light Company, Philadelphia Electric Company and Metropolitan Edison Company for resale? A. Yes.

Q. Have you examined the billings under those contracts for 1946? A. Yes.

Q. Does Exhibit 353 designate the points at which Holtwood system interconnects with the facilities of the other companies? A. Yes.

Q. Did Holtwood make deliveries of energy in 1946 for the account of Baltimore? A. Yes.

[19416] Q. At what points? A. At points of interconnection of Susquehanna with the Pennsylvania Railroad at Conowingo and Perryville, Maryland, and at a point of interconnection of Susquehanna with Potomac Electric Power Company, northeast of Takoma Park, Maryland.

Q. Have you made studies to determine, for the years 1945 and 1946, the amounts of electric energy transmitted from Pennsylvania over the facilities of Holtwood and Susquehanna across the Pennsylvania and Maryland state lines to points of delivery in Maryland? A. Yes.

Q. Have you made studies to ascertain, for 1945 and 1946, the quantities of energy transmitted over the transmission facilities owned by Susquehanna and Holtwood from the Baltimore-Washington system to the Holtwood system in Pennsylvania? A. Yes.

Q. Upon what information are these studies based? A. They are based on information similar to that obtained for 1944 which was furnished to me by the Holtwood Company at my request.

Q. Have you prepared an exhibit showing the quantities so transmitted for 1945 and 1946? A. Yes.

MR. GOLDBERG: I would like to offer for identification a document entitled "Electric Energy Transfers Across Maryland- [19417] Pennsylvania Boundary over Facilities of Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland by Months—Values in Megawatt Hours".

TRIAL EXAMINER: The document referred to may be marked for identification as Exhibit Number 436.

(The document referred to was marked for Identification as Exhibit Number 436.)

By MR. GOLDBERG:

Q. Referring to Exhibit 436, is that exhibit comparable to Exhibit 38? A. Yes, with the exception of the years covered and the amounts shown, the two exhibits are identical.

Q. Then is it correct to say that the explanation which you gave at transcript pages 917, 918 and 919 regarding Exhibit 38 also applies to Exhibit 436? A. Yes.

Q. On transcript pages 918 and 919, you referred to a one-line diagram entitled "Pennsylvania Water and Power Company One-Line Diagram of Main Metering Points on the Holtwood-Safe Harbor-Baltimore-Washington Interconnected System," which is Exhibit 39. Did you use that diagram for the same purpose and in the same way for your 1945 and 1946 studies that you did for your 1944 studies? A. Yes.

Q. On page 920, line 19 to page 921, line 14 and referring [19418] to Exhibit 38, you testified as to the amounts of electric energy transmitted across the Pennsylvania-Maryland boundary from Pennsylvania to Maryland and from Maryland to Pennsylvania over the 220 kv circuits. Do the corresponding amounts for 1945 and 1946 appear in Exhibit 436? A. Yes.

Q. On page 921, line 18 to page 922, line 18, you testified as to the amounts of energy transmitted from Holtwood to Highlandtown during each of the years 1943 and 1944; also with respect to the amounts of backfeed over these lines, is that correct? A. Yes.

Q. Do the corresponding amounts transmitted from Holtwood to Highlandtown for 1945 and 1946 appear in Exhibit 436? A. Yes.

Q. Exhibit 436 shows zero as the amount transmitted from Maryland to Pennsylvania over the 66 kv, 25 cycle lines. Can you explain that? A. Yes.

Q. Will you please do so? A. I was advised by the Holtwood Company that its records of monthly transfers of energy over the Highlandtown lines were on a net basis and since the amount of backfeed was relatively small, only one figure representing the net amount delivered to Highlandtown would appear on its records. It is for this reason [19419] that the transfers from Highlandtown to Holtwood appear as zero for each month of 1945 and 1946 on Exhibit 436.

Q. Actually was there backfeed over those lines in 1946? A. Yes. Mr. Spaulding testified at page 17085, line 11, that the net hourly backfeed over those lines totaled 1,673 megawatt hours in 1946.

Q. Have you shown the amount of energy transmitted from Pennsylvania to Maryland and from Maryland to Pennsylvania during 1945 and 1946 over the 220 kv and 66 kv circuits in graphic form? A. I have.

MR. GOLDBERG: I would like to offer for identification a document entitled "Electric Energy Transfers Across the Maryland-Pennsylvania Boundary over Facilities of the Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland by Months."

TRIAL EXAMINER: The document referred to may be marked as Exhibit Number 437 for identification.

(The document referred to was marked for Identification as Exhibit Number 437.)

By MR. GOLDBERG:

Q. Is this bar chart similar to Exhibit 40? A. Yes.

Q. Is your explanation of Exhibit 40 on page 926, line 10, to page 927, line 8, applicable to Exhibit 437? A. Yes.

[19420] Q. To what extent was generation at Safe Harbor

and Holtwood hydro greater or less than average in 1946? A. The output of these two plants was greater than average by 31,000,000 kilowatt hours in 1946. Q. I show you Exhibit 216. Did you inquire of the Holtwood Company whether or not this exhibit correctly shows system facilities and connections as of 1946? A. I did.

Q. What were you informed? A. I was informed that no changes were made in system facilities and connections, subsequent to the preparation of Exhibit 216, which would make any significant change in the exhibit.

Q. During 1946, how much energy was transmitted from Conestoga substation across the Pennsylvania-Maryland boundary to Conowingo and Perryville, Maryland? A. During 1946 Holtwood delivered 56,657 megawatt hours to the facilities of the Pennsylvania Railroad at Perryville for the account of Philadelphia Electric Company, since it was for railroad service north of Perryville. Approximately 44,000 megawatt hours of this amount was transmitted from Conestoga over the two circuits designated as P-5 and P-6. The balance of the deliveries at this point for the account of the Philadelphia Electric Company was transmitted over the two circuits from Conestoga, designated as P-7 and P-8, or from [19421] Washington over the Railroad Company's lines.

In 1946 Holtwood transmitted 115,605 megawatt hours to the facilities of the railroad at Conowingo and Perryville over circuits P-7 and P-8 for the account of Baltimore Company.

Q. With respect to the amounts of electric energy which Exhibits 436 and 437 show as being transmitted by the Holtwood system from Pennsylvania to the Baltimore-Washington system in Maryland over the 66 kv circuits during the years 1945 and 1946, where was that energy generated? A. Most of that energy was generated at Holtwood hydro plant.

* * *

[19422] Q. With respect to the amounts of electric energy which Exhibits 436 and 437 show as being transmitted by the Holtwood system from Pennsylvania to the Baltimore-Washington system in Maryland, over the 220 kv circuits during 1945 and 1946, where was that energy generated? A. Most of that energy was generated at the Safe Harbor plant.

Q. With respect to the amounts of electric energy which Exhibits 436 and 437 show as transmitted from the Holtwood system in Pennsylvania to the Baltimore-Washington system in Maryland during 1945 and 1946, was that energy consumed at points outside the state of Pennsylvania? A. Most, if not all, of that energy was consumed at points outside of Pennsylvania.

Q. With respect to the amounts of electric energy which Exhibits 436 and 437 show was transmitted from Maryland to Pennsylvania during 1945 and 1946, in which state or states was that energy generated? A. That energy was generated in Maryland or in the District of Columbia.

Q. With respect to the amounts of electric energy which Exhibits 436 and 437 show was transmitted from Maryland to Pennsylvania, did you make any studies to ascertain whether or not any of that energy was sold by Holtwood for resale to other electric utility companies in Pennsylvania? [19423] A. Yes, I did.

Q. On page 935, beginning at line 21 and ending at line 6 of page 939, referring to Exhibit 41, you designated the points at which Holtwood sells electric energy to others in Pennsylvania at wholesale for resale. Now, referring to Exhibit 216, is it correct to state that the points of such sales for resale in 1946 were the same as those stated on the pages of your testimony which I have just specified? A. Yes.

Q. At page 939, line 12 to page 940, line 25, you described the facilities by means of which electric energy, shown on Exhibits 38 and 40, was transmitted from Mary-

land to Pennsylvania, can be transmitted to interconnection points which you described, using Exhibit 41 for reference purposes. Now, then, is it correct to state that this description applies to the energy transfers shown on Exhibits 436 and 437, using Exhibit 216 for reference purposes. A. Yes.

MR. GOLDBERG: I would like to have marked for identification a document consisting of 32 pages entitled: "Generation and Transmission of Electric Energy on Holtwood-Safe Harbor System and Transmission from Maryland to Holtwood's Resale Customers in Pennsylvania by Hours for 30 Days of 1946."

TRIAL EXAMINER: The document referred to may be marked as Exhibit Number 438 for Identification.

[19424] (The document referred to was marked for Identification as Exhibit Number 438.)

By MR. GOLDBERG:

Q. Did you prepare Exhibit 438? A. It was prepared by me and by my assistants under my direct supervision.

Q. What, in general, does it purport to show? A. Exhibit 438 shows the generation and transmission of electric energy on the Safe Harbor-Holtwood System as well as the amounts of electric energy transmitted from Maryland to Holtwood's resale customers in Pennsylvania during each hour of 30 days in 1946.

Q. Does it show the percentage of energy delivered to Holtwood's resale customers in Pennsylvania which is transmitted from Maryland? A. Yes. That is shown in Columns 14, 17 and 29.

Q. How were the 30 days chosen which you used in your study? A. On March 5, 1947, I called on Mr. Von Eiff, Interconnection Engineer, and Mr. Watchorn, Efficiency Engineer, of the Holtwood Company to discuss with them the matter of obtaining records of hourly watt hour

meter readings at various points on the Holtwood system during 1946. Mr. Von Eiff provided me with blue print copies of tabulations and graphs showing average daily river flow for the Susquehanna River, measured [19425] at Holtwood for the year 1946.

With the aid of these tabulations, and charts, and from an examination of the load dispatcher's log sheets and other data showing sendout from Safe Harbor over the 220 kv and 69 kv circuits, backfeed over the 220 kv circuits and interchange sales by months for 1946, I designated 30 representative days of the year for which I requested that hourly load data at various points on the system be furnished. I designated the week of December 16, which was the week of maximum load on the interconnected system; a week of low river flow in September, namely, September 15 through September 21; three high flow days; and 13 other days during which daily average flows ranged from 10,400 to 25,800 cubic feet per second.

Q. Do you have a tabulation showing Susquehanna River flow for 1946? A. Yes.

Mr. Goldberg: I would like to offer for identification a document entitled "Pennsylvania Water and Power Company—Susquehanna River Flow—24 Hour Average in Thousand C. F. S."

Trial Examiner: The document may be marked Exhibit Number 439 for identification.

(The document referred to was marked for identification as Exhibit Number 439.)

By Mr. Goldberg:

Q. Do you have a graph showing Susquehanna River Flow [19426] for 1946? A. Yes.

Mr. Goldberg: I would like to offer for identification a document entitled "Daily Discharge Curves—Susquehanna River at Holtwood, Pennsylvania—1946."

TRIAL EXAMINER: The document may be marked as Exhibit Number 440 for identification.

(The document referred to was marked for identification as Exhibit Number 440.)

By MR. GOLDBERG:

Q. Excluding the three high flow days, what was the highest river flow you designated for the remaining 27 days? A. 25,800 cubic feet per second.

Q. During 1946 on how many days was the river flow 25,800 cubic feet per second or less? A. 240 days.

Q. During what months in 1946 did they occur? A. During every month excepting March and June.

Q. Do you consider that energy flows on the Holtwood-Safe Harbor System, during the 27 days on which stream flow was 25,800 cubic feet per second or less, are reasonably representative of energy flows during the 240 days when stream flows were 25,800 cubic feet per second or less? A. Yes.

Q. On transcript page 946, line 22 through page 948, line [19427] 9, you testified with respect to the approximations and possible errors involved in your studies of the amounts of energy transmitted from Maryland to the Holtwood system in Pennsylvania and sold by Holtwood for resale in Pennsylvania. Does your testimony on those pages also apply to your studies for 1946? A. Yes.

Q. On transcript page 948, line 16 to page 956, line 11, and referring to Exhibit 42, you described how you computed the quantities of electric energy, if any, transmitted from Maryland to Pennsylvania Power and Light Company at Donegal Tap and at Lehman Farm, and to Pennsylvania Water and Power Company's Holtwood station, using some particular hour as an example. Does the testimony you gave at those pages also apply to Exhibit 438? A. Yes, with one exception, which is purely a matter of presentation. That is in Exhibit 42, column 12 shows total deliveries to Pennsylvania Power and Light Company via Donegal,

whereas in Exhibit 438, column 12 shows the firm deliveries, and column 12a shows other deliveries to Pennsylvania Power and Light Company via Donegal. The percentage figures shown in column 17, however, apply to the amounts shown in both columns 12 and 12a.

Q. In your studies of energy transfers for the 30 days, did you find hours when all the energy delivered to Pennsylvania [19428] Power and Light Company at Donegal and at Lehman Farm and all the energy delivered to Holtwood via Lehman Farm was transmitted from Maryland? A. Yes.

Q. How many such hours did you find? A. There were 240 hours representing 33 per cent of the total hours in the 30 days when all the energy delivered to Pennsylvania Power and Light Company at Donegal was transmitted from Maryland.

There were 218 hours representing 30 per cent of the total hours when all the energy delivered to Pennsylvania Power and Light Company at Lehman Farm, and 210 hours representing 29 per cent of the total hours, when all the energy delivered to the bus at Holtwood via Lehman Farm, was transmitted from Maryland.

Q. During how many hours of the 30 days did you find that there was no generation by the main 60-cycle generators at Safe Harbor? A. There were 302 such hours representing 42 per cent of the total hours.

Q. During how many hours of the 30 days did you find that all the energy supplied to the 13 kv, 60-cycle bus at Safe Harbor came from Maryland? A. There were 270 such hours representing 38 per cent of the total number of hours in the 30 days.

[19429] Q. Do you find it generally true, with respect to your 1946 study, when the hydro units at Safe Harbor are not generating energy, that energy is transmitted to Safe Harbor from Maryland? A. Yes.

Q. Were there some hours during the 30 days in 1946 when energy was transmitted from Maryland to Safe Har-

bor during the same hours when energy was generated by the main units at Safe Harbor? A. Yes.

Q. At transcript pages 960, line 24 to 966, line 17, you described how you determined the amounts of electric energy transmitted from Maryland to Safe Harbor, during the same hours when energy was generated by main units at Safe Harbor; which was sold to Pennsylvania Power and Light Company at Donegal and Lenman Farm, and what part, if any, was transmitted to the Holtwood bus. Did you employ the same method and assumptions described on those pages in preparing Exhibit 438? A. Yes.

Q. On pages 967, line 10 to 972, line 16, referring to Exhibit 42, you described what happened to the energy transmitted from Maryland to the 13 kv, 60-cycle bus at Holtwood. Does your testimony on those pages also apply to your 1946 study as shown in Exhibit 438? A. Yes. There is one difference of presentation, however, [19430] that should be pointed out. In Exhibit 42, column 31 shows total deliveries to Metropolitan Edison; whereas in Exhibit 438, column 31 shows the firm deliveries and column 31a shows other deliveries to Metropolitan Edison Company. The percentage figure in column 29, however, applies to the amounts shown in both columns 31 and 31a.

Q. During how many hours of the 30 days to which you have referred was electric energy transmitted from Maryland via Safe Harbor and Holtwood to Metropolitan Edison at York; to Pennsylvania Power and Light Company over circuit 18; to Philadelphia Electric Company at Coatesville; and to the 11 kv, 25-cycle bus through the frequency changer? A. Electric energy was transmitted from Maryland via Safe Harbor and Holtwood to Metropolitan Edison Company during 423 hours; to Pennsylvania Power and Light Company over circuit 18 during 351 hours; to Philadelphia Electric Company during 425 hours; and to the 60-cycle end of the frequency changer during 156 hours.

In terms of percentage of total hours in the 30 days, these amounts are 59, 49, 59 and 22 per cent, respectively.

Q. During how many hours of the 30 days was electric energy transmitted from Maryland via Safe Harbor and Holtwood to meet Metropolitan Edison Company's firm demands at York? A. There were 218 such hours representing 30 per cent of the total number of hours in the 30 days.

[19431] Q. On transcript pages 974, line 3 to 976, line 7, you explained how you derived the entries shown in columns 36 through 43 of Exhibit 42. Did you derive the entries in columns 36 through 43 of Exhibit 438 in the same way? A. Yes.

Q. On pages 976, line 11 to 977, line 23, referring to Exhibit 42, you testified with respect to the amounts of energy transmitted from Maryland to Pennsylvania Power and Light Company over Circuit Number 3 via Safe Harbor and Holtwood. Is the same method you described at those pages applicable to your study shown in Exhibit 438? A. Yes.

Q. During how many hours of the 30 days was some electric energy transmitted from Maryland via Safe Harbor and Holtwood or from Highlandtown to Pennsylvania Power and Light Company over Circuit Number 3? A. There were 226 such hours representing 31 per cent of the total hours in the 30 days. The amounts for some of these hours are very small.

Q. Did you find any hours during the 30 days when electric energy delivered to Pennsylvania Power and Light Company over Circuit Number 3 was electric energy transmitted from Highlandtown over Circuit Numbers 1, 2, 5 and 6? A. Yes. There were 92 such hours representing 13 per cent of the total hours in the 30 days.

[19432] Q. From the study you have made, do Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland each own and operate facilities for the transmission of electric energy, which is trans-

mitted from one or more states and consumed at points outside thereof? A. Yes.

Q. Are the amounts of such electric energy so transmitted substantial? A. Yes.

Q. Does the transmission of such substantial amounts occur frequently? A. Yes.

Q. Generally speaking, what are the facilities for the transmission of such energy? A. The substations and transmission lines owned by Holtwood and Susquehanna as shown on Exhibit 353 are used for that purpose.

Q. Does Holtwood sell for resale electric energy so transmitted? A. Yes.

Q. To what companies does Holtwood sell for resale electric energy so transmitted? A. Baltimore Company, Pennsylvania Power and Light Company, Philadelphia Electric Company, and Metropolitan Edison Company.

[19433] Q. Do Holtwood and Susquehanna each own and operate facilities for such sales? A. Yes.

Q. Generally speaking, what are those facilities? A. Those facilities would include the substations and transmission lines owned by Holtwood and Susquehanna, as shown on Exhibit 353, together with metering and other equipment for billing and recording sales.

* * *

[19438] CROSS-EXAMINATION.

By MR. MYSE:

* * *

[19446] Q. Did you ever take a look at the Form 1 report to find out how much the company reported as being delivered to Baltimore Company in the year 1946? A. No, but I have shown in some of my exhibits here how much was delivered to the Baltimore Company. It was sold to them.

Q. You do show in your exhibit some place how much was sold to Baltimore Company, assuming delivery is the sale. A. Yes, I showed how much was delivered over the [19447] Highlandtown lines and what the sendout was

over the 220 kv lines from Safe Harbor. Some of that includes losses; losses are included in the figures.

Q. Are you saying all deliveries over those two lines was sold by Holtwood to Baltimore Company? A. I don't know what in a legal sense would be considered a sale, but in my opinion——

Q. I am not asking you in a legal sense but I am asking you in whatever sense you use the word "sell" in your testimony. A. Yes, I would say whatever was delivered to them was sold to them.

Q. In other words, everything which was delivered over the Highlandtown line by Holtwood to Baltimore and everything that was delivered over the 220 kv lines by Holtwood to Baltimore was sold by Holtwood to Baltimore. Is that your testimony? A. Yes.

Q. Are there any other deliveries by Holtwood to Baltimore over any other lines which you consider a sale by Holtwood to Baltimore? A. Yes, over the 132 kv lines, single-phase lines at Conowingo and Perryville.

* * *

[19454] Q. Did you consider all of the sales today to Metropolitan Edison Company other than interchange transactions as firm energy transactions? A. Not according to the usual definition of firm energy, but it is firm energy the way it is defined in the contract.

Q. According to the way you would normally consider firm energy transactions do you consider all of the transactions with Metropolitan Edison Company other than interchange transactions as firm energy transactions? A. Not according to the concept of firm energy I have had in the past.

Q. Well, let's have your concept of firm energy in the past. A. The definition which appears in Form 12 and I believe schedule 8. reads, "Firm power is power which is intended to be continuously available to the purchaser."

Q. To that extent, then, some of the energy transactions [19455] with Metropolitan Edison Company other

than interchange transactions are not firm energy. Is that right? A. Not according to that definition which I just gave you. It is a limited type of delivery which is not in conformity with the definition which I just gave you.

Q. Which of the energy supplied to M. E. other than the interchange transactions do you consider not to be a firm energy transaction under the definition you have referred to? A. I presume the energy above the steam line would be considered ordinarily as a firm obligation. The others have strings tied to them. There has to be a certain ratio of hydro and steam generation; it has to be supplied during certain hours. It is not unlimited service, in other words. It has a lot of strings tied to it which ordinarily you do not get with firm commitments in the ordinary sense, as the term is ordinarily used.

Q. Do I understand your testimony to be then, Mr. Roland, that the energy transactions with Metropolitan Edison Company other than the interchange transactions and other than the transactions relating to energy supply above the steam line are the energy transactions which you do not consider to be firm energy transactions within the meaning of the definition to which you have referred in the Form 12 report. Is that right? A. That is my offhand opinion on the thing, yes.

[19456] In my Exhibit 438 I listed it as firm, because that is the way the company designates it, as "firm." I did that in that exhibit.

Q. In other words, you anticipate me a little bit, Mr. Roland.

Exhibit 438, then, insofar as it divides up the energy supplied to Metropolitan Edison Company between interchange and firm, is not in accordance with your understanding of the division which should be made between the energy supplied to Metropolitan Edison Company. Is that right?

• • • •

THE WITNESS: I haven't given a great deal of thought to that question as to whether or not that is properly designated as firm or interchange; that is the A, B and C energies in the M. E. contract. You asked for my offhand opinion and I gave it.

In accordance with the definition that I gave you the part of that which is shown as firm energy in my opinion would not ordinarily be classified as firm.

By MR. MYSE:

Q. I am asking for your testimony and not what [19457] ordinarily would be done by somebody else. What is your opinion? A. That is what I am giving you.

Q. Then your offhand opinion is what you understand on it, is that right, Mr. Roland? A. Yes. That is all I can do, isn't it?

• • •

[19479] Q. Mr. Roland, at page 9 of your proposed testimony you stated that the 30 days used by you in Exhibit 438 were representative of the year, did you not? A. Yes.

Q. How many days out of the 30 did you include in your exhibit in which river flow was 25,800 C. F. S. or lower? If I recollect it was something like 27 out of 30, isn't that right? A. 26 days?

Q. 27. A. Including the 25,800 it would be 27.

Q. That means, does it not, that only the three highest flow days that you used in your Exhibit 438 are days in which the river flow was higher than 25,800 C. F. S.? A. Yes.

[19480] Q. That means you have included in your 30 days some 90 per cent, approximately, of days when the river flow was 25,800 C. F. S. or lower. Isn't that right? A. Yes, and for the reasons that I stated in connection with my Exhibit 42.

Q. Let's hold the reasons and stick to my question. Do you have any idea what the average number of days

are out of the 365 in the year when the river flow is 25,800 C. F. S. or lower? I have a figure of 210 days out of 365, or roughly 58 per cent. Does that help you any?

* * *

THE WITNESS: I would believe there would be more days than that when the flow was less than 25,800. I would say that it would be approximately 235 days. I am now using the curve furnished me by the company.

MR. GOLDBERG: Are we trying to ascertain during how many days in 1946 the river flow was 25,800 C. F. S. or less?

MR. MYSE: No. The question was what was the number of days when the river flow is 25,800 C. F. S. or lower under average flow conditions.

THE WITNESS: Under average flow conditions?

By MR. MYSE:

Q. Yes. A. It was 233 days in my count here for 1946 which is [19481] pretty close to an average year.

Q. Well, 233 is roughly what percentage? That would be 60 per cent, wouldn't it? A. Yes, it is fairly close to that.

Q. On an average water-flow year it would be slightly less than that, isn't that right? A. It depends upon where the deviation from the average occurred, whether it was in the low flows or the high flows. It would be in that neighborhood, however.

Q. Well, that is satisfactory to me. Do you happen to have an average flow duration chart with you? A. I think I have one here.

Q. You can get it off that, can't you? A. About 58 per cent.

Q. As a matter of fact, in your 30 days you included no days in which the river flow was between 26,000 and 65,000 C. F. S. Isn't that right? A. That is right. Three days in which the flow was 30,000 and over. That is all.

Q. None of those days happen to be days in which the river flow is between 26,000 and 65,000 C. F. S. Isn't that correct? A. That is right.

Q. Do you know what the average number of such days would be on an average flow duration chart on the Susquehanna River, [19482] that is days between 26,000 and 65,000 C. F. S.? A. About 100 days.

Q. 100 days out of 365. That gives you roughly 27 per cent, does it not? A. Yes. I had 28 per cent.

Q. What was it in 1946? A. 20 per cent.

Q. The figure of 65,000 C. F. S. represents full power house draft conditions, does it not? A. At Safe Harbor, yes.

Q. When you referred to the week of maximum load on the interconnected system in your testimony on page 9 of your prepared testimony you were there referring to the Area 6 system, were you not? A. Yes.

Q. You were not referring to the Penn Water-Safe Harbor system alone, were you? A. Only to the interconnected system load.

Q. That is the Area 6 system as you know it? A. Including the Pennsylvania customers, yes.

* * *

[19487] J. M. NEWLANDS.

* * *

[19488] DIRECT EXAMINATION.

By MR. HALL:

Q. Mr. Newlands, have you reviewed the facts with reference to the loss of materials and supplies amounting to $13,033.04 claimed by Penn Water in its original cost determination as shown by Schedule H of Exhibit No. 320? A. Yes.

Q. Did McCall Ferry Power Company take a physical inventory of supplies and materials at December 31, 1908? A. Yes.

Q. What quantity of cement was listed in that inventory? A. 17,246 barrels of Giant and Atlas cement and 18,490 barrels of Union cement.

Q. What was the cost of this cement to McCall Ferry Power Company? A. The Giant and Atlas cement cost $1.73 a barrel and the Union cement $1.18 a barrel, or a total cost of $51,653 for the cement on hand at December 31, 1908.

[19489] Q. What was the balance of the material and supplies account on McCall Ferry Power Company's books at December 31, 1908? A. The balance on the books was $35,421 at that date.

Q. What entry would be necessary to correct the books to agree with the actual physical inventory of cement at December 31, 1908? A. It would be necessary to reduce the recorded construction costs by $16,232 and to increase the material and supplies account by the same amount to reflect the return of the unused material to stock.

Q. Was any construction carried on between December 31, 1908, and the date the Receiver was appointed, July 17, 1909? A. No. There had been no construction work since the previous October.

Q. What amount of supplies were charged out from material and supplies account during the period from December 31, 1908, to July 17, 1909? A. Less than $500.

Q. Was any cement purchased during this period? A. No. There were no construction materials of any kind purchased during this period.

Q. Would the same adjustment of construction costs have been necessary at July 17, 1909, the date the Receiver was appointed for McCall Ferry Power Company, as was necessary [19490] at December 31, 1908, in order to account for the excessive materials charged to construction? A. Yes.

Q. Was this adjustment ever made on the books of McCall Ferry Power Company or any successor? A. No.

Q. Was any part of the 35,736 barrels of cement on hand at December 31, 1908, ever used in construction? A. The Receiver used 7,852 barrels of this old cement during 1909 and charged it to construction at a reduced cost due to its poor quality. Penn Water also used 8,626 barrels of this old cement during the last four months of 1910 and charged it to construction.

Q. Have you, in your original cost determination as reflected in Exhibit 51, allowed as plant costs the charges made to construction by the Receiver and by Penn Water for the portion of the old cement which was actually used in construction during 1909 and 1910? A. Yes.

Q. Have you found any evidence indicating that the balance of the old cement amounting to 19,258 barrels was ever used in construction work? A. No.

Q. Have you found any evidence indicating why the cement was not used? [19491] A. Yes, correspondence indicated that the cement had spoiled.

Q. What adjustment would be necessary to your original cost determination to remove the cost of the unused spoiled cement? A. It would be necessary to decrease the original cost by at least $16,232, the amount of the difference between the physical inventory of cement at December 31, 1908, and the book balance of the material and supplies account at the same date.

Q. In other words, in order to correctly account for the loss due to deteriorated cement it would be necessary to decrease your recommended original cost allowed by $16,232 instead of increasing it by $13,033 as Penn Water now proposes? A. Yes.

Q. When did the deterioration of the cement take place? A. Memoranda in the files indicate it occurred during the delay caused by the suspension of work.

Q. Did the Receiver or Penn Water purchase any Giant and Atlas or Union cement during 1909 or 1910? A. No.

Q. Did you, during your investigation, find any evidence which indicated that the firm of Harvey Fisk & Sons at any time controlled McCall Ferry Power Company? A. No. I found no such evidence or indication. The correspondence, documents and minutes of both McCall Ferry Power [19492] Company and Susquehanna Contracting Company and other records which I examined indicated only that the Fisk firm, after it came into the financing picture, shared in the control of McCall Ferry Power Company but did not dominate or control it either alone or with the aid of any other interest.

Q. Did the minutes of the Board of Directors or Executive Committee of McCall Ferry Power Company or of Susquehanna Contracting Company indicate in any way that Harvey Fisk & Sons or W. M. Barnum were to manage McCall Ferry Power Company or that they actually did manage the enterprise? A. No. There is not the slightest indication in any of the contemporary records to that effect. A search of the correspondence and other records disclosed no management activities by the Fisk firm or by W. M. Barnum; nor were there any communications from or to Harvey Fisk & Sons or W. M. Barnum dealing with the management of the project.

Q. What position did Mr. W. M. Barnum hold with McCall Ferry Power Company? A. Mr. W. M. Barnum was a member of the Board of Directors and the Executive Committee of McCall Ferry Power Company. He performed the duties of these positions in common with the other members.

Q. Who was the chairman of the McCall Ferry Power Company Executive Committee? A. There was no formal chairman, but Mr. Dimock, the [19493] president of McCall Ferry Power Company, was by far the most active member of the Committee. He was a member of most of the subcommittees created at various times to investigate particular problems. Reports and communications regarding management activities or problems were addressed to

Mr. Dimock. None were addressed to W. M. Barnum or to Harvey Fisk & Sons.

Q. To what extent do the minutes of the Executive Committee indicate that Mr. W. M. Barnum participated in the committee's activities? A. Mr. W. M. Barnum's attendance at Committee meetings was listed together with the other members present and appeared again when he resigned. Aside from this Mr. Barnum's name appeared in connection with the Committee's activities only four times in the entire minutes.

Q. Did Mr. W. M. Barnum state the conclusions of the Executive Committee as claimed by Mr. Gunn at page 7598 of the transcript? A. No. There is no indication that he did.

Q. What was the total number of Executive Committee meetings and how many were attended by Mr. Dimock? A. The Executive Committee held a total of 109 meetings all of which were attended by Mr. Dimock.

Q. How many of the Executive Committee meetings did Mr. Hutchinson attend in his capacity as Chief Engineer? A. Ninety-two meetings.

[19494] Q. How many Executive Committee meetings did Mr. W. M. Barnum attend? A. Eighty meetings.

Q. What did your investigation disclose as to the management of McCall Ferry Power Company? A. It disclosed that the active management of the company was in the hands of its officers, particularly Mr. Dimock, the President; Mr. Kirkland, the Vice-President and General Manager; and Mr. Hutchinson, the Chief Engineer.

Q. Who negotiated the contracts with Hugh L. Cooper and Sanderson & Porter for the construction of the project? A. These contracts were negotiated by Mr. H. F. Dimock and Mr. C. A. Coffin.

Q. How were the members of the Board of Advisory Engineers of McCall Ferry Power Company employed? A. On May 12, 1905, Mr. Hutchinson wrote to Messrs. H. L. Cooper, F. O. Blackwell and C. T. Main stating the

terms of their prospective employment. Mr. Hutchinson's arrangements were ratified and confirmed by the Executive Committee of McCall Ferry Power Company on September 20, 1905.

Q. Have you found any indication in the contemporary correspondence, documents or records that Harvey Fisk & Sons were entitled to or actually did receive 17,537½ shares of common stock of McCall Ferry Power Company? A. No. I found no such indication.

[19495] Q. Did you find any record of the transfer of any of the ten incorporators' shares of McCall Ferry Power Company from the names in which they were originally issued? A. The only transfer was recorded on June 22, 1906, when six of these shares were transferred to F. W. Walz.

Q. Where were construction expenditures charged on the books during the cessation period extending from November 1, 1907, to August 1909? A. To the regular detailed construction accounts of McCall Ferry Power Company.

Q. Why did McCall maintain its administrative and construction organization during the period of cessation? A. It wished to keep its trained construction team intact for the completion of the project?

Q. Was this goal achieved? A. No. Due to the long delay in obtaining additional financing the entire administrative and construction forces were finally discharged with the exception of a few watchmen and administrative employees.

Q. Did you find any evidence that the maintenance of this standby administrative and construction force during the period of cessation resulted in any reduction of the cost to complete the project through any saving or any necessary expenditure avoided when the project was finally completed by the Receiver and Penn Water? [19496] A. None whatever.

Q. Did you eliminate from the original cost of plant the cost of reestablishing the construction plant in 1908 for

the tailrace work or the cost of reopening the project incurred by the Receiver in 1909? A. No, I did not.

Q. Who had direct supervision of the limited amount of construction work done by McCall Ferry Power Company during 1908? A. Mr. J. B. Goodwin, an engineer on the payroll of McCall Ferry Power Company was placed in charge of the work.

Q. Did Mr. Hutchinson exercise any direct supervision of the construction work carried on in 1908? A. No.

Q. What was the nature of Mr. Hutchinson's work during the cessation period? A. His work was administrative in character such as planning the work suspension; budgeting the company's activities; planning for the future resumption of work and the eventual completion of the project; estimating plant costs, costs to complete, and prospective earnings; reporting on the progress of the work and the condition of the work, etc.

Q. Did you find any indication in the records that the work done by Hutchinson during the period of cessation resulted in any saving or the avoidance of any necessary expenditure [19497] when the work was finally completed by the Receiver and Penn Water? A. None whatever.

Q. Did Albert S. Crane and J. D. Mortimer prepare a report dated September 10, 1908 for Electric Bond and Share Company as to the condition of the work at McCall Ferry? A. Yes.

Q. How was the balance of the Cessation Account on the books of McCall Ferry Power Company described in that report? A. The balance was described as "Loss due to Stoppage of Work".

* * *

[19506] Q. Did Penn Water provide an office for Mr. Bushong during the period from 1912 to 1915? A. No.

Q. Did your investigation indicate whether Penn Water by March, 1916 had acquired all the flowage rights necessary for its flashboard installation? A. The correspondence indicated that the company believed it had the

necessary rights for its flashboards after the acquisition of the Woelpper property in March, 1916 and immediately took steps to replace the flashboard installation.

Q. Why did Penn Water acquire the Hiemenz, Heine and Harnish properties in 1920? A. These properties were acquired on the general [19507] recommendation of Carney and Lindemuth in their report of June, 1920 as a site for the river coal plant later built by Anthracite Production Corporation.

Q. Why did Penn Water acquire the Vandersloot, Colemanville Water and Power Company, Lancaster & York Furnace Street Railway Company, and Alice M. Tripple properties in 1921? A. To settle flashboard suits brought by these parties in the latter half of 1918.

Q. Did these suits ever come to trial? A. No.

Q. Were any flashboard suits filed after 1918? A. One suit was filed in 1929 and another in 1933.

Q. Why did Penn Water acquire the Hiemenz property in 1922 and the Rineer and Martin properties in 1923? A. To provide further area for the river coal recovery operations of Anthracite Production Corporation.

Q. Why did Penn Water acquire the Manor substation site? A. This site was acquired in connection with the Safe Harbor development.

Q. When did the owner of the DePue property bring suit against Penn Water? A. In November, 1924.

Q. How many flowage basin properties were acquired for the Holtwood project between 1926 and 1929? [19508] A. Only one property was purchased—the George B. Willson property acquired in 1927.

Q. Did Penn Water undertake any construction during the years 1916 to 1922? A. Only minor work. The company's major construction program was completed at the end of 1914.

Q. What transmission lines were built between 1916 and 1929? A. The Coatesville and York lines were built in 1923 and the Lancaster Line in 1925.

Q. Who acquired the rights of way for these lines? A. Penn Water employed several agents to acquire the rights of way.

Q. Were the salaries and expenses for these agents included as a cost of constructing the lines? A. Yes.

Q. To how many road and bridge relocations did Penn Water contribute from 1916 to 1929? A. Penn Water contributed to the replacement of the Otter Creek Bridge in York County in 1923 and to the relocation of a highway in Conestoga Township during the same year.

Q. Mr. Newlands, do you have a copy of Simpson, Thacher & Bartlett's bill for legal services which was attached to voucher 6892, referred to in the last paragraph on page 1 of Exhibit 239? [19509] A. Yes. I have a copy made from the original bill in the company's files.

Q. What does the bill indicate as to the distribution made by the company of the bill on its books? A. A handwritten notation on the bill distributes the total charge of $2,044.15 by assigning $1,000 to Bond Issue Expense, $44.15 to Flowage Basin, and $1,000 to Accounts Payable Suspense (Legal).

Q. Was this distribution entered on the company's books of account? A. Yes, but a later entry transferred the $1,000 originally charged to Accounts Payable Suspense (Legal) to Flowage Basin.

Q. What was the nature of the services which the company classified as Accounts Payable Suspense (Legal)? A. They were general legal services chargeable against income.

Q. What item is classified to Flowage Basin Account on the bill? A. An item is called "Consideration of the Woelpper injunction case."

MR. HALL: Mr. Examiner, I would like to have marked for identification a bill from Simpson, Thacher & Bartlett, dated December 20, 1915. It consists of two photostatic pages.

TRIAL EXAMINER: It will be marked for identification as [19510] Exhibit No. 444.

(The document above referred to was received and marked for identification as Exhibit No. 444.)

By MR. HALL:

Q. Did Simpson, Thacher and Bartlett handle the trial or preparation of the Woelpper injunction case? A. No. Mr. W. U. Hensel handled the entire case for Penn Water.

Q. Did Mr. Malone's bills to Penn Water, referred to in the second paragraph on page 2 of Exhibit 239, show the nature of the legal services rendered by him? A. No.

Q. Did the bills or vouchers show the basis for the distribution of the fees to flowage basin? A. No.

Q. Are there any records available showing the details of the work done and time spent by Mr. Malone for which he rendered these bills? A. I know of none and the company has given me none except a general statement by Mr. Bortner expressing his personal opinion as to what the charges represent.

Q. Have you found any record showing that Malone actually negotiated the purchase of any property for Penn Water? A. No.

Q. How did the company classify these legal fees in its [19511] original cost reclassification? A. As general overheads.

Q. Have you been able to determine from the Company's records any amounts charged to Flowage Basin subaccounts E, River Observations; 6, 6E and 6L, Engineering Expenses, or 6N, 6O or 6T, Office and Miscellaneous Expense, which resulted from and were necessary for the purchase of any of the properties acquired by Penn Water? A. No.

Q. Have company representatives presented to you any evidence relating the individual charges for engineering expenses in the Flowage Basin account to the purchase of any property, describing the work done, the cost, and explaining

the necessity of the expenditure for the acquisition of the property? A. None other than a statement made by Mr. Bortner expressing his personal opinion as to the general nature of the charges in Flowage Basin Account.

Q. Do you refer to Mr. Bortner's statement which has been offered by the Company as Exhibit 237 in this case? A. Yes.

Q. Where should the cost of hydrographic surveys, river observations, backwater observations, gauge readings, etc., be charged after the beginning of commercial operation? A. They should be charged to operating expenses.

Q. How should expenses incurred in connection with the [19512] investigation of and cost of defending against flooding and damage claims be treated on the books? A. As an operating expense.

Q. Did you ask Mr. Bortner the nature of the duties assigned to the Lancaster office? A. Yes, and the information he furnished me is contained in a memoranda dated December 12, 1945.

MR. HALL: I ask to have marked for identification a document consisting of five photostatic pages captioned "Memorandum—Re: Lancaster Office Expense," dated December 12, 1945.

TRIAL EXAMINER: It is marked for identification as Exhibit 445.

(The document above referred to was received and marked for identification as Exhibit No. 445.)

• • •

[19517] Q. Have you investigated the items listed on Schedules K-1, K-2 and K-3 of Company's Exhibit 320? A. Yes.

Q. What is the character of the items listed in Schedule K-1? A. Except for Item No. 1, all the items on Schedule K-1 represent necessary repair and maintenance work involving replacement of individual parts of equip-

ment or structures. Item 1 represents the replacement of a minor one.

Q. Did the original entries made on the books for these transactions represent an accepted accounting practice at the time of the entry? A. Yes.

Q. Did the company in making its calculations of betterments on Schedule K-1 use current price quotations as at the date of replacement for the old parts being replaced? A. No. With the possible exception of one item, the company resorted to estimates arrived at by trending the cost of the old item to the year of replacement by means of commodity price indices. In some cases where the item being replaced represented a part of a machine bought as a unit, even the original cost of the old part had to be estimated.

Q. Are commodity price indices an accurate measure of the current price of replacement parts for old equipment? [19518] A. No.

Q. What is the character of the items listed on Schedule K-2? A. These items represent mainly straight maintenance and repair work but include some relocation and rearrangement work and a few replacements.

Q. Did the original entries made on the books for these transactions represent an accepted accounting practice at the time of the entry? A. Yes.

Q. Which items represent relocations or rearrangements of equipment? A. Items 6, 11, 18 and 20.

Q. Is the cost of relocating or rearranging equipment a proper charge to plant account? A. No.

Q. Has the company capitalized any part of the cost of relocation of Items 6, 11, 18 and 20? A. Yes, the company capitalized $2,900 of the cost of relocating the Low-Tension Bus Reactors and $11,000 in connection with the modification of the pull boxes.

[19519] Q. Were any substantial additions of new equipment made in connection with the relocation of Items 11 and

18? A. No, the material used was primarily to replace existing facilities.

Q. Do you recommend that any additional amount be added to plant account as a result of these relocations listed on Schedule K-2? A. No. If any adjustment is made the amount already charged to plant account should be materially reduced.

Q. Which items listed on Schedule K-2 are replacements of previously existing items of equipment? A. Items 4, 8 and 19.

Q. What is the proper accounting for the item of alterations to leased premises, Item 21? A. It was properly charged to operations when incurred.

Q. Were the construction plant buildings listed at Item 26 used in the company's operations? A. Yes, they were used in the company's operations until 1928 when they were replaced by permanent stores and shops buildings which were erected at that time.

Q. What do the rest of the items on Schedule K-2 represent? A. They are all maintenance and repair items.

Q. Do you recommend that the company be allowed to add to plant account the items listed on Schedules K-1 and K-2? [19520] A. No. They were properly treated as repair and maintenance items when incurred.

Q. Is there any precise accounting standard which determines what portion of minor replacements or repair and maintenance work, if any, shall be treated as a betterment or capital addition? A. No, the determination of what portion, if any, of items of this nature should be added to plant account is largely a matter of managerial judgment which varies from company to company and from period to period. So long as the policy adopted results in a reasonable statement of operating expenses and plant costs it is acceptable under accounting standards. As a general rule great caution should be exercised in the capitalization of items of this nature.

Q. In your opinion, is it proper accounting practice to review and change decisions of this nature made previously in accordance with accepted accounting practices and to adjust the books retroactively to agree with the latest policy. A. No, such reaccounting would seriously violate sound accounting principles.

Q. What is the character of the items listed on Schedule K-3? A. These items represent replacements of existing facilities made prior to the time the company began recording retirements of property on its books or during the period [19521] immediately following when the change to a retirement policy was being effected. Prior to the adoption of the policy of recording retirements, the cost of replacing facilities was charged by the company to the depreciation reserve or to operating expense in lieu of removing the cost of the old facility from plant account and adding the cost of the new.

Q. Did the entries made on the books for these transactions represent an accepted accounting practice at the time of the entries? A. Yes.

Q. Do you recommend that the items be reaccounted for as proposed by the Company? A. No. The items were accounted for properly when the entries were made and should not be subject to a later reaccounting. The original accounting for item 2, covering the repaving of tailbays 5 and 6 in order to fill in the eroded rock surface of the tailbays, and item 13, covering the relocation of the railroad track into the hydro station, is preferable to the reaccounting proposed by the company in Exhibit 320.

* * *

[19527] Q. I show you a tabulation entitled "Consolidated Balance Sheet, December 31, 1946, Per Books and As Adjusted." Was this statement prepared by you? A. Yes, this statement was prepared by me from the books and records of the Company.

MR. HALL: Mr. Examiner, I would like to offer this document entitled "Consolidated Balance Sheet, December 31, 1946, Per Books and As Adjusted" for identification.

TRIAL EXAMINER: The document may be marked as Exhibit Number 449 for identification.

(The Document referred to was marked for identification as Exhibit Number 449.)

By MR. HALL:

Q. Will you describe the statment just identified? A. The statement just identified is a consolidated balance sheet of Pennsylvania Water and Power Company and its wholly owned subsidiary, Susquehanna Transmission Company of Maryland, as at December 31, 1946, and shows the financial position of [19528] the companies at that date on a consolidated basis. The first column shows the balances per books. The second column shows the examiners' adjustments on a basis consistent with the adjustments made by the examiners at December 31, 1945 as shown by Exhibit 51. The third column shows the adjusted balances.

Q. I show you a tabulation entitled "Summary of Construction Work in Progress (Consolidated), as at December 31, 1946." Was this statement prepared by you? A. Yes, this statement was prepared by me from the books and records of the Company.

MR. HALL: Mr. Examiner I would like to offer this document entitled "Summary of Construction Work in Progress (Consolidated), As at December 31, 1946" for identification.

TRIAL EXAMINER: The document may be marked for identification as Exhibit Number 450.

(The Document referred to was marked for identification as Exhibit Number 450.)

By Mr. Hale:

Q. Will you please describe the statement just identified? A. The statement just identified contains a list of the construction work in progress at December 31, 1946, for Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland as shown by the books.

* * *

[19561] Cross-Examination.

By Mr. King:

* * *

Q. Now, Mr. Newlands, will you please refer to the portion of your rebuttal testimony covering the loss in materials and supplies? I believe it is page 19488 of the transcript. Do you have that before you? A. No, I haven't.

Q. Would you secure a copy of the transcript so I can keep my copy before me? [19562] A. Yes, sir. I have it.

* * *

By Mr. King:

Q. Mr. Newlands, do you know that the 8,626 barrels of cement referred to by you at transcript 19490, line 11, were Union cement? A. The records that I saw didn't indicate clearly, but I think that was indicated by what I did have available.

Q. Are you aware of the fact that the mixer plant of the company was destroyed by fire on July 31, 1911? A. Yes.

Q. Are you aware of the fact that there were approximately 21,000 bags of Union cement destroyed by that fire? A. I was aware that there were 21,000 bags of cement. I was not aware that it was destroyed by fire, however. The correspondence indicates that the fire didn't harm the cement.

Q. Did not? A. That is right.

Q. I show you a document entitled "Schedule of property of Pennsylvania Water and Power Company, McCall [19563] Ferry, Pennsylvania, fire of July 31, 1911," and ask you to turn to page 3 of that document and ascertain whether or not the company claimed the loss of 21,000 bags of Union cement.

* * *

TRIAL EXAMINER: What is this document?

MR. KING: That is a copy, I believe, of the claim to the insurance company by the company in connection with the loss as a result of the fire which destroyed the mixer plant.

TRIAL EXAMINER: When was that filed with the insurance company?

MR. KING: July 31, 1911.

MR. GOLDBERG: Mr. Examiner, we object to the use of this document. On its face it does not show that it is a [19564] claim that was filed with an insurance company. It is merely entitled "Schedule of the property of Pennsylvania Water and Power Company." No foundation has been laid showing that the witness is familiar with this document, nor has there been any showing of relevance to the periods of time which the witness Newlands is dealing with. This is dealing with a fire of July 31, 1911, and referring to the testimony, the witness Newlands is referring to an inventory made at December 31, 1908. The other dates I see are the date of the appointment of the receiver, July 17, 1909, and both the dates I have referred to are long before July 31, 1911, and we submit there isn't any showing of relevancy.

TRIAL EXAMINER: What is Respondents' counsel's reply to that?

MR. KING: Might I ask a question or two more of the witness before I answer, your Honor? I think it may clear the situation up.

TRIAL EXAMINER: Yes.

By MR. KING:

Q. Mr. Newlands, where did you get the information that enables you to recollect a reference to 21,000 bags of Union cement? A. There are several letters in the file containing a reference to it.

[19565] Q. And did you examine that file yourself, personally? A. Yes, sir.

Q. From which those letters came? A. Yes.

Q. And was not the document that I have heretofore handed you included in that file? A. I don't recollect. It may have been.

Q. But you just didn't see it? A. I don't recall now.

Q. Whether you saw it or not? A. That is right.

Q. You do know, however, do you not, that there were 21,000 bags of Union cement destroyed by fire?

* * * * *

A. The correspondence I saw indicated that a claim had been made on the insurance company for damaged cement, and that the insurance company had protested it and said that the heat from the fire would not damage [19566] the cement, and that the company was willing to accede to that statement by the insurance company.

By MR. KING:

Q. Do you know whether there was a credit to the cement account?

* * *

A. No, I don't know.

By MR. KING:

Q. You don't know that? A. No.

TRIAL EXAMINER: How do you connect up the 18,490 barrels of cement included in the inventory of December 31, 1908, with the 21,000 bags or barrels contained in that insurance claim?

MR. KING: I was going to go ahead and do that, Mr. Examiner.

TRIAL EXAMINER: All right.

MR. HALL: Did you intend, Mr. Examiner, to refer to 35,736 barrels or only to the Union cement?

TRIAL EXAMINER: Only to the Union cement. The 21,000 related only to Union, didn't it?

MR. KING: Yes.

By MR. KING:

[19567] Q. Mr. Newlands, do you know how many barrels are represented by 21,000 bags of cement? A. It depends on the type of cement.

Q. Union cement. A. I believe it was three bags to a barrel, or 7,000 barrels.

Q. 7,000? A. Yes.

Q. Assuming that the fire did destroy 7,000 barrels of Union cement, should not your 19,258 barrels referred to at transcript 19490 be reduced by that amount, to 12,258 barrels?

• • •

A. You are referring now to line 20 of page 19490?

By MR. KING:

Q. Line 21. [19568] A. No, I see no reason for reducing that 19,258 barrels by 7,000 barrels.

Q. Assuming that 7,000 barrels were destroyed by fire? A. Even assuming that the 7,000 barrels had been destroyed, which is contrary to the facts as I have found them.

Q. You wouldn't reduce, even though that were so, the 19,258 barrels?

• • •

A. I would not reduce that number of barrels.

By MR. KING:

Q. Why not, Mr. Newlands? A. Because there is no reason to.

Q. The 19,258 barrels includes both types of cement, namely, Union and Giant and Atlas, does it not? A. I presume it does, yes. There is not a very clear indication of what types of cement are left, or how much of each is left, but I presume that it includes both types.

Q. If it does include both types, and there was a loss of 7,000 barrels, why wouldn't it be deducted from your figure of 19,258 barrels?

[19569] MR. GOLDBERG: May I have the question?

TRIAL EXAMINER: Read it.

(Question read.)

A. I apparently don't understand what you are getting at.

By MR. KING:

Q. The 7,000 barrels should be a construction loss, should they not, assuming they were destroyed? A. Certainly not.

Q. What would you do with it? A. It had nothing to do with construction. It would be an operating loss.

Q. How would you handle the loss of 7,000 barrels? A. It would be charged off as an operating expense. Certainly it isn't a construction loss.

Q. At a time when the company was not operating? A. The company was operating in 1911.

Q. Assuming the company was not operating, would that be the manner in which you would handle the loss of 7,000 barrels?

* * *

[19570] A. Based on your assumption, I still do not believe that a loss of cement due to a fire is a proper construction cost.

By MR. KING:

Q. How would you handle it? A. In the first place, it should have been insured against, and insurance recovered, so there would have been no loss, if that were the

case. If there were such a loss, and the company were not operating, it would be a charge against surplus. All losses occurring during a construction period are not a construction cost.

Q. Now, Mr. Newlands, do you know how many barrels of cement were used by McCall Ferry Power Company for construction?

* * *

[19571] MR. KING: Beginning with the beginning of construction and continuing to July 16, 1909.

* * *

A. I believe the company has prepared some statistics in that regard, and I don't know whether it covered that particular period or not, but I believe it did.

By MR. KING:

Q. Do you know how many barrels were used in that particular period? A. Not offhand, no.

Q. In your opinion, what would be a reasonable percentage of loss due to spoilage and other causes on a [19572] project of this size and character? A. I don't know, but it certainly wouldn't amount to any such spoilage as occurred in this case.

Q. Have you any idea as to what a reasonable percentage of loss would be?

* * *

A. No, I have no exact percentage in mind, except that it would be relatively small. It would not be in any way comparable to the loss that occurred in this particular instance.

By MR. KING:

Q. What do you mean by "relatively small," Mr. Newlands? A. Not more than a few percent.

Q. I beg your pardon? A. Not more than a few percent.

Q. A few percent? A. That is right.

Q. What do you mean by "a few percent"? A. Oh, less than, say, 4 percent.

[19573] Q. Will you assume, Mr. Newlands, that during the period I mentioned to you, there were 263,000 barrels of cement used? Now, as I understand it, you believe that a reasonable loss for spoilage would be about 4 percent of that? How many barrels would that amount to? A. I said less than 4 percent.

Q. All right. How many barrels would you think would represent a reasonable spoilage of 363,000 barrels? A. Did you say 363,000 or 263,000?

Q. 263,000 barrels. Excuse me. A. In my opinion, not more than, at the most, a thousand bags, and that is considerably less than ½ percent.

Q. A thousand bags. How many barrels is that? A. Well, is your 263,000 barrels or bags?

Q. Yes, 263,000 barrels. A. Less than a thousand barrels. And that would be a very generous estimate.

Q. How many percent is a thousand barrels of 263,000 barrels? A. It is less than a half of 1 percent.

Q. Why do you think less than a half of 1 percent is a reasonable spoilage here, when you indicated a percentage of 4 percent a little earlier?

[19574] A. It depends a great deal on the amount of cement used. If a small amount of cement is used on jobs that are scattered all over, you will have a greater loss than otherwise. If you are using a great quantity of cement, spoilage can be kept down.

By Mr. King:

Q. Have you had any experience in the use of cement, Mr. Newlands? A. Well, I have had some knowledge of the construction of a reinforced cement building.

Q. Is that the only experience you have? A. That is right. The spoilage in cement, by the way, that would have occurred during a construction period, would have been included in the cement already charged to construc-

tion. It is not included in the 30,000-odd barrels that were left. That was good cement, supposedly, that was on hand, and was inventoried. But cement that had already spoiled during the construction period was charged to construction and is still in construction costs.

Q. Mr. Newlands, is it not a fact that some of the 19,258 barrels referred to by you may have been used in [19575] construction? A. No. I saw no indication that would indicate that that had ever been used in construction.

Q. Do you know that it wasn't used? A. I am pretty certain of it. There is nothing to indicate that it has been used.

Q. And is there anything to indicate that it had been used? A. There is nothing to indicate that that cement had been used. There is considerable correspondence to indicate that it had spoiled, and couldn't be used.

Q. Mr. Newlands, do you have Exhibit 320 for identification before you? A. Yes, I have it.

Q. Will you refer to Item 11, Schedule H? A. Yes.

Q. Do you dispute the fact that this loss in the amount of $8,970.34, shown there, was due to a writedown in value of the cement by the receiver from $1.73 per barrel to 58¾ cents per barrel?

* * *

[19576] A. The records of the receiver show that that cement had originally been set up on the books at $1.73 a barrel, and subsequently had been written down to, I think 58½ cents a barrel due to the fact that it was not in the best of condition.

By Mr. King:

Q. The amount of the reduction that you have just spoken of applied to 7,852 barrels of cement; isn't that true? A. That is correct.

Q. Do you dispute the fact that this cement was actually used in construction? [19577] A. No; the 7,852 barrels was used in construction.

Q. Mr. Newlands, will you please turn to the portion of your rebuttal testimony having to do with the arms' length transactions between McCall Ferry and Fisk? I believe it appears at transcript 19491. Rather it begins at that page. Do you have that before you? A. Yes.

Q. I direct your attention to that portion of your answer which appears on line 24 on that page, which is as follows: "No, I found no such evidence or indication."

Do you mean by that sentence that you determined whether or not there was any evidence in existence concerning this arms' length transaction? A. Which arms' length transaction are you talking about?

Q. The one you are talking about, beginning on page 19491. A. I don't know of any arms' length transaction here.

Q. The question was asked you, at line 21:

"Did you, during your investigation, find any evidence which indicated that the firm of Harvey Fisk at any time controlled McCall Ferry Power Company?" that was the question.

I want to know whether or not in that portion of the answer which I have just quoted you meant that you [19578] determined there was no evidence of that fact. Is that what you mean by that answer? A. That is right. The correspondence and the records I examined gave no indication that Harvey Fisk & Sons controlled McCall Ferry Power Company.

Q. You said you found no evidence of that fact. My question is: is that your opinion as to whether there was any evidence or not, alone? Or did you receive any legal advice from Mr. Goldberg or anybody else? A. No, that was my opinion.

Q. What do you mean by the word "evidence," Mr. Newlands? Are you referring to what has been introduced in this case when you refer to evidence? A. No, I am referring to all of the records and memoranda which I have examined. The fifteen filing cabinets and the minutes.

Q. Does that description "all of the evidence," include the evidence on original cost introduced in this proceeding? A. That is correct.

Q. When you made that statement to which I have just referred, namely, "I have found no such evidence or indication," did you have in mind Part 14 of Exhibit 27, in this case? And I will present that to you.

* * *

[19579] By Mr. King:

Q. Part 14 of Exhibit 27.

Trial Examiner: What is that?

Mr. King: That is a letter from Houseman to Messrs. Harvey Fisk & Sons, Bankers, New York, New York, dated April 18, 1905.

By Mr. King:

Q. Would you examine that, Mr. Newlands, and tell me whether you had that statement in mind when you made the answer I have just referred to? A. Yes, I had this letter in mind.

Q. I have particular reference to the next to the last paragraph of that letter, Mr. Newlands, on page 117 of Exhibit 27, which is to the effect that the writer, Mr. Houseman, states that he is writing this letter to Fisk & Sons somewhat in detail for the reason that Fisk's interests on the river are apparently in conflict "with our plans, which were being worked out on the river long before Dr. Hutchison had acquired any property rights there." [19580] That is the paragraph that I had reference to.

* * *

[19581] By Mr. King:

Q. Did you have that in mind when you made the statement that there was no evidence? A. Yes, I had that in mind. Houseman was in no position to know who controlled McCall Ferry Power Company.

Q. In your opinion, you mean? A. As shown by the records that I have examined and as shown by the other correspondence in the files.

Q. In your opinion? A. It would have to necessarily be my opinion.

Q. When you made that statement to which I have just referred, at line 24 of transcript 19491, did you have in mind the affidavits of Mr. Hutchison and Mr. Fisk, which appear in Exhibit 27? A. Yes, I had those in mind.

Q. Having them in mind, you still made the statement, at line 24, transcript 19491; is that correct? A. That is correct. I believe the actual records of the events as they happened in 1905 are a better indication than an affidavit made 30 to 40 years later by a man——

* * *

[19582] By Mr. King:

Q. You just stated that you thought other evidence was better than the Fisk and Hutchison affidavits. Is that what you mean by the quotation "I found no such evidence or indication"?

* * *

The Witness: My quotation indicates that there is no evidence that Harvey Fisk and Sons controlled McCall Ferry Power Company. It does not indicate that there is no evidence that Harvey Fisk and Sons didn't control it. As a matter of fact, there are letters in evidence which indicate that the control was a mutual affair by the five interests.

Mr. King: Might we have the question and answer read? I don't believe the answer is responsive, Mr. Examiner.

Trial Examiner: Yes.

(Question and answer read.)

Mr. King: I move the answer be stricken and the witness be directed to give a responsive answer.

TRIAL EXAMINER: Read the question, please.

(Question read.)

MR. KING: The point is, if your Honor please, that the [19583] prior statement indicates that the answer on line 24 is now a little incorrect.

TRIAL EXAMINER: I think the answer could be more responsive in form. Answer the question, Mr. Witness, with whatever explanation you deem necessary.

THE WITNESS: May I have the question again?

TRIAL EXAMINER: Yes.

(Question read.)

THE WITNESS: No, my quotation was not directed to answering a question such as the one you have just put to me. It was directed to the point that there was no evidence in the files that Harvey Fisk and Sons controlled McCall Ferry Power Company. There is evidence in the files that the five interests mutually controlled McCall Ferry Power Company.

By MR. KING:

Q. There is also evidence in the files in the form of the Fisk affidavit and Hutchison affidavit that Fisk did control the enterprise; isn't that correct? A. That was not contemporary evidence.

Q. I didn't ask you that.

MR. KING: Mr. Examiner, I ask that the witness be directed to answer responsively the question put.

MR. GOLDBERG: I think the difficulty is in the form of the question. Is he asking the witness whether the witness assessed one document against another document and decided [19584] that one, in his opinion, was entitled to more weight than the other one? If that is the question I think it will eliminate the difficulty.

MR. KING: I think that is a perfectly simple question.

TRIAL EXAMINER: You may answer, Mr. Witness.

THE WITNESS: There have been statements filed by the Company, obtained from these persons, to that effect which are at variance with the actual facts as I found them in the files.

By MR. KING:

Q. So, then, you have come to the conclusion, in giving the answer on line 24 of transcript 19,491, that those affidavits are not evidence and not entitled to any consideration; is that correct? A. I believe those affidavits do not correspond to the actual facts of the situation and therefore should be given no consideration.

Q. Did you take any legal advice in coming to that conclusion? A. No. That is my own opinion.

Q. Now, Mr. Newlands, in making the statement to which I have just referred, at line 24, transcript 19,491, did you [19585] have in mind the Hopkins affidavit, Part 24, of Exhibit 27? I believe you have Exhibit 27 before you. A. Yes, I had that affidavit in mind.

Q. And you considered that that was not proper evidence, in your opinion. Is that right? A. Well, I would have to read it to find what it states about control there.

Q. Will you please do so? A. Yes, sir. (Witness reads document.) Yes, I had that letter in mind.

Q. And you considered that was not proper evidence in coming to your conclusion at line 24 of transcript 19,491; is that right? A. I considered that it conflicted with the actual facts as I had discovered them.

Q. Did Mr. Hopkins' statement that Coudert Bros., as counsel, were replaced by Simpson, Thacher and Bartlett conflict with the actual evidence, in your opinion? A. I don't know what connotation the word "replaced", there, has. I know that Simpson, Thacher and Bartlett became

counsel for McCall Ferry Power Company—one of the counsel.

Q. But that doesn't conflict, then, with the evidence in the case; is that right? A. Coudert Bros. had never been counsel for McCall [19586] Ferry Power Company.

Q. Had they been for Hutchison? A. Semple had.

Q. Well, he was a member of the firm of Coudert Bros., wasn't he? A. He was associated with Coudert Bros. I don't know whether he was a member of the firm or not.

Q. You had that fact in mind when you made the statement we are discussing? A. Yes. A change in counsel doesn't indicate control, by any means.

Q. To you. Is that correct? A. It doesn't mean it to me, and it is my belief it doesn't mean it to anybody. But of course——

[19587] By Mr. King:

Q. Mr. Hopkins, who signed the affidavit now in front of you, Mr. Newlands, was a director of the Susquehanna Power Company, was he not? A. Yes, I believe he was.

Q. I'm sorry. I said Susquehanna Power Company. I meant Contracting Company. That is what you meant, too, wasn't it? A. Yes, I meant Contracting Company.

Q. And he owned, or held, one share of the stock of that Company, did he not? A. I believe that is correct.

Q. Mr. A. P. Bartlett held three shares of the stock of that Company, did he not? A. I believe he held some shares. I don't know the exact amount.

Q. And he was a brother of Mr. P. G. Bartlett of Messrs. Simpson, Thacher and Bartlett, isn't that correct? A. I don't know that.

Q. Mr. Newlands, do you know whether or not Mr. Fisk was present at the executive committee meeting at which the Cooper contract was approved and authorized to be executed? A. No, I don't know that.

Q. I show you page 4 of the minutes of the executive committee and ask you to examine them and tell me whether

or [19588] not they show that Mr. Fisk was present. A. The minutes of the executive committee of McCall Ferry Power Company, dated October 18, 1905, state that the president reported that pursuant——

Q. I only want to know whether they show that Mr. Fisk was present. That is a simple question, Mr. Newlands. A. You also asked me whether the particular minutes covered the approval of Mr. Cooper's contract——

Q. Will you answer the question, first, as to whether Mr. Fisk was present or not?

* * *

THE WITNESS: The minutes of the executive committee of McCall Ferry Power Company, dated October 18, 1905, state that the president reported that, "pursuant to the authority heretofore given, he and Mr. Coffin had agreed with Mr. Cooper upon the terms of a contract to be entered into for securing the services of the latter in the construction of a dam," etc., at McCall Ferry.

[19589] The minutes also indicate that Messrs. Dimock, Parsons, Coffin and Bertron, of the Committee, and, by request, Messrs. Fisk, Lane and Hutchinson—were present.

By MR. KING:

Q. You didn't read it all, Mr. Newlands. I hope you didn't fail to do so purposely.

The minutes also indicate that "the president is hereby authorized and directed to execute on behalf of this Company a contract substantially in the form submitted at this meeting." A. That is correct.

MR. GOLDBERG: He did try to read, but you didn't like it. Then, when he did read it, you thought he hadn't read enough.

MR. KING: That is right. I still didn't like it.

TRIAL EXAMINER: All right, that's enough.

By MR. KING:

Q. Until December 6, 1905, Mr. Newlands, the executive committee meetings were held at Fisk's New York office; is that correct? A. I don't know that to be the case.

Q. I show you the original minutes of October 4, 1905, and ask you if the first paragraph of them does not indicate that the meeting was held at No. 62 Cedar Street, New York City.

* * *

[19590] THE WITNESS: Yes, the minutes of October 4 indicate that that is so.

By MR. KING:

Q. Will you look through the book, from the minutes on October 4 on, and see if that same address does not appear until the minutes of December, 1905?

* * *

THE WITNESS: The minutes of the executive committee from October 4, 1905 to and including December 6, 1905—including some dozen or so [19591] meetings—apparently were all held at No. 62 Cedar Street.

By MR. KING:

Q. Will you turn to Exhibit 27, which you have before you, on pages 158 to 1[illegible]. Do you have that before you? A. Yes, sir.

Q. The first letter, on page 158 of Exhibit 27, is addressed to Harvey Fisk and Sons at 62 Cedar Street; isn't that correct? A. That is correct. That, of course, doesn't indicate that there weren't other firms at 62 Cedar Street besides Harvey Fisk.

Q. It indicates that he was at 62 Cedar Street, and these minutes indicate that the meetings were held at 62 Cedar Street. A. It doesn't indicate that that was Harvey Fisk and Sons' offices.

* * *

Q. Do you deny that Harvey Fisk's office was at 62 Cedar Street?

• • •

[19592] THE WITNESS: I have made no check as to exactly where Harvey Fisk was located. Some of the letters addressed to them are addressed to 62 Cedar Street.

By MR. KING:

Q. One of those appears at page 158 of Exhibit 27 that you have just looked at; isn't that correct? A. That is correct.

Q. Another one appears at page 160 of the same exhibit. That is correct, is it not? A. That is correct.

• • •

[19594] By MR. KING:

Q. Before lunch, Mr. Newlands, you made reference to five interests at McCall Ferry. Will you name the interests you had in mind? A. Harvey Fisk and Sons; Bertron, Storrs and Griscom; Lee Higginson and Company; C. A. Coffin and the Hutchinson interests.

Q. Did any of those five, except Fisk, have an office at 62 Cedar Street, New York? A. I don't know where their offices were located, with the exception of McCall Ferry Power Company, which had an office at 60 Wall Street late in the year.

Q. But not at 62 Cedar Street? A. Their general office was at 60 Wall Street.

Q. Will you please turn to transcript page 19,495? In line 5 thereof you referred to a Mr. F. W. Walz. Do you know, as a matter of fact, that he was associated with Harvey Fisk? [19595] A. No, I do not.

Q. Mr. Newlands, I show you a letter dated March 21, 1908, taken from the general letter book number 4 of the Company, and ask you to look at that and see if that does not indicate that that letter was written to Mr. F. W. Walz at Harvey Fisk and Sons, 62 Cedar Street, New York City. A. This letter apparently dated March 21, 1908, is from

H. F. Dimock to F. W. Walz, Esquire, Messrs. Harvey Fisk and Sons, 62 Cedar Street, New York City.

* * *

TRIAL EXAMINER: Is there any objection to copying that short letter in the transcript?

* * *

March 21, 1908.

F. W. Walz, Esq.,
Messrs. Harvey Fisk and Sons,
62 Cedar Street,
New York City, N. Y.

[19596] Dear Sir:

At William Henry Barnum's request I return you herewith the stock certificate book of the common stock of the McCall Ferry Power Company, and have signed, as he requested, in blank, two certified copies, 26 and 27, and have had the seal of the Company placed thereon.

/s/ H. F. DIMOCK,
President.

By MR. KING:

Q. Mr. Newlands, do you know whether Mr. Hutchinson exercised at any time during the construction of the McCall Ferry Power Company project any direct supervision of the work? A. No. The direct construction work was under the supervision of Mr. Value, as assistant of Mr. Cooper. He was replaced by Mr. J. B. Goodwin when Value left, in November of 1907.

Q. Isn't it a fact— Had you finished? A. Yes.

Q. Isn't it a fact, Mr. Newlands, that both Hutchinson and the administrative force at the McCall project both worked on drawings during the so-called cessation period?

* * *

[19597] THE WITNESS: No, that is not a fact.

By Mr. King:

Q. You say that is not a fact? A. No.

Q. Mr. Newlands, do you know, as a matter of fact, that Hutchinson and the administrative force worked on drawings in New York City, which drawings had to do with the construction of the project, during the cessation period? A. No, Hutchinson and the administrative force at New York City didn't work on drawings. The drawings were prepared by Cooper's force in New York City and Sanderson and Porter's force in New York City.

Q. And your position is that Hutchinson and his administrative force performed no work in connection with any of those drawings? A. Except as the drawings were completed they may have passed through their hands. They probably did. They might want to inspect them.

[19598] Q. What would these pass through their hands for? For checking, would they not, and correlating them, and O. K.'ing them? A. Not necessarily, no.

Q. What do you mean by "not necessarily"? Do you know, as a matter of fact, that Hutchinson and his administrative force never passed on the advisibility of these drawings, and never tried to correlate them? A. I have seen no indication that Hutchinson and his administrative force in New York passed on those drawings in detail after Cooper's force had finished with them.

Q. Did they pass on them in any way?

Mr. Goldberg: Just a minute. Let the witness finish.
